

**State Environmental Quality Review
Notice of Completion of Draft
and
Notice of SEQR Hearing**

Lead Agency: City of Utica Planning Board

Project Number:

Address: c/o Department of Urban & Economic Development
1 Kennedy Plaza
Utica, NY 13502

Date: 11/15/18

This notice is issued pursuant to Part 617 of the implementing regulations pertaining to Article 8 (State Environmental Quality Review Act) of the Environmental Conservation Law. (and local law # _____ if any)

A Draft Environmental Impact Statement has been completed and accepted for the proposed action described below. Comments are requested and will be accepted by the contact person until 12/27/18. A public hearing on the Draft EIS will be held on 12/6/18; 5 p.m. (date and time) at NYS Office Bldg, 207 Genesee St. Utica, NY (place).

Name of Action:

Mohawk Valley Health System (MVHS) - Integrated Health Campus (IHC)

Description of Action:

The project consists of the construction and operation of an IHC in downtown Utica. MVHS' mission is to provide excellence in healthcare for its communities. Substantial effort has been focused on consolidating existing resources, eliminating redundancies, expanding the depth and breadth of services, improving access and elevating the quality of healthcare services in the region. MVHS has been successful in its efforts thus far, but has been constrained by age and physical limitations of existing facilities. To support goals to deliver higher quality, more effective care with better community outcomes at a lower cost, the proposed IHC will combine services from both the St. Luke and St. Elizabeth campuses. The new IHC will replace the St. Luke and St. Elizabeth campuses, reduce the number of beds in the community, and consolidate patient services to one campus. Project funding has been provided, in part, by New York State via the Oneida County Health Care Facility Transformation Program, which provided capital funding "in support of projects located in the largest population center in Oneida County that consolidate multiple licensed health care facilities into an integrated system of care." The project includes: 670,000 ± sf hospital, central utility plant, parking facilities (one municipal parking garage and multiple surface lots), medical office building (by private developer), campus grounds, utility/pedestrian bridge (over Columbia Street) and helipad. The project also involves acquisition of properties and modifications to existing public/private utility infrastructure.

Location: (Include street address and the name of the municipality/county. A location map of appropriate scale is also recommended.)

The MVHS IHC will encompass approximately 25-acres, which will generally be bounded by Oriskany Street (NYS Route 5S) to the north, Broadway to the east, NYS Route 5/8/12 to the west, and Columbia Street, City Hall and Kennedy Apartments to the south.

Potential Environmental Impacts:

The proposed project exceeds thresholds defined for Type I projects in the SEQRA implementing regulations. Type I actions carry a presumption that the project is likely to have a significant effect on the environment. The project could result in moderate to large impacts on land; surface water; groundwater; air; historic or archaeological resources; transportation; energy; noise, odor, and light; human health; consistency with community plans; and consistency with community character.

A copy of the Draft / Final EIS may be obtained from:

Contact Person: Brian Thomas, Commissioner, Department of Urban & Economic Development

Address: 1 Kennedy Plaza, Utica, NY 13502
<http://www.cityofutica.com/>

Telephone Number: (315) 792-0181

A copy of this notice must be sent to:

Department of Environmental Conservation, 625 Broadway Albany, New York 12233-1750

Chief Executive Officer, Town/City/Village of Utica

Any person who has requested a copy of the Draft / Final EIS

Any other involved agencies

Environmental Notice Bulletin 625Broadway Albany, NY 12233-1750

Copies of the Draft EIS must be distributed according to 6NYCRR 617.12(b).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

EXECUTIVE SUMMARY

To further its goal of delivering higher quality, more effective care with better community outcomes at a lower cost, the Mohawk Valley Health System (MVHS) proposes to build and operate an Integrated Health Campus (IHC), which will include the following elements:

- Hospital building
- Central utility plant (CUP)
- Parking facilities (including one municipal parking garage and multiple surface lots)
- Future medical office building (MOB) (by private developer)
- Campus grounds
- Hospital helipad

The IHC will replace and consolidate services currently provided at MVHS' existing Faxton-St. Luke's Hospital (FSLH) and St. Elizabeth's Medical Center (SEMC). Except for certain existing ancillary facilities within which existing operations will be maintained, MVHS' also plans to redevelop the existing St. Luke's and SEMC campuses consistent with the Town of New Hartford's and the City of Utica's long-term development plans such that each site will remain capable of making an economically positive contribution to each community.

The MVHS IHC will encompass approximately 25-acres within the City of Utica, which will generally be bounded by Oriskany Street (NYS Route 5S) to the north, Broadway to the east, NYS Route 5/8/12 to the west, and Columbia Street, City Hall and Kennedy Apartments to the south. The proposed location is proximal to the City's urban core, as well as the City's proposed "U" District, existing Brewery District, Bagg's Square and Utica Harbor Point. Development of the MVHS IHC will involve the acquisition of properties, modifications to existing public/private utility infrastructure, and closure of city streets. A 40-month construction schedule, beginning in 2019, is anticipated. The hospital will operate 24-hours per day, 365-days per year.

Funding for the project will be furnished, in part, by New York State via the Oneida County Health Care Facility Transformation Program, which provided capital funding (\$300 million) "in support of projects located in the largest population center in Oneida County that consolidate multiple licensed health care facilities into an integrated system of care."

Construction and operation of the IHC will require several local and state permits and approvals. The issuance of local and state discretionary approvals requires compliance with the State Environmental Quality Review Act (SEQRA), which mandates that environmental review must be completed for projects that may result in a significant adverse environmental impact. The SEQR process establishes steps to systematically consider environmental and socio-economic factors early in the planning stages of actions that are directly undertaken, funded or approved by local, regional and state agencies. By incorporating environmental review early in the planning stages, projects can be modified as needed to avoid or minimize adverse impacts on the environment.

The City of Utica Planning Board is acting as the Lead Agency for the IHC SEQR process. The Lead Agency is the Involved Agency principally responsible for undertaking, funding or approving an action, and therefore responsible for determining whether an environmental impact statement is required in connection with the action. As the public agency responsible for reviewing and approving the IHC site plan, the City Planning Board, as SEQR Lead Agency in a coordinated review process, issued a "Positive Declaration" requiring the project sponsor (MVHS) to prepare an Environmental Impact Statement (EIS).

In July 2018, the City Planning Board issued a Final Scoping Document, which summarized the required content of the DEIS. The Final Scoping Document was based on the receipt of substantive public and agency comments received during a 30-day public scoping comment period that included a public scoping meeting held on June 7, 2018.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

This DEIS has been prepared to evaluate potentially significant adverse impacts and reasonable alternatives. Moreover, measures to reduce/mitigate the significant adverse impacts that could potentially result from the construction and operation of the project are identified in the DEIS. Consistent with the Final Scoping Document, the DEIS considers impacts relative to land, surface water, groundwater, air, aesthetic resources, historic and archaeological resources, transportation, energy, utilities, noise and odor, human health, community character, and solid waste.

In addition to issues identified in the Final Scoping Document, SEQR regulations require that the following elements be included in the DEIS:

- Cover sheet
- Table of contents
- Summary of the document
- A concise description of the proposed action, its purpose, public need and benefits, including social and economic considerations
- A concise description of the environmental setting of the areas to be affected, sufficient to understand the impacts of the proposed action and alternatives
- A statement and evaluation of the potential significant adverse environmental impacts at a level of detail that reflects the severity of the impacts and the reasonable likelihood of their occurrence including, as applicable:
 - » Reasonably related short-term and long-term impacts, cumulative impacts and other associated environmental impacts
 - » Those adverse environmental impacts that cannot be avoided or adequately mitigated
 - » Any irreversible and irretrievable commitments of environmental resources that would be associated with the proposed action
 - » Any growth-inducing aspects of the proposed action
 - » Impacts of the proposed action on the use and conservation of energy
 - » Impacts of the proposed action on solid waste management and its consistency with the state or locally adopted solid waste management plan
- A description of the mitigation measures
- A description and evaluation of the range of reasonable alternatives to the action that are feasible, considering the objectives and capabilities of the project sponsor including the “no action” alternative.
- A description of the project’s impact on “Environmental Justice” issues
- A list of any underlying studies, reports, EISs and other information obtained and considered in preparing the DEIS.

The DEIS is supported by field and issue-specific studies and evaluations that describe the project's potential impact and potential methods to reduce/mitigate a significant adverse impact on the environment. Information from these supporting studies are relied upon in the document, with the complete reports provided as appendices. Information sources are referenced throughout the document with full citations provided at the end of the document.

Release of this document by the City Planning Board (as Lead Agency) initiates another public and agency review process. Upon acceptance of this DEIS by the City Planning Board, it will be made available to the public and involved/interested agencies for the purposes of soliciting substantive comments. Both written and oral comments will be received, with the latter obtained at a public hearing to be scheduled during the comment period.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Following the comment period, a Final Environmental Impact Statement (FEIS) will be prepared. The FEIS will include responses to the substantive agency and public comments raised during the comment period. The FEIS will be used by the involved agencies (including the City Planning Board, as Lead Agency) to make written findings regarding the environmental effects of the proposed actions. In their respective findings, involved agencies weigh and balance the relevant environmental impacts along with social, economic, and other essential considerations to determine whether the action minimizes or avoids environmental impacts to the maximum extent practicable. "Findings" must be based on information presented in the FEIS. The proposed action cannot be undertaken until a positive findings statement is written, approved and field and the applicable permits and approvals are obtained.

SEQRA notices relevant to this project will be published in the Utica Observer Dispatch and in the New York State Department of Environmental Conservation's (NYSDEC) Environmental Notice Bulletin. In addition, SEQRA materials will be accessible on the internet at the following address (<http://www.cityofutica.com/>).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

1. PROJECT OVERVIEW

1.1 PROJECT DESCRIPTION

1.1.1 Project Purpose (Public Need and Benefit)

Faxton St. Luke's Healthcare (FSLH) and St. Elizabeth Medical Center (SEMC) affiliated in 2014 to become the Mohawk Valley Health System (MVHS)¹. While MVHS is a private entity, its mission is to provide excellence in public healthcare for its community. Substantial effort has been focused on consolidating existing resources, eliminating redundancies, expanding the depth and breadth of services, improving access and elevating the quality of healthcare services in the region. MVHS has achieved some success, but it has been constrained by the age and physical limitations of the existing facilities.

As summarized below (Table 1), MVHS is currently comprised of three locations (see Figure 1).

Table 1. MVHS Campus Locations

FSLH Campus Locations	SEMC Campus Location
St. Luke's Campus 1656 Champlain Avenue Utica, NY	SEMC Campus 2209 Genesee Street Utica, NY
Faxton Campus 1676 Sunset Avenue (1675 Bennett Street) Utica, NY	

To further its goal of delivering higher quality, more effective care with better community outcomes at a lower cost, the Integrated Health Campus (IHC) will combine services from both the St. Luke's and SEMC campuses, replace the St. Luke's and SEMC campuses, reduce the number of beds in the community, and consolidate patient services at the IHC campus.² In accordance with Article 28 of the Public Health Law, MVHS has applied for a Certificate of Need (CON) from the New York State Department of Health (NYSDOH) pursuant to which it would be the sole operator of the IHC.

While MVHS is a private entity, the IHC is a public facility that will serve public needs and receive public funding. MVHS' decision to consolidate these two campuses to a single facility was motivated by several key factors and public need considerations:

- The desire and need to build a facility with the newest technology, services and advancements in patient safety and quality so that our community can receive the most up-to-date healthcare services that rivals those found in large cities
- The growing demand for healthcare due to the rapidly increasing and aging population in this region
- The increasing need to improve accessibility and availability by attracting specialists and providing services that otherwise would not be available to our community
- The opportunity to gain greater operational efficiencies through the elimination of duplicative and redundant functions will help to reduce the rate of increase in healthcare spending and to achieve improved financial stability

¹ Mohawk Valley Health System is the Sole Corporate Member of Faxton-St. Luke's Healthcare, St. Elizabeth Medical Center, St. Luke's Home Residential Health Care Facility, Senior Network Health, LLC, Visiting Nurse Association of Utica and Oneida County, Inc., and Mohawk Valley Home Care, LLC. Together, the system is governed by one Board of Directors.

² Services offered at the Faxton Campus will not move to the new IHC.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

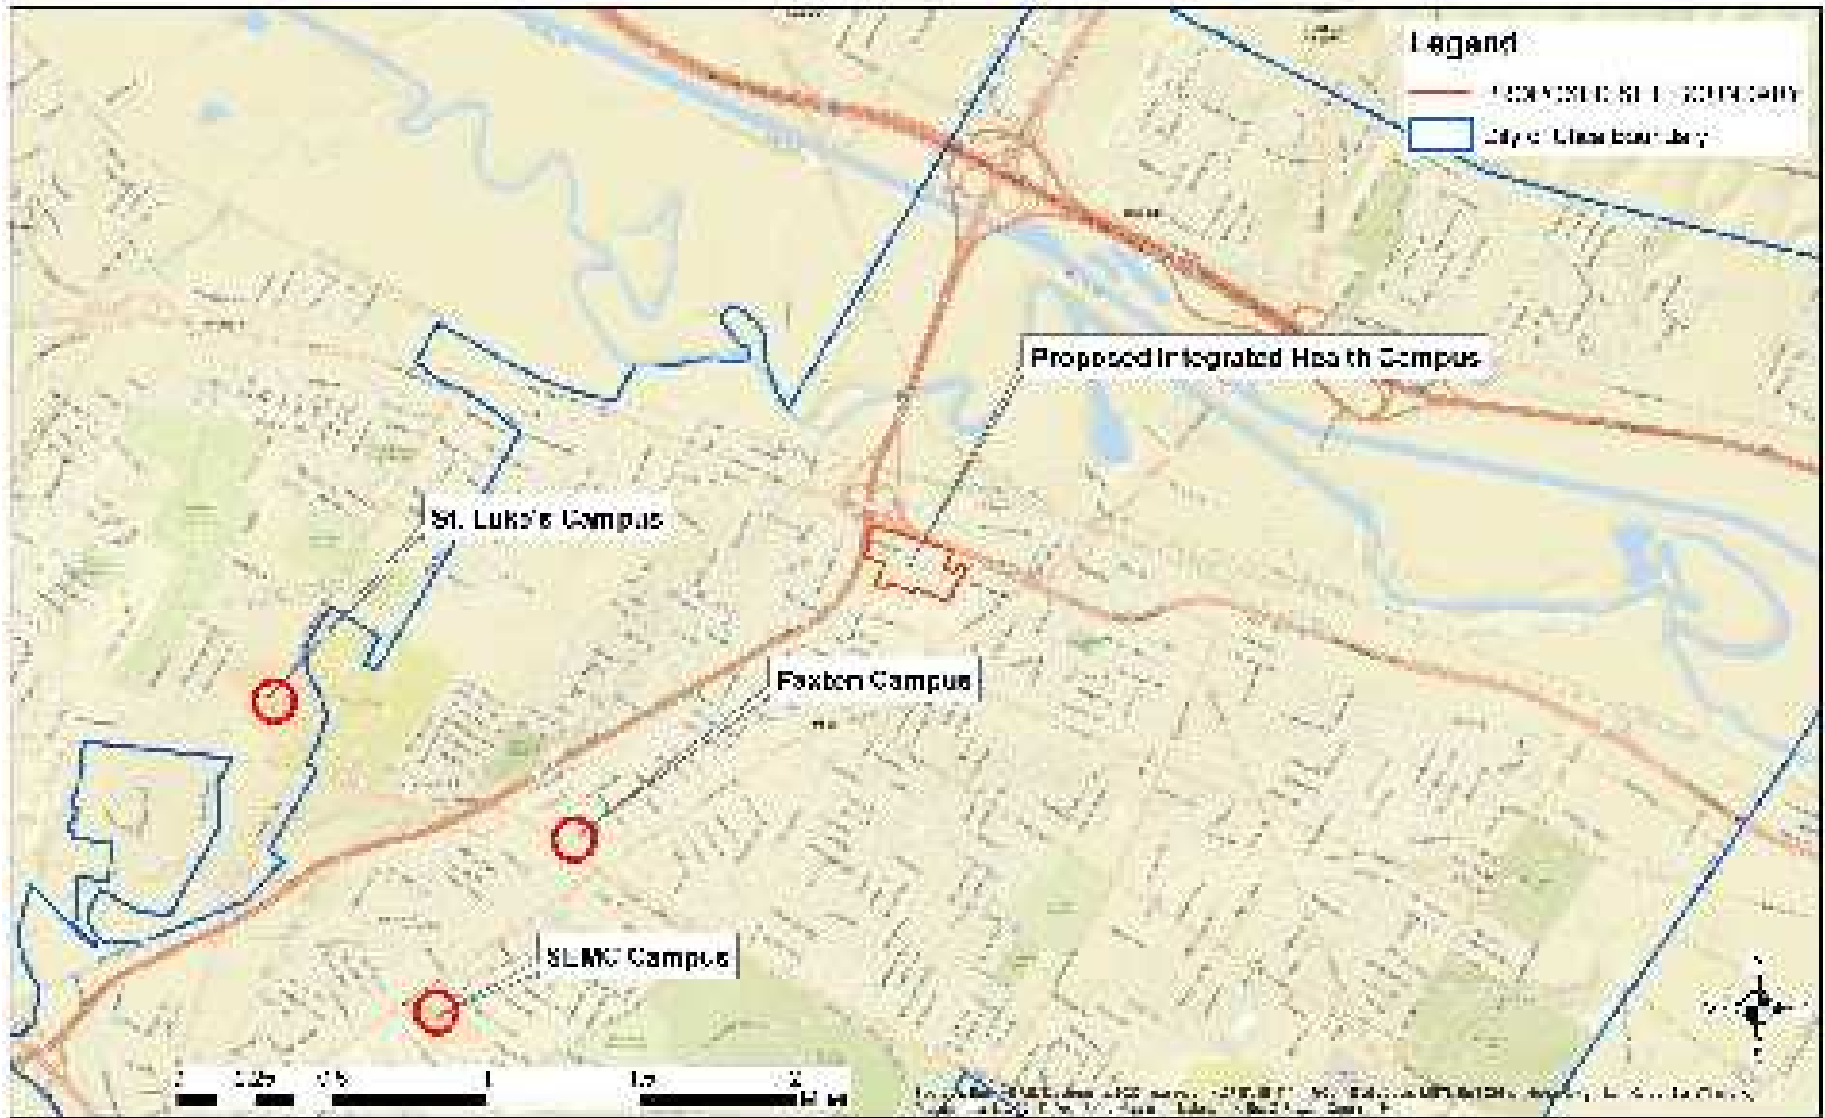

Figure 1. Existing MVHS Campuses

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

The project also includes a proposed collaborative affiliation between MVHS and the Masonic Medical Research Laboratory. Research space is proposed within the new IHC that will allow Masonic laboratory researchers working behind the lab bench and MVHS clinicians working at patients' bedsides to collaborate and create new and innovative research and clinical benefits for the Mohawk Valley and beyond. Additional information regarding the public need for the project is included in the Certificate of Need (CON) application provided as Appendix A.

1.1.2 Background and History

Funding for the project will be furnished, in part, by New York State via the Oneida County Health Care Facility Transformation Program, which provided capital funding (\$300 million) "in support of projects located in the largest population center in Oneida County that consolidate multiple licensed health care facilities into an integrated system of care."³

The MVHS Board of Directors, with Hammes Company, a healthcare consulting firm, and the Mohawk Valley Economic Development Growth Enterprises Corporation's (Mohawk Valley EDGE or EDGE) engineering and planning professionals, engaged in a process to evaluate alternative sites for the project (see Section 2). Criteria used to evaluate 12 potential sites included: infrastructure (water, sewer, power), access, transportation network, capacity to accommodate hospital operations and parking, and no adverse impact on existing hospital operations.

The MVHS Board unanimously selected the downtown Utica site based on the site-selection criteria (above), as well as its central location, urban revitalization opportunities, and alignment with the NYS legislation that allocated \$300 million for projects located in Oneida County's largest population center.

Other factors that support the downtown location (see below) include: regional accessibility with proximity to major highways, public transit systems, and the support of the regional community and government stakeholders.

1.1.3 Project Location

The MVHS IHC will encompass approximately 25-acres (see Figure 2), which will generally be bounded by Oriskany Street (NYS Route 5S) to the north, Broadway to the east, NYS Route 5/8/12 to the west, and Columbia Street, City Hall and Kennedy Apartments to the south. The proposed location is proximal to the City's urban core, as well as the City's proposed "U" District, existing Brewery District, Bagg's Square and Utica Harbor Point.

1.1.4 Project Elements

As illustrated on Figure 3, the MVHS IHC will include the following elements:

- Hospital building
- CUP
- Parking facilities (including one municipal parking garage and multiple surface lots)
- Future medical office building (MOB) (by private developer)
- Campus grounds
- Hospital helipad
- Pedestrian/utility bridge over Columbia Street

To accommodate the proposed MVHS IHC, the proposed project will involve the acquisition of properties and modifications to existing public/private utility infrastructure. Descriptions of the project elements are provided below.

³ <https://www.nysenate.gov/legislation/laws/PBH/2825-B>

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Facilities

Hospital Building

The proposed 670,000± square foot (sf) hospital building will be constructed on parcels located west of Broadway and will extend through Cornelia Street onto parcels located east of State Street. The hospital building consists of a two-story podium and a seven-story bed tower.

Most services currently provided at the St. Luke's and SEMC campuses will be transitioned to the MVHS IHC including 373± inpatient beds (see below). MVHS plans to facilitate the adaptive reuse of the vacated space at the existing facilities (see Section 8).

Central Utility Plant

A one-story CUP will service the hospital. The CUP will adjoin the southeastern portion of the podium of the hospital building via a utility/pedestrian bridge. The CUP will house three centrifugal chillers, a heat recovery chiller and four steam and eight hot water heating condensing boilers, each of which will be fueled by both natural gas and No. 2 Fuel oil. A 50,000-gallon underground storage tank (UST) used to store the No. 2 fuel/diesel oil will be installed east of the CUP in the service yard (for emergency generators). A 30,000-gallon aboveground storage tank (AST) used to store emergency water for fire protection will also be located in the service yard.

Parking Facilities

Parking facilities will consist of a three-story, municipally-owned parking garage and multiple parking lots. The parking garage will provide approximately 1,550 parking spaces and the parking lots will allow for an additional 1,100± parking spaces. These parking facilities will be available for use by patients, visitors, staff, and volunteers, as well as the community for non-hospital related events.

Future Medical Office Building (MOB)

A future MOB is proposed. It is anticipated that the MOB would be owned and operated by a private developer. As illustrated on Figure 3, the proposed location of the MOB is south of Columbia Street and west of Cornelia Street.⁴

Campus Grounds

The campus will be designed as an urban park with enhanced lighting, trees, pedestrian walkways and seating areas. A pedestrian walkway will replace a portion of Lafayette Street. This walkway will extend from the main entrance to the west, terminating at State Street. An additional segment of the walkway will provide access to the Emergency Department (ED) entrance. Outdoor areas will include gardens and other design considerations to create a healing environment.

Hospital Helipad⁵

Similar to existing operations at FSLH and SEMC⁶, the IHC will have an emergency helipad. Hospital sites generally like to locate the helipad as close as practical to the emergency/trauma area for ease of patient transport. To facilitate access to the ED, a ground-based (vs. rooftop) hospital helipad, designed to Federal Aviation Administration (FAA) specifications, will be situated to the west of the hospital building, adjacent to the ED ambulance entrance and north of Columbia Street. Use of the helipad will be intermittent; approximately 40±

⁴ An alternative MOB location within the footprint is south of Lafayette Street and west of Broadway.

⁵ In contrast to a heliport, a helipad (or helistop) is a location designated for helicopters to land and take off without facilities for refueling or repair. A hospital helipad is limited to serving helicopters engaged in air ambulance, or other hospital related functions.

⁶ Helipad operations at FSLH and SEMC will cease upon the transfer of operations to the IHC.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

annual emergency flights to the hospital are anticipated.⁷ Operating procedures for the existing helipads are summarized in Appendix B; similar procedures will be implemented at the downtown IHC.

Property Acquisition

The project includes the acquisition of the 25± acres of property in an area of Utica that is designated as a Federal “Historically Underutilized Business” (HUB) Zone⁸, a distressed area and a New York State Department of Environmental Conservation (NYSDEC) designated “Potential Environmental Justice Area.” While it is anticipated that most of the property will be acquired through voluntary negotiation, it is likely that some property may need to be acquired via eminent domain. Many of the existing property owners and businesses will be required to relocate to other parts of Utica or Oneida County. The magnitude of the acquisition of 25± acres will be large, but most of the impacts are expected to be beneficial because it will better position the hospital to serve the largest and most diverse population in Oneida County, as well as creating the potential for secondary economic development opportunities.

Street Closures

As currently proposed, the project would require the following public street closures or changes in designation:

- Lafayette Street from State Street to Broadway will be abandoned by the City
- Cornelia Street from Columbia Street to Oriskany Street will be abandoned by the City
- Carton Avenue, Sayre Alley, and Pine Street will be abandoned by the City
- The former Lafayette Street from Broadway to Cornelia Street will become the main entrance to the IHC
- The former Cornelia Street from Lafayette Street to Oriskany Street will become the entrance to the new public parking garage and an alternate hospital entrance/exit

Access/Egress

The main entrance to the hospital will be located south of Lafayette Street, proximal to Cornelia Street. In addition to the main entrance, ED walk-in and ED ambulance entrances will be located on the western portion of the hospital. Vehicular and pedestrian entries will be marked by canopy systems that provide adequate coverage for public drop off, ED walk-in and loading activities. Ambulance traffic will be provided with a large drive-thru canopy adjoined to the podium.

A service entrance will be located on the eastern portion of the hospital building, which will be accessible via Columbia Street.

As illustrated on Figure 3, the downtown IHC is located adjacent to NYS Route 5S (Oriskany Street), with interchange access to the North-South Arterial Highway (NYS Routes 5, 8 & 12).⁹ The New York State

⁷ MVHS does not own or operate medivac helicopters, which is provided by a third-party specialty service. Operations are not scheduled events, but episodic. MVHS’ primary use of medevac helicopters is for transfer out of patients to larger tertiary care/specialty hospitals. The example types of transport may be neonates, trauma, and other higher level of care services. Annual cumulative helicopter landings at St. Luke’s and SEMC have ranged from 15 to 37 between 2014 and 2017 (MVHS 2018); according to MVHS, approximately 50% of the existing medivac flights are patients leaving the hospital for another facility. No significant increase or decrease in landings at the downtown IHC are anticipated.

⁸ HUBZone means a historically underutilized business zone, which is an area located within one or more: (1) Qualified census tracts; (2) Qualified non-metropolitan counties; (3) Lands within the external boundaries of an Indian reservation; (4) Qualified base closure areas; (5) Re-designated areas; or (6) Qualified disaster areas.

⁹ The NYSDOT recently completed the Route 5-8-12 North-South Arterial Viaduct Replacement project, which involved the replacement of the viaduct (the elevated portion) of NYS Routes 5, 8, and 12 over Columbia and Lafayette Streets and Oriskany Street (intersection of NYS Routes 5A and 5S).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Department of Transportation (NYSDOT) is currently coordinating¹⁰ the Route 5S Safety Project, which incorporates intersection and safety improvements from Cornelia Street to Broad Street, including miscellaneous work on the side streets; work is scheduled to be completed in 2020.¹¹

Infrastructure

Based on a preliminary assessment of existing utilities and project needs, modifications to the existing infrastructure in the project area are anticipated. A summary of anticipated modifications is provided below.

Sanitary Sewers

The project is anticipated to generate 187,000± gallons per day (gpd), which will be discharged to Oneida County's Water Pollution Control Plant via City sanitary sewers and Oneida County interceptor sewers. Based on the proposed building layout, it is anticipated that the following modifications will be made to the sanitary infrastructure within the proposed project area:

- All existing sewers in Lafayette Street, between State Street and Cornelia Street, will be abandoned/removed, including 12", 15" and 18" diameter sewer piping
- A new 15" diameter sewer on Columbia Street would need to flow in the reverse direction of the existing 15" and tie into the 48" trunk sewer on State Street
- A new section of 18" sewer will divert upstream flow from Cornelia Street to the existing 24" sewer in Columbia Street, discharging to the 33" sewer in Broadway.

Other potential new sewers include a new 15" diameter pipe in Lafayette Street, on the north side of the hospital. The location and size of sanitary laterals and connections will depend on the plumbing/mechanical design of the new hospital buildings. It is assumed each new structure will have its own service lateral(s) connecting to the City mains.

Water Mains

Water mains located within the new building footprint will need to be removed/abandoned. Upgrades to other smaller water mains are also required. Where new supply mains are required, the older mains would be replaced. Fire hydrants will be located along the public streets and private fire hydrants will be located within the IHC campus, as required for fire protection. Each building will be provided with its own backflow prevention device to comply with Mohawk Valley Water Authority requirements.

Water demand for the IHC is estimated at approximately 500 gallons per minute (gpm). Based on the current IHC design configuration, water mains to be replaced or installed will consist of the following:

- Older 6" and 16" mains on State Street will be replaced with a new 16" water main
- A 6"/8" main on Broadway will be replaced with a 12" pipe between Columbia Street and Oriskany Street
- Installation of a 12" water main along Oriskany Street East between State Street and Broadway
- Installation of a 12" water main (private) along Lafayette Street, between State Street and Broadway to serve the hospital
- Potential installation of booster pumps to increase flow rates and pressures necessary for fire protection to the upper floors of the proposed hospital.

¹⁰ The NYSDOT has coordinated efforts with the City of Utica, Oneida County, and MVHS to incorporate downtown IHC related data and access needs.

¹¹ <https://www.dot.ny.gov/route5ssafetyproject>

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Electric and Natural Gas

Electric and gas utilities proximal to the proposed IHC are operated and maintained by National Grid. The gas mains and underground electric conductors are owned by National Grid. The underground conduits and vaults are owned by the City of Utica, and leased to National Grid for use.

The peak electrical demand load for the proposed IHC is estimated at 4,304.27 kW (SSR 2018). Although, the existing infrastructure and electrical capacity of the grid will be sufficient to operate the IHC, the potential exists for the hospital to receive dedicated feeders, which would require upgrades to the substation and approximately 1.5 miles of new feeders; however, this option is solely based on MVHS's discretion and is not necessary for service.

The peak natural gas load and annual natural gas usage for the proposed IHC is estimated at 50 mcf/hour and usage of 90,000 mcf/year, respectively (SSR 2018). To meet demand and minimize disturbances to existing customers, an 80 pounds per square inch (psi) gas main would need to be installed and extended back to the existing 80 psi supply main. This would require approximately 2,500 linear feet (lf) of 6" main to be installed, which would also require crossing of the existing railroad to the north.

Stormwater Management

The overall percent impervious surfaces resulting from development of the IHC is anticipated to be less than the amount of coverage under existing conditions. In addition, the buildings and paved impervious surface areas of the MVHS IHC may be further minimized or reduced using "Green Infrastructure" design features such as pervious pavement/pavers, planting beds, and subsurface rainwater detention.

To provide sufficient capacity and drainage for the proposed hospital, sections of existing storm sewers within the project area will be abandoned/removed and new storm sewers will be installed. The modifications will include:

- Abandonment/removal of 12" and 15" pipe on Lafayette Street
- Removal of 36" trunk sewers from Cornelia Street, between Columbia Street and Lafayette Street
- Removal of 12" storm sewer from Columbia Street
- Installation of new 36" diameter storm sewer on Columbia Street, State Street, and potentially along Oriskany Street connecting back to the existing 42" line crossing Oriskany Street West/NYS Route 5S at Cornelia Street, or boring under Oriskany Street to connect to an existing storm sewer on the north side of Oriskany Street.
- Installation of new storm sewer as needed to tie-in catch basins along the route of the new storm sewer mains.

The project is required to meet Chapter 9 of the New York State Stormwater Management Design Manual (including water quality and quantity requirements) for redevelopment projects (NYSDEC 2015). The proposed site plan represents a net reduction in impervious surfaces (compared to existing conditions), which eliminates the requirement for post-construction quantity control. Re-development of the site requires water quality treatment of 75% of the water quantity from disturbed areas with proposed impervious surfaces. The water quality will be treated by Vortech treatment units as approved by NYSDEC, which are placed at each connection point to the City's stormwater system. The conveyance to the proposed treatment units will include curbing and catch basins within each parking area, as well as collection of runoff via building roof drains.

Disposition and Repurposing of Existing MVHS Campuses

Except for certain existing ancillary facilities within which existing operations will be maintained (see below), MVHS' objective is to facilitate redevelopment of the existing St. Luke's and SEMC campuses consistent with the Town of New Hartford's and the City of Utica's long-term development plans so that each site is capable of making an economically positive contribution to each community. In support of this objective, MVHS will be conducting an evaluation of the properties and the potential "as-of-right" redevelopment opportunities concurrent with planning for the proposed IHC (see Section 8.2). In addition to the disposition and

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

redevelopment of the primary facilities, existing ancillary facilities will also be reused. A description of the anticipated continued use of portions of the existing campuses is provided below.

FSLH

Most of the inpatient and outpatient services performed at the existing St. Luke's campus will be transitioned to the downtown IHC. However, it is anticipated that 24± physical medical and rehabilitation beds, as well as some outpatient services will remain at this site. Unused medical supplies and certain medical equipment will be brought to the MVHS IHC. Medical equipment that is beyond its useful life will be disposed of in accordance with applicable federal and state regulations.

SEMC

Some of the non-hospital buildings located at the SEMC Campus will be converted into an outpatient extension clinic, while others will maintain their existing use (*e.g.*, St. Elizabeth College of Nursing). Services provided at the clinic may include sleep center services, cardiac and thoracic surgery-related physician offices, primary care services and a laboratory patient service center. Unused medical supplies and certain medical equipment may be brought to the downtown IHC. Medical equipment that is beyond its useful life will be disposed of in accordance with applicable federal and state regulations.

1.1.5 Construction Activities

Implementation of the project will require the physical alteration of land within the project footprint. Generally, construction activities within the 25±-acre footprint will include:

- Installation and maintenance of construction-phase erosion and sedimentation controls (E&SCs)
- Demolition and clearing of existing targeted facilities
- Utility relocations
- Site grading
- Construction of IHC facilities and utility extensions/connections
- Site stabilization and removal of temporary, construction phase E&SCs.

In addition, construction activities will require access and egress to and from the site by construction workers, as well as equipment and materials over the anticipated 40-month construction schedule.

1.1.6 Operation and Maintenance Requirements

The IHC will operate 24-hours per day, 7-days per week, 365-days per year.

1.1.7 Project Schedule (Including Phasing)

A 40-month construction schedule, beginning in 2019, is anticipated. While MVHS is not proposing a phased construction schedule, construction of the parking garage and MOB will be controlled by the City and private developers, respectively.

1.2 REGULATORY REVIEW AND APPROVALS

1.2.1 State Environmental Quality Review Act (SEQRA)

Pursuant to New York State Environmental Conservation Law (ECL) Article 8, SEQRA; and Part 617 of Chapter 6 of the New York Codes, Rules and Regulations (6 NYCRR Part 617), environmental review must be completed for projects that may result in a significant adverse environmental impact so that these impacts can be identified and avoided or mitigated to the maximum extent practicable. This DEIS has been prepared to evaluate potentially significant adverse impacts and reasonable alternatives. Moreover, measures to reduce/mitigate the significant adverse impacts that may potentially result from the construction and operation of the IHC are identified in the DEIS. Steps of the SEQR process are summarized below.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Coordinated Review. Coordinated review is the process by which involved agencies cooperate in one integrated environmental review. Coordinated review has two major elements: establishing a lead agency (from among involved agencies) and identifying the interests and concerns of involved agencies so that they may be considered by the lead agency in the determination of significance and scoping the content of the DEIS.

Lead Agency coordination. On February 2, 2018, based on its receipt of an application from MVHS requesting certain, discretionary financial assistance¹², and in its role as a potential involved agency, the Oneida County Local Development Corporation (OCLDC) classified the proposed action as a Type I action and initiated a 30-day lead agency coordination process¹³ with other identified potential involved agencies to coordinate the designation of a Lead Agency. A copy of the OCLDC letter is included in Appendix C.

As a potential Involved Agency (see Section 1.2.2), the City of Utica Planning Board, by resolution dated February 22, 2018, declared its intent to act as SEQR Lead Agency for the proposed review of the project. The intent of the City Planning Board was relayed to the OCLDC in a letter dated February 23, 2018 from the City of Utica's Department of Urban & Economic Development¹⁴, which provides staff support to the Planning Board. Copies of the resolution and correspondence are included in Appendix C.

Notice of Determination of Significance/Notice of Intent to Prepare an Environmental Impact Statement. A determination of significance is the critical step in the SEQR process in which the Lead Agency decides whether an environmental impact statement must be prepared for an action. The two key considerations in determining significance are "magnitude" (*i.e.*, severity) and "importance" (*i.e.*, in relation to its setting) of impacts. On May 7, 2018, the City of Utica Planning Board, as Lead Agency, issued a "Notice of Determination of Significance (Positive Declaration) indicating its intent to require the preparation of an Environmental Impact Statement to assess potential significant environmental impacts from the project. Copies of the resolution and Positive Declaration are included in Appendix C.

Scoping. Scoping is a process that identifies potential environmental impacts of an action or actions which should be addressed in a DEIS. The purpose of scoping is to narrow issues to be addressed in the DEIS to facilitate the preparation of a concise, accurate and complete DEIS that is adequate for public review. The scoping process is intended to:

- Create consensus among involved agencies
- Provide additional opportunities for public participation by seeking input from the public regarding the content of the DEIS
- Minimize the inclusion and review of unnecessary issues.

On May 17, 2018, the City Planning Board issued a Draft Scoping Document, prepared by MVHS, initiating a 30-day review period to solicit written public and agency review comments. In addition, the Board held a public scoping meeting on June 7, 2018 to solicit oral comments. Based on a review of the comments (written and oral), the Board issued a Final Scoping Document on July 19, 2018. A copy of the Final Scoping Document is provided in Appendix C. The content of this DEIS is based on issues identified in the Final Scoping Document.

Draft Environmental Impact Statement. In addition to issues identified in the final scoping document, SEQR regulations require that the following elements be included in the DEIS:

- Cover sheet

¹² MVHS' application included a completed Part 1 (Project and Setting) of a Full Environmental Assessment Form (EAF), which is included in Appendix C.

¹³ 30-days ending on March 3, 2018.

¹⁴ In a letter to Involved Agencies, dated March 8, 2018, the City Planning Board (via the City's Department of Urban & Economic Development) extended the Lead Agency coordination process from March 3, 2018 to March 23, 2018 (see Appendix C).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- Table of contents
- Summary of the document
- A concise description of the proposed action, its purpose, public need and benefits, including social and economic considerations
- A concise description of the environmental setting of the areas to be affected, sufficient to understand the impacts of the proposed action and alternatives
- A statement and evaluation of the potential significant adverse environmental impacts at a level of detail that reflects the severity of the impacts and the reasonable likelihood of their occurrence including, as applicable:
 - » Reasonably related short-term and long-term impacts, cumulative impacts and other associated environmental impacts
 - » Those adverse environmental impacts that cannot be avoided or adequately mitigated
 - » Any irreversible and irretrievable commitments of environmental resources that would be associated with the proposed action
 - » Any growth-inducing aspects of the proposed action
 - » Impacts of the proposed action on the use and conservation of energy
 - » Impacts of the proposed action on solid waste management and its consistency with the state or locally adopted solid waste management plan
- A description of the mitigation measures
- A description and evaluation of the range of reasonable alternatives to the action that are feasible, considering the objectives and capabilities of the project sponsor including the “no action”¹⁵ alternative.
- A description of the project’s impact on “Environmental Justice”¹⁶ issues
- A list of any underlying studies, reports, EISs and other information obtained and considered in preparing the DEIS.

The DEIS is supported by field and issue-specific studies and evaluations that describe the project's potential impact and methods to reduce/mitigate any potential significant adverse impact on the environment. Information from these supporting studies is relied upon in the document, with the complete reports provided as appendices:

- Hospital Site Selection Process Summary Memorandum (Appendix D)
- Phase 1A Cultural Resource Investigation (Appendix E)
- Phase 1A Architectural Inventory (Appendix E)
- Traffic Impact Study (Appendix F)
- Preliminary Geotechnical Review (Appendix G)
- Preliminary Environmental Due Diligence Review (Appendix H).

¹⁵ Discussion on the “no action” alternative includes an evaluation of the adverse or beneficial site changes that may occur in the absence of the proposed actions.

¹⁶ Environmental justice is defined as the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies (<http://www.dec.ny.gov/public/333.html>).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Final Environmental Impact Statement (FEIS)/Findings. Upon acceptance of this DEIS by the City Planning Board, it will be made available to the public (see below) and involved/interested agencies¹⁷ for the purposes of soliciting substantive comments. Both written and oral comments will be received, with the latter obtained at a public hearing to be scheduled during the overall comment period.

Following the comment period, a Final Environmental Impact Statement (FEIS) will be prepared. The FEIS will include responses to the substantive agency and public comments raised during the comment period. The FEIS will be used by the involved agencies (including the City Planning Board, as Lead Agency) to make written findings of fact regarding the environmental effects of the proposed actions. In their respective findings, involved agencies weigh and balance the relevant environmental impacts along with social, economic, and other essential considerations to determine whether the action will minimize or avoid environmental impacts to the maximum extent practicable. “Findings” will be based on information presented in the FEIS. Implementation of the action will not proceed until written findings are filed and all other applicable permits and approvals obtained (see below).

Public notice. Notices relevant to this project, including those related to SEQR procedures and filings, will be published in the Utica Observer Dispatch, as well as the NYSDEC’s Environmental Notice Bulletin (as appropriate). In addition, SEQR materials will be accessible on the internet at the following address (<http://www.cityofutica.com/>).

Supporting information. Preparation of this DEIS was aided by the contributions of several agencies that contributed technical information incorporated and referenced in this document. Key contributors by category included:

Infrastructure

- City of Utica
- Mohawk Valley Water Authority (MVWA)
- National Grid
- Oneida County Department of Water Quality and Water Pollution Control (WQ&WPC)

Regulatory Programs

- City of Utica (multiple departments)
- FAA¹⁸
- NYSDEC
- NYSDOH
- NYSDOT
- NYS Office of Parks, Recreation & Historic Preservation – Field Services Bureau¹⁹
- Oneida County Department of Emergency Services.

Environmental Setting

- City of Utica Fire Department
- City of Utica Department of Urban & Economic Development

¹⁷ “Interested Agency” means an agency that lacks the jurisdiction to fund, approve, or directly undertake an action but wishes to participate in the review because of its specific expertise or concern about the proposed action.

¹⁸ The FAA provides design-related guidance in support of the helipad, but has no approval authority. The helipad design will be reviewed by the City of Utica Planning Board in conjunction with the overall site plan.

¹⁹ Also referred to as the State Historic Preservation Office (SHPO).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- NYSDEC
- NYSDEC Natural Heritage Program (NHP)
- NYSDOT
- United States Fish & Wildlife Service (USFWS).

Information sources are referenced throughout the document; full citations are provided at the end of this document.

1.2.2 Permits and Approvals

Construction and operation of the IHC will require the acquisition of discretionary²⁰ and ministerial²¹ permits and approvals from various state and local jurisdictional agencies. A summary of potential permits and approvals is provided in Table 2.

Table 2. Summary of Potential Permits and Approvals

Permit/Approval	Activity	Agency	
State			
1	Funding Administration, Certificate of Need (CON), Construction Approval, and Operating Certificate	Joint Administration (with DASNY) of project funding approved by New York State Legislature. Review process, mandated under state law, which governs the establishment, ownership, construction, renovation and change in service of specific types of health care facilities including hospitals.	NYSDOH
2	Operating Certificate	Obtain an operating certificate (license) issued by the NYS Office of Mental Health (NYSOMH) prior to the operation of such facilities and programs that are subject to the regulatory jurisdiction of the Commissioner of Mental Health	NYSOMH
3	Funding Administration	Joint administration (with NYSDOH) of project funding approved by New York State Legislature. Potential conduit debt issuer in connection with any private not-for-profit tax-exempt MVHS bonds issued through DASNY.	DASNY
4	Air Facility Permit ²²	Permit to construct and operate an air emission source.	NYSDEC
5	SPDES General Permit for Storm Water Discharges from Construction Activity (GP-0-15-002)	Storm water discharges from construction phase activities disturbing one-acre or greater.	NYSDEC
6	Petroleum Bulk Storage Registrations	Petroleum bulk storage tanks for boilers and emergency generators	NYSDEC
7	Highway Work Permit	Work within NYS highway right-of-way (ROW).	NYSDOT
8	Consultation (16PR06600)	Compliance with State & National Historic Preservation Acts	SHPO

²⁰ Discretionary decisions are those where there are choices to be made by the decision makers that determine whether and how an action may be taken.

²¹ A ministerial action is an action performed upon a given state of facts in a prescribed manner imposed by law without the exercise of any judgment or discretion as to the propriety of the act (*e.g.*, a building permit); ministerial actions are not subject to review under the SEQRA.

²² Proposed emissions may be considered “trivial or exempt activities” (see Section 3.4); a permit or registration may not be required.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

	Permit/Approval	Activity	Agency
	Local		
9	Project Funding	Financial benefits & incentive support	Oneida County Local Development Corporation (LDC)
10	Potential Property Condemnation/Eminent Domain	Potential condemnation and acquisition of private property within project footprint.	Oneida County Oneida County IDA City of Utica Urban Renewal Agency
11	Site Plan Review	Review and approval of site plan ²³	Utica Planning Board
12	Multiple	Approval of public property transfers/road closures; funding of parking garage; review and approval of structures located within City rights-of-way (<i>i.e.</i> , pedestrian bridges, walkways, canopies, <i>etc.</i>)	Utica Common Council
13	Highway Work Permit	Work within highway rights-of-way (road and utility improvements, curb cuts).	Utica Department of Engineering
14	Consolidation & Re-Subdivision	Potential consolidation of parcels within area of potential effect.	Utica Department of Engineering or City Planning Board
15	Special Use Permit/Variances	Medical use in Central Business District (CBD); area variances depending upon location of specific project elements	Utica Zoning Board of Appeals
16	General Municipal Law (GML) § 239-m	County Planning review of activities located within 500-feet of State or County highway, municipal boundary or park.	Oneida County Department of Planning
17	Water and Wastewater System Improvements Approval of Plans	Approval of water and wastewater infrastructure improvements and connections.	Mohawk Valley Water Authority (MVWA) Oneida County Health Department City of Utica Oneida County Department of Water Quality & Water Pollution Control
18	Building & Demolition Permits	Building code compliance.	Utica Codes Department
19	Certificate of Occupancy	Approval to occupy building.	Utica Codes Department
20	Various	Specific hospital operations will require multiple registrations, licensing, notifications, and/or certifications. Such activities are considered nondiscretionary (ministerial) approvals.	Various

1.2.3 New York State Executive Orders and Policies

Environmental Justice

Environmental justice (EJ) is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.²⁴ In March 2003, the NYSDEC issued policy²⁵ to guide the incorporation of EJ concerns into the Department's environmental permit review process, as well as in their application of the SEQR process. The policy focuses on the integration of public participation in NYSDEC's permit review process for projects located in potential EJ areas. The policy is written to assist NYSDEC staff, the regulated community and the public in understanding the requirements and review process.

²³ Installation of a utility/pedestrian bridge over a City street (Columbia Street) will require review and approval by the City Engineer.

²⁴ <https://www.epa.gov/environmentaljustice/learn-about-environmental-justice>

²⁵ http://www.dec.ny.gov/docs/permits_ej_operations_pdf/cp29a.pdf

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

The IHC project area is located in the City of Utica, which has been identified by the NYSDEC as a “Potential EJ Area²⁶.” In addition, as identified in Section 1.2.2, implementation of the project may require several approvals from the NYSDEC, which will require conformance with the NYSDEC’s EJ policy.

Specifically, CP-29 states that where a Potential EJ area is identified by the NYSDEC, the applicant shall submit a written public participation plan as part of its complete NYSDEC application. At a minimum, the plan must demonstrate that the applicant will:

- Identify stakeholders to the proposed action
- Distribute and post written information on the proposed action and the environmental permit review process
- Hold a public information meeting or meetings to keep the public informed about the proposed action and the permit review process
- Establish an easily accessible document repository or repositories in or near the Potential EJ area
- Provide a report or reports which summarize all progress to-date in implementing the plan, all substantive concerns raised to-date, all resolved and outstanding issues, the components of the plan yet to be implemented and an expected time line for completion of the plan
- Upon completion of the plan, submit written certification that the applicant has complied with the plan and submit a final report detailing the activities that occurred pursuant to the plan.

A summary of MVHS-sponsored public engagement efforts is provided below.

MVHS-Sponsored Public Engagement Efforts

Since 2015, the project sponsor and/or its team has coordinated and participated in over 130 meetings with decision-makers and stakeholders. These efforts have complemented additional public engagement and outreach initiated in conjunction with the on-going SEQR process (see Section 1.2.1). These efforts have included meetings with the following groups:

- Clinton Chamber of Commerce
- St. Elizabeth Medical Center – College of Nursing (Board of Directors)
- St. Elizabeth Medical Center – Neighbors Group
- Greater Utica Chamber of Commerce (Board)
- Local Business Leaders Meeting (with Legislators)
- Patient Advisory Council
- Association of Block Coalitions (Community Group)
- Mohawk Valley Latino Association
- Mohawk Valley Center for Refugees
- Court Street Children’s Center
- Bagg’s Square Association
- Community Forum
- Utica Common Council
- Genesis Group

- Office of the Aging Board (Livable Community Steering Committee)

2. ALTERNATIVES CONSIDERED

2.1 PURPOSE

As stated in the SEQR Handbook (3rd Edition – 2010²⁷) published by the NYSDEC, the goal of the alternatives discussion in an EIS is to “investigate means to avoid or reduce one or more identified potentially adverse environmental impacts.” The SEQRA implementing regulations (6 NYCRR 617) further require that the alternatives discussion include “a range of reasonable alternatives, which are feasible considering the objectives and capabilities of the project sponsor.”

As previously identified in Section 1, the objectives and capabilities of the project sponsor (MVHS) are as follows:

- Consolidation of multiple, existing, licensed health care facilities into an integrated system of care, within the largest population center in Oneida County (as stated in MVHS’ CON application; see Appendix A). Within its CON application submitted to the NYSDOH, MVHS indicated that the consolidation will result in the following public benefits:
 - » Provision of one integrated location for acute care with greater access to residents of the City of Utica, Oneida County and the region
 - » Improvements to operational efficiency, patient satisfaction, and safety for both patients and caregivers
 - » Creation of a structured delivery system, ending current service fragmentation, and increasing service integration and coordination of work of the hospitals and other community-based organizations
 - » Reduction of gaps/inefficiencies in care coordination, alignment with payment reform and rebalance healthcare delivery through the reduction in the number of hospital beds as care is shifted from an inpatient care model to an outpatient care model focused on population health
- Substantive compliance with the Oneida County Health Care Facility Transformation Program²⁸, a law enacted by the New York State Legislature in 2015, which provides capital funding (\$300 million) “in support of projects located in the largest population center in Oneida County that consolidate multiple licensed health care facilities into an integrated system of care.” (<https://www.nysenate.gov/legislation/laws/PBH/2825-B>) The location and centralization of the project within the central business district of Utica, can become a catalyst for ongoing and future development of the region (see Section 8 – Growth Inducing Aspects).

Additional information regarding the public need for the project is included in the CON application provided as Appendix A.

Consistent with the Final Scoping Document (Appendix C), the following alternatives are evaluated in this section:

- “No action” alternative
- Alternative sites
- Alternative scale/magnitude
- Alternative design
- Alternative timing

²⁷ http://www.dec.ny.gov/docs/permits_ej_operations_pdf/seqrhandbook.pdf

²⁸ New York Public Health Law § 2825-b.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

2.2 NO ACTION ALTERNATIVE

In accordance with the SEQRA implementing regulations²⁹, the range of alternatives must include a discussion of the “no action” alternative. The no action alternative discussion evaluates the adverse or beneficial site changes that are likely to occur in the reasonably foreseeable future, in the absence of the proposed action.

The “no action” alternative is included in the DEIS to provide a baseline for evaluation of impacts and comparisons of other impacts (*i.e.*, the likely circumstances at the project site if the project does not proceed). The absence of the proposed action (“no action”) is defined as:

- The likely continuation of existing conditions within the project footprint, which includes existing businesses, as well as underutilized, vacant, dilapidated and unsafe properties
- MVHS’ continued maintenance and operation of existing aged facilities, despite the State-identified public need for consolidation of, and improvements to, regional healthcare and its associated public benefit
- The forfeiture of project-related funding including \$300 million from New York State.

As noted in Section 1, implementation of the project will eliminate the existing operational inefficiencies through the elimination of duplicative and redundant functions between FSLH and SEMC, thereby reducing overall spending. The “no action” alternative is inconsistent with this objective, as well as the additional objectives of MVHS and other stakeholders to provide improved healthcare to the residents of the Mohawk Valley region.

2.2.1 Future Conditions – Downtown Footprint

As indicated in the Phase 1A Architectural Inventory (see Section 3.6), the project site is predominantly characterized by remnant 19th and 20th century buildings vacated during the decline of manufacturing within the City limits. In the late 1950s and 1960s, urban renewal plans led to the demolition of numerous city buildings, which became vacant lots when proposed projects did not materialize. While some of the buildings have been adaptively reused by local businesses, the condition of many other buildings within the project footprint continues to decline due to neglect and vacancy (as illustrated in project photographs; see Appendix E).

Under the “no action” alternative, potential development scenarios range from a continuation of the *status quo* conditions (*i.e.*, continued operation of existing businesses under a no growth scenario and continued deterioration of already vacated and dilapidated buildings and properties) to a maximum build-out scenario consistent with the City’s existing zoning designation (Central Business District, CBD³⁰).

While the no growth scenario would not necessarily result in any direct significant adverse impacts on the environment, it would likely, over time, result in potentially significant adverse socio-economic impacts due to the need for funding to demolish uninhabitable, vacated and/or abandoned buildings; repair neglected infrastructure; and/or remediate impacted sites/buildings.

The maximum build-out scenario would require public and/or private investment resulting in potential growth of existing operations and/or adaptive reuse or replacement of existing, vacated buildings or vacant lots. The maximum build-out scenario would result in environmental and socio-economic impacts similar in type and magnitude to impacts identified as a result of construction and operation of the hospital including:

- Impacts on Land – Clearing and/or excavation on parcels could expose impacted soils requiring removal and off-site management.
- Impact on Surface Water – Potential to encounter and remediate impacted surface water due to past land use, as well as the need to manage stormwater runoff due to potential increases in impervious surfaces.

²⁹ 6 NYCRR § 617.9(b)(5)(v)

³⁰ <https://ecode360.com/14015081?highlight=business,central business district,centralized,district#14015081>

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- Impact on Groundwater – Potential to encounter and remediate impacted groundwater due to past land use.
- Impact on Flooding – Potential increase in stormwater runoff, which could exacerbate flood potential during storm events.
- Impact on Air – Construction and operation-related impacts associated with construction or expansion of new businesses (*i.e.*, dust; emissions from construction and operations-related equipment; increase in mobile source emissions due to increased traffic).
- Impact on Aesthetic Resources – Temporary construction-related lighting; changes to viewshed due to modifications to existing buildings, demolition of existing buildings, and construction of new buildings; potential increases in site lighting.
- Impact on Historic and Archaeological Resources – Potential impacts on historic properties and/or archaeological resources due to construction-related ground disturbances or demolition/renovation of existing buildings.
- Impact on Transportation – Increases in traffic due to expansion of existing businesses and/or creation of new businesses; associated increase in demand for parking.
- Impact on Utilities – Improvements/modifications to existing utility infrastructure to support growth.
- Impacts on Noise – Temporary, construction-related noise impacts.
- Impact on Human Health – Disturbance of hazardous building materials during demolition activities (*e.g.*, asbestos, lead, *etc.*); potential to encounter impacted soil/groundwater from past land use.
- Consistency with Community Character and Plans – Potential to replace or eliminate existing facilities, structures, or areas of historic importance to the community; potential inconsistencies of new development with the existing architectural style and character of the area.
- Impacts on Solid Waste Management – Increased waste generation during construction and operations.
- Environmental Justice – Potential displacement of affordable or low-income housing in NYSDEC-designated “Potential Environmental Justice Area.”

2.2.2 Future Conditions – MVHS Facilities

Under the “No Action” alternative, the existing MVHS facilities would not be consolidated to an integrated health campus and would continue to operate and be maintained as they are at present. Under this scenario, the greatest impact would be to the community, which would not benefit from the transformative, positive impacts on regional healthcare as identified in Section 1 of this DEIS, as well as in the public need section of the CON application (see Appendix A). Anticipated benefits and positive impacts included:

- The desire and need to build a facility with the newest technology, services and advancements in patient safety and quality so that our community can receive the most up-to-date healthcare services that rivals those found in large cities
- The growing demand for healthcare due to the rapidly increasing and aging population in this region
- The increasing need to improve accessibility and availability by attracting specialists and providing services that otherwise would not be available to our community
- The opportunity to gain greater operational efficiencies through the elimination of duplicative and redundant functions will help to reduce the rate of increase in healthcare spending and to achieve improved financial stability

2.3 ALTERNATIVE SITES

As described in SEQR guidance materials (*e.g.*, the SEQR Handbook³¹), a discussion of alternative sites is appropriate when:

- A project sponsor has already evaluated alternative sites in developing the proposal for a private action, and desires to include that analysis in the DEIS.
- The suitability of the site for the type of action proposed is a critical issue, in which case a conceptual discussion of siting should be required.

As both those considerations are true for this project, a conceptual discussion of alternative sites is included in this DEIS.

2.3.1 Conceptual Siting Study Approach

A conceptual siting study (Appendix D) was completed in June 2015³², which consisted of the following four steps:

1. **County-wide Site Search** – Geographic Information System (GIS)-based analysis to identify parcels that could potentially host the IHC; twelve locations were identified for initial evaluation.
2. **Level 1 Analysis** – Using the results of the GIS analysis, initial sites were screened in a “funnel” process to identify potential “fatal flaws” (see Section 2.3.3) that warranted sites be eliminated from further consideration (*i.e.*, “go/no go” decision).
3. **Level 2 Analysis** – With the fatal flaws analysis completed, a site selection matrix was created to complete a detailed screening of the top remaining sites.
4. **Capacity Analysis** – In addition to a detailed evaluation using the site selection matrix, a conceptual capacity analysis³³ for the top three sites was prepared, which included identifying areas for hospital operations, hospital expansion areas, parking facilities (surface and structured), medical office building, and patient towers. An initial capacity concept plan was prepared for all 3 sites and two sites (Downtown and NYS Psych Center) were advanced further to consider circulation and functional entrances.

The study relied on previously completed evaluations prepared for MVHS by the Hammes Company³⁴ (Hammes), which identified the preliminary program requirements for hospital operations.³⁵ These requirements consisted of:

- 440 beds proposed (actual reduction of approx. 164 beds for 3 hospitals)
- 884,256 square feet (sf)³⁶
- 40,000 sf Medical Office Building to be programmed as part of development
- Estimated Cost: \$507.7 M or \$527.40/sf

³¹ http://www.dec.ny.gov/docs/permits_ej_operations_pdf/seqrhandbook.pdf

³² MVHS coordinated with Mohawk Valley EDGE (EDGE) to complete a conceptual site analysis for the proposed IHC. EDGE contracted with Elan Planning, Design, & Landscape Architecture, PLLC (Elan) of Saratoga Springs, NY to complete these services. O'Brien & Gere Engineers, Inc. (OBG), from its local office in Utica, provided sub-consulting services to Elan relative to infrastructure and environmental considerations. The work was commissioned in February 2015.

³³ The complete capacity analysis, including concept plan illustrations, is provided in Appendix D.

³⁴ Hammes Company is a healthcare project management firm that provides strategic planning, implementation and development services for capital construction projects such as hospitals.

³⁵ While the project planning/design has progressed since 2015, several of these preliminary program requirements have been adjusted/updated, but not to a degree that would substantially affect the findings of the siting evaluation.

³⁶ Current space in the existing three hospitals encompasses approximately 1.3 million square feet.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- Urban Site Requirements:
 - » 433,250 sf
 - » Total acreage = 10±³⁷
- Suburban Site Requirements:
 - » 1,927,500 sf
 - » Total acreage = 45±³⁸

In addition, sites were evaluated relative to the following key parameters (Hammes 2015):

- **Size** – can the site accommodate MVHS program objectives?
- **Future growth potential** – will the site support future growth and expansion?
- **Accessibility to the region** – Does the location provide better access and will that access support MVHS’ role as a regional tertiary care center³⁹?
- **Patient experience/convenience** – Will a hospital on this site enhance the patient experience, be convenient to MVHS customers (*i.e.*, staff, patients, and clinicians) and enable MVHS to build a modern, healing environment?
- **Cost** – What is the cost premium of the recommended site?

The study findings were summarized in a report, which is included as Appendix D. Additional details for each of the study steps is provided below.

2.3.2 County-wide Site Search⁴⁰

A GIS-based search was performed to identify sites, which were 50-acres and larger (including multiple, contiguous or adjacent parcels) and could potentially host the new IHC. The search process did not account for: site control, current site build-out, or existing or past land uses (and associated impacts).

Parcels meeting the 50-acre threshold were identified and plotted on a base map, which included: county and municipal boundaries, Oneida County property lines (2011), and topographic relief. To illustrate the location of sites relative to the MVHS service areas, the following socio-economic data was overlaid on the “funnel map”:

- MVHS Primary Service Area (PSA)⁴¹
- MVHS Secondary Service Area (SSA)⁴²

³⁷ Urban site assumes vertical building construction constrained by street grid; additional land may be necessary for parking, stormwater management, and support facilities.

³⁸ Suburban site assumes less expensive horizontal construction, not constrained by street grid.

³⁹ A tertiary care center is a hospital that provides tertiary care, which is health care from specialists in a large hospital after referral from primary care and secondary care.

⁴⁰ Although MVHS is a private, not-for-profit healthcare organization, which would typically limit alternative sites to those which the project sponsor owns or has under a purchase option (6 NYCRR § 617.9(b)(5)(v)(g)), the public need for the project, associated support via public funds, and the potential use of eminent domain to acquire property, a County-wide search was conducted. Although MVHS operates in Oneida, Madison and Herkimer Counties, the site search was limited to Oneida County, which was the focus of the Oneida County Health Care Facility Transformation Legislation, approved by the NYS Legislature to consolidate health care services and “support health care facility transformation within the County of Oneida...”

⁴¹ The primary service area is where a majority of MVHS patients originate as determined by patient encounters by zip code.

⁴² The secondary service area is further away from the facility and is typically associated with specific health services (*i.e.*, cardiac, *etc.*).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

The following additional radii were overlaid on the funnel map to focus the search by identifying potential sites that might be considered as reasonably central to serve PSA and SSA customers:

- 10-mile radius from the approximate geographic center of Utica
- 5-mile radius from the approximate geographic center of Utica.

Parcels were highlighted on the funnel map, which met the following criteria:

- Parcels ≥ 50 -acres⁴³
- Parcels ≥ 50 -acres within the 10-mile radius and within the PSA
- Parcels ≥ 30 -acres and < 50 -acres within the 10-mile radius and within the PSA (≥ 30 -acre parcels were added to capture additional urban-centric sites)
- Parcels, which substantially meet required geographic parameters, as well as those parcels, which are not characterized by “unfavorable” environmental conditions.

Based on the county-wide search parameters, the following twelve locations, which are illustrated on Figure 4, were identified for additional Level 1 analysis:

1. Yahnundasis Golf Club, Seneca Turnpike, New Hartford, NY
2. Twin Ponds Golf Country Club, Main Street, New York Mills, NY
3. New Hartford Business Park, New Hartford, NY
4. Property adjacent to SUNY Polytechnic Institute, fronting onto Route 12 South, Deerfield, NY
5. Sadaquada Golf Club, Whitesboro, NY
6. Hidden Valley Golf Club, Castle Road, Whitesboro, NY
7. Domenico's Golf Course, Church Road, Whitesboro, NY
8. Downtown - generally bounded by Oriskany Street on the south, Broadway on the east, State St on the west, and City Hall on the north
9. St. Luke's Hospital Campus, New Hartford, NY
10. NYS Psych Center grounds Utica, NY
11. Tect Utica, Whitesboro, NY
12. Faxton Hospital-Murnane Field, Utica, NY.

2.3.3 Level 1 Analysis

The twelve locations were screened in a “funnel” process to identify the potential presence of unfavorable “fatal flaw” characteristics that would warrant a site’s elimination from further consideration. Unfavorable fatal flaw characteristics are existing site conditions, which impact the developable acreage and/or increase development costs and schedule. Fatal flaw characteristics included considerations such as:

- Wetlands (New York State⁴⁴ and potential federal⁴⁵)
- 100-year floodplain
- Steep slopes ($> 15\%$; created using USGS 10m Digital Elevation Models [DEMs])
- Lack of infrastructure (sewer/water)
- Access limitations
- Inadequate transportation network
- Other factors, including challenging permitting needs, that could adversely impact, or create major obstacles to, the development potential of the site as a hospital campus.

⁴³ Including grouping of contiguous or adjacent parcels.

⁴⁴ Based on NYS Freshwater Wetland Maps published by the NYSDEC.

⁴⁵ Based on National Wetland Inventory (NWI) Maps published by the US Fish & Wildlife Service.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Figure 4. Alternative Locations

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Existing web-based GIS resources, as well as input from utility purveyors and the NYSDOT, were relied upon to provide the requisite environmental, topographic, infrastructure and access related data. The analysis resulted in the Level 1 elimination of eight sites as summarized below.

Yahnudasis Golf Club (Eliminated)

- Access issues:
 - » NYSDOT indicates that access would be near the existing entrance from Commercial Drive, but would require a reconfiguration of the NYS Route 12 – Genesee Street/NYS Route 12B/MYS Route 5 intersection
 - » The road network has the capacity, but there are potential operational issues with restrictions on the number of options for ingress/egress
 - » There is a railroad spur that would need to be crossed, but it has extremely limited use
 - » Secondary access from NYS Route 840, NYS Route 12 or Commercial Drive is not feasible
- High tension power lines are present
- Mud Creek with associated wetlands impacts a large portion of the golf course site
- Site is located outside the major population center as required in the 2015-2016 NYS budget legislation

Twin Ponds (Eliminated)

- Adjacent to older well-established neighborhoods
- New York Mills planning and permitting process
- Generally hilly site
- Twin Ponds is a 1950's icon – with some associated history
- Access Issues:
 - » Main Street and Burrstone Road have capacity issue; three-legged intersection with rail crossing at Main Street, Burrstone Road and Clinton Street creates circulation issues
 - » A secondary access from Burrstone Road would require residential property acquisition; capacity concerns about access from Burrstone Road
- No assessment has been made of utility and infrastructure capability and whether additional upgrades would be necessary to serve a hospital use
- Site is located outside the major population center as required in the 2015-2016 NYS budget legislation.

New Hartford Business Park (Eliminated)

- Access issues:
 - » Operational issues along approach at “Jay – K intersection”
 - » Capacity and operational issues along Middle Settlement Road
 - » Woods Highway at NYS Route 5 is not a feasible main entrance
 - » Creating interchange at NYS Route 840 to allow westbound access to the site would be at a cost of \$20 to \$30 million
- Power lines cut through site, which reduces available acreage
- Site is located outside the major population center as required in the 2015-2016 NYS budget legislation.
- Deerfield Property (SUNY Poly and Route 12 South) (Eliminated)

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- North of NYS Thruway – further from population centroid
- Along a divided highway; traffic from south, west or east would need to travel north on NYS Route 12 and take exit ramp at Mulaney Road to then travel south to enter site
- Only known access to site is through access road off Mulaney Road that extends from Bank of America to site; not clear if access could be provided off service road parallel to NYS Route 12 or through SUNY Poly
- Highest and best use of site is for expansion of the State University of New York (SUNY) Polytechnic Institute
- Improvements would be required to bring power to the site
- No ability to expand site as site is landlocked by NYS Route 12 to east, Bank of America to the north, and SUNY Poly to west and south
- Site is located outside the major population center as required in the 2015-2016 NYS budget legislation.

Sadaquada Golf Club (Eliminated)

- Access issues:
 - » Henderson Street has operational and capacity issues
 - » Approach would be along Commercial Drive which has the highest traffic volumes in the region
 - » Clinton Street and Clark Mills Road also have capacity issues
- Utility and infrastructure availability and capacity not assessed
- Site is located outside the major population center as required in the 2015-2016 NYS budget legislation.

Hidden Valley and Domeninco's Golf Course Sites (Eliminated)

- Remote site
- Access issues:
 - » North Side of NYS Thruway – further from population centroid
 - » Access north on NYS Route 840 past Westmoreland Road
 - » Lack of secondary access points
- Power lines cut through the site
- No infrastructure at site
- Site is located outside the major population center as required in the 2015-2016 NYS budget legislation.

Tect Utica Site (Eliminated)

- Remote site
- Access issues:
 - » Halsey Road has capacity issues
 - » Clark Mills Road has capacity issues
- Potential wetlands
- Power lines
- Infrastructure upgrades needed – sewer upgrade
- Tect Utica may not be compatible – vibrations and noise
- Site is located outside the major population center as required in the 2015-2016 NYS budget legislation.

Faxton Hospital – Murnane Field (Eliminated)

- Alienation of park lands required with replacement of Murnane Field
- City of Utica School District approval required to acquire Murnane Field
- Access issues:
 - » No access from Burrstone Road
 - » Burrstone Road and Sunset Avenue have existing capacity issues, which would be compounded with development on Murnane and potentially Pin-O-Rama sites
 - » Additional property acquisition would be required – Pin-O-Rama Block
- Site would require overhead connector with Faxton from Murnane
- Would need to consider integration of Faxton campus with new hospital complex to determine whether there is value in maintaining Faxton site and using property at Murnane Field and Pin-O-Rama for expansion.

2.3.4 Level 1 Analysis Findings

Based on the Level 1 analysis, the following sites were advanced to the Level 2 analysis:

- Downtown
- St. Luke’s Hospital Campus
- NYS Psych Center

2.3.5 Level 2 Analysis

With the fatal flaw analysis completed, a weighted site selection matrix was created to complete a more detailed screening of the three remaining sites. The matrix format was used to examine a variety of factors necessary for a successful and functioning site that would meet current and future hospital needs. A comparative analysis of the three remaining sites was completed using the seven evaluation categories listed below:

- **Size** – Size evaluation was based on the programming guidelines set forth by Hammes and adjusting for urban and suburban environments
- **Utilities** – The availability and capacity of water, sewer, stormwater, electrical, natural gas, and fiber line utilities were evaluated under this category
- **Accessibility** – Accessibility was reviewed both from the distance to NYS routes and the NYS Thruway
- **Zoning Approvals and Impact Fees** – Basic zoning was reviewed for each site (allowed use, lot coverage, and height requirements, *etc.*) along with fee requirements (sewer use offsets, stormwater mitigation fees, *etc.*)
- **Monetary Factors** – Both cost prohibitive factors (site assemblage, construction phasing, *etc.*) and cost incentive factors (State investment, shared facilities, *etc.*) were evaluated under this category
- **Community Factors, Perception & Sustainability** – existing community policy documents, potential impact on neighborhoods, and sustainability features were reviewed
- **Environmental** – factors evaluated under this category included: 100-year floodplain, cultural resources, wetlands, steep slopes (amount of land with less than 15% slope), and endangered and threatened species.

Criteria and sub-criteria were established for each category. Each sub-criterion was assigned points with the higher values representing more desirable features or development conditions. However, the Level 2 analysis did not weight any of the criteria and sub-criteria based on the Oneida County Health Care Facility Transformation Program found in Section 2825 of the New York State Public Health Law. Rather, all Level 2 sites were deemed equal with regard to their status in terms of the legislation. The findings of the Level 2 analysis are provided below; the complete evaluation is provided in Appendix D.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Size

Size evaluation was based on the programming guidelines set forth by Hammes (Hammes 2015), which were adjusted for urban and suburban environments. The Hammes report established a minimum lot size of 11 acres for an urban location and 49 acres for a suburban location. The points assigned in this section are based on current available acres for development. Scoring results under the Size category are as follows:

- Downtown – 7 points
- St. Luke’s Hospital Campus – 7 points
- NYS Psych Center – 10 points

Utilities

Water, sewer, stormwater, electrical, natural gas, and fiber line utilities were evaluated under this category. Water capacity is sufficient at all three sites. However, static pressures at the Psychiatric Center (approximately 60-70 psi) are less than the static pressures at the other two sites (approximately 90 psi). The Downtown location is also surrounded by older infrastructure that has experienced frequent water main breaks during deep winter frosts. All three sites have good redundancy.

Sanitary and storm sewers are not separated at the Downtown site and the site is not conducive to green infrastructure features. A sewer separation project would need to be planned in advance of hospital construction at this location. The sewer improvement project would need to eliminate stormwater inflow from the combined sewers in this area. Stormwater lines would need to be constructed to separate stormwater flow and direct it under the main rail lines to the north and then to the canal.

None of the sites are in the “downtown electrical network,” which would likely prohibit the development of a Combined Heat and Power facility (CHP). Natural gas is likely available near each site at the appropriate capacity for a gas turbine CHP system. However, the level of system improvements necessary to deliver this volume of gas is not yet determined.

The Downtown site has the potential to be the better site among the three for power delivered from the electrical grid. This downtown site is relatively close to National Grid’s Terminal substation located to the north at Harbor Point. The Terminal station has two transformers and distribution buses. As a result, it functions in a manner similar to two separate substations. National Grid would need to explore the possibility of running two dedicated 13.2 kV underground cables to the new hospital. This would provide a high level of reliability since the cables would serve only the hospital, be relatively short in distance, and have no exposure to the factors that impact overhead lines. While the other sites (Psych Center and existing St. Luke’s campus) can be fed from two 13.2 kV lines, as well, the lines would run aboveground and would not be dedicated; there is also the potential that the existing infrastructure could not handle the required loads. At the St. Luke’s site, there are two 46 kV circuits located at the intersection of Main Street, Clinton Street and Burrstone Road in New York Mills; lines could be extended from this intersection to St. Luke’s, which would improve the reliability at this location.

Scoring results under the Utilities category are as follows:

- Downtown – 6 points
- St. Luke’s – 8 points
- NYS Psych Center – 8 points

Accessibility

The accessibility criterion was based on distances from the site to NYS Thruway and other NYS routes, which consisted of:

- North-South Arterial including NYS Route 840 segment
- Oriskany Street/NYS Route 5A/ NYS Route 5S
- NYS Route 49
- Non-Arterial segments of NYS Routes 5 and 12

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

In addition, likely road and signal improvements were reviewed with NYSDOT Region 2 staff. Based on that coordination, it was identified that the Downtown location had the potential benefit of being planned in conjunction with the NYSDOT's Oriskany Street/5S project so that the access needs of the Hospital from Oriskany Street could be incorporated into the project.⁴⁶

To improve access, it is anticipated the Psychiatric Center location would require improvements along the Jason Street and Court Street corridors. For the St. Luke's location, signal improvement would be anticipated at The Burrstone Road and Champlin Avenue intersection.

Travel distance for employees was scored by reviewing zip code data of the employees to identify an approximate centroid of the base employment zone. The intersection of the North-South Arterial and the East-West Arterial (NYS Routes 8 and 840) was used as this centroid.

Based on a preliminary review of incorporating a helipad into the new facility, the 2015 analysis determined there were no significant overriding deficiencies, which would promote one site over another in reference to this criterion. Helicopter access is essentially design-driven including approach and departure procedures, which require two unobstructed flight paths in and out from the helipad. Coordination with municipal planners and zoning commissions are necessary to promote proper zoning, as well as safeguards to prevent future development from interfering with approved flight paths. The design should plan for growth, and account for proximity to sensitive receptors.

In regard to visibility, the downtown site is the only sight with direct sight lines to New York State routes. Scoring results under the Accessibility category are as follows:

- Downtown – 9 points
- St. Luke's – 6 points
- NYS Psych Center – 5 points

Zoning Approvals and Impact Fees

Basic zoning was reviewed for each site to identify if the hospital is an allowed use as-of-right and what the lot coverage and height requirements are. The zoning ordinances for the City of Utica and the Town of New Hartford were reviewed. While there are other components to zoning, these three regulations provide the ability to determine if a zoning change or creation of a Planned Unit Development would be warranted.

Zoning for the Downtown site and the St. Luke's campus are adequate and in place. For the Downtown site, the hospital is an allowed use with a special permit. The allowable lot coverage is 100%, and there are no height restrictions.

The St. Luke's campus is zoned as a planned development district, which allows the hospital use. Site plan approval by the Town of New Hartford would be required.

A hospital on the NYS Psych Center site is an allowed use by special permit. The lot coverage and height restrictions would not be sufficient for the project requirements and either a zone change or area variance would be required.

The additional sub-criteria relate to sewer offset requirements. Due to stormwater inflow and infiltration issues within the basin, development projects that are in the service area of the Sauquoit Creek Pumping Station (SCPS) require flow credits to be in place before they can proceed. The SCPS basin generally follows municipal borders. The towns of Whitesboro and New Hartford are inside the SCPS basin and the City of Utica is outside the basin.

Flow credits are established by tracking the amount of stormwater removed from the sanitary sewer system during a one-year, 24-hour storm and dividing that volume by 5. The flow credits, assuming they are available from the municipality, are then applied against the anticipated gallons per day of sewer flow of the pending

⁴⁶ The NYSDOT project is ongoing.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

development project. In contrast, development within the City of Utica is currently not subject to sewer offset requirements, although it may impose similar restrictions in the future.

Although the St. Luke's site is located in New Hartford, a majority of its sewer discharges enter the City's sewer system. Assuming the connection to the City's system would remain, new development at the St. Luke's site would be viewed as outside the SCPS basin.

Scoring results under the Zoning Approvals and Impact Fees category are as follows:

- Downtown – 8 points
- St. Luke's – 8 points
- NYS Psych Center – 5 points

Monetary Factors

Site assembly was reviewed, in general terms, based on the number of properties involved in land acquisition. Consideration was also given to additional investment potential based on the site location and the project's relation to broader downtown revitalization, neighborhood revitalization, and/or preservation features. These same interests could also result in increased fundraising for the project (in addition to the State-designated allotment of \$300 million).

Constructability issues were weighed with regard to demolition, geotechnical, and phasing elements of the project. With regard to demolition, all three sites will require 2 to 4 acres of demolition and judged equal for this level of analysis. Geotechnical conditions are likely preferable at the NYS Psych Center and St. Luke's sites. However, further geotechnical studies will be needed to identify how these conditions will translate to the cost of foundation construction.

The St. Luke's site presents a challenge regarding construction phasing. The existing hospital operations will need to be maintained and protected during the construction of the new facility. If the new hospital were to be located on the current St. Luke's campus, a myriad of issues would need to be explored including:

- Construction and employee access – the need to continue hospital operations during construction increases health and safety concerns regarding potential conflicts between personnel, vehicles and equipment/materials accessing and egressing the site for operations vs. construction
- Circulation – the need to maintain dedicated and unhindered emergency access and site circulation (first responders, ambulances, patients) is mission critical
- Noise, vibrations, and other sensitivities – Noise, vibrations and other sensitivities (*i.e.*, construction lighting and emissions) have the potential to adversely impact on-going surgical and patient recovery activities

The Downtown site has the added benefit of utilizing some percentage of shared public parking, which may offset some operational costs. Sanitary sewer discharges from the St. Luke's site predominately flow into the City of Utica's combined sewer system and are, therefore, not subject to additional sewer fees established under the Sanitary Sewer Overflow (SSO) Mitigation Program to implement improvement projects in the SCPS basin.

Scoring results under the Monetary category are as follows:

- Downtown – 5 points
- St. Luke's – 4 points
- NYS Psych Center – 6 points

Community Factors, Perception & Sustainability

This section of the matrix evaluated the project's consistency with existing community policy documents; whether or not the site was in an existing neighborhood; and if there are sustainability features that could be implemented. For the community policy document review, the sites were examined to identify if they are

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

consistent with an existing comprehensive or master plan and if the site is within or adjacent to an existing or proposed Brownfield Opportunity Area (BOA).

Based on a review of available information, all three sites are consistent with a master plan and only the Downtown and NYS Psych Center sites are near proposed BOAs.⁴⁷

The next sub-criterion examined the location of each site in relation to the surrounding neighborhood. The Downtown site was identified as the only site not situated near a residential neighborhood, whereas St. Luke's and the NYS Psych Center sites are located near neighborhoods, although creation of a buffer is possible.

The final sub-criterion examined sustainability features as it relates to the ability to provide an energy microgrid and if it can be considered an urban infill project (vs. greenfield development). The Central Utility Building at the Downtown and NYS Psych Center sites have the potential to serve as microgrid power sources. CHP's are considered a more sustainable option for generating electric power versus relying 100% on the electrical grid. CHP's are more energy efficient and rely on cleaner sources (*i.e.*, gas turbines) reducing emissions of carbon dioxide and other air pollutants in comparison to regional power stations.

Finally, consideration was given to the Downtown and NYS Psych Center sites for re-purposing urban parcels for reuse, which is considered a sustainable initiative as higher densities in the urban environment minimizes the need for energy, allows for non-motorized types of transportation, and increases the efficiency for the delivery of utilities and services. While all three site options would likely comply with the State's Smart Growth Development Policy⁴⁸, the Downtown and NYS Psych Center sites would be viewed more favorably if state funds are pursued to assist with the development of either of these urban sites.

Scoring results under the Community Factors, Perception & Sustainability category are as follows:

- Downtown – 10 points
- St. Luke's – 4 points
- NYS Psych Center – 8 points

Environmental

For this portion of the matrix, the following factors were evaluated: 100-year floodplain, cultural resources, wetlands, steep slopes (amount of land with less than 15% slope), and endangered and threatened species.

All three sites are not located in a 100-year floodplain. Only the St. Luke's site is not listed or eligible for listing on the State and/or Federal Registers of Historic Places; it is also not located within an archeologically sensitive area. None of the sites encroach upon state wetlands or the regulated buffer area; St. Luke's does encroach upon a potential federal wetland. All three sites are relatively flat and none of the sites will have restrictions for clearing as it relates to the Indiana Bat and other protected endangered species. Development of the Downtown and NYS Psych Center sites will require coordination with the State Historic Preservation Office (SHPO). Buildings on the NYS Psych Center campus, particularly the building referred to as "Old Main"⁴⁹, will be subject to review associated with any renovation and/or reuse of these buildings, and any demolition that may be part of the hospital redevelopment. The capacity analysis shows integration of Old Main into the proposed redevelopment program, which likely would receive favorable support from SHPO. The Downtown site would likely require demolition of all buildings within the defined property boundaries for the hospital. This will also require coordination with SHPO.

⁴⁷ Being adjacent or within a BOA can be helpful in obtaining state funding if the project is consistent with the BOA planning document.

⁴⁸ <http://www.dec.ny.gov/lands/45970.html>

⁴⁹ https://en.wikipedia.org/wiki/Utica_Psychiatric_Center

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

The Downtown site also creates opportunities to catalyze development of key downtown buildings that lie on the periphery of the hospital development (*e.g.*, E. Tudor Williams Building, Utica Paint Buildings, as well as key buildings along the Genesee Street corridor).

Scoring results under the Environmental category are as follows:

- Downtown – 8 points
- St. Luke’s – 9 points
- NYS Psych Center – 8 points

2.3.6 Level 2 Analysis Findings

The final Level 2 scoring for the three sites is as follows:

- Downtown – 53 points
- St. Lukes – 46 points
- NYS Psych Center – 50 points

Of these three sites, the Downtown site scored highest. Some of the reasons for this advantage included:

- Water pressure and capacity are very good. Water capacity is such that is not anticipated that onsite storage will be needed to accommodate fire flows.
- The Downtown site is relatively close to National Grid’s Terminal Substation located to the north at Harbor Point. The Terminal station has two transformers and distribution buses. Dedicated underground cables can be provided to the new hospital. This would provide a high level of reliability.
- The city street is grid is an asset. Multiple routes can be used to arrive at the hospital.
- The site is less than two miles from the Thruway, less than 0.5 miles from the North-South Arterial (NYS Routes 5, 8 and 12), and located along Oriskany Street (NYS Routes 5A and 5S).
- The Downtown location has the benefit of being planned in conjunction with the NYSDOT’s Oriskany Street/5S project allowing the access needs of the hospital to be addressed as part of the original re-design of the roadway.
- The site is readily available to public transit.
- The site has high visibility.
- Sustainability/smart growth – Re-purposing urban parcels is considered a sustainable initiative as higher density in the urban environment minimizes the need for energy, allows for non-motorized types of transportation, and increases the efficiency for the delivery utilities and services.
- The site will not encroach on an existing residential neighborhood.
- The site is part of a broader downtown revitalization vision.

2.3.7 Other Sites

During the Lead Agency coordination process, the City Planning Board received correspondence from the New Hartford Shopping Center Trust (Trust)⁵⁰. The letter is included in Appendix C. The correspondents, which identified themselves as “leaseholders of a certain piece of property known as the New Hartford Shopping Center located in the Village of New Hartford,” requested that the site be considered as an alternative site for the proposed IHC project. The Trust offered the following supporting reasons⁵¹:

⁵⁰ Undated letter received February 20, 2018. Based on letter narrative, the Trust is the operator, not the owner of the property.

⁵¹ No additional documentation was provided.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- The property consists of approximately 42 acres. There are 32 acres of surface parking available, which would eliminate the need for the construction of indoor parking facilities
- The site is environmentally clean
- The site is located at the intersections of NYS Routes 5, 12, 8 and 840, plus has access from Genesee Street giving it access from every corner of the county
- The mandate from New York State is that the hospital must be built in the largest population center in the county. The site abuts City of Utica property, which is across Campion Road from the site, but is arguably centered in and around the largest population in the county
- The Trust would be open to maintaining control of the property and working out a lease agreement with MVHS, thereby keeping the property on the tax rolls. A pilot program could be worked out that would keep all public entities, town, county, city and school districts from suffering the loss, which would result from a not-for-profit hospital being built on tax exempt land
- The tenants currently in the Shopping Center have leases that expire on or before 2029, at which time the center will be vacant. Many leases expire well before then. There is no shortage of vacant retail space in the area into which tenants could be relocated, if necessary. The future of retail is in flux at best thus it seems that highest and best use of the center property may not be retail
- Hospitals could continuously operate without being interrupted by construction. There are no wetland issues here.
- Locating the hospital here would allow the development of the Varick Street-Bagg's Square corridor to continue unimpeded by the uncertainty of the proposed development

An evaluation of the New Hartford site is provided below. The evaluation is based on the same Level 1 parameters upon which the other twelve locations were assessed

New Hartford Shopping Center (Eliminated)

- Site is located substantially contiguous to a residential neighborhood
- Genesee Street in New Hartford is a high traffic volume corridor through a mixed residential and commercial area. Access points from the North-South Arterial, as well as the existing NYS Route 5/8/12 interchange, are antiquated
- Existing at-grade crossing of Campion Road to access site; Campion Road provides access to NYS Route 12 North and NYS Route 8 South
- Site is located outside the major population center as required in the 2015-2016 NYS budget legislation
- See narrative on Yahnudasis Golf Club, which is located adjacent to the New Hartford Shopping Center (Section 2.3.3)

2.4 ALTERNATIVE SCALE/MAGNITUDE

Based on information provided in the NYSDEC's SEQR Handbook, consideration of alternative scales or magnitudes may be reasonable under the following circumstances:

- Some or all potential impacts of the action can be avoided or reduced by a change in project size
- The change in project size does not reduce the project to the point where it will no longer serve its intended function. For example, a communication tower may require a minimum height for effective operation
- The reduction in project size may decrease potential profit, but does not make the project infeasible.

As indicated in the CON application (Appendix A), multiple facility options were analyzed, including:

- Maintaining both hospital sites (FSLH and SEMC)

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- Consolidating one facility into the other facility based upon available land, feasibility with phasing and logistics
- Consolidating both facilities to a new campus.

The IHC will consolidate operations, resulting in a reduction in square footage and the number of beds, while meeting the community's future healthcare needs. In addition, the vertical build (tower) of the hospital and sharing of the parking garage further reduces the IHC footprint.

Based upon its analysis, MVHS decided that the option of consolidating both facilities to a new campus would be the most effective option. First, it would give MVHS the opportunity to improve patient access to serve the County's largest population center, which includes the 4th largest refugee program in the United States. Secondly, consolidating services to a single site would improve operational efficiency and maximize resources (including physicians and employees). Thirdly, a new, consolidated site will enable MVHS to reduce infrastructure and energy cost/consumption for decades to come. The existing SEMC and FSLH facilities were constructed in 1917 and 1957, respectively. A single campus would reduce the overall building square footage from 928,000± sf to approximately 670,000± sf (a 28% decrease).

2.5 ALTERNATIVE DESIGN

Based on information provided in the NYSDEC's SEQR Handbook, consideration of alternative project designs may be reasonable under the following circumstances:

- Some or all potential impacts of the action can be avoided or reduced by a change in project design, such as a change in traffic ingress/egress to direct traffic away from a quiet residential street to a county road, or a change in the facade of a structure to make it more compatible with its surroundings
- The alternative design may increase the overall project costs, but the increase is not prohibitive.

The project sponsor continues to review the project design, which, to date, has resulted in a minimization of the project footprint, modifications to access locations to facilitate access and traffic flow, an increase in greenspace, and addition of architectural elements to increase consistency with the surroundings. These types of design reviews and value-added vetting activities, which would occur regardless of the project site, will continue throughout the design process. No significant modifications, which would substantially change potential impact types and magnitudes, are anticipated.

2.6 ALTERNATIVE TIMING

Based on information provided in the NYSDEC's SEQR Handbook, consideration of timing or phasing alternatives may be reasonable in the following circumstances:

- The timing or phasing are necessary to avoid impacts to seasonal or temporary aspects of environmental resources, such as spawning or nesting seasons for certain fish and wildlife
- The timing or phasing alternative would not delay the start or extend the overall schedule of a proposed action to the point that project feasibility would be threatened.

Neither of those considerations are relevant to the proposed project. If the project is extended beyond the projected 40-month build-out, it is anticipated that the type and magnitude of impacts will not change. However, in an extended schedule scenario, the type and magnitude of impacts assessed within this DEIS would be extended over a longer period.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

3. ENVIRONMENTAL SETTING, IMPACTS AND MITIGATION

3.1 LAND (GEOLOGY, SOILS, AND TOPOGRAPHY)

The proposed action may have an impact on land. The following potential impacts, identified in the scoping process, are evaluated in this section:

Construction

- Physical alteration of >10-acres of land and construction that continues for more than one year or in multiple phases
- Excavation and removal of more than 1,000 tons of material including removal and disposal of unsuitable fill material and/or impacted soil, if encountered
- Increase in erosion, whether from physical disturbance or vegetation removal (including from treatment by herbicides)

Operation

- No significant adverse impacts anticipated; proposed post-construction conditions will result in an increase in pervious greenspace

3.1.1 Existing Conditions

Soils. Soil mapping for the proposed project area was obtained using the United States Department of Agriculture – National Resource Conservation Service’s (USDA NCRS) Web Soil Survey (WSS).⁵² Based on data from the WSS, the major soil component within the project footprint consists of “Urban Land,” which is defined as areas where at least 50% of the land surface is covered with impervious materials or buildings, including parking lots, shopping centers, industrial parks, highways, and institutional sites (Soil Survey of Oneida County 2008). Minor soil components existing between buildings and other structures consist of Udorthents (6%), Alton (4%), Honeoye (4%), Castile (3%), Lima (3%), Windsor (3%) and Canandaigua (2%). A soil map of the proposed project area is included as Figure 5, and the properties of the soil units are summarized in Table 3, below.

Table 3. Soil Properties within Proposed Project Area

Soil Name	% Project Area	Depth to bedrock (inches)	Percent Slopes	Depth to Seasonal High Water Table (feet)
Major Soils				
Urban Land	75	---	0-5	---
Minor Soils				
Udorthents	6	>60	0-3	Variable
Alton	4	>60	3-8	>6.0
Honeoye	4	>60	2-8	4.0-6.0
Castile	3	>60	0-3	1.5-2.0
Lima	3	>60	0-3	1.5-2.0
Windsor	3	>60	0-3	>6.0
Canandaigua	2	>60	0-3	0-1.0

Source: USDA NRCS Soil Survey of Oneida County, New York (2008)

Geology. Based on data from the WSS, the bedrock underlying the proposed project site consists of Utica Shale. In May 2017, CME Associates, Inc. (CME) performed a screening level geotechnical study (Appendix G) to characterize the stratigraphy and quality of the surrounding area by examining historic boring logs. Results of the geotechnical screening report are summarized in Table 4.

⁵² <https://websoilsurvey.sc.egov.usda.gov/App/HomePage.htm>

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Table 4. Generalized Subsurface Profile

Approximate Depth Range (feet)	Approximate Thickness (feet)	Deposit Description/Characterization
0 to 10	0 to 10	Urban Fill , existing structures, miscellaneous materials, unsuitable soils, random materials and buried or remnant pre-existing topsoil horizon.
2 to 40	7 to 39	Natural Overburden soils consisting chiefly of silts and sands with minor proportions of gravel and clay are generally soft to medium compact. In the northern portion of the site, plastic clays, deposited as sediment from a prehistoric lake, intervenes. These clays are subject to compression and long-term consolidation (volume loss). Overburden soils generally exhibit low bearing capacity which may be limited by settlement tolerance.
12 to 44	0 to 6	Glacial Till is discontinuous across the project area and where present consists of a mixture of soils overridden by Glacier. Till is generally firm or compact and exhibits moderate bearing capacity. Till contains shale rock in areas.
12 to 44	unknown	Utica Shale Bedrock is poor quality and exhibits moderate bearing capacity. The upper several feet of bedrock may exist as highly weathered rock exhibiting little structure and very poor quality and/or decomposed rock consisting of Residual Soil (<i>i.e.</i> silt and clay) and/or interlayered rock-like and soil-like materials. Utica Shale may exhibit expansive characteristics.

Source: CME (May 2017)

Figure 5. Soil Map

Topography. A topographic survey of the proposed project area was performed by Delta Engineers, Architects & Land Surveyors, DPC (Delta) (Delta 2018). The survey indicates that the site generally slopes from the south to the north towards the Mohawk River, with slopes ranging from 0 to 5% across the site. Elevations range from ± 435 feet above mean sea level (amsl) at the southern boundary to ± 425 feet amsl at the northern boundary.

3.1.2 Potential Impacts

Precluding implementation and maintenance of appropriate mitigation measures, the following adverse impacts could occur from construction and operation of the project.

Construction⁵³

Physical Alteration of Land, Extended Construction, Increases in Erosion

The current foundation design consists of drilled caissons and grade beams, with a non-structural slab; significant adverse impacts on the foundation design from existing geotechnical conditions are not anticipated. Without proper mitigation, construction activities involving the physical alteration of land, such as grading and filling, can drastically reduce soil quality on construction sites, especially over long periods of time. Left unprotected, sites will be further degraded by erosion and begin to adversely affect the surrounding environment both on-site (*e.g.*, loss of topsoil) and off-site (*e.g.*, migration of sediments and reduction in water quality).

Excavation of and Disposal of Impacted Soils

Due to the pre-existing urban setting, and information obtained in CME's screening level geotechnical study, it is expected that soils, impacted from past land uses, will be encountered during the construction phase.

Unmitigated, impacted soils can contribute to secondary impacts such as air quality issues, human health consequences to both the construction workers and the public, degradation of surface water and groundwater, and impacts associated with the transport and disposal of such wastes.

Excavation of and Disposal Unsuitable Fill

Excavations from the proposed project area will likely result in the generation of fills (*e.g.*, soils, building rubble and refuse), that are unsuitable for reuse within the project area. In addition to previously described potential erosion and sedimentation impacts, this could potentially require the storage, ultimate removal and disposal of large quantities of fill, leading to: stockpiles of soils and materials and other visual signs of construction that result in longer-term visual changes to the character of the area, use of heavy equipment with high noise levels, generation of truck traffic to and from site, and the influx of fill material and debris to local landfills.

Operation

The buildout of the site is consistent with the pre-existing urban setting; therefore, no significant adverse impacts to the geology or soils are anticipated. Building designs, including foundations, will account for existing subsurface geologic conditions. Proposed post-construction conditions will result in an increase in pervious greenspace.

3.1.3 Mitigation Measures

The following mitigation measures are proposed to minimize or eliminate the potential for, and/or significance of, potential adverse impacts.

⁵³ The potential for construction phase impacts is typically short-term and limited to the project's construction phase.

Construction

Physical Alteration of Land, Extended Construction, Increases in Erosion

Mitigation measures will be implemented and maintained by the contractor(s) to prevent temporary impacts from soil erosion due to construction-related activities. Project activities requiring site clearing, grading, excavation and trenching operations will include stabilization practices to minimize soil erosion. Coverage under NYSDEC's State Pollutant Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activity (GP-0-15-002⁵⁴) will be obtained, requiring the preparation, implementation and maintenance of a Stormwater Pollution Prevention Plan (SWPPP). The SWPPP will be prepared in accordance with the New York State Standards and Specifications for Erosion and Sediment Control (2005) and New York State Stormwater Management Design Manual (2015). The SWPPP will include E&SC measures as well as Best Management Practices (BMPs) to prevent stormwater pollutants from migrating off-site and impacting down-gradient surface waters. Mitigation measures and BMPs that may be utilized to limit erosion and sedimentation include:

- Installation of temporary and permanent structural and vegetative measures that will be used to control erosion and sedimentation for each stage of the project from land clearing to the finished stage
- Physically marking limits of land disturbances on the site with tape, signs, or fencing, so that workers can see the areas to be protected
- Diversion of off-site runoff from erodible soils and steep slopes to stable areas
- Sequencing construction activities to avoid mass clearings and gradings, and clearing only what is required for immediate construction activity
- Restabilizing disturbed areas as soon as possible after construction is completed
- Utilization of perimeter sediment control systems (silt fencing, hay bales, *etc.*) around stockpile areas, roadway improvements, and areas within 50 feet of buildings under construction
- Use of plastic or geotextile fabric to prevent soil loss in highly exposed disturbed areas, such a construction entrances/exits
- Appropriate management of chemicals (*e.g.*, herbicides) and petroleum products with spill potential (*i.e.*, secondary containment or storage indoors in sealed, non-leaking containers which have appropriate secondary containment)
- Cleaning and/or sweeping of affected roadways daily, or more frequently if otherwise required based on periodic inspections
- Weekly inspections of E&SCs to ensure Contractor's adherence to SWPPP requirements

In addition, after construction activities are completed, the following restoration measures will be implemented:

- Subsoil will be properly graded and scarified before topsoil is added (loosening the soil surface where heavy equipment has been used by contour furrowing, imprinting with dozer, or scarification to facilitate subsequent vegetative growth or plantings)
- Seeding and mulching (site restoration will occur earlier in areas where no further disturbance is anticipated)
- Temporary erosion control devices will be removed from the site upon final site stabilization.

⁵⁴ http://www.dec.ny.gov/docs/water_pdf/gp015002.pdf

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Adherence to the General Permit (GP-0-15-002) and associated SWPPP, as well as BMPs identified above should provide sufficient mitigation to eliminate potential significant adverse impacts to land.

Refer to Sections 3.5 – *Aesthetic Resources*, 3.7 – *Transportation*, 3.10 – *Noise and Odor*, and 3.13 – *Solid Waste Management* for further discussion of the mitigation measures associated with physical alteration of land, extended construction and soil erosion.

Excavation of and Disposal of Impacted Soils

Surface and subsurface soils will be sampled and analyzed prior to site disturbance activities. The resulting data will be utilized to prepare soil (and groundwater) management and health and safety plans. The Construction Health and Safety Plan (CHASP) will incorporate measures to protect construction workers and the community from exposure to potential impacted materials. If impacted materials are encountered, they will be removed, transported and disposed at an approved off-site facility in accordance with applicable local, state and federal regulations. Removal of any encountered ASTs and USTs will be conducted in accordance with NYSDEC-regulated PBS and/or CBS closure requirements. E&SCs outlined above will be maintained throughout the construction phase (start-up through site restoration). Adherence to these requirements should provide sufficient mitigation to eliminate potential significant adverse impacts related to land.

Refer to Sections 3.2 – *Surface Waters*, 3.3 – *Groundwater*, 3.4 – *Air*, 3.11 – *Human Health*, and 3.13 – *Solid Waste Management* for further discussion of the mitigation measures associated with impacted soils.

Excavation of and Disposal Unsuitable Fill

An organized, integrated and systematic approach to effectively address spoil management issues during the project will be implemented to mitigate potential impact. Contractor(s) will be required to adhere the following guidelines:

- Spoils generated during the project will be managed in accordance with the hierarchy of avoidance, minimization, reuse, recycling and, ultimately, disposal
- Material, which can be re-used on-site but cannot be directly re-placed, will be stored in designated stockpile areas. Where space is restricted material may require temporary storage off-site prior to re-use
- E&SC measures, as well as BMPs to prevent stockpiles of fill from migrating off-site and impacting down-gradient surface waters, will be utilized, as discussed above.

This approach should provide sufficient mitigation to eliminate potential significant adverse impacts on land from the excavation, management and disposal of unsuitable fill.

Refer to Sections 3.5 – *Aesthetic Resources*, 3.7 – *Transportation*, 3.10 – *Noise and Odor*, and 3.13 – *Solid Waste Management* for further discussion of mitigation measures associated with unsuitable fill.

Operation

No significant adverse operation phase impacts on land are anticipated; therefore, no special mitigation measures are warranted.

3.2 SURFACE WATER

The proposed action may have an impact on surface water. The following potential impacts, identified in the scoping process, are evaluated in this section:

Construction

- Potential temporary impacts (sediment-laden runoff) to surface waters from demolition/construction activities including ground disturbances (*e.g.*, excavation or installation of utilities), construction of facilities, grading, and landscaping

- Potential to encounter impacted surface/groundwater due to past land use(s)

Operation

- Potential impacts on stormwater runoff including existing combined sewer overflows (CSOs)
- Potential impacts from outdoor storage of materials (if any) and runoff from impervious areas (including rooftops and parking lots)

3.2.1 Existing Conditions

Surface Water Features. As indicated on Figure 6, the proposed project area is located in the vicinity of several water bodies. The Mohawk River is located approximately one-third of a mile north of the project site's northern boundary. The Mohawk River serves as one of the primary feed waters for the NYS Barge Canal System, which is located immediately adjacent to the river, and is connected to the river by a series of locks and dams. Surface water runoff from the project site is currently collected in a series of storm sewers and combined CSOs⁵⁵, which ultimately convey runoff to the river and canal.

Surface Water Quality. Based on a review of NYSDEC's Final 2016 Clean Water Act (CWA) Section 303(d) List of Impaired/Total Maximum Daily Load (TMDL) Waters⁵⁶, the Mohawk River Segment H-240 (portion 12), the NYS Barge Canal (portion 12a), and Utica Harbor (portion 12b), located downgradient from the proposed project area, are all listed as impaired water bodies for specific pollutants, as identified in Table 5, below.

Freshwater Wetlands. Based on a review of the NYSDEC-published freshwater wetlands mapping (Figure 6), no New York State (NYS)-jurisdictional freshwater wetlands (and associated check zones/buffers) were identified within or immediately adjacent to (*i.e.*, 100 feet) the project area. Additionally, the National Wetlands Inventory (NWI)⁵⁷ mapping, which provides an indication of potential federal wetlands, was reviewed. Based on a review of the NWI maps, which was supported by field reconnaissance by a wetland biologist, no potential federal wetlands were identified within or proximal to the project area (Figure 6).

Floodplains. The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) for the project area (Community Panel No. 36065C0751F effective September 27, 2013, Panel 751 of 926, Suffix F)⁵⁸ was reviewed to evaluate flood potential within the project area. Based on the current map (Figure 6), the project area is located near, but not within or contiguous to, the 100-year flood hazard area associated with the Mohawk River and Barge Canal.

While no recent flooding has occurred within the project area, a July 2017 rain event forced the temporary closure of the adjacent North-South Arterial from Oriskany Street to Burrstone Road.

⁵⁵ See Section 3.9 regarding recent City-sponsored infrastructure efforts to decrease CSO events in the vicinity of the project site.

⁵⁶ http://www.dec.ny.gov/docs/water_pdf/303dListfinal2016.pdf

⁵⁷ NWI mapping is provided by the US Fish & Wildlife Service (USFWS) as an indicator of potential wetlands. Descriptions and boundaries are provided by the USFWS for informational purposes only. Permitting requirements are based on actual field delineations conducted in accordance with the United States Army Corps of Engineers (USACE) guidelines under Section 404 of the Clean Water Act.

⁵⁸ <https://msc.fema.gov/portal/home>

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

This mapping is provided by the US Fish & Wildlife Service (USFWS) as an indicator of potential wetlands. Descriptions and boundaries are provided by the USFWS for informational purposes only. Wetland requirements are based on special field determinations conducted in accordance with the United States Army Corps of Engineers (USACE) wetlands delineation of the Clean Water Act.

Source: NYSDEC (2016)

3.2.2 Potential Impacts

Barring implementation and maintenance of appropriate mitigation measures, the following adverse impacts could occur from construction and operation of the project.

Construction

Surface Water Features/Quality

If left unmitigated, demolition/construction activities including ground disturbances (e.g., excavation or installation of utilities), construction of roads and facilities, grading, and landscaping could result in temporary impacts to surface water quality (sedimentation) of downgradient waterbodies (i.e., Mohawk River, NYS Barge Canal, freshwater wetlands).

Excavation of and Disposal of Impacted Soils

As previously discussed in Section 3.1.2, due to the pre-existing urban setting, and information obtained in CME's screening level geotechnical study, it is expected that impacted soils from past land uses will be encountered during the construction phase. If unmitigated, these soils could become exposed to stormwater and conveyed off-site, potentially reaching downgradient surface waterbodies (i.e., Mohawk River, NYS Barge Canal, freshwater wetlands), some of which are currently impaired. This would compound the effects of already

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

contributing known and suspected pollutant types (aesthetics, priority organics, pathogens, silt/sediment, metals, nutrients, water levels) and sources (CSO, toxic/contaminated sediment, sanitary discharges, urban/stormwater runoff), which could lead to the further contravention of New York State water quality standards.

Operation

Stormwater Runoff, CSOs

Potential increases in stormwater runoff at full buildout could exacerbate flood potential to downgradient areas during storm events.

As urban development increases, impervious surfaces like concrete and asphalt cover more and more area. These surfaces prevent water from percolating into the ground and disrupt the natural water cycle. The amount of stormwater runoff in areas with these surfaces is much higher than natural, undeveloped areas. Left unmitigated (water quantity and quality), this disruption can have detrimental environmental impacts on the surrounding area and the groundwater table.

Outdoor Storage of Materials

Based on the preliminary design, the IHC will be served by one 50,000-gallon UST containing fuel oil, to serve as a secondary fuel source for the facility's boilers, and a primary fuel source for the facility's emergency generators. Additionally, the hospital will have support equipment and containers (*i.e.*, elevator reservoirs, transformers, emergency generator crank cases, *etc.*) containing petroleum based oils. Left unmitigated, spills or leaks from these facilities could negatively affect stormwater quality.

3.2.3 Mitigation Measures

The following mitigation measures are proposed to minimize or eliminate the potential for, and/or significance of, potential adverse impacts.

Construction

Surface Water Features/Quality

As previously described in Section 3.1.3, it is anticipated that coverage under the General Permit (GP-0-15-002) will be required. Therefore, a SWPPP (and E&SC Plan) will also be prepared and implemented in accordance with the General Permit as well as New York State guidance documents. Preparation and implementation of the SWPPP will include stormwater management practices and components to control the post-construction rate and quality of runoff, as well as measures to minimize sedimentation to downgradient surface waters during construction.

Adherence to the requirements of the General Permit (GP-0-15-002) and associated SWPPP should provide sufficient mitigation to eliminate potential significant adverse impacts related to adjacent surface waters.

Excavation and Disposal of Impacted Soils

If impacted materials are encountered they will be promptly removed and disposed of at an approved off-site facility in accordance with applicable local, state and federal regulations. If it is not possible to remove all contaminated soils at one time, BMPs identified in the site-specific SWPPP will be utilized to prevent the materials from being exposed to stormwater.

Adherence to these requirements should provide sufficient mitigation to eliminate potential significant adverse impacts related to adjacent surface waters.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Operation***Stormwater Runoff, CSOs***

Due to the existing urban nature of the proposed site, the majority of the land is already covered with impervious materials with few exceptions. The project proposes to increase the amount of pervious area in comparison to existing conditions (*i.e.*, an increase in greenspace). Consequently, the amount of runoff is expected to decrease under the proposed buildout. However, the project sponsor will still be required to control the rate of runoff, as well as the quality of runoff, from the site as indicated below.

To mitigate impacts on the rate of and quality of stormwater runoff from the site during operations, the following practices, designed in accordance with Chapter 9 of the NYS Stormwater Design Manual for redevelopment projects, will be implemented:

- Treatment of 75% (at minimum) of stormwater from disturbed areas with proposed impervious surfaces.
- The water will be treated by Vortech Treatment Units (see Appendix I) as approved by NYSDEC, which will be placed at each connection point to the City's existing stormwater system. The proposed Vortech Treatment Units provide treatment by a swirl concentrator that separates trash, sediment, and hydrocarbons from the stormwater runoff. The units provide a sump for cleanout, which becomes part of the site-specific Operations and Management (O&M) plan. The units are placed inline on the outlet of each stormwater conveyance system prior to connection with the City of Utica's stormwater system. The unit is installed below grade and provides access for inspection and cleanout.

In addition to project-specific efforts to mitigate potential project-related impacts on and from stormwater runoff, the City of Utica is implementing a program to reduce CSOs within the City system; these efforts are summarized in Section 3.9.

Outdoor Storage of Materials

Based on anticipated project fuel storage needs, MVHS could be subject to both federal and state regulations governing the design and registration of underground storage tanks (USTs) and other oil containers. The following regulations could apply:

- United States Environmental Protection Agency (USEPA) Underground Tank Regulations - 40 CFR Part 280
- USEPA Oil Pollution Prevention - 40 CFR Part 112
- NYS Petroleum Bulk Storage (PBS) - 6 NYCRR Part 613

Installation and operation of tanks will be conducted in accordance with applicable NYSDEC regulations, including design requirements. Stationary fuel tanks and associated unloading areas will be designed with secondary containment specifications in accordance with federal and state regulations to minimize the potential for release, including the preparation of a Spill Prevention, Control & Countermeasure (SPCC) Plan, and PBS registrations.

Adherence to federal and state regulations should provide sufficient mitigation to eliminate potential significant adverse impacts related to adjacent surface waters.

3.3 GROUNDWATER

The proposed action may have an impact on ground water. The following potential impacts, identified in the scoping process, are evaluated in this section:

Construction

- Potential impacts to groundwater associated with dewatering during construction activities
- Potential to encounter aboveground and/or underground storage tanks (ASTs and USTS, respectively) during demolition/excavation activities, as well as, impacted soil/groundwater from past land use(s)

Operation

- Potential impacts relating to the bulk storage of oil/fuel and/or chemicals

3.3.1 Existing Conditions

Groundwater Elevation. Groundwater elevations within the project area were obtained from both the Soil Survey of Oneida County (NRCS *et al.*, 2007), and CME's 2017 screening level geotechnical investigation (Appendix G). Data from both resources indicated that the water table varies throughout the project area. As shown in Table 3, approximate depths to groundwater based on the soil survey range from the surface to greater than 6 feet, depending on the soil type. Results of the geotechnical screening report regarding groundwater observations are as follows:

- The historic groundwater observations indicate a hydraulic gradient oriented approximately northerly at 10 feet to 20 feet below existing grade. The groundwater table may be a confined aquifer in areas, and if the upper confining layer is removed or penetrated, artesian conditions may be exposed. At the City Courthouse, once the confining layer was removed to accommodate a basement level, groundwater flowed vertically upward inside parts of the sheeted excavation creating a quick-sand condition. At the City Hall Project, construction delays and difficult dewatering conditions were reported by the inspecting engineer during drilled pier foundation construction (Appendix G).

Groundwater Quality. The project is located in an existing urban environment with a history of prior industrial use (see Section 3.6). Although the existing quality of the groundwater within the project area is uncertain, it is anticipated, based upon information obtained in CME's screening level geotechnical study, as well as records of past industrial land uses, storage tanks, and spills, that soils and/or groundwater adversely impacted from past land uses will be encountered during the construction phase.

Sole Source Aquifers. According to the USEPA's interactive map of Sole Source Aquifers⁵⁹, no Sole Source Aquifers exist within the vicinity of the project area. In addition, based on NYSDEC-published data, no primary aquifers⁶⁰ exist within the project area.⁶¹

3.3.2 Potential Impacts

Precluding implementation and maintenance of appropriate mitigation measures, the following adverse impacts could occur from construction and operation of the project.

Construction

Dewatering

Based upon CME's screening level geotechnical investigation, groundwater will likely be encountered during construction activities, which may require dewatering to accomplish the work. Dewatering can lead to a multitude of impacts including geotechnical impacts, contamination, and water dependent impacts. Geotechnical impacts include ground settlements, potentially resulting in distress or damage to surrounding structures. Contamination can occur by drawing groundwater through contaminated soils, or if the existing groundwater is already contaminated, creating a waste that must be managed. Water dependent feature impacts can result from depleting or drawing down aquifers that serve as sources to surface waterbodies such as wetlands, rivers and streams, or that are used as drinking water supplies.

⁵⁹ <https://epa.maps.arcgis.com/apps/webappviewer/index.html?id=9ebb047ba3ec41ada1877155fe31356b>

⁶⁰ Primary aquifers are defined in the NYSDEC's Division of Water Technical & Operational Guidance Series (TOGS) 2.1.3 as "highly productive aquifers presently utilized as sources of water supply by major municipal water supply systems." (http://www.dec.ny.gov/docs/water_pdf/togs213.pdf)

⁶¹ http://www.dec.ny.gov/docs/water_pdf/primary.pdf

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Impacted Soils/Groundwater

As previously discussed in Section 3.1.2, the potential exists to encounter impacted soils caused by past industrial land uses, such as leaking ASTs and USTs. If dewatering is required, groundwater could be exposed to such soils, thereby impacting the water. Additionally, groundwater that was previously impacted could be drawn to the surface. Impacted groundwater could result in secondary impacts including air quality issues, human health consequences, and creation of a waste stream that must be managed off-site.

Operation***Bulk Storage of Oil/Fuel and/or Chemicals***

As previously discussed in Section 3.2, potential exists that the hospital may require the storage of fuels to support facility operations, which could potentially impact groundwater resources in the event of a leak or spill. Based on the preliminary design, the IHC will be served by one 50,000-gallon UST containing fuel oil, to serve as a secondary fuel source for the facility's boilers, and a primary fuel source for the facility's emergency generators. Additionally, the hospital will have support equipment and containers (*i.e.*, elevator reservoirs, transformers, emergency generator crank cases, *etc.*) containing petroleum-based oils. These equipment/tanks/containers could negatively affect groundwater quality in the event of a spill or leak.

3.3.3 Mitigation Measures

The following mitigation measures are proposed to minimize or eliminate the potential for, and/or significance of, potential adverse impacts.

Construction***Dewatering***

Prior to commencing the work, a geotechnical investigation will be completed to assess and identify the most significant potential groundwater impacts that could result from the proposed dewatering. The geotechnical investigation will address the following:

- The types of groundwater aquifers and potential vulnerability to groundwater impacts
- The depth and extent of excavation, and proposed method(s) of groundwater control
- The presence of any nearby sensitive groundwater receptors (*e.g.*, third party wells, *etc.*)
- The geotechnical properties at the site (existing fills, compressibility of the strata, *etc.*)
- The presence of any groundwater contamination in the vicinity of the site.

If it's determined that the volume of groundwater to be withdrawn will be greater than an average of 100,000 gallons per day (GPD) in any consecutive thirty-day period (*i.e.*, 3 million gallons during a 30-day period), a water withdrawal permit will be obtained through the NYSDEC in accordance with 6 NYCRR Part 601. If the quantity of water to be withdrawn is less, the project will be exempt from NYSDEC water withdrawal permitting; however, management of groundwater will still be controlled by appropriate measures in accordance with the General Permit (GP-0-15-002) and associated SWPPP (as discussed in Section 3.1.3 and 3.2.3), in addition to site-specific engineering practices.

The following site-specific engineering measures could be applied as needed to minimize the impacts associated with dewatering:

- Artificial Recharge – Groundwater from the pumped discharge can be re-injected back into the ground either to prevent lowering of groundwater levels and corresponding ground settlement, or to prevent depletion of groundwater resources. This will prevent the possibility of depleting groundwater resources and will avoid any geotechnical issues associated with lowering the groundwater table

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- Temporary or Permanent Barriers – Sheet steel piles or grout curtains can temporarily or permanently be installed to prevent groundwater from entering construction areas

Adherence to NYS requirements for groundwater withdrawals, adherence to the General Permit (GP-0-15-002) and associated SWPPP, and site-specific engineering practices should provide sufficient mitigation to eliminate potential significant adverse impacts related to groundwater from dewatering activities.

Impacted Soils/Groundwater

Surface and subsurface soils and encountered groundwater will be sampled and analyzed prior to the initiation of site disturbance activities. The resulting data will be utilized to prepare construction phase soil and groundwater management plans, as well as the CHASP. If groundwater is encountered, it will be characterized to identify the appropriate method of management. If determined to be impacted, it will be managed and disposed of off-site in accordance with applicable local, state, and federal requirements. If deemed clean, the groundwater will be managed in accordance with standard dewatering practices identified in the General Permit and site-specific SWPPP, as previously discussed in Sections 3.1.3 and 3.2.3.

Refer to Sections 3.4 – *Air*, 3.11 – *Human Health*, and 3.10 – *Solid Waste Management* for further discussion on mitigation measures related to impacted soils and/or groundwater.

Operation

Bulk Storage of Oil/Fuel and/or Chemicals

Design, installation and operation of bulk storage tanks will be conducted in accordance with applicable NYSDEC regulations. Stationary fuel tanks and associated unloading areas will be designed with secondary containment specifications in accordance with federal and state regulations to minimize the potential for release, including the preparation of an SPCC Plan and PBS registration, if regulatory quantity thresholds are met or exceeded.

Adherence to federal and state regulations should provide sufficient mitigation to eliminate potential significant adverse impacts related to groundwater.

3.4 AIR

The proposed action may have an impact on air. The following potential impacts, identified in the scoping process, are evaluated in this section:

Construction

- Dust generation during construction (including demolition activities)
- Short-term emissions from construction equipment
- Excavation and management of impacted soils/groundwater (potential secondary impacts from Sections 3.1 – *Land*, 3.2 – *Groundwater*, and 3.3 – *Surface Waters*)

Operation

- Operation phase emissions including combustion sources (*e.g.*, boilers, emergency back-up generators) and process sources (*e.g.*, sterilizers, refrigeration equipment)
- The proposed action will include state regulated air emission sources
- Potential increase in mobile source emissions due to project-related increases in traffic and road closures

3.4.1 Existing Conditions

In New York State, air quality is regulated by the NYSDEC. Pursuant to the 1970 Clean Air Act and the 1977 and 1990 Clean Air Act Amendments, the USEPA has established National Ambient Air Quality Standards (NAAQS) to protect public health and welfare. Currently, NAAQSs exist for six criteria pollutants: particulate matter (PM₁₀ and PM_{2.5}), carbon monoxide (CO), sulfur oxides (SO_x), nitrogen dioxide (NO₂), ozone (O₃) and lead (Pb). Primary

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

standards were established to protect more “sensitive” groups (*e.g.*, children), while secondary standards were developed to protect public welfare (*e.g.*, crops, vegetation).

A summary of NAAQS is provided below:

Table 6. NAAQS

Pollutant		Primary/ Secondary	Averaging Time	Level	Form
Carbon Monoxide		Primary	8-hour	9 ppm	Not to be exceeded more than once per year
			1-hour	35 ppm	
Lead		Primary and Secondary	Rolling 3-month average	0.15 µg/m ³	Not to be exceeded
Nitrogen Dioxide		Primary	1-hour	100 ppb	98th percentile, averaged over 3 years
		Primary and Secondary	Annual	53 ppb	Annual Mean
Ozone		Primary and Secondary	8-hour	0.070 ppm	Annual fourth-highest daily maximum 8-hr concentration, averaged over 3 years
Particulate Matter	PM _{2.5}	Primary	Annual	12 µg/m ³	annual mean, averaged over 3 years
		Secondary	Annual	15 µg/m ³	annual mean, averaged over 3 years
		Primary and Secondary	24-hour	35 µg/m ³	98th percentile, averaged over 3 years
	PM ₁₀	Primary and Secondary	24-hour	150 µg/m ³	Not to be exceeded more than once per year on average over 3 years
Sulfur Dioxide		Primary	1-hour	75 ppb	99th percentile of 1-hour daily maximum concentrations, averaged over 3 years
		Secondary	3-hour	0.5 ppm	Not to be exceeded more than once per year

ppm - parts per million

ppb - parts per billion

µg/m³ - micrograms per cubic meter

Source: USEPA (www.epa.gov/criteria-air-pollutants/naaqs-table)

Revisions to the Clean Air Act (1990) recognized the importance of regulating upwind from non-attainment areas and set out specific requirements for a group of northeast states that make up the Ozone Transport Region (OTR), which includes New York State (NYS). Nitrogen oxides (NO_x) and volatile organic compounds (VOC) are considered precursors to ozone. Consequently, in New York State, emissions of NO_x and VOC are limited to 100 tons per year (tpy) NO_x and 50 tpy VOC. Oneida County is in attainment or considered unclassifiable (and, therefore, considered in attainment) for other criteria pollutants.

Ambient air quality standards. The NYSDEC (2018) provides summary tables of annual ambient air quality as well as real-time air quality data for criteria pollutants⁶² separated by region within New York. State monitoring is conducted at several stations⁶³ located within the Western Adirondacks/Upper Mohawk Valley/Eastern Lake

⁶² The USEPA uses six “criteria pollutants” as indicators of air quality, and has established for each of them a maximum concentration above which adverse effects on human health may occur. These threshold concentrations are called National Ambient Air Quality Standards (NAAQS). The six criteria pollutants are Ozone (O₃), Carbon Monoxide (CO), Nitrogen Dioxide (NO₂), Sulfur Dioxide (SO₂), Particulate Matter (PM, 10 and 2.5 micrometers), and Lead. The NYSDEC has established corresponding State Ambient Air Quality Standards (6 NYCRR Part 257).

⁶³ The nearest monitoring stations within the abovementioned Air Quality Control Region are located in Perch River (Ozone), Utica (PM_{2.5}), Nick’s Lake (Ozone, SO₂).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Ontario Air Quality Control Region, which includes Herkimer County Jefferson County, Lewis County, Oneida County, and St. Lawrence County. Impairment of air quality is based on comparison with State and National Ambient Air Quality Standards (NAAQS). Based on a review of data available during the preparation of this document, there were no exceedances of these standards at the monitoring stations, indicating that existing air quality in these areas are not impaired for the monitored constituents. Regional data is summarized in Table 7.

Table 7. Existing Air Quality Data

Pollutant	Primary/ Secondary	Averaging Time	NAAQS Level	2017 Observations (Averaging Time)	
Carbon Monoxide	Primary	8-hour	9 ppm	No data	
		1-hour	35 ppm	No data	
Lead	Primary and Secondary	Rolling 3-month average	0.15 µg/m ³	No data	
Nitrogen Dioxide	Primary	1-hour	100 ppb	No data	
	Primary and Secondary	Annual	53 ppb	No data	
Ozone	Primary and Secondary	8-hour	0.070 ppm	0.066 ppm	
Particulate Matter	PM _{2.5}	Primary	12 µg/m ³	6.0 µg/m ³	
		Secondary	15 µg/m ³	6.0 µg/m ³	
	PM ₁₀	Primary and Secondary	24-hour	35 µg/m ³	16.7 µg/m ³
		Primary and Secondary	24-hour	150 µg/m ³	No data
Sulfur Dioxide	Primary	1-hour	75 ppb	2.5 ppb	
	Secondary	3-hour	0.5 ppm	No data	

ppm - parts per million

ppb - parts per billion

µg/m³ - micrograms per cubic meter

Source: NYSDEC 2017 (http://www.dec.ny.gov/docs/air_pdf/2017airqualreport.pdf)

Based on available data summarized in Table 7, ambient air monitoring conducted by the NYSDEC indicates that there have been no violations of the State or National Ambient Air Quality Standards (NYSDEC 2017).

Sensitive receptors. The following sensitive receptors (*i.e.*, churches/synagogues/mosques, schools, senior homes, public access areas, *etc.*) were identified proximal to the project area:

Proximal to Proposed Project⁶⁴

- Westminster Moriah Olivet Presbyterian Church (730 Broadway)
- Bosnian Islamic Association of Utica (306 Court Street)
- Beit Shalom (49 Franklin Square)
- Mohawk Valley Montessori, LLC (714 Washington Street)
- Marlon's Daycare (Kennedy Plaza)
- The Children's Center (415 Court Street)

⁶⁴ Several sensitive receptors are located within the project footprint, but would be relocated as part of the IHC project. Facilities to be relocated consist of: Turning Point Church (438 Columbia Street), and John Bosco House (closed; 425 Lafayette Street). A few residences will also be relocated.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

3.4.2 Potential Impacts

Precluding implementation and maintenance of appropriate mitigation measures, the following adverse impacts could occur from construction and operation of the project.

Construction

Dust generation during construction (including demolition activities)

- Dust generation associated with demolition and construction activities within the project footprint
- Dust generation associated with access and egress to and from the site by construction workers, as well as equipment and materials over the 40-month construction schedule

The potential for dust-related impacts is considered short-term; limited to the construction phase when bare soils are exposed.

Short-term emissions from construction equipment

- Release of exhaust from the combustion of fossil fuels in construction vehicles and equipment and workers accessing and egressing the project area

Fugitive emissions from regulated materials/impacted soils

Due to the age of existing buildings within the project footprint, it is likely that building materials will contain hazardous materials such as asbestos-containing materials (ACMs) and lead-based paint (LBP), which would need to be identified and managed prior to initiation of demolition activities.

In addition, as previously stated in Section 3.1, soils and other substrates may have been adversely impacted by prior or existing land uses. Cumulatively, these existing conditions have the potential to result in the following impacts during construction:

- Dust generation and migration during project-related demolition activities (*i.e.*, ACM, LBP), as well as from soils, which may have been impacted by prior or existing land use

Operation

Operation phase emissions

New York's air permitting program identifies and controls sources of air emissions. The air permitting program is required by the Clean Air Act and under New York State law and regulation, most notably 6 NYCRR Part 201. The program is administered by the NYSDEC's Division of Air Resources, which evaluates the type and magnitude of proposed emissions to identify permit applicability. Permitting options consist of:

- **Title V facility permits** – Title V permits are issued to facilities that are judged to be major emission sources under the department's regulations, or that are subject to New Source Performance Standards (NSPSs), to a standard or other requirement regulating hazardous air pollutants or to federal acid rain program requirements.
- **State facility permits** – State facility permits are issued to facilities that are not considered to be major (as defined in the department's regulations), but are generally large facilities with the following characteristics:
 - » Their actual emissions exceed 50 percent of the level that would make them major, but their potential to emit as defined in 6NYCRR Part 200 does not place them in the major category
 - » They require the use of permit conditions to limit emissions below thresholds that would make them subject to certain state or federal requirements
 - » They have been granted variances under the department's air regulations
 - » They are new facilities that are subject to New Source Performance Standards (NSPS) or that emit hazardous air pollutants

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- **Registrations** – Non-major facilities that meet the criteria of [Subpart 201-4](#) can register under the department's permitting program, rather than obtain a permit. Registrations are ministerial in nature and have no formal notice requirements.
- **Permit exempt and trivial activities** – The owner or operator of an emission source listed as an exempt or trivial activity⁶⁵ is exempt from the NYSDEC registration and permitting provisions.

IHC operations will result in air emissions from boilers, emergency generators, and additional minor sources. In accordance with New York State regulations⁶⁶, the proposed emission sources are exempt from permitting (*i.e.*, exempt and trivial activities). In addition, the annual potential to emit (PTE) is below the Title V major source thresholds. Based on the expected air emission sources, it is likely that the proposed hospital will not require an air permit or registration.⁶⁷ MVHS-IHC will still be required to meet the requisite air quality standards regardless of the need for permitting. Adherence to these standards will mitigate potential significant adverse impacts.

Mobile Sources

- The project will generate vehicular emissions from employees and visitors accessing and egressing the IHC. Carbon monoxide (CO) is the major pollutant emitted by motor vehicle exhaust systems
- Potential increase in mobile source emissions due to project-related increases in traffic and road closures and its potential adverse impact on traffic flow within the local road network

3.4.3 Mitigation Measures

The following mitigation measures are proposed to minimize or eliminate the potential for, and/or significance of, potential adverse impacts.

Construction

Dust generation during construction (including demolition activities)

The potential for dust generation will be minimized by E&SCs identified in Section 3.1. Based on regular inspections, the contractor(s) will also implement, as necessary, dust suppression measures throughout the construction phase. Means and methods may include:

- Water truck(s)
- Cleaning and/or sweeping of affected roadways
- Stabilized construction entrances, tracking pads and/or tire wash systems.

Short-term emissions from construction equipment

The contractor(s) will be required to implement the following measures to minimize impacts:

- Preparation and implementation of a maintenance and protection of traffic plan in accordance with the Manual on Uniform Traffic Control Devices (MUTCD) for Streets and Highways⁶⁸ (see Section 3.7) to minimize traffic delays and queued vehicle exhaust emissions
- Proper maintenance of vehicles and equipment including mufflers and other required emissions control devices

⁶⁵ 6 NYCRR Subpart 201-3 (Permit Exempt and Trivial Activities).

⁶⁶ Title 6 of the New York Code, Rules and Regulations (6 NYCRR) Section 201-3.2.

⁶⁷ The proposed individual air emissions sources are expected to be exempt from permitting pursuant to 6 NYCRR 201-3.2 (1)(i), (6), (7) and (21). The facility-wide potential emissions are less than the Title V major source thresholds and the projected facility-wide actual emissions are less than 50% of the major source threshold. As such, the facility is not expected to be required to obtain an air facility registration or permit.

⁶⁸ <https://mutcd.fhwa.dot.gov/kno-overview.htm>

- Use of low sulfur diesel fuel
- Best available technology to achieve the greatest reduction in particulate emissions
- Adherence to New York State ECL, which prohibits heavy duty vehicles, including diesel trucks, from idling for more than five minutes at a time.⁶⁹

Fugitive emissions from regulated materials/impacted soils

Prior to the initiation of construction activities, a hazardous building materials survey will be conducted to identify the potential presence of hazardous materials such as ACM and LBP in buildings to be demolished. In addition, an additional environmental subsurface investigation will be conducted (including soil and groundwater sampling) to evaluate potential impacts from past or existing land use, if any, that would require special handling and disposal during construction activities. Samples will be analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), Target Analyte List (TAL) metals and total petroleum hydrocarbons (TPH). Soil sampling results will be compared to NYSDEC Part 375 Soil Cleanup Objectives (SCOs) for Unrestricted Use and for Restricted Commercial Use; groundwater sampling results will be compared to NYSDEC Division of Water Technical and Operational Guidance Series (TOGS 1.1.1⁷⁰) Ambient Water Quality Standards and Guidance Values for Class GA waters.

Based on the data, wastes will be removed, stockpiled, handled, transported and disposed in accordance with applicable local, state⁷¹ and federal regulations. Waste management protocols (including reporting and manifesting) will be implemented in addition to E&SCs and dust suppression measures previously identified.

Operation

Operation phase emissions

As noted above, the type of proposed emissions currently contemplated from the IHC are considered trivial and/or exempt activities; no air permit or registration is required. As design activities continue, proposed combustion operations may trigger additional the need for a permit and/or emission controls. The need for emission controls, if any, will be identified through continued consultation with the NYSDEC.

Mobile Sources

The following measures will be implemented to mitigate or avoid potential impacts from mobile sources:

- Optimization of signal timings at the following intersections to facilitate the adequate flow of traffic adjacent to the project area (see also Appendix F):
 - » State Street & Lafayette Street/Emergency Department Access (PM)
 - » State Street & Court Street (PM)
 - » Cornelia Street & Oriskany Street (AM & PM)
 - » Broadway & Oriskany/Liberty Street (AM)
 - » Oriskany Street & Genesee Street (PM)

⁶⁹ 6 NYCRR, Subpart 217-3.

⁷⁰ http://www.dec.ny.gov/docs/water_pdf/togs111.pdf

⁷¹ For ACM abatement projects, the New York State Department of Labor's Code Rule 56 requires that all work that disturbs ACM be done by trained workers following special procedures and engineering controls (including air monitoring) to prevent the spread of asbestos into the air and ensure ACM has been properly removed.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- The locations of heating, ventilation and air conditioning (HVAC) systems, as well as the direction of prevailing winds, will be identified. Helipad operations will be located sufficiently away from ventilation systems to prevent impacts from helicopter engine exhaust fumes and rotor-wash.⁷²
- The helipad and adjacent area will be kept free of debris to prevent flying objects and significant dust from the high winds created by rotor-wash. Landscape mulch will not be utilized in the area surrounding the helipad.

Based on implementation of construction and operation phase mitigation measures described above no significant adverse impacts to air quality associated with construction activities or operations are anticipated.

3.5 AESTHETIC RESOURCES (INCLUDING LIGHT)

The proposed action may have an impact on aesthetic resources. The following potential impacts, identified in the scoping process, are evaluated in this section:

Construction

- Temporary construction-related lighting impacts from mobile sources (*e.g.*, trucks, heavy machinery)
- Visible signs of construction (secondary impact from Section 3.1 – *Land*)

Operation

- Outdoor lighting will include signage, lamp posts and building-mounted fixtures in exterior parking areas, walkways and entrances to the hospital, hospital helipad operations, and other project-related facilities, as applicable, which may result in light shining onto adjoining properties and creating sky-glow brighter than existing area conditions
- Potential impacts on viewshed due to the proposed height of the building

3.5.1 Existing Conditions

The proposed IHC will be constructed in the northwest corner of the City's Central Business District (CBD), which has also been designated as a Federal "Historically Underutilized Business" (HUB) Zone. Land uses within this district are subject to the applicable standards codified in the City of Utica's Zoning Code (Section 2-29-193).

The existing building scale within the CBD and the surrounding area is a diverse mixture of building heights, consisting of mostly low rise (1-4 stories) and mid-rise (5-10 stories) buildings, with a few high-rises (11+ stories) buildings located to the east of Genesee Street. The area is gently sloping (~5%). While the project area is characterized by buildings greater than 50+ years in age, many of them have undergone 20th and 21st century modifications (see Section 3.6; including Appendix E, which contains a photolog of existing buildings).

The project footprint contains approximately 80± tax parcels and a diversity of property types including mixed use, commercial, offices/warehouses and parking; some properties are vacant/abandoned. The property types are further broken down as summarized in Figure 7.

⁷² Rotor-wash is a column of downward moving air produced by helicopters during the approach or departure phase of a flight. Rotor-wash can carry dust and exhaust several hundred feet and can also be influenced by air currents and building architecture (NEMSPA 2010; <http://slideplayer.com/slide/1422568/>).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

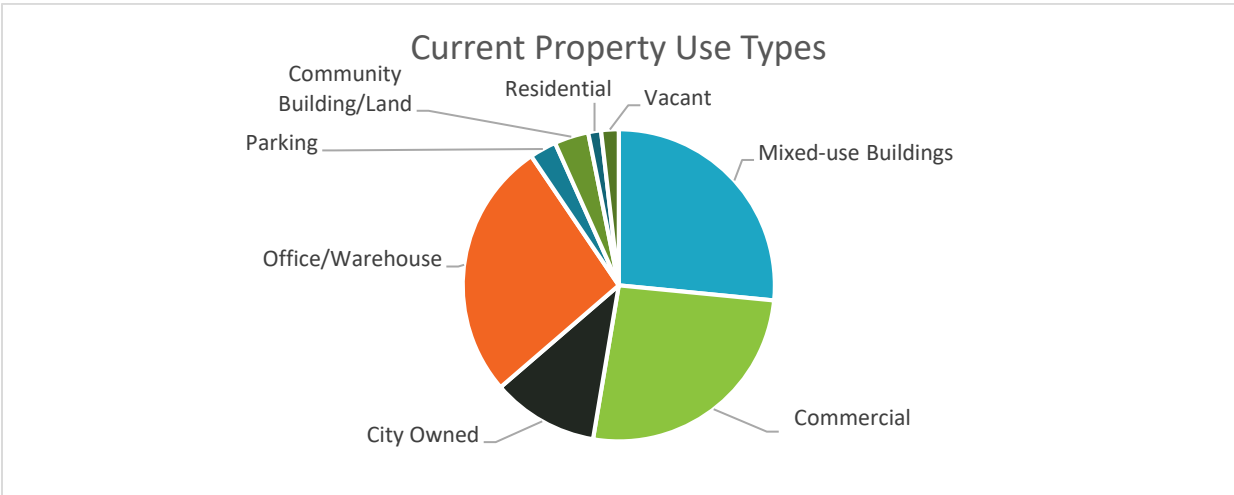

Figure 7. Current Property Use Types

Exterior lighting within and adjacent to the project area is currently used for safety and security along streets, parking areas and buildings. The City has enacted a municipal glare standard (§ 2-29-526 of the City Code⁷³). An excerpt from the ordinance, which summarizes the glare standards by zoning districts, is provided below.

§ 2-29-526. Glare standards. (a) The City shall...

(b) The City shall...

(c) The City shall...

(d) The City shall...

(e) The City shall...

(f) The City shall...

TABLE III
MAXIMUM ILLUMINATION OF LIGHT SOURCES

Location	General	Special
Public buildings and facilities	10 foot-candles	5 foot-candles
Commercial buildings	10 foot-candles	5 foot-candles
Industrial buildings	10 foot-candles	5 foot-candles
Offices	10 foot-candles	5 foot-candles
Warehouses	10 foot-candles	5 foot-candles
Parking areas	10 foot-candles	5 foot-candles

TABLE IV
Maximum Foot-Candle Illumination

Zone	Residential Zone		Commercial Zone

⁷³ <https://ecode360.com/ut2994#ut2994>

3.5.2 Potential Impacts

Precluding implementation and maintenance of appropriate mitigation measures, the following adverse impacts could occur from construction and operation of the project.

Construction

Construction-related Lighting

Lighting needed during the project construction-phase has the potential to generate light spillover to off-site land uses within the Project vicinity, including the residential apartment complex to the south, and hotel uses to the east of the project area.

Visible Signs of Construction

As identified in Section 3.1 – *Land*, extended periods of construction can result in excavated areas, stockpiled soils, and other materials, as well as heavy equipment and other visual signs of construction that could temporarily impact the visual character of the area.

Operation

Light and Glare

Outdoor lighting will be provided for on-site safety and security. Outdoor lighting will include signage, building-mounted fixtures and lamp posts to promote safe and secure access/egress to buildings, parking areas and other IHC and MOB project elements/operations, as well as connectivity to adjacent communities. If unmitigated, lighting has the potential to spillover to adjacent properties and contribute to urban glare (see Section 3.5.3).

Viewshed

The proposed action will replace the predominant 19th and 20th century architectural building styles, which currently characterize the project footprint. While the IHC will replace these existing styles, the current design⁷⁴ is consistent with recent City-approved and completed modifications to the Utica Memorial Auditorium (Aud) and Landmarc buildings, as well as styles proposed for the Utica Inner Harbor Redevelopment and NEXUS projects.

Architectural renderings illustrating the proposed viewshed from various adjacent vantage points are provided below (Figure 9 through Figure 11).

⁷⁴ The design of the “podium” (1st and 2nd floors) will emulate the masonry paradigm of the local architecture.

Figure 11. View of the Proposed IHC from the Southeast
(Source: NBBJ 2018)

3.5.3 Mitigation Measures

The following mitigation measures are proposed to minimize or eliminate the potential for, and/or significance of, potential adverse impacts.

Construction

To reduce or eliminate construction phase aesthetic impacts, the following measures may be implemented:

Construction-related Lighting

Construction would occur primarily during daylight hours, and construction lighting would only be used for the duration needed if construction were to occur during evening hours. Construction-related illumination would be used for safety and security purposes only, and would be shielded and/or aimed so that no direct beam illumination is provided outside of the project site boundary.

Visible Signs of Construction

To mitigate the visual effects of construction and provide for site safety, contractor(s) may implement means and methods to shield direct views of, and to minimize potential pedestrian and vehicular distractions from, on-going construction activities. Following the completion of construction activities, disturbed pervious areas will be graded, seeded and landscaped.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Operation

To reduce or eliminate post-construction aesthetic impacts, the following measures may be implemented:

Light and Glare

To mitigate light migration and glare, the project will be designed to conform with City Code requirements (City Code Section 2-29-387), which require the following:

- The illumination of off-street parking facilities shall be designed so that the light from lighting fixtures in such facilities does not reflect direct rays or spill over into adjacent residential districts. Lighting arrangements for all off-street parking facilities shall be approved by the City
- Lighting fixtures shall not be placed higher than 12 feet above the finished grade, except that in business districts the Planning Board may approve lighting fixtures of a greater height, but not exceeding 25 feet above the finished grade
- Fixtures shall be of the non-spill type, hooded/shielded with reflective cut-offs to reduce glare
- Candle power per fixture shall not exceed 3 foot-candles measured at grade level directly under the fixture.

Outdoor site lighting for the proposed IHC will consist of a combination of pole-mounted, bollard-mounted, or wall-mounted LED lighting. Lighting of the surface parking lots and access roadways will be accomplished using approximately 127-watt LED fixtures mounted on 25-foot high poles. The poles will be spaced appropriately to provide acceptable lighting levels, no greater than 3 foot-candles measured at grade directly under the fixture. The fixtures will be hooded to reduce glare, and direct light downward to the parking lot surface.

Walkways will be lit using both bollard and pole mounted LED light fixtures. Pole mounted walkway lighting will be approximately 66-watt fixtures on 12-foot poles, and bollard lighting will be 28-watt fixtures.

To further minimize light or glare impacts, the following additional measures will be considered:

- Building design would use low-reflective glass and other materials, window recesses and overhangs, and façade modulation
- The amount of reflective surfaces may be limited
- Landscaping, screens, and “green walls” may obstruct light from shining to off-site locations
- Nighttime illumination of the site and selected buildings may be restricted and provided only when function or safety requires it
- Interior lighting, if appropriate, would be equipped with automatic shut-off times. Automatic shades may be installed where lighting is required for emergency egress
- Parking lots and structures may include screens or landscaping to obstruct glare caused by vehicle headlights.

Adherence to New York Building Code requirements for outdoor lighting, as well as the use of the mitigation measures described above should provide sufficient mitigation to eliminate potential significant adverse impacts related to aesthetics from light and glare. Specific information relative to stationary building fixtures and signage would be provided as part of the construction level plans associated with the City’s Building Permit process.

Viewshed

The project will require City Planning Board approval of the IHC site plan, as well as City issuance of building permits based on compliance with the New York State Building Code. As provided above, preliminary architectural renderings were prepared by MVHS to illustrate future views from various vantage points

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

surrounding the proposed IHC. MVHS's objective is to provide a campus-like setting, which is consistent with, and provides connectivity to, existing, adjacent land uses. The design also considers:

- Scale-reducing elements, particularly at areas exposed to people activity (e.g., building entrances, adjacent to walkways, places of high visibility)
- Pedestrian amenities such as wayfinding, benches, historic markers, and bike racks
- A landscape design, which promotes pedestrian interest, scale, partial building screening and building contrast
- The long-term maintenance of landscaped areas.

3.6 HISTORIC AND ARCHAEOLOGICAL RESOURCES

The proposed action may have an impact on cultural and/or archaeological resources. The following potential impacts, identified in the scoping process, are evaluated in this section:

Construction

- Potential impacts to archaeological resources due to ground disturbances

Operation

- Potential impacts to historic properties located within or substantially contiguous to the project area including:
 - » parcels listed or eligible for listing on the State or National Registers of Historic Places
 - » parcels located in the Upper Genesee Street Historic District
- The proposed action will result in the destruction or alteration of all or part of the site or property
- The proposed action may result in the introduction of visual elements, which are out of character with the site or property, or may alter its setting (see Sections 3.5 and 3.12)

3.6.1 Existing Conditions

Phase 1A Archaeological Investigation

Purpose

In September 2016, OBG provided the New York State Office of Parks, Recreation and Historic Preservation (OPRHP) – Field Services Bureau (also known as the State Historic Preservation Office or SHPO) with preliminary information for the proposed project. An OPRHP Project Review Cover was submitted in October 2016 and assigned an OPRHP/SHPO Project Review Number (16PR06600). In their October 2016 correspondence (see Appendix E), OPRHP indicated that:

Based on available information, your project is located in an archaeologically sensitive area. Because of the size of the proposed project, the hypothesized intersection of the Erie and Chenango Canals within your project area, the presence of a previously identified archaeological site (06540.001655), and the potential for cultural resource deposits to be intact within the subject parcels, OPRHP recommends that a Phase IA Archaeological Survey is warranted for all portions of the project that will involve ground disturbance. A Phase IA survey is a literature search and sensitivity study, designed to systematically assess the significance of, and overall sensitivity for cultural resources within your project area's Area of Potential Effect (APE). This study will subsequently be used to make recommendations regarding whether or not any further, subsurface investigations are warranted.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

In April 2018, Panamerican Consultants, Inc. (Panamerican) conducted a Phase 1A⁷⁵ Archaeological Investigation of the APE (project area) (Appendix E). The study was conducted to assess the APE for:

- Archaeological sensitivity
- The presence of any existing State or National Register of Historic Places-listed or -eligible resources (individual and historic districts).

The purpose of the Phase 1A investigations were to identify previously recorded cultural and archaeological resources and that may be impacted by the proposed project and to assess the likelihood that unrecorded resources may be present within the APE of the proposed project (New York Archaeological Council NYAC] 1994). The investigations included preparation of prehistoric and historic contexts of the project area; a site file and literature search, documentary and historical map search, as well as the examination of properties listed in the New York State and National Registers of Historic Places (S/NRHP), each of which are summarized below.

Prehistoric and Historic Contexts

The major cultural traditions manifested in central New York State during the Prehistoric Period through the Twentieth Century are described in full report provided as Appendix E. Excerpts from the report are provided below:

- **Prehistoric (Precontact) Period** - The three major cultural traditions in central New York State during the prehistoric era were the Paleo-Indian (ca 12,000-8000 BC), Archaic (ca 8000-1000 BC), and Woodland (1000 BC-AD 1500). Cultural development of the area can be summarized as a gradual increase in social complexity, marked by several important cultural or technological innovations.
- **Contact Period (AD 1500-1650)** – During the late prehistoric and Contact periods, tribal clusters of Iroquoian-speaking peoples were distributed throughout New York State and lower Ontario. Comprising several thousand people in at least one, and usually several, villages in proximity to one another, each tribal cluster was separated from the others by extensive and widespread hunting and fishing areas. Native American groups in central New York were profoundly affected by the introduction of the fur trade, long before the arrival of a permanent European-American population in the area. This period dates the beginning of the end of traditional native cultural patterns due to ever-increasing political, military, religious and economic interactions with Europeans.
- **Historic Period** – As a result of the increasing supply of workers, factories in Utica flourished between ca. 1890 and 1950. Textile mills and knitting factories were especially robust. Industry expansion included the emergence of Oneida Mills, Frisbie-Stansfield Knitting Company, and Utica Knitting Company as national leaders in the knit goods industry. Other large companies included the Mohawk Valley Cotton Mill which merged with the Utica Steam Cotton Company in 1901. The height of the Utica textile industry was 1910 when nearly two-thirds of the city's inhabitants worked in textile-related industries. Transportation changes facilitated the industrial development as establishment of the textile industry emerged with the completion of the Erie and Chenango canal. Beginning in 1886 streets of the city began to be paved with asphalt, beginning with Rutger Street. In 1887, the Utica Electric Light Company began to provide street lighting, "starting in the business section, although lighting for residential districts...soon followed". The electric streetcar was introduced in the 1890s and an interurban electric line, Utica & Mohawk Valley, ran between Rome and Little Falls during the early twentieth century. The Utica Belt Line Railroad system ran along Lafayette, Columbia, and State streets. With the closure of the Chenango canal, the northern end of the former

⁷⁵ The Phase I survey is designed to determine the presence or absence of cultural resources in the project's potential impact area. A Phase 1A study is the initial level of survey and is carried out to evaluate the overall sensitivity of the project area for the presence of cultural resources, as well as to guide potential future field investigation. The Phase IA work includes a literature search and an initial field inspection. The field inspection is conducted to assess previous disturbance and the level of testing which may be necessary. The resulting document contains a cultural history of the project area, and an evaluation of the area's known and potential sensitivity for cultural resources which might be affected by possible construction impacts.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

canal was gradually turned into a reservoir for the Erie canal. The abandoned canal channel was ultimately filled, although it was still depicted as open in 1888. As noted the canal system was reimagined and modernized during the early twentieth century and the subsequent Barge Canal was completed in 1917 through Utica. Gradually filled, the former Erie Canal channel was leveled through the city by 1923 and became Oriskany Street. The North Genesee Arterial was completed in the 1970s.

The textile industry began a slow decline after World War I as the industry was plagued by over supply and northern textile operations shifted work to mills in the South. While Utica supported more than 40 mills in 1910, only six survived in 1922. Further, transportation improvements like the trolley and later the automobile freed workers from living in proximity to their places of employments. This freedom resulted in workers, especially the better paid, seeking to find living arrangements in less crowded and noisy places and gave rise to suburban housing areas. By 1940 the city had a population of 100,518. After the war, General Electric opened a factory in Utica which expanded during the 1950s as the Cold War intensified. This factory helped offset the loss of textile jobs as GE employed more than 5,800 people at the close of the 1950s. During this period large infrastructure projects like the construction of the North- South Arterial (NYS Route 12), the East-West Arterial (NYS Route 5S), and the Sauquoit Valley Arterial (NYS Route 8) helped speed the development of residential suburbs and draw residents from the central city. In addition, the completion of the New York State Thruway (Interstate-90) north of the city in the mid- 1950s helped commerce bypass the area. During the late 1950s and 1960s, urban renewal plans led to the demolition of numerous city buildings, which became vacant lots when proposed projects did not materialize. In 2006, structures in the area were demolished for a police support facility. A major economic development in the area during the twentieth century was the construction of the U.S. Air Force repair and maintenance depot, which served the entire northeastern section of the nation. This facility would develop into Griffiss Air Force Base, northeast of the City of Rome. The base closed in the late 1990s, although Rome Laboratories (now the Air Force Research Laboratory) continued to utilize buildings within the facility, which has become the Griffiss Business and Technology Park. The City of Utica had a population of 62,235 in 2010.

Site File and Literature Search

A review of archaeological site files on the New York State Office of Parks, Recreation, and Historic Preservation (OPRHP)/New York State Historic Preservation Office's (SHPO) Cultural Resource Information System (CRIS) (<https://cris.parks.ny.gov>) was performed. Early archaeological surveys by Beauchamp (1900) and Parker (1922) were consulted. Later archaeological investigations by Ritchie (1980) and Ritchie and Funk (1973) do not report the presence of archaeological sites in the project area. One archaeological investigation (PIN 2134.41.121, New York State Routes 5, 8, and 12) was conducted within the APE according to the OPRHP/SHPO CRIS, which resulted in the identification of one archaeological site previously reported within the project's APE. The site is summarized below. Additional sites (48) were identified within one-mile of the APE.

- **442 Lafayette Street** – The archaeological site reported within the APE is a historic period site (NYSM 12153; USN A06540.001655). A scatter of historic materials (*e.g.*, ceramics, glass, nails, and bricks) was found at the site. National Register eligibility of the site is undetermined. Based on field reconnaissance, the site is located within the yard of the extant building. Access was not available during the Phase 1A field reconnaissance, but aerial imagery and site photographs show this to be a small grass yard. A view toward the site from outside the property limits is presented in Appendix E, Photograph 18).

Precontact Archaeological Sensitivity

The former natural setting of the project area in proximity to the Mohawk River indicates that the APE is sensitive for precontact archaeological sites. Three precontact archaeological sites (or sites with a precontact component) were previously found within one mile of the APE including: 617 Cooper Street Historic & Precontact Site (USN A06540.001660; NYSM 12158); 613 Court Street Historic and Precontact Site (USN A06540.001668; NYSM 12166); and 613 Court Street Historic and Precontact Site (USN A06540.001668; NYSM 12166).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

However, years of urban development very likely disturbed or destroyed any precontact sites if any are or were present. The overlay comparison of historic maps identified only four small locations where no structures were ever recorded and thus are presumably the least disturbed (see Appendix E, Figure 15). It is possible that archaeological sites could be covered by fill and pavement but due to the size of the APE, mechanical removal of fill/pavement is not logistically practical. The possibility of finding archaeological sites beneath fill is too low to warrant the level of effort required to conclusively determine their presence or absence. The most practical approach to assess the extent of soil disturbances and archaeological sensitivity would be the review of soil-boring data which recorded the depth of fill and stratigraphy.

Historic Archaeological Sensitivity

The project area is sensitive for the presence of a variety of historic archaeological resources associated with, but not exclusive to, urban centers. As noted above, an historic site identified as 442 Lafayette Street Historic Site (NYSM 12153; USN A06540.001655), is within the APE. The site's National Register eligibility is presently undetermined and, therefore, the site will likely require Phase 2 investigation to assess its significance. Although it's possible that historic structural foundations and other cultural features could be present beneath pavement and/or fill, the likelihood of intact historically significant cultural resources is considered low.

Phase 1A Architectural Inventory

Purpose

In addition to the Phase 1A Archaeological Investigation (Appendix E), Panamerican conducted a preliminary architectural survey of existing buildings within the APE. The purpose of the Phase 1A architectural inventory (Appendix E) was to identify if any existing State/National Register of Historic Places-listed or -eligible resources (individual and historic districts) are present within the APE for the project and to provide an inventory of architectural resources (structures) in the Project APE as per the request of the ORHP. Building information provided in this report will assist the OPRHP with their evaluation of the historic significance of all buildings/structures/historic districts within or adjacent to the project area. The Phase 1A Architectural Inventory included the following:

- Documentary and historical map research
- An online search of the SHPO's CRIS
- Identification of properties listed or eligible in the New York State and National Registers of Historic Places (S/NRHP) in the APE
- A pedestrian survey⁷⁶ of buildings in the project area

The inventory included photographic documentation of the existing conditions characterizing the APE (see Appendix E).

Findings

A tabular list of all buildings in the Project APE and their current S/NRHP eligibility information was presented in the Panamerican report (see Appendix E, Table 4.1). The building inventory includes an annotated list arranged in alpha-numerical street address order. Building descriptions and current photographs are included in the inventory. The locations of documented buildings are identified by street address on a project map included in the report (see Appendix E). Recommendations of S/NRHP eligibility were not provided in this Phase 1A inventory.

⁷⁶ A pedestrian survey limited to visual inspection of the exterior of buildings from public rights-of-way in the APE was conducted in March 2018. All buildings in the Project APE were photographed with a digital camera. Information gathered for each building included the following: location, approximate date of construction (*i.e.*, circa date); architectural style; physical characteristics; building materials; integrity of the resource; and other defining features.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Forty-nine architectural resources were identified in the Project APE; 43 buildings older than 50 years of age and six buildings less than 50 years of age (see Appendix E, Table 4.1). Three contributing resources to the State/National Register-Listed Downtown Genesee Street Historic District are also located in the Project APE:

- 301 Columbia Street (USN 06540.002010)
- 608 Broadway (building section in APE at 335 Columbia Street per parcel data [USN 6540.002007])
- 401-407 Columbia Street (USN 6540.002011)

Four existing National Register-eligible architectural resources are in the Project APE:

- 440 Lafayette Street (USN 06540.001491)
- 442 Lafayette Street (USN 06540.001490)
- 444 Lafayette Street (USN 06540.001489)
- 506 Columbia Street (shares address with 509 Lafayette Street (USN 06540.001555))

The survey documented thirty-four resources that are not presently in the OPRHP historic resource database (CRIS). The locations of all documented buildings are identified on the survey map included in Appendix E (Figure 4.1).

The report (and inventory) was subsequently submitted to SHPO via CRIS to obtain recommendations as to each building's S/NRHP eligibility. In correspondence dated July 17, 2018 (see Appendix E), SHPO indicated that the project area includes a portion of the Downtown Genesee Street Historic District, which is listed in the New York State and National Registers of Historic Places. The project area also includes 10 other buildings, which have been identified by SHPO as eligible for inclusion in the registers. The properties are summarized in Table 8, below.

Table 8. List of Historic Resources

SHPO USN	Address	Property Name	SHPO Determination of Eligibility
06540.002010	301 Columbia Street	Brick Commercial	NR Listed in the Downtown Genesee Street Historic District
06540.002095	326-334 Columbia Street	Haberer Building	S/NR Eligible
06540.002011	401 Columbia Street	Brick Commercial	NR Listed in the Downtown Genesee Street Historic District
06540.002107	460-464 Columbia Street	Witzenberger Building	S/NR Eligible
06540.000101	300 Lafayette Street	Former Utica & Mohawk Valley Railway Car Barn/Electric Express/Girard Chevrolet Service Garage	S/NR Eligible
06540.02114	333 Lafayette Street	Childs Building	S/NR Eligible
06540.002119	437 Lafayette Street		S/NR Eligible
06540.001489	440 Lafayette Street	L. Snyder House	S/NR Eligible
06540.001490	442 Lafayette Street	S. Isele House	S/NR Eligible
06540.001491	444 Lafayette Street	C & A Eichmeyer House	S/NR Eligible
06540.001555	509 Lafayette Street	Utica Turn Hall/Utica Turnverein	S/NR Eligible

Source: SHPO (July 2018)

3.6.2 Potential Impacts

Implementation of the IHC project would result in substantial demolition and new construction within a majority of the APE, as well as the elimination of several city streets (or portions thereof) (see Figure 3). In the absence of appropriate mitigation measures, the following adverse impacts could occur from construction of the project.

Archaeological Sensitivity

In correspondence dated June 18, 2018 (Appendix E), SHPO identified the following potential project-related impacts on archaeological resources:

- Disturbance of a known archaeological site – 442 Lafayette Street (NYSM 12153; USN A06540.001655)
- Potential impacts to sections of the Chenango Canal and associated Huntington Basin, which may remain intact with the project's APE (possibly deeply); the area includes the following properties within the APE:
 - » Chenango Canal: 318-333 Oriskany Street, 402 Oriskany Street, 514-524 Lafayette Street, 506 Columbia Street, and depending on the degree of disturbance related to recent arterial construction, possibly 509 Lafayette Street
 - » Huntington Basin: 401 & 402 State Street, and the section of State Street between these addresses.
- Potential site disturbance impacts to parcels deemed archaeologically sensitive by SHPO, which recommended further testing:
 - » 437 Lafayette Street
 - » 458 Columbia Street
 - » Witzemberer Building (460-464 State Street)
 - » 450-454 State Street (SHPO notes that a foundation associated with a structure on this property was previously partially exposed during some sidewalk related impacts).

Architectural Inventory

Based on information provided above and in Appendix E, at least two contributing buildings within the listed district and ten eligible historic resources may be demolished during implementation of the project. These resources are identified in Table 8; resource locations are illustrated on Figure 4.1, Appendix E.

3.6.3 Mitigation Measures

To mitigate, minimize or eliminate the potential for, and/or significance of, potential adverse impacts, the Dormitory Authority of the State of New York (DASNY)⁷⁷, OPRHP and MVHS have commenced the consultation process as required by the State Historic Preservation Act ("SHPA"). The first step in that process involved the preparation and submission of the surveys prepared by Panamerican (Appendix E). OPRHP, DASNY and MVHS are now in the process of developing a Letter of Resolution (LOR) that will set forth the mitigation measures that minimize the effects on known and as of yet unknown historic properties. It is anticipated that some of the mitigation measures will include the following:

Buildings

- Once site control of the project's Project Impact Area (PIA) is secured, MVHS will complete an assessment of the conditions of each of the buildings identified as historic and listed in the LOR (see Table 8 and Appendix E) that will be proposed for removal

⁷⁷ DASNY administers grant funding for construction of the IHC (see Section 1.2.2).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- The assessment will include photographs of exterior and interior conditions. Sufficient (10 to 20) images should be prepared to provide OPRHP with a general understanding of the state of the resource. These images along with a written assessment of the general condition of the building will be submitted to OPRHP via the CRIS program

Archaeology

- Archaeological testing, as previously requested by OPRHP (see Section 3.6.2 and Appendix E), will commence once MVHS obtains site control
- No ground disturbing activities in the PIA will commence until all archaeological testing has been completed at each identified site and the results of the testing have been reviewed by OPRHP
- Associated archaeological survey reports must be filed with OPRHP in a timely manner and must meet New York State Archaeological Standards
- Unanticipated discoveries, including the discovery of human remains during construction, will follow the protocol outlined in Appendix E

Treatment Measures (Buildings)

In accordance with Section 14.09, efforts that would avoid or minimize impacts to historic buildings should be explored and documented. An alternatives analysis relating to the disposition of historic buildings in the PIA will be submitted to OPRHP for review and comment prior to any activity on the site that might damage the resources. This analysis should explore the following opportunities:

- **Avoidance:** If practicable, efforts to avoid the removal or direct impacts to buildings identified as historic (see Table 8 and Appendix E) will be explored. Documentation outlining this exploration of alternatives will be provided to OPRHP prior to any action that would directly impact the involved resource(s)
- **Minimization:** If practicable, efforts that would include options to lessen the overall, as of yet to be fully documented, impacts to historic resources will need to be explored. This assessment should include efforts to retain some or all of the historic resources in situ as part of the development planning
- **Mitigation Options:** Where it has been determined by the parties that some or all of the historic resources must be removed from the site, with appropriate justification and documentation as noted above, the following mitigation measures may be applied:
 - » MVHS will follow OPRHP's standard resource documentation process outlined in Appendix E
 - » Other appropriate mitigation for the loss of historic resources as agreed to by the parties

3.7 TRANSPORTATION

The proposed action may have an impact on transportation. The following potential impacts, identified in the scoping process, are evaluated in this section:

Construction

- Temporary road and/or sidewalk closures
- Construction vehicle & equipment/material staging
- Impacts to bus service (routes, stops)
- Increased demand for parking (construction workers)

Operation

- Increased traffic flow and operating conditions, which may exceed capacity of existing road network
- Impacts to bus service (routes, stops, capacity)

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- Impacts to pedestrian facilities (sidewalk, crosswalks)
- Increased demand for parking (employees, patients) resulting in the construction of parking area/garage for 500 or more vehicles
- Alterations to the present pattern of movement of people or goods (including road closures)

3.7.1 Existing Conditions

A traffic impact study (TIS) was prepared by C&S Engineers, Inc. (C&S) to evaluate the existing traffic conditions within and adjacent to the project area, and to assess the potential transportation impacts to the highway system from implementation of the IHC project. A summary of the TIS is provided below; the complete report is included as Appendix F.

Roadway & Intersection Characteristics

The study area limits were defined based on discussions with NYSDOT Region 2 staff. Information for the roadway and intersection characteristics within and adjacent to the proposed IHC was provided by C&S via a field visit, desktop analysis in Google Maps, and the NYSDOT Functional Class Viewer⁷⁸. Existing roadways are summarized in Table 9, and key intersections within the study area are shown on Figure 12.

Table 9. Existing Study Area Roadways

Road Name	Description
Bank Place	An urban local street situated at the eastern edge of the study area. Bank Place is a one-way road running southeast from Genesee Street to outside of the study area onto Union Street. Curb-cut buffered parking is provided on the southern side of Bank Place.
Blandina Street	An urban local street situated on the eastern edge of the study area that becomes Washington Lane at its intersection with Genesee Street. This one-lane road runs southeast from Genesee Street towards Charlotte Street (located outside of the study area). Street parking is available on both sides of the street.
Bleecker Street	An urban major collector. This two-way roadway has one travel lane in each direction and runs east/west. This roadway becomes Lafayette Street west of Genesee Street and eventually becomes County Road 241 to the east, outside of the city limits. On-street parking is available on both sides of the street within the study area. Bleecker Street includes bus stops for the CENTRO ⁷⁹ UT 12 and UT 14 bus lines outside of the study area.
Broadway	A two-way urban local street. Broadway has one travel lane in each direction and runs northeast/southwest, terminating at Court Street and Whitesboro Street (outside of the study area). Broadway provides direct access to NYS Route 5S, an urban arterial.
Columbia Street	An urban major collector. Columbia Street runs southeast/northwest from Whitesboro Street and Genesee Street (both outside of the study area). It is a two-way roadway with one travel lane in either direction. On-street parking is available on both sides of the street and has bus stops for the CENTRO UT 20, UT 11, and UT 111 bus lines.
Cornelia Street	A two-way urban street that cuts through the center of the study area. Cornelia Street runs southwest/northeast and terminates at Oriskany Street and Mandeville Street (both outside of the study area). On-street parking is available on portions of the street.
Court Street	An urban minor arterial. Within the study area, it is a two-way street with two travel lanes in each direction. This street terminates at Whitesboro Street (outside of the study area) and Genesee Street, east of which it becomes Hopper Street. Within the study area, there are no bus lines on this street or on-street parking.

⁷⁸ <https://www.dot.ny.gov/gisapps/functional-class-maps>

⁷⁹ https://www.centro.org/service_schedules/schedules-utica

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Road Name	Description
Elizabeth Street	An urban major collector that becomes Columbia Street west of Genesee Street. Elizabeth Street runs southeast/northwest, terminating at Genesee Street and Nichols Street (outside of the study area). It is a two-way road with a travel lane in both directions. There is on-street parking available on both sides of the street and the street is serviced by the CENTRO UT 12 bus line outside of the study area.
Genesee Street	An urban principal arterial. It has two travel lanes that run northeast through the study area and feeds into Oriskany Street (an urban arterial) after which it becomes North Genesee Street and feeds into I-790/I-90 (principal arterial-interstates) north of the study area. It also has two travel lanes that run southwest through the study area towards NYS Route 8 (a principal arterial expressway) and eventually terminates at NYS Route 12/Seneca Turnpike (a principal arterial) and Highway 5 (a principal arterial expressway) outside of the study area. There is on-street parking on both sides of the street throughout the study area. CENTRO bus lines that service this street include UT 15, UT 22, UT 24, UT 40, and UT 31.
Hopper Street	An urban minor arterial. Hopper Street has two travel lanes in either direction and runs northwest/southeast, connecting Steuben Park (outside of the study area) to Genesee Street. West of Genesee Street, Hopper Street becomes Court Street. On-street parking is available on both sides of Hopper Street and it is serviced by the CENTRO bus line UT 22 outside of the study area.
Lafayette Street	An urban major collector. It becomes Bleecker Street east of Genesee Street and also terminates at Whitesboro Street (west of the study area). Lafayette Street is a two-way street with one travel lane in each direction. There is on-street parking available on both sides of the street. CENTRO bus stops on this street are for the following routes: UT 11, UT 20, and UT 111 lines.
NYS Route 5S	Also known as Oriskany Street West, Oriskany Street East, and Liberty Street. Oriskany Street West begins in Yorkville and ends at the Genesee Street Intersection. Oriskany Street East begins at the Genesee Street Intersection and ends at the Broad Street Intersection. Liberty Street begins adjacent to the northern portion of Genesee Street and extends to Broadway along the one-way westbound portion of NYS Route 5S (Oriskany Street West). Although this street is not located in the study area, it is located directly to its north and runs east/west, so many of the streets running north/south in the study area do feed into it. It is an urban principal arterial and contains two travel lanes in each direction with a dividing barrier.
NYS Routes 5/8/12	NYS Routes 5/8/12 (also known as the North-South Arterial), is located on an elevated roadway west of the study area. It is an urban principal arterial other, running north/south that connects to Oriskany Street/NYS Route 5S and eventually I-790 and I-90 (all north of the study area). This road has two travel lanes in both directions with a dividing barrier.
Sayer Alley	A one-way local alley that connects Lafayette Street with Columbia Street. Sayer Alley has a bi-directional single travel lane.
Seneca Street	A two-way urban local street that dead-ends mid-block south of Lafayette Street to provide on-street parking to local businesses. North of Lafayette Street, Seneca Street is a two-way urban street with on-street parking available on both sides. This portion of the street provides access to Oriskany Street outside of the study area before becoming Water Street. It has one travel lane in each direction.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Road Name	Description
State Street	An urban minor arterial. State Street runs along the western edge of the study area and terminates outside of the study area on Genesee Street to the south and Oriskany Street to the north where it provides the only direct access to I-790 and I-90 via NYS Routes 5/8/12 since the northbound access at Court Street was eliminated. Within the study area, it has two travel lines in each direction. On-street parking is only available on the 700-block of the street.
Washington Street	An urban local street located in the northern portion of the study area. This two-way street has one travel lane in each direction to provide access from Lafayette Street to Oriskany Street. It terminates to the north of the study area on Whitesboro Street. Within the study area, parking is available on the western side of the street.
Washington Lane	A two-way, one-block urban local street. East of Genesee Street, Washington Lane becomes Blandina Street. At its termination to the west, it becomes Washington Street. Washington Lane mainly provides access to the Washington Street Parking Garage and does not have on-street parking available.

Source: C&S (TIS, Appendix F)

Figure 12. Study Intersections
Source: C&S (TIS, Appendix F)

Existing traffic and pedestrian data was collected during peak commuter travel periods at key intersections within the study area on July 18th and 19th, 2018. While peak hours for individual intersections varied, the overall study peak morning and evening hours were determined to be from 7:45 am – 8:45 am and 4 pm – 5 pm, respectively. The highest pedestrian volumes were noted along the Genesee Street intersections, as well as along Columbia Street at Cornelia Street and State Street. There were very few bicyclists observed during the peak hours. The existing AM and PM peak hour traffic and pedestrian volumes for the study area intersections are shown on Figures 2.2 and 2.3 of Appendix F, respectively.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

The study intersections were analyzed using SYNCHRO 10⁸⁰, a computer program that implements the methods presented in the Highway Capacity Manual⁸¹ (HCM). SYNCHRO determines the level of service (LOS⁸²), which is defined in terms of delay, as well as anticipated queue lengths. The LOS for both signalized and unsignalized intersections are defined in terms of control delay. Control delay is a measure of the total travel time lost and includes slowing delay, stopped delay, queue move-up time, and start-up lost time. LOS thresholds are defined as average delay in seconds per vehicles over a fifteen-minute analysis period and range from LOS A to F for both signalized and unsignalized intersections. An overall intersection LOS D or better is generally considered acceptable at a signalized intersection. An overall intersection LOS E or better is generally considered acceptable at an unsignalized intersection. The following table provides a summary of the LOS thresholds as defined in the HCM (2010).

Table 10. Intersection Level of Service Criteria

Level of Service (LOS)	Signalized Intersection Delay (sec)	Unsignalized Intersection Delay (sec)
A	0-10	0-10
B	> 10-20	> 10-15
C	> 20-35	> 15-25
D	> 35-55	> 25-35
E	> 55-80	> 35-50
F	over 80	over 50

Source: HCM 2010

The SYNCHRO 10 capacity analysis for the existing intersections within the study area, showed that each of the intersections operate as a LOS C or better during the peak hours, with a few exceptions noted below.

- 6 – Cornelia Street & Oriskany Street (PM)
 - » Northbound LT/THRU/RT = LOS F (96.2 sec)
- 17 – Seneca Street & Liberty Street (AM)
 - » Northbound LT/THRU/RT = LOS E (38.2 sec)

The complete results of the existing condition capacity analyses are included in Appendix B of the TIS (Appendix F).

Accident Analysis

According to data extracted from the NYSDOT Accident Location Information System (ALIS) for Oneida County, New York for the period between March 1, 2015 and February 28, 2018, there have been 75 vehicular accidents

⁸⁰ SYNCHRO 10, Traffic Signal Coordination Software, Version 10.1, Trafficware LLC, Albany, California, 1993-2017.

⁸¹ The fifth edition of the Highway Capacity Manual is a publication of the Transportation Research Board of the National Academies of Science in the United States. The HCM contains concepts, guidelines, and computational procedures for computing the capacity and quality of service of various highway facilities, including highways, freeways, arterial roads, roundabouts, signalized and unsignalized intersections, rural highways, and the effects of mass transit, pedestrians, and bicycles on the performance of these systems.

⁸² Level of service (LOS) is a qualitative measure used to relate the quality of motor vehicle traffic service. LOS is used to analyze roadways and intersections by categorizing traffic flow and assigning quality levels of traffic based on performance measures (i.e., vehicle speed, density, congestion, etc.). The following LOS grades are based on North American highway LOS standards as identified in the Highway Capacity Manual (HCM) and AASHTO Geometric Design of Highways and Streets ("Green Book"), using letters A through F, with A being the best and F being the worst, similar to academic grading: A = free flow; B = reasonably free flow; C = stable flow, at or near free flow; D = approaching unstable flow; E = unstable flow, operating at capacity; and F = forced or breakdown flow. An overall intersection LOS D or better is generally considered acceptable at a signalized intersection. An overall intersection LOS E or better is generally considered acceptable at an unsignalized intersection.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

reported within the study area, not including NYS Route 5S, which was analyzed separately by the NYSDOT. Accident occurrence by street location during this period are summarized in Table 11.

Table 11. Accident Occurrence

Street	# of Accidents	% of Total
Bleeker St.	2	2.67%
Broadway	2	2.67%
Columbia St.	4	5.33%
Cornelia St.	4	5.33%
Court St.	12	16.00%
Devereau St.	3	4.00%
Elizabeth St.	3	4.00%
Genesee St.	17	22.67%
Hopper St.	4	5.33%
Kennedy Plz.	2	2.67%
Lafayette St.	6	8.00%
Seneca St.	3	4.00%
NYS Route 5S	1	1.33%
State St.	9	12.00%
Washington St.	3	4.00%
Total	75	100%

Source: NYSDOT ALIS, Oneida County for 3/1/15-2/28/18
Compiled by C&S (TIS, Appendix F)

Of the accidents presented, approximately 23% occurred during inclement weather conditions (rain, snow, sleet, hail, or freezing rain) and approximately 17% occurred during non-daylight conditions (dusk or dark road/lighted conditions). In addition, 76% of these accidents occurred on roads that were straight and level, as opposed to those that occurred on curved or graded roads. Overall, this is indicative that the majority of accidents that occurred within the study area were under weather and visibility conditions not conducive to vehicular accidents.

As indicated by the NYSDOT ALIS data, 69% of the accidents reported in the study area occurred at intersections. Of the accidents that occurred at intersections, 64% occurred in the same exact geographic location as another reported accident. Intersection “hot spots” where accidents have occurred more than once are indicated on Figure 2.4 of Appendix F.

Accident data was also analyzed by collision type. As indicated by Figure 2.5 of Appendix F, approximately 24% of recorded accidents were rear ends, 23% were collisions from right angles, 19% were collisions from overtaking, and 17% were from other causes.

Traffic control types were associated by collision type. For rear end collisions, 50% occurred in association to traffic lights and 39% occurred when there was no traffic control type present. The remaining rear end collisions occurred at stop signs and flashing lights. Right angle collisions followed similar trends, with 53% occurring at traffic lights, 35% under no traffic control type, and the remaining from stop signs and flashing lights. Accident type information was also associated with the NYSDOT ALIS data:

- A majority (88%) of accidents documented were from collisions with other vehicles.
- Three (4%) of accidents were collisions with pedestrians and occurred under traffic signal control conditions.
- Six accidents (8%) occurred from collisions with fixed objects, fire hydrants, and guide rails.
- No accidents were reported with bicyclists.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Overall, the data indicated that vehicle accidents are less likely to occur on the weekend than on a weekday. In addition, 89% of accidents within the study area resulted in zero injuries (18 resulted in an injury). No accidents within the study area for this set of data resulted in fatalities.

3.7.2 Potential Impacts

Construction

Construction of project elements will require the use of local roads by construction worker vehicles and equipment for the duration of the construction phase. Construction activities are expected to temporarily increase traffic volumes within and adjacent to the project area. The need for equipment and vehicles (including material flow from staging/laydown areas to project sites and transportation of C&D from the project area) to access and egress sites may cause temporary, short-term delays in traffic flow on local roads. With the implementation of appropriate mitigation (see Section 3.7.3), such impacts are not anticipated to be significant.

Operations

Increased Parking Demand

Using the Institute of Engineers (ITE), Parking Generation Manual, 3rd Edition, the anticipated parking supply and demand associated with the proposed MVHS IHC was estimated. Land use codes 610 – Hospital and 720 – Medical-Dental Office were used to estimate the parking supply needed and anticipated peak (weekday) parking demand. Based on the anticipated number of employees for the hospital and size of the MOB, the parking supply and demand is estimated as shown in the table below:

Table 12. Parking Supply and Demand

ITE Land Use Code	Description	Unit	Urban Supply/Unit	Urban Peak Demand/Unit	MVHS Unit	Urban Supply	Urban Peak Demand
610	Hospital	Employees	0.72	0.6	2,400	1,728	1,440
720	Medical-Dental Office	GFA (kSF) ¹	3.9	3.53	80	312	283
Totals						2,040	1,723

1. GFA – gross floor area kSF – thousands of square feet

Source: C&S (TIS, Appendix F)

While the calculation for the hospital is based on the total number of employees, it takes into account all parking demand associated with the land use such as patients, visitors, as well as staff in an urban setting. This analysis indicates that hospitals with 2,400 employees along with an 80,000± sf MOB typically provide approximately 2,000 parking spaces to accommodate their demand. The peak demand for the IHC project is estimated at just over 1,700 spaces for a typical weekday.

The proposed development proposes a total of 1,830 spaces. While it is less than the ITE demand, it is more than is anticipated to be needed for their peak demand. Table 13 summarizes how the proposed parking supply and estimated demand compare for the MVHS IHC development. Based on this analysis, the hospital could consider allocating some hospital employees to the parking lot adjacent to the MOB to more equally distribute demand amongst the MVHS IHC facilities.

Table 13. Parking Summary

	Proposed Supply	Anticipated Peak Demand	Estimated Surplus
Hospital	1,455	1,440	15
MOB	375	283	92
Total	1,830	1,723	107

Source: C&S (TIS, Appendix F)

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Bus Services

As previously indicated, bus service stops are located within and adjacent to the project area, as follows:

- Bleecker Street – Bus stops for CENTRO UT 12 and UT 14
- Columbia Street – Bus stops for CENTRO UT 20, UT 11, and UT 111
- Elizabeth Street – Bus stops for CENTRO UT 12
- Genesee Street – Bus stops for CENTRO UT 15, UT 22, UT 24, UT 40, and UT 31
- Hopper Street – Bus stops for CENTRO UT 22
- Lafayette Street – Bus stops for CENTRO UT 11, UT 20, and UT 111

Street closures associated with implementation of the project will require coordination with CENTRO to provide for route adjustments necessary to account for the changing street grid. MVHS' goal is to coordinate with CENTRO to maintain sufficient service (routes, stops, capacity) during the construction and operation phases.

Pedestrian Facilities

As previously indicated, the highest existing pedestrian volumes within the study area occur along the Genesee Street intersections, as well as along Columbia Street at Cornelia Street and State Street. Without proper mitigation, pedestrian flow could be impeded by the changing street grid and building layout.

Traffic Flows and Operating Conditions

The TIS included analyses to assess the additional traffic flow anticipated to be generated due to the proposed development as well as changes in traffic distribution.

The 10th Edition of ITE's Trip Generation Manual was used to estimate the traffic that will be generated by the proposed development during the typical weekday AM and PM peak hours. Using the same land use codes and variables as the parking analysis (hospital employees and square footage of the MOB), the trip generation for the IHC is summarized below:

Table 14. Trip Generation

ITE Land Use Code	Description	Unit	AM Peak Hour			PM Peak Hour		
			Entering	Exiting	Total	Entering	Exiting	Total
610	Hospital	Employees	476	176	652	185	500	685
720	Medical Office	GFA (kSF) ¹	143	40	183	76	197	273
		Totals	619	216	835	261	697	958

Source: C&S (TIS, Appendix F)

The proposed project includes the acquisition of parcels within the study area. These properties currently, or have in the recent past, generated traffic in the study area that will be removed when the properties are acquired. To be conservative, the current traffic associated with these properties was not included in the TIS.

As previously discussed, the NYSDOT is currently coordinating the "Route 5S Safety Project", which incorporates intersection and safety improvements from Cornelia Street to Broad Street, including miscellaneous work on the side streets; work is scheduled to be completed in 2020.

As part of the analysis included for the NYS Route 5S project, an initial trip generation and distribution for the proposed MVHS IHC project was developed to be incorporated in their future conditions modeling. A letter memo was developed by GTS Consulting in March 2016 that used initial development assumptions and data provided by the MVHS regarding employee and patient zip code information to determine peak hour regional distributions. While the project information has changed since the memo was developed, the employee and patient information and routing assumptions are still valid. Therefore, the regional distribution from that memo was used for the TIS. Figure 13 illustrates the regional trip distribution to the study area.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

The local distribution of project-generated trips within the study area is based on the most logical routing to/from the larger/busier highways and roadways to/from each individual parking facility access. The future AM and PM peak hour trips associated with the proposed development are shown on Figures 4.3 and 4.4 of Appendix F, respectively.

Figure 13. Regional Trip Distribution
Source: C&S (TIS, Appendix F)

Alterations to Present Pattern of Movement

A future build capacity analysis was performed to compare the transportation settings resulting from the future IHC operations to the existing (baseline) conditions. When analyzing the AM and PM peak hour future condition LOS, all of the study intersections operate at LOS C or better except for the following intersections (both during the PM peak hour):

- State Street & Lafayette Street /Emergency Department Access (average intersection LOS F [85.6 sec] previously LOS D [43.8 sec])
- Cornelia Street & Oriskany Street (average intersection LOS D [42.4 sec] previously LOS C [21.8 sec])

Under proposed conditions (IHC build-out), the following movements are expected to operate at a LOS E or F:

- State Street & Lafayette Street/ED Access (PM)
 - » Northbound THRU/RT = LOS F (101.4 sec) previously LOS F (84.1 sec) when Lafayette Street continued eastbound through State Street
 - » Southbound THRU/RT = LOS F (91.9 sec) previously LOS B (19.5 sec)

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- State Street & Court Street (PM)
 - » Northbound LT = LOS E (63.9 sec) previously LOS C (22.1 sec)
- Cornelia Street & Oriskany Street (AM)
 - » Northbound LT/THRU/RT = LOS E (72.2) previously LOS D (53.4 sec)
- Cornelia Street & Oriskany Street (PM)
 - » Northbound LT/THRU/RT = LOS F (176.3) previously LOS E (63.9 sec)
- Broadway & Oriskany/Liberty Street (AM)
 - » Southbound LT = LOS E (55.9 sec) previously D (52.7 sec)
- Oriskany Street & Genesee Street (PM)
 - » Northbound THRU = LOS E (74.1 sec) previously D (52.8 sec)

In addition, there is expected to be some delay during the PM peak hour for vehicles exiting the new parking garage onto State Street (LOS F [79.2 sec]). It is not anticipated that this delay, internal to the garage, will impact operations of the adjacent roadways. The future build condition model reports are included in Appendix B of the TIS (Appendix F).

3.7.3 Mitigation Measures

The following mitigation measures are proposed to minimize or eliminate the potential for, and/or significance of, potential adverse impacts.

Construction

To minimize impacts on traffic flow (including delays and queued vehicle exhaust emissions) from project-related activities within road rights-of-way (*i.e.*, off-site utility work), and project-related vehicles, equipment and materials accessing and egressing the site, the contractor(s) will be required to prepare, implement and maintain a maintenance and protection of traffic plan.

The maintenance and protection of traffic plan would be prepared to mitigate project-specific impacts. The plan would be developed to conform to highway work permits, local guidelines, and the MUTCD for Streets and Highways. As applicable, mitigation measures may include the use of:

- Post mounted traffic control and informational/work zone warning signs – As necessary, traffic signs in conformance with Part 201 of the MUTCD will be installed at crossroads, detours, parking areas, and elsewhere, as needed, to direct construction and affected public traffic. Signs will be relocated as work progresses to maintain effective traffic control
- Traffic cones and drums, flares and lights – As specified in the MUTCD, contractors will be required to use flares and lights during hours of low visibility to delineate traffic lanes to guide traffic
- Flag persons – Construction contractors will be responsible for providing trained and equipped flag persons to regulate traffic when construction operations or traffic encroach on public traffic lanes and shoulders
- Staging/laydown areas – Construction contractors will be responsible for identifying material staging and laydown areas proximal to the work area. Material staging and laydown area locations will be incorporated into the maintenance and protection of traffic plan.

The contractor(s) will be required to repair roads including the replacement of subbase and new asphalt where the original road is impacted by utility work (including entrances and exits). Work will be coordinated with both the City and NYSDOT and performed in accordance with the highway work permits and the project SWPPP.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Construction-phase access to the project area will be controlled. Figure 14 illustrates the primary path proposed for material deliveries. Project engineers will coordinate with contractors to utilize the North-South Arterial Highway to avoid traffic through the downtown area. Excess materials (including spoils and Construction and Demolition [C&D] debris) will be removed from the site from staging areas along State and Columbia Streets; with quick access to the North-South Arterial Highway.

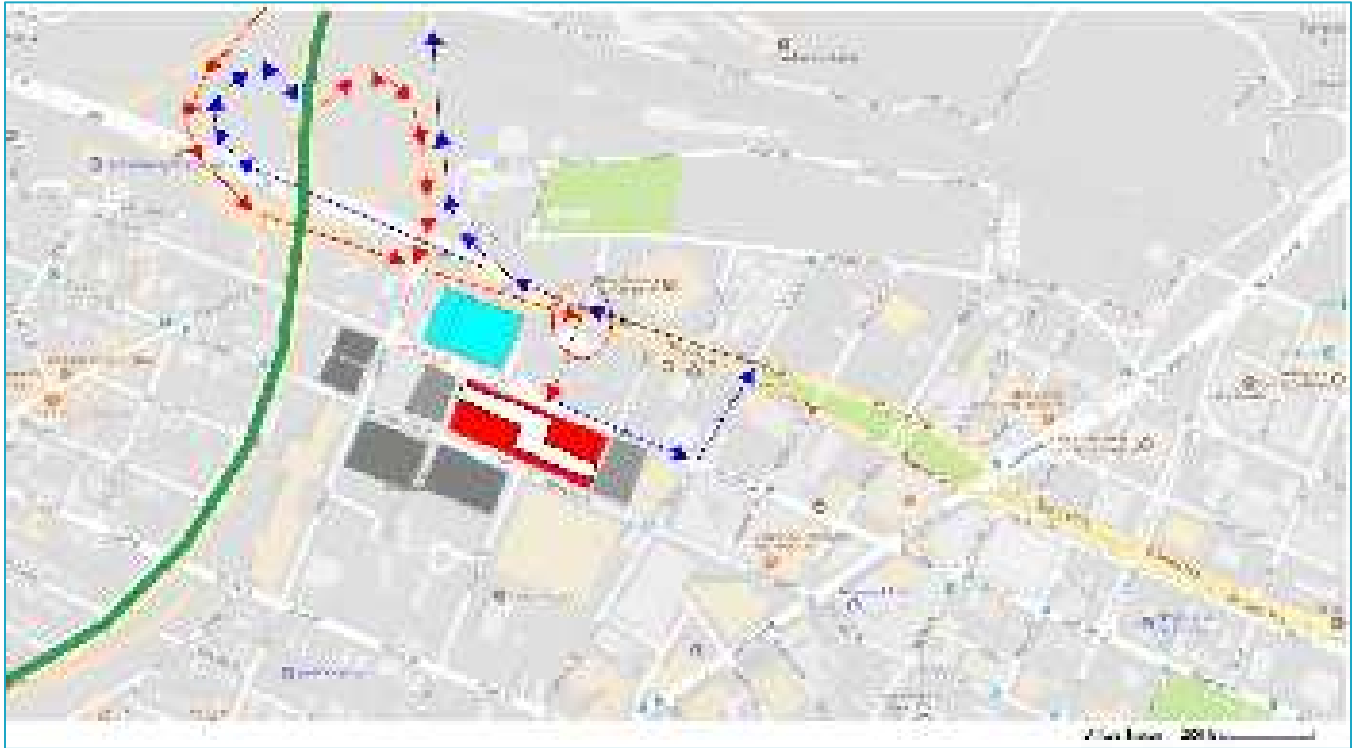

Figure 14. Construction-Phase Access and Egress
(Source: Turner Construction)

Vehicular parking allocated to construction workers will be limited to project staging and laydown areas. Contractors will be responsible for controlling construction-related parking to prevent interference with public traffic and parking, and access by emergency vehicles. Parking on or adjacent to entrance roads or in non-designated areas will be prohibited. Contractors will be required to remove equipment and devices no longer required for construction purposes from the project area.

Operations

Based on the analysis provided in the TIS (Appendix F), it was determined that the proposed development will not have a significant adverse impact on the adjacent transportation network with the following mitigation measures implemented beyond what is expected as part of the development plan for the project:

- Coordination with CENTRO Utica to accommodate any necessary changes in bus services (routes, stops, capacity) within the project area, as a result of the IHC project
- Ensure adequate pedestrian facilities are available from each proposed parking area to the access points of the main hospital building
- Construction of a pedestrian/utility bridge over Columbia Street
- Incorporation of a pedestrian walkway to replace a portion of Lafayette Street; this walkway is proposed to extend from the main IHC entrance to the west, terminating at State Street
- Incorporation of sidewalks and crossings along the reconfigured city streets

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- Implementation of optimized signal timings at the following intersections (to be coordinated with the City and NYSDOT):
 - » State Street & Lafayette Street/Emergency Department Access (PM)
 - » State Street & Court Street (PM)
 - » Cornelia Street & Oriskany Street (AM & PM)
 - » Broadway & Oriskany/Liberty Street (AM)
 - » Oriskany Street & Genesee Street (PM)

3.8 ENERGY

The proposed action may have an impact on energy. The following potential impacts, identified in the scoping process, are evaluated in this section (also see Section 4 – Effects on the Use and Conservation of Energy):

Construction

- Significant adverse impacts to energy are not anticipated.

Operation

- The peak electrical demand load for the proposed MVHS IHC is estimated to be 4.2 Megavolt-Amperes (“MVA”). Although upgrades to the existing electrical distribution system may be required to adequately service the IHC, the electrical demand is not anticipated to significantly impact the grid
- The proposed action will involve heating and/or cooling of more than 100,000 sf of building area when completed
- Diesel-fueled emergency generators will also be used at the proposed MVHS IHC

3.8.1 Existing Conditions

Electrical and Natural Gas Service

Electric⁸³ and natural gas utilities exist extensively within and adjacent to the project area and are operated and maintained by National Grid. The gas mains and underground electric conductors are owned by National Grid. The underground conduits and vaults are owned by the City of Utica, and leased to National Grid for use.

Existing Electric and Natural Gas Demand

Energy use within and proximal to project area is primarily driven by the need for heat and electrical power for the current property owners and businesses.

3.8.2 Potential Impacts

Construction

Construction-related activities will require the use of electricity, as well as fuels to power equipment and vehicles. Construction vehicles are typically powered by diesel fuel; however, potential alternatives include natural gas (CNG and LNG), biodiesel, or LPG (propane). Consumption activities are expected to continue throughout the construction phase, but are not expected to significantly impact existing reserves.

To service the project, existing electric and natural gas infrastructure will be relocated out of the IHC footprint, into public rights-of-way. Locations will be identified through on-going coordination between MVHS, National Grid and the City. Impacts will be short-term; extending through a portion of the construction phase.

⁸³ Includes a 13.2 kV underground feed in Cornelia and Lafayette Streets, as well as an electrical substation located at National Grid’s Harbor Point site (Terminal Substation).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Operation***Electrical Demand***

Based on preliminary calculations (SSR 2018), the peak electrical demand load for the proposed IHC is estimated at 4,304.27 kilowatts (kW). An estimated electrical demand load summary is provided below (Table 15). The summary is based on a 685,000-sf facility utilizing a chilled water plant that will maintain 68-degree air in most of the facility. Electric heating load is minimal, consisting primarily of electric heat tracing cable. The demand summary was produced using estimated power density values, which is consistent with the current level of project design development.

Table 15. Estimated Electrical Demand Load Summary

Load Category	Load (kW)
Lighting (100% LED)	479.50
Receptacles	1,027.50
Miscellaneous Equipment	274.00
Electric Heating	68.50
Motors (Chillers, Pumps, Cooling Towers, HVAC)	2,218.50
Fire Pump (assumed 250 HP)	236.27
Total Estimated Demand Load	4,304.27

Source: Smith Seckman Reid, Inc. (SSR)

Two 15 kV utility electric services will enter the CUP and be distributed to four switchgear rooms on the hospital roof, where the service will be transformed down to 480 and 120-volt distribution branches.

National Grid has verbally indicated, in consultation with the design team, that existing infrastructure proximal to the project site (*e.g.*, substation, transformers, and feeders) are adequate to support the hospital's proposed electrical demand, and will have no adverse impact to current capacity or service levels to others in the network.

Although, the existing infrastructure and electrical capacity of the grid will be sufficient to operate the IHC and supporting elements, the potential exists that the hospital will receive dedicated feeders, which would require upgrades to the existing National Grid substation and approximately 1.5 miles of new feeders; however, this option is solely based on MVHS's discretion and is not necessary for service.

Natural Gas Demand

The peak natural gas load and annual natural gas usage for the proposed IHC is estimated at 50 mcf/hour and 90,000 mcf/year, respectively (SSR 2018). To meet demand and minimize disturbances to existing customers, an 80 psi, 6-inch diameter gas main will be installed and extended approximately 2,500 lf to the site from National Grid's existing 80 psi supply main⁸⁴; no significant adverse impacts to the capacity or service levels to others in the network are anticipated.

Heating/Cooling

The hospital HVAC system consists of roof-mounted central air handling units, which supply conditioned and filtered air to variable volume terminal reheat boxes. Return air is ducted back to the unit. Sound attenuating elbows will be located at strategic locations in the ductwork. Roof-mounted exhaust fans remove air from restrooms, kitchen and laboratory hoods. Water chillers provide chilled water to the air handling units and gas-fired (with fuel oil-backup) condensing boilers provide hot water to the terminal reheat boxes. Chillers, boilers and associated equipment will be located in the CUP. Natural gas for the boilers will be piped in from the existing utility grid located within the street.

⁸⁴ Extension of the gas main may require crossing underneath an existing railroad. If necessary, National Grid will coordinate the crossing with CSX.

Emergency Generators

In accordance with code requirements, the IHC will be served by two 2,500 kW diesel-fueled emergency generators with automatic transfer (located in the CUP) supplied by a 50,000-gallon UST (installed adjacent to the CUP). The generators will have sufficient capacity to power the hospital in the event of a power failure⁸⁵. The generators will be housed within noise-attenuating enclosures; and will be regularly tested, maintained, exercised, and inspected in accordance with code and manufacturer specifications. Use of the generators will not adversely impact energy supplies.

3.8.3 Mitigation Measures

The proposed project would be constructed in accordance with the New York State Energy Conservation Code, which is also the basis for the State and City energy policy. The following mitigation measures are proposed to minimize or eliminate the potential for, and/or significance of, potential adverse impacts.

Construction

While no significant adverse impacts on existing energy resources/capacities are anticipated from construction-phase activities, contractors can select and implement alternative options and methodologies to reduce/minimize energy use. Measures include:

- Implementation of a maintenance and protection of traffic plan including the scheduling of activities to reduce traffic delays and associated fuel consumption
- Use of alternative fuels or energy-saving equipment
- Evaluation of material selection for interior and exterior building materials for recycled content and local material
- Evaluation of interior material selection for indoor air quality impacts
- Diversion of construction and land clearing debris from landfill disposal
- Redirecting recyclable-recovered resources back to the manufacturing process
- Redirecting reusable materials to appropriate sites (other projects)
- Buying and hiring locally to avoid or minimize delivery and travel costs.

Reuse and recycling of materials will result in a further reduction in energy use that might otherwise be expended to produce new materials.

Mitigation related to secondary impacts resulting from the extension of electric and/or natural gas lines within road or railroad rights-of-way is identified in Section 3.7.

Operation

No significant adverse impacts on energy are anticipated as a result of project-related operations. Energy requirements will be consistent with energy policy recommendations established in the New York State Energy Conservation Construction Code.⁸⁶ Additional BMPs could include:

- Promotion of “green” product purchases including the use of recycled and reusable materials

⁸⁵ 72-hours of operation for the boilers in case of interruption of the natural gas service.

⁸⁶ <https://www.dos.ny.gov/DCEA/pdf/2016%20EC%20Supp-Revised-2016-08-12-approved%20bycouncil%20V-A.pdf>

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- Building design and efficiency
 - » Facilities include energy-efficient lighting (including spacing) and other equipment
 - » Purchase of equipment based on life-cycle costs rather than initial costs of equipment
 - » Proposed facility designs which promote sustainable building practices using the United States Green Building Council's "Leadership in Energy and Environmental Design" (LEED) program or a similar system; elements currently proposed include:
 - › Heat recovery chiller that puts "waste" heat to use year-around (in CUP)
 - › Low temperature hot water heating system with high efficiency (condensing) hot water boilers (in CUP)
 - › Green islands within the parking areas
 - › Use of energy efficient mechanical, electrical and plumbing systems
- Urban forestry
 - » Promote tree planting to increase shading and to absorb CO₂ (*i.e.*, creation of GHG emission offsets at facilities)
- Energy conservation measures (construction and operation phases).
 - » Purchase of electricity generated from renewable resources
 - » Implementation of "plug-load" audit recommendations to identify operation-phase power management strategies (*i.e.*, automatic turn-off of computers during non-business hours or into "sleep" mode when not in use for a certain period of time during normal work hours)
 - » Energy conservation employee training
 - » Optimization of vehicle usage (*i.e.*, promotion of carpooling, access to and use of mass/public transit, encouragement of efficient driving techniques, use of active modes of transportation including walking, bicycling, *etc.*).

3.9 UTILITIES

The proposed action may have an impact on utilities. The following potential impacts, identified in the scoping process, are evaluated in this section:

Construction

- Temporary impacts due to the abandonment/removal; and installation of utilities (*e.g.*, sanitary and storm sewer, water, electric and natural gas). Specific construction-related impacts are identified elsewhere in this scoping document

Operation

- Although improvements/modifications to the existing utility infrastructure will be necessary to provide adequate services to the IHC, the utility systems themselves currently have sufficient capacity to service the IHC. Therefore, no significant adverse impacts on utility infrastructure capacities are anticipated

3.9.1 Existing Conditions

Sanitary Sewers – Existing

The proposed project area is currently served by the City of Utica's sanitary sewer system. The City of Utica is a member of the Oneida County Sewer District (OCSD). The OCSD is administered through the Oneida County Department of Water Quality and Pollution Control (WQ&PC). The City of Utica is responsible for operation and management of the collection system sewers within the City, while WQ&PC is responsible for the operation and management of the sewer district infrastructure, including approximately 45 miles of interceptor sewers, the Sauquoit Creek and the Barnes Avenue Pumping Stations, and the Oneida County Water Pollution Control Plant (WPCP) (Shumaker *et al.* 2012). Sanitary sewers servicing the project area are shown on Figure 15, below.

Storm Sewers – Existing

Many of the storm sewers within the City of Utica, including some within the proposed project area are combined with the sanitary sewage system. During times of heavy rainfall or snow melt, the combination of wastewater and stormwater surpasses the capacity of the sewers. The excess flow then overflows and discharges into surface water bodies (*e.g.*, Mohawk River) via NYSDEC-permitted outfalls. This type of occurrence is known as a CSO, and is a major contributor of pollution to surface water bodies across the country. In response, the City of Utica is implementing a NYSDEC-approved Long Term Control Plan requiring the City to increase its percent capture of CSO to 85% (Shumaker *et al.* 2012).

To achieve its CSO capture goal, the City is replacing its combined infrastructure with separate storm and sanitary sewer systems through a series of CSO Control Projects. Currently, CSO Control Project A9.1, which is being conducted in the vicinity of the project, is in the early planning stages. The CSO project includes the construction of a new outfall under the existing CSX railroad, downstream from the existing 42-inch diameter storm sewer currently located in Cornelia Street (at Oriskany Street). The new outfall will increase the amount of stormwater that can be routed through this existing storm sewer, as the new outfall will bypass a known hydraulic limitation at the CSX bridge over Nail Creek. These proposed improvements, as well as the existing storm sewers within the project area are shown on Figure 16.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

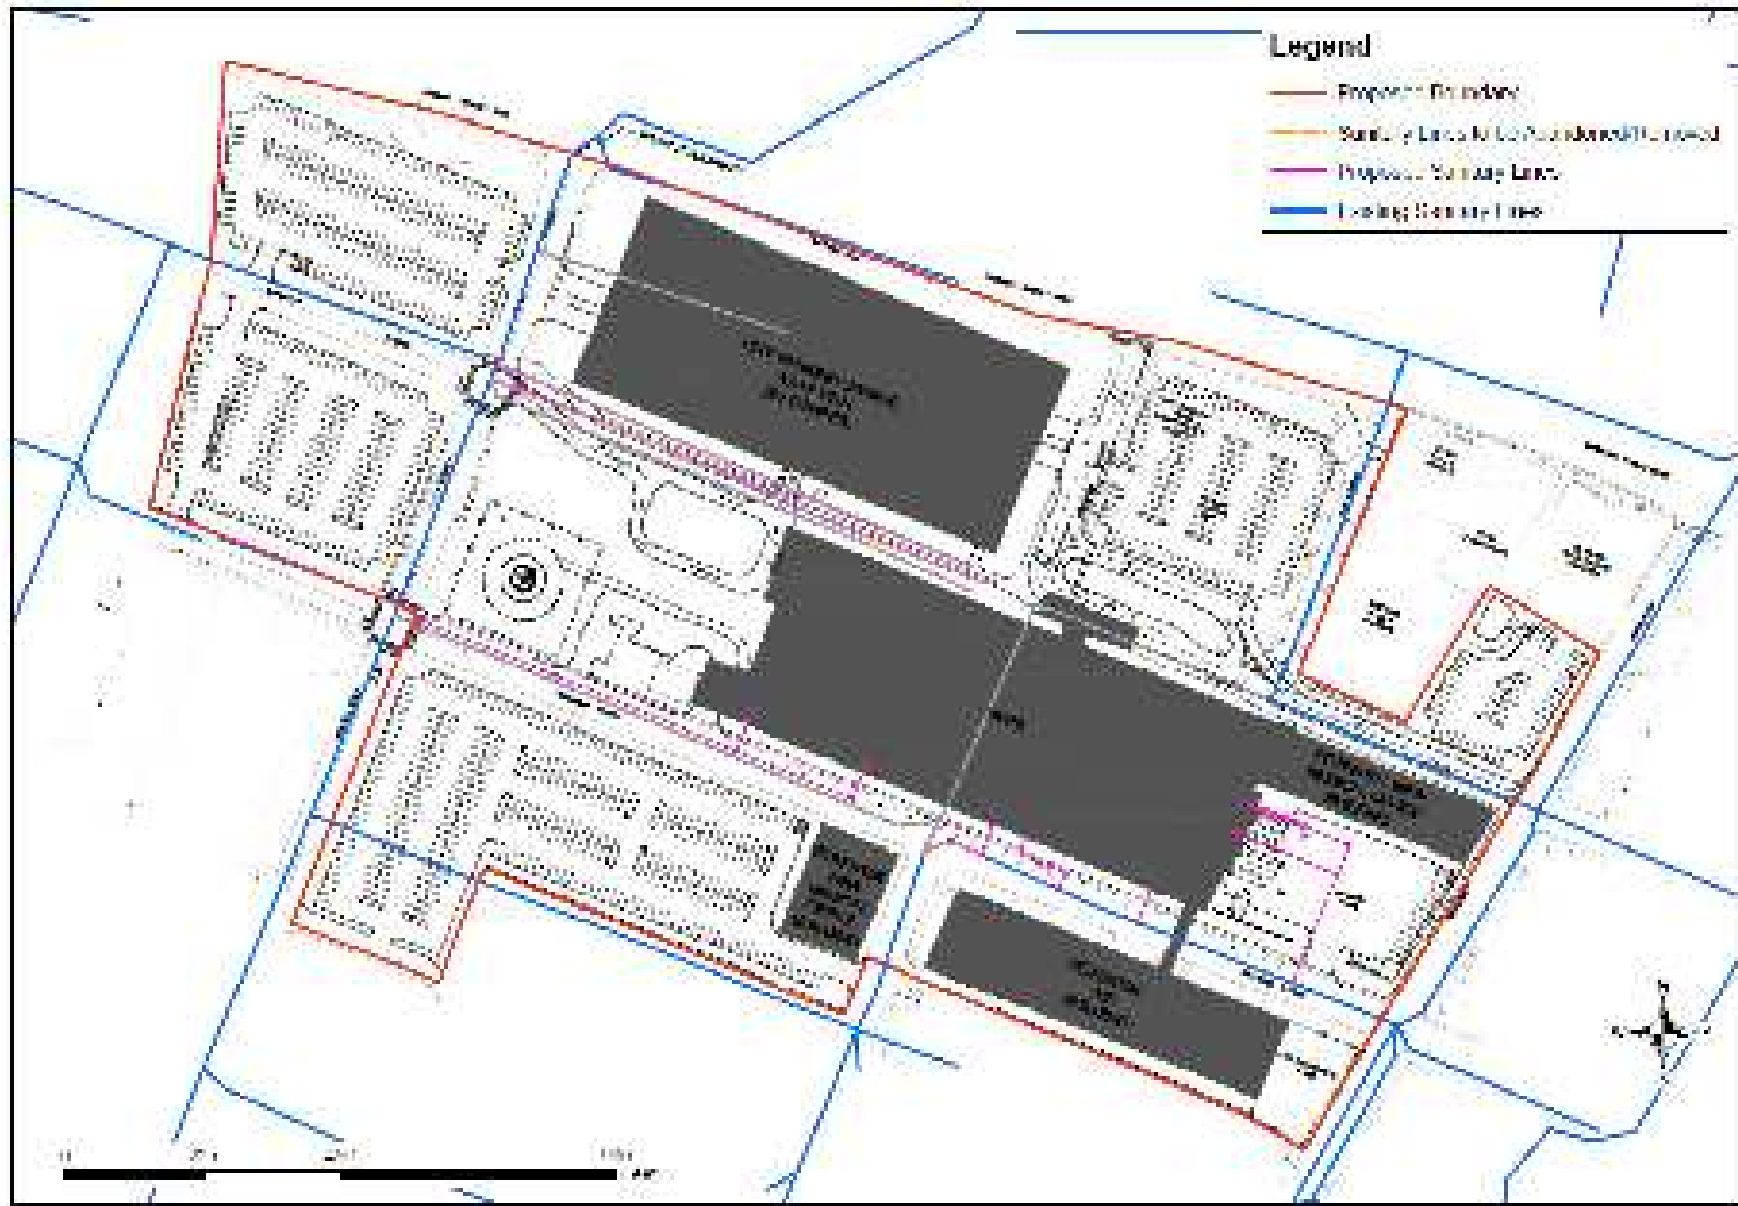

Figure 15. Existing and Proposed Sanitary Sewers

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

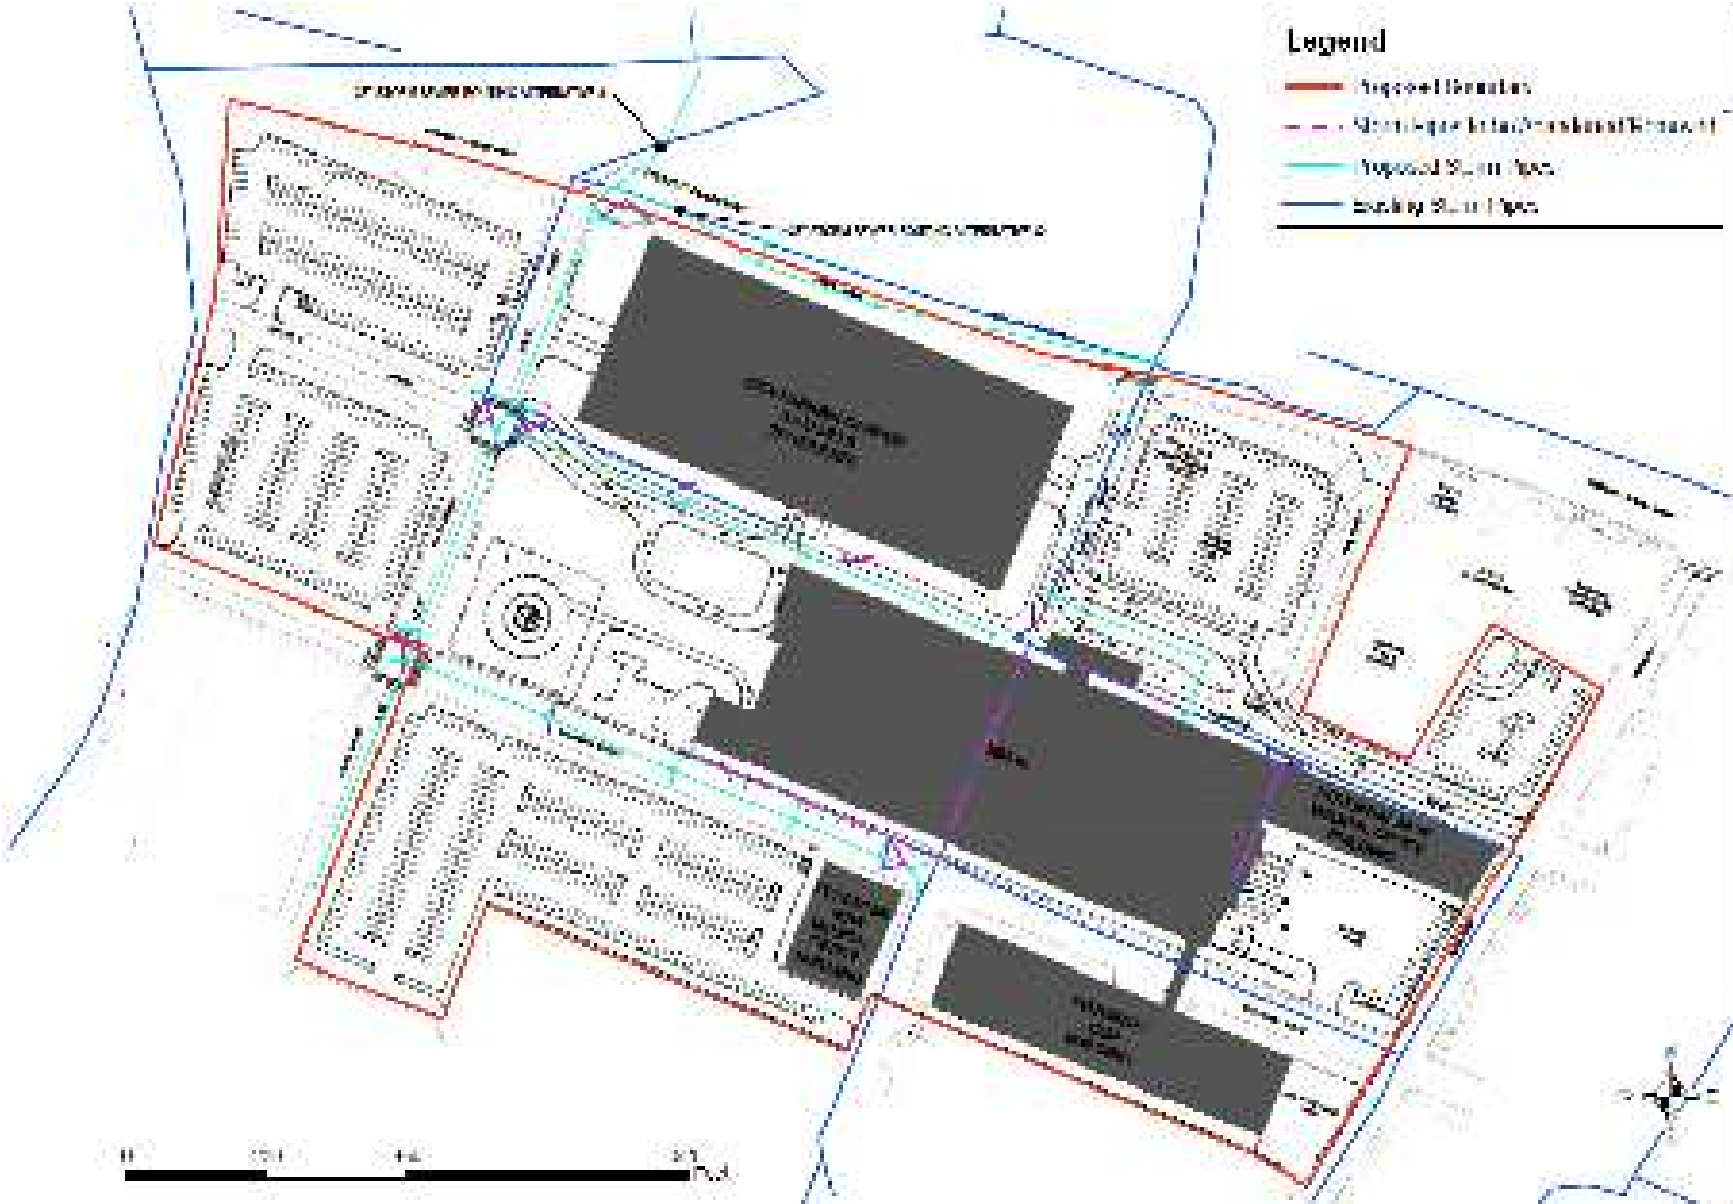

Figure 16. Existing and Proposed Storm Sewers

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Water – Existing

According to the Mohawk Valley Water Authority (MVWA), water is supplied to the downtown area by a 16” primary feed, which extends west along Oriskany Street, south on State Street to Lafayette Street. A secondary feed with a strong flow is the 10” main on Columbia Street that is fed by a 20” main on Genesee Street. According to the MVWA, both feeds can supply large amounts of water. Existing static pressure in the area is approximately 88 psi, which varies with the area surface elevation between 426 and 434 feet. Redundancy is provided for the Genesee Street main fed by the Deerfield Reservoir. If a system break occurs, a pressure regulating valve in Yorkville can open to supply water to a 20” main coming down Erie Street to the 16” primary on Oriskany Street. Locations of existing water mains are illustrated on Figure 17.

Telecommunications – Existing

Existing telecommunications (*i.e.*, phone, fiberoptic/cable, and high-speed internet) are currently available within the proposed project area, and are serviced by a variety of providers including Verizon, Spectrum and Northland Communications.

3.9.2 Potential Impacts

Precluding implementation and maintenance of appropriate mitigation measures, the following adverse impacts could occur from construction and operation of the project.

Construction***Sanitary Sewers – Proposed Improvements***

Wastewater associated with hospital operations is anticipated to be 187,000± gallons per day (gpd) and will be discharged to the WPCP via City sanitary sewers and Oneida County interceptor sewers. Based on the proposed building layout, it is believed that the following modifications will be made to the sanitary infrastructure within the proposed project area, as shown on Figure 15:

- All existing sewers in Lafayette Street, between State Street and Cornelia Street will be abandoned/removed, including 12”, 15”, and 18” diameter sewer piping
- A new 15” diameter sewer on Columbia Street would need to flow in the reverse direction of the existing 15” and tie-into the 48” trunk sewer on State Street
- A new section of 18” sewer will divert upstream flow from Cornelia Street to the existing 24” sewer in Columbia, discharging to the 33” sewer in Broadway

Other potential new sewers include new 15” diameter pipe in Lafayette Street, on the north side of the hospital. The location and size of sanitary laterals and connections will depend on the plumbing/mechanical design of the new hospital buildings. It is assumed each new structure will have its own service lateral(s) connecting to the City mains.

Storm Sewers – Proposed Improvements

To provide sufficient capacity and drainage for the proposed project, sections of existing storm sewers within the project area will be abandoned/removed and new storm sewers will be installed, as shown on Figure 16. The modifications will include:

- Abandonment/removal of 12” and 15” pipe on Lafayette Street
- Removal of 36” trunk sewers from Cornelia Street, between Columbia Street and Lafayette Street
- Removal of 12” storm sewer from Columbia Street

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

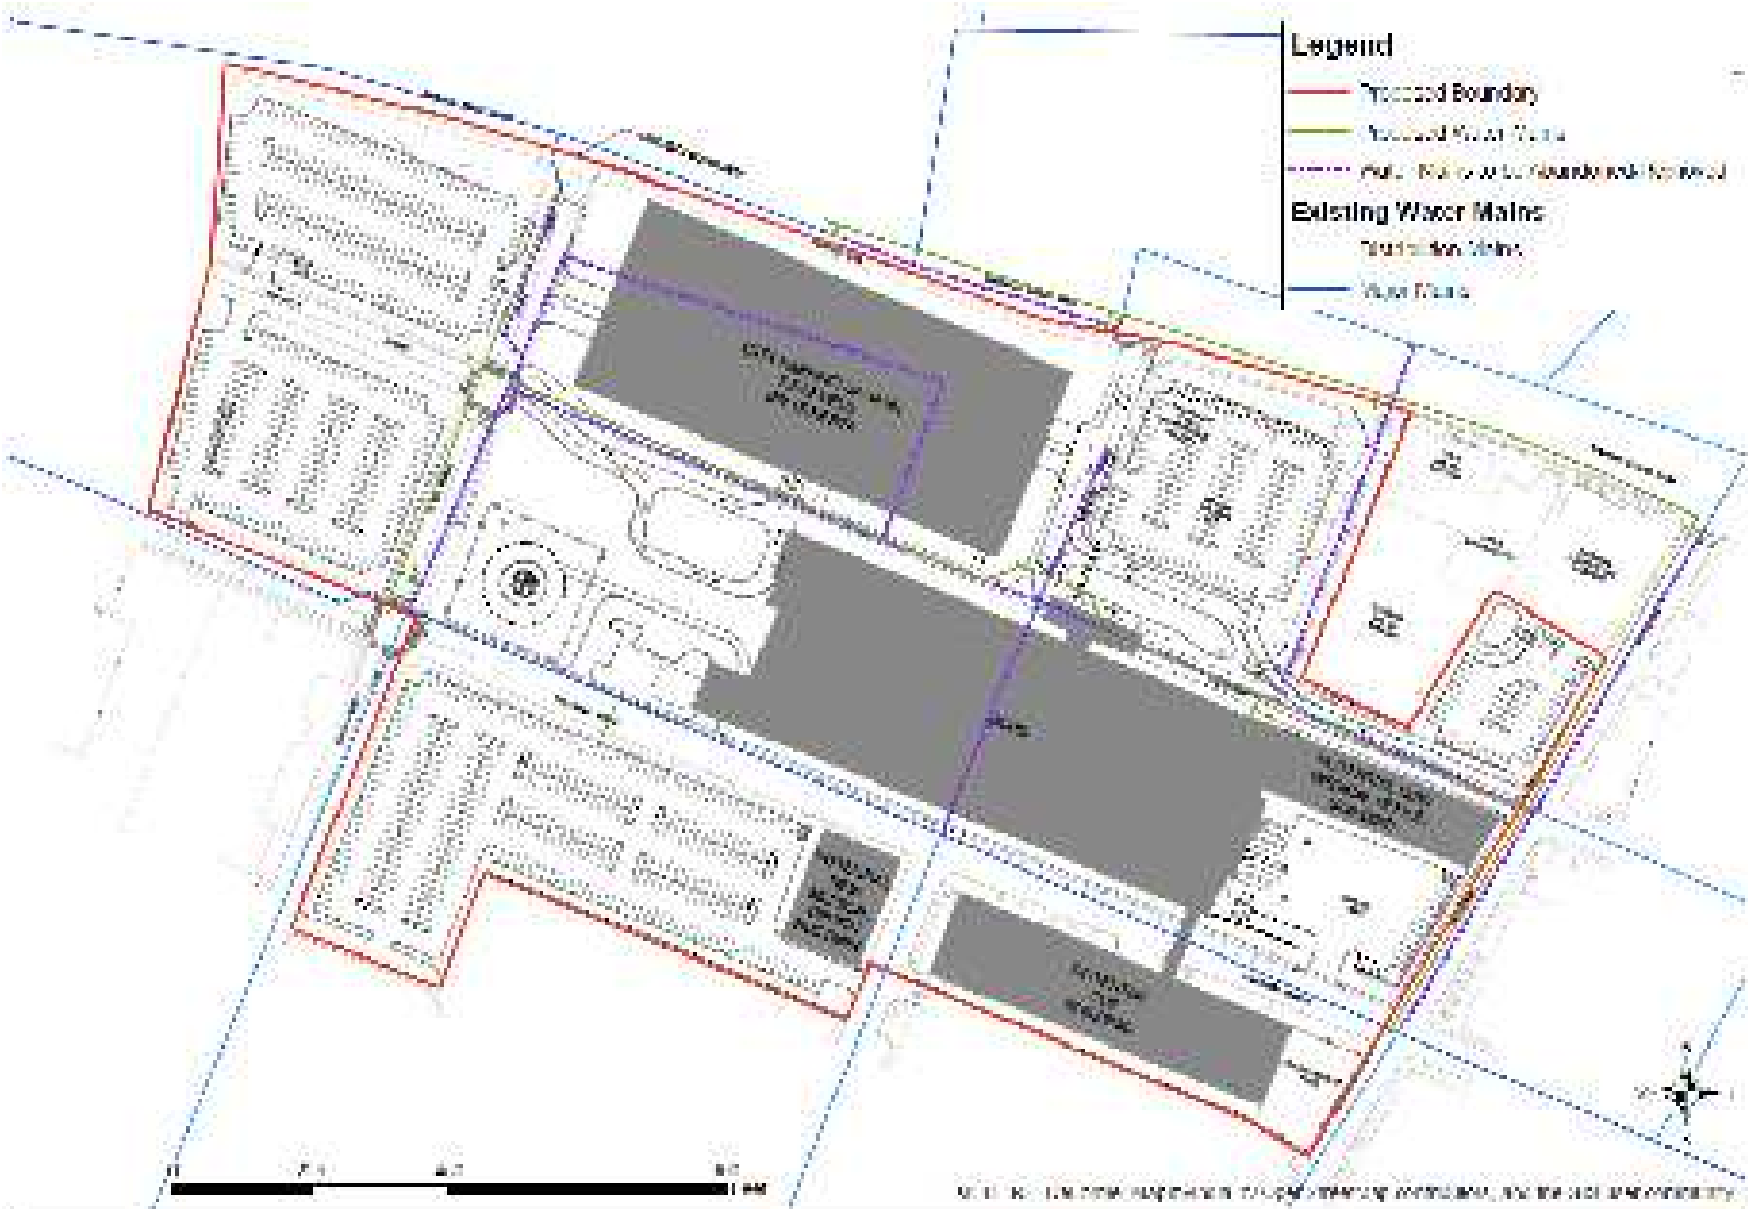

Figure 17. Existing and Proposed Water Mains

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- Installation of new 36" diameter storm sewer on Columbia Street, State Street, and potentially along Oriskany Street connecting back to the existing 42" line crossing Oriskany Street West/Route 5S at Cornelia Street, or boring under Oriskany Street to connect to an existing storm sewer on the north side of Oriskany Street.
- Installation of new storm sewer, as needed to tie-in catch basins along the route of the new storm sewer mains.

Water – Proposed Improvements

Water demand for the IHC is estimated at approximately 500 gallons per minute (gpm). Due to the configuration of the hospital in regard to current infrastructure, the abandonment and rerouting of some water mains will be required. Water mains to be replaced or installed are shown on Figure 17 and proposed improvements will consist of the following:

- Older 6" and 16" mains on State Street will be replaced with a new 16" water main
- A 6"/8" main on Broadway will be replaced with a 12" pipe between Columbia Street and Oriskany Street
- Installation of a 12" water main along Oriskany Street East between State Street and Broadway
- Installation of a 12" water main (private) along Lafayette Street, between State Street and Broadway to serve the hospital
- Potential installation of booster pumps to increase flow rates and pressures necessary for fire protection, as well as domestic water, to the upper floors of the proposed hospital.

Telecommunications – Proposed Improvements

Utility purveyors will extend connections to facilities within the project footprint. Potential impacts will be limited to construction-related impacts associated with extending service connections to proposed project facilities; these short-term impacts are not considered significant and can be mitigated consistent with other work within road rights-of-way (ROWs).

Utility Installations/Removals

Potential secondary impacts, which may occur during utility-related construction consist of:

- Potential to encounter groundwater during below-grade construction activities (*e.g.*, utility trenching), which will require temporary dewatering (as discussed in Section 3.3 – *Groundwater*).
- Potential to encounter impacted soil/groundwater from past land use(s) (as discussed in Sections 3.1 – *Land*, and 3.3 – *Groundwater*)
- Potential temporary impacts (sediment laden runoff) to downgradient waterbodies (*i.e.*, Mohawk River, NYS Barge Canal) resulting from disturbances to the soil profile, and exposure of bare soils, from construction activities (as discussed in Section 3.2 – *Surface Water*)

Operation**Utility Capacities**

- **Sanitary Sewers** – In correspondence dated September 28, 2018 (see Appendix J), the Oneida County Department of WQ&PC indicated that:

“Current County facilities can accommodate the estimated sanitary sewage design flow of 360 gallons per minute from the proposed healthcare facility. The proposed healthcare facility operations can be supported with no adverse impact on utilities or expansion of existing infrastructure.”

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- **Storm Sewers** – The project will result in a net decrease in impervious surfaces in comparison to existing conditions (15±% decrease). The stormwater management system for the project will be designed to control the rate of runoff from the site to at, or below, the rate of runoff during existing conditions. In addition, the system will manage the quality of runoff to eliminate any potential impacts on receiving water bodies. The stormwater system will be designed in accordance with local, state and federal requirements as described in Section 3.2; and, so, no significant adverse impacts are anticipated.
- **Water** – In correspondence dated August 8, 2018 (see Appendix J), the MVWA indicated that they can meet the water demands of the project. The MVWA summarized that:

“...the average water demands of 500 gpm can be met with existing water system delivery capacity and storage reserves. There will be no adverse impact on current capacity or service levels to others. Final Campus configuration will require abandonment and rerouting of some water mains. Furthermore, fire quantity demands can be supported in terms of water storage capacity however, the required flow rates and pressures may require booster pumping dependent upon the final demand.

- **Telecommunications** – IHC operations will result in additional demand for telecommunications and fiber optic services. The proposed improvements would utilize capacity for phone, cable, and internet services; additional capacity needs would be off-set by the termination of services to existing facilities, which will be relocated. No significant adverse impacts on existing capacities are anticipated.

3.9.3 Mitigation Measures

The following mitigation measures are proposed to minimize or eliminate the potential for, and/or significance of, potential adverse impacts.

Construction

- If groundwater is encountered during utility removal or installation, it will be characterized to identify the appropriate method of management. If determined to be impacted, it will be managed and disposed of off-site in accordance with applicable local, State, and Federal requirements. If deemed clean, the groundwater will be managed in accordance with standard dewatering practices identified in the General Permit and site-specific SWPPP, as previously discussed in Sections 3.1 and 3.3.
- If impacted soils are encountered they will be removed and disposed of at an approved off-site facility in accordance with applicable local, state and federal regulations.
- Measures will be put in place to prevent temporary impacts to soil erosion and downgradient water bodies (sediment laden runoff) due to excavation and trenching operations associated with utility installations or removals. E&SC measures and BMPs identified in the General Permit and site-specific SWPPP will be employed, as previously discussed in Section 3.1.

Adherence to these measures should provide sufficient mitigation to eliminate potential significant adverse impacts related to utility removal/installations.

Operation

No significant adverse impacts to the capacity or service levels to others in the network are anticipated from hospital operations., therefore no mitigation measures relative to utility service and capacities are warranted. Service connections will be coordinated with respective purveyors. Stormwater management measures, designed in accordance with local, state and federal requirements, will be implemented as described in Section 3.2.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

3.10 NOISE AND ODOR

The proposed action may have an impact on noise and odor. The following potential impacts, identified in the scoping process, are evaluated in this section:

Construction

- Temporary construction-related noise impacts from the following:
 - » Equipment necessary to prepare the project area (including demolition) and construct the proposed MVHS IHC
 - » Vehicles and equipment accessing and egressing the site including trucks hauling C&D debris for off-site management
 - » Temporary power generators
- Significant adverse odor impacts are not anticipated.

Operation

- Sporadic noise in excess of existing ambient levels during operation may be generated by incoming ambulances and helicopter flights
- Significant adverse odor impacts are not anticipated.

3.10.1 Existing Conditions

Noise

For the purposes of this assessment, noise is defined as “unwanted sound.” Some noise (*e.g.*, police sirens, garbage trucks) are essential to the health, safety and well-being of the city. Other noise emanates from many different sources including traffic, businesses, residences, construction, people and animals. Existing noise sources in the proposed project area include traffic, businesses, residences and humans.

Many factors impact the perception of sound. These include the level of sound, the frequencies involved, the duration of exposure, and the variations in noise level during exposure. Levels of noise are measured in units called decibels (dB). A-weighted decibels (dBA) refers to noise and its effects on humans and other animals. Based on information from the USEPA, existing ambient day-night sound levels may be expected to range from 70 (urban row housing on major avenue) to 80 dBA (downtown with some construction activity).⁸⁷ In addition, a significant portion of the project is located near Oriskany Street and the North-South Arterial Highway, which are influenced by noise generated from vehicular traffic and local businesses.

Sensitive receptors within or proximal to the project area (*i.e.*, residences, churches/synagogues/mosques, schools, senior homes, schools, *etc.*) were identified in Section 3.4.

The City of Utica has enacted a municipal noise ordinance (§ 2-15-63 of the City Code, Permissible Noise Levels in Zoning Districts). An excerpt from the ordinance, which summarizes City noise limits, as presented in Figure 18.

⁸⁷ <http://www.nonoise.org/library/levels/levels.htm> (USEPA 1979)

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Sec. 2-15-63. Permissible noise levels in zoning districts.
[Code 1964, § 16-9(c)-(e)]

A noise ordinance as hereafter provided in this section shall apply to all noise which is provided in Section 2-15-67 in a local zoning district and shall increase the [20%] contribution by the same period and shall be in the manner declared to be reasonable and necessary for such purposes.

Zone	7:00 a.m. to 10:00 p.m.	10:00 p.m. to 7:00 a.m.
	(db(A), Lmax)	(db(A), Lmax)
Residential	55	45
Commercial	60	55
Light industrial	65	60
Industrial	70	65

When noise is caused by construction activities, then for some, the permissible sound level of the zone restriction zone shall apply.

Between the hours of 10:00 a.m. to 10:00 p.m., the noise levels permitted in Category (a) may be increased by 10 dBA for a period of not to exceed 15 minutes in any one hour period.

Where noise is periodic, impulsive or other, the maximum sound level for these noises shall be 5 dBA less than those listed in the restriction of this section.

Figure 18. Permissible Noise Levels in Zoning Districts (City of Utica)

Odor

No significant or long-term sources of odor currently exist within the project area.

3.10.2 Potential Impacts

Precluding implementation and maintenance of appropriate mitigation measures, the following adverse impacts could occur from construction and operation of the project.

Construction

Construction-related Noise

Noise will be generated during demolition and construction activities associated with the proposed project. Construction-related noise will be short-term, intermittent and limited to the construction phase. Common construction equipment sound levels may be expected to range from 70 to 90 dBA at a distance of 50 feet (NYSDEC 2001⁸⁸). Off-site noise will be generated by construction-related traffic accessing and egressing the site, and traveling on local roads.

Construction-related Odor

No significant construction-related odors are anticipated. Short-term impacts from construction-related emissions and soil disturbances were previously addressed in Sections 3.4.

⁸⁸ http://www.dec.ny.gov/docs/permits_ej_operations_pdf/noise2000.pdf

Operation***IHC, MOB and Parking Garage Operations***

Operation phase activities associated with the project are not anticipated to result in noise levels substantially different than existing noise sources and levels generated from existing operations within the project area. The primary sources of noise will be vehicular traffic entering and egressing project elements (*i.e.*, IHC, MOB, parking garage). Normal operations (including facility mechanical equipment) will be required to comply with the City's noise ordinance; no significant adverse noise impacts are anticipated. Periodic, episodic events such as helicopter arrivals and departures (*i.e.*, 40/year) and ambulances are described below.

Helicopter/Ambulance Noise

Maximum sound levels from individual helicopter operations are expected to be short in duration. As with some existing community noise sources, helicopter arrivals and departures would have the potential to affect speech intelligibility for short periods of time. Lower ambient levels at night could make the helicopter noise more prominent. The community will hear the helicopter operations just as they currently hear buses and trucks on the local roads, but since helicopters (and ambulance sirens) have a unique sound and are episodic, the community will perceive the sound source as unique.

Noise generated from helicopter and ambulance operations are episodic. Episodic noise is infrequent and short-term, with durations lasting only as long as the arrival and departure duration of the equipment. Significant adverse long-term impacts are not anticipated.

Odor

No significant operations-related odor sources were identified.

3.10.3 Mitigation Measures

The following mitigation measures are proposed to minimize or eliminate the potential for, and/or significance of, potential adverse impacts.

Construction***Construction-related Noise***

To mitigate construction-related noise, the following mitigation measures may be implemented:

- Contractors will be responsible for using appropriate mufflers on machinery to mitigate potential construction-related noise impacts
- Limiting workday construction activities to normal hours (the NYSDEC program policy suggests that limiting activity to normal workday hours is an effective mitigation [NYSDEC 2001])
- Compliance with the requirements identified in Chapter 2-15 of the City of Utica's Municipal Code and Ordinances

Construction-related Odor

No significant adverse odor impacts are anticipated during the construction phase. Short-term construction-related emissions from equipment and vehicles will be mitigated as indicated in Section 3.4. If petroleum-impacted soils are encountered during excavations, they will be managed in accordance with state and federal regulations, as outlined in Sections 3.1, 3.2, and 3.3.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Operation***IHC, MOB and Parking Garage Operations***

To mitigate operations-related noise, the following mitigation measures may be implemented:

- Use of noise attenuation devices/building materials, as necessary (acoustic panels and fully grouted concrete masonry units to attenuate sound transmission through facility walls)
- The housing of roof-top or externally located HVAC system elements in noise attenuating enclosures, as necessary; sound attenuating elbows will be located at strategic locations in the ductwork
- Sound attenuation will be provided at the emergency generator discharge louvers
- Utilization of engineering controls that minimize noise generation and allow employees to work in designated areas without hearing protection (designed to an occupational exposure limit <85 dBA)
- Maintaining day and night time operation phase sound levels at the nearest sensitive receptor (*i.e.*, the property line) in accordance with local code
- Use of landscaping and/or berming for noise abatement.

Helicopter/Ambulance Noise

To mitigate intermittent, episodic noise from periodic helicopter and ambulance operations, the following mitigation measures and best practices may be implemented:

- MHVS will coordinate with helicopter companies to identify optimum arrival and departure flight procedures and paths to minimize episodic noise impacts.

Operations-related Odor

No significant or long-term sources of odor are anticipated from long-term operations within the IHC. Solid waste management practices (see Section 3.13) will incorporate good housekeeping and best management practices including proper storage (*i.e.*, covered receptacles, bins, and dumpsters), transport and off-site management of waste materials.

In addition, the project will adhere to the City's zoning code, which indicates that "no emission shall be permitted of odorous gases or other odorous matter in such quantities as to be readily detectable without instruments at the property line of the zone lot from which they are emitted" (§ 2-29-529 of the Utica City Code).

3.11 HUMAN HEALTH

As noted in Section 1, implementation of the project is based on a desire and need to build a facility with the newest technology, services and advancements in patient safety and quality so that our community can receive the most up-to-date healthcare services that rivals those found in large cities. Attainment of this objective will have a significant beneficial impact on human health. As identified in the scoping process, construction and implementation of the project could also result in the following impacts, which are evaluated in this section:

Construction

- Vehicles and equipment accessing and egressing the project site
- Disturbance of hazardous building materials during demolition activities (*e.g.*, asbestos, lead, *etc.*)
- Potential to encounter impacted soils/groundwater (from past or existing land use).

Operation

- Impacts on sensitive receptors (*i.e.*, proximity to three licensed daycare centers and religious centers)
- Proximity to existing impacted sites (*i.e.*, completed or on-going remediation or spill response)
- Increase in the rate of disposal or processing of solid and other types of waste
- Use of pesticides or herbicides.

This section also evaluates “reasonably foreseeable catastrophic impacts” (even if the probability of such an occurrence is small). During the public scoping process, several commenters identified concerns relative to the proposed project site’s proximity to the existing CSX railroad, including the potential impacts resulting from a train derailment. This section includes a general discussion of the likelihood that the catastrophic impact would occur.

3.11.1 Existing Conditions

Preliminary Environmental Due Diligence Review

Existing and past land uses were previously described in Sections 3.5 and 3.6, respectively. Existing and past operations, including activities conducted in accordance with prior regulations and acceptable practices, may have resulted in environmental impacts (Recognized Environmental Conditions, RECs⁸⁹) within and adjacent to the project footprint. These RECs could be encountered during construction phase activities (see Sections 3.1, 3.2, and 3.3).

To provide a preliminary environmental review of the project area, OBG obtained an environmental database search package (see Appendix H) in 2016 to identify potential RECs associated with past and existing land uses; the following records were reviewed:

- Sanborn® Maps
- Aerial Photos
- Historical Topographic Maps
- Federal and state environmental databases:
 - » National Priority List (NPL) – identified priority cleanup sites within the Superfund Program
 - » Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) – releases, clean-ups and enforcement activities under the Superfund Act of 1980
 - » Resource Conservation and Recovery Act (RCRA) Generators List – generators of hazardous waste
 - » LTANKS – Leaking storage tanks
 - » UST Registry – for both petroleum and chemical bulk storage
 - » AST Registry – for both petroleum and chemical bulk storage
 - » BROWNFIELDS – New York State Brownfields sites

⁸⁹ The American Society of Testing and Materials defines a REC as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject to an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not RECs.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- » NY SPILLS – Records of emergency release reports and subsequent remedial actions
- » NY DRYCLEANERS – Records of dry cleaning businesses.

The 2016 literature search resulted in the following potential RECs:

- Spills – The database records indicate 10 spill numbers issued by the NYSDEC within the project area. Nine of those numbers are listed as closed and one number remains open. The one active spill number is associated with 401 State Street, owned by the City of Utica. The spill was reported as a tank test failure during the removal of a gasoline UST registered to B&G Diversified, Inc. in June 1993. Notes within the NYSDEC file indicate that 100 cubic yards of contaminated soil was removed with the tanks and “may have been disposed of at an unapproved site.” The file also noted that a subsurface investigation is needed to define contamination in groundwater and soils, and that the site has been paved over and is no longer an active managed spill.
- USTs – The NYSDEC PBS database identifies 7 registered PBS facilities within the study area. All 7 of the facilities are closed and all registered USTs were removed. The former locations of the facilities are summarized in Appendix H. It should be noted that USTs may still be present at locations that pre-date registration requirements.
- Cleaners – Historical cleaning operations are identified in the NY DRYCLEANERS database. One property at 432 Lafayette Street was identified by the database search: Mutchlers Chem Dry Carpet & Upholstery; cleaning is the business type reported with the record. Cleaners historically used solvents that, if released to the environment can impact soil and groundwater. The presence of volatile organic compounds in soil and groundwater resulting from chemical or petroleum spills can potentially create a vapor intrusion concern. Vapor intrusion occurs when soil vapors migrate into a building through foundation cracks and penetrations, potentially creating nuisance odors or exposure to building occupants. No known spills were identified at this property or in relation to the business name noted above.
- Sanborn® Map Review – Sanborn® Maps were ordered as part of the environmental database search package. Coverage was available for the subject area for 1884, 1888, 1899, 1925, 1950, 1952, 1970, 1973, and 1986. The maps were reviewed for environmental indicators such as past industrial use and the presence of gasoline tanks. The findings of the map review are summarized in Table 16, below.

Table 16. Summary of Sanborn® Map Review

Address	Parcel	Map Date	Observations
501 Lafayette St.	318.033-3-14	1884	Lumber, Coal Shed, dwellings
		1888	Coal shed, dwellings
		1899	Blacksmith Shop, Stable, dwelling

Source: EDR (2016) (Appendix H)

Prior Phase 1 Environmental Site Assessments (ESAs)

The following prior Phase I ESA and environmental reports, prepared by others, were identified and reviewed⁹⁰ (Appendix H):

- Prior Phase I ESA (401-407, 409 Columbia Street) (2002)
- Mold Report (409 Columbia Street) (2014).

Conclusions relative to the Columbia Street properties are summarized below:

- Potential RECs associated with past land use at 401-407 Columbia Street, which reportedly included oil cloth factory operations during the late 19th century; car sales and services at 409 Columbia Street during the first half of the 20th century
- Potential RECs associated with the storage and subsequent removal of up to 30 drums in the basement of 401-407 Columbia Street. A spill report was filed; a follow-up inspection by the NYSDEC documented the removal and noted no evidence of spillage
- Indoor air quality issues at 401-407 Columbia Street reported by building employees in 1987 and mid-1990s
- Potential presence of ACM and LBP
- Indoor mold growth (409 Columbia Street)

⁹⁰ These prior assessments (2002, 2014) are associated with the facility currently owned by the Resource Center for Independent Living (RCIL).

3.11.2 Potential Impacts

Precluding implementation and maintenance of appropriate mitigation measures, the following adverse impacts could occur from construction and operation of the project.

Construction

Vehicles and Equipment Accessing and Egressing the Project Site

Vehicles and equipment accessing and egressing the construction zone could contribute to human health consequences related to pedestrian safety, exposure to air emissions from vehicle exhaust and nuisance dust, as well as from noise.

Disturbance of Hazardous Building Materials During Demolition Activities

Based on the urban setting, age of existing structures, prior land uses, and known RECs, it is likely that ACM, LBP, and other regulated substances will be encountered during the project's demolition and construction phases. Management of these materials will require conformance with applicable state and federal regulations.

Potential to Encounter Impacted Soils/Groundwater

As previously discussed in Sections 3.1, 3.2, and 3.3, it is expected that impacted soils and/or groundwater from existing or past land uses will be encountered during the construction phase. Management of these materials will require conformance with applicable state and federal regulations.

Operations

Impacts on Sensitive Receptors

Sensitive receptors located proximal to the project site were previously identified in Section 3.4. The IHC is also a sensitive receptor. Based on information provided in other sections (3.4, 3.7, 3.10), it is not anticipated that project-related operations will result in significant adverse impacts on remaining sensitive receptors.

Proximity to Existing Impacted Sites

State and/or federally sponsored remediation activities are on-going at various locations in the Mohawk Valley, including National Grid's Harbor Point site⁹¹; remediation activities are coordinated with oversight by the USEPA and/or NYSDEC. Based on site distances and topography (including available data), it is unlikely that conditions at these sites would adversely impact the project.

Increase in the Rate of Disposal or Processing of Solid and Other Types of Waste

Once operational, the proposed hospital will generate solid waste, RMW and other specialty wastes. As described in Section 3.13, quantities are not expected to exceed current waste production at the existing MVHS facilities and will be managed in accordance with applicable state and federal regulations. Based on this information, no significant adverse impacts on human health are anticipated from the management of these wastes.

Use of Pesticides or Herbicides

The IHC will be required to maintain healthy and sanitary conditions. Consequently, it is likely that pesticides and/or herbicides will be utilized to control vectors, nuisance animals and insects, as well as to maintain landscaping.

3.11.3 Mitigation Measures

The following mitigation measures are proposed to minimize or eliminate the potential for, and/or significance of, potential adverse impacts.

⁹¹ <http://www.harborpointsite.com/>

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Construction

To provide for human health and safety during construction activities, the following mitigation measures (also identified in other sections) will be implemented:

- Performance of due diligence evaluations to identify the potential presence of ACM⁹², LBP and other regulated materials, which could be encountered during construction phase activities
- Preparation, implementation, and maintenance of a “Maintenance and Protection of Traffic Plan” including provisions and measures to accommodate pedestrians and adjacent vehicular traffic surrounding the work zone
- Compliance with state and federal regulations regarding the handling, transportation and disposal of ACM, LBP, and other regulated materials encountered during construction phase activities
- Adherence to construction schedule restrictions (days and hours)
- Proper maintenance of vehicles and equipment including mufflers and other required emissions control devices (including adherence to state-mandated vehicle idling restrictions)
- Proper storage and handling of petroleum and chemical products
- Implementation of a site security plan (*i.e.*, fencing, lighting, use of secure material storage containers, monitoring of site during off-hours)
- Preparation and implementation of a CHASP to protect construction workers and the community from exposure to potentially impacted materials
- Spill response measures, training and reporting
- Compliance with City Code requirements

Operation

To provide for human health and safety during operational activities, the following mitigation measures (also identified in other sections) will be implemented:

- Provision of safe access/egress (vehicles and pedestrians) to and from the IHC and other project elements (see Section 3.7 and Appendix F)
- Compliance with the City’s noise ordinance
- Proper storage, handling, transportation and disposal of wastes generated from project operations
- Storage, application (including proper licensing) and disposal of pesticides/herbicides in accordance with applicable local, state and federal requirements
- Proper storage and use of chemicals, medicines, and other regulated materials and substances including conformance with applicable state and federal requirements
- Compliance with petroleum bulk storage requirements including the preparation and implementation, as necessary, of a Spill Prevention, Control and Countermeasure (SPCC) Plan.

⁹² As previously stated in this DEIS, for ACM abatement projects, the New York State Department of Labor’s Code Rule 56 requires that all work that disturbs ACM be done by trained workers following special procedures and engineering controls (including air monitoring) to prevent the spread of asbestos into the air and ensure ACM has been properly removed.

3.11.4 Reasonably Foreseeable Catastrophic Impacts

As defined in the SEQR Handbook⁹³, a catastrophic impact is “one which is life threatening to a number of individuals; would cause extreme hardship to their physical well-being; or would cause widespread destruction of natural resources as a result of a proposed action.”⁹⁴ The handbook, developed by the NYSDEC, further states that an impact is “reasonably foreseeable” if it could occur as a result of the action, even if the probability of such an occurrence is small.

It is important to note that potential extreme hazards are not inherent to the nature of the proposed action. While hospital-related activities can result in hazards (*i.e.*, lifting and moving patients; needle sticks; slips, trips, and falls; and the potential for agitated or combative patients or visitors), they do not, regardless of their location, typically include activities, which would reasonably result in catastrophic impacts.

Consistent with the Final Scoping Document (Appendix C), the issue addressed in this section focuses on potential secondary impacts associated with the proximity of the project to the existing, active CSX railroad located approximately 1,400± lf northeast and downgradient (20± feet) of the project area, including its use to provide for periodic pass-through transport of Bakken oil⁹⁵ and other hazardous substances. During the scoping process, commenters, expressed concerns relative to the proximity of the hospital to the railroad, and potential impacts associated with a derailment and release of chemicals, oils or other hazardous substances.

Overview

Site access is an important consideration for critical facilities such as hospitals. The ability for emergency medical service (EMS) personnel, patients, medical personnel, staff and visitors to quickly access the site often places hospitals proximal to the cross-roads of municipal highway systems (*i.e.*, Utica’s North-South and East-West Arterials). Highways are also used daily to advance commerce, which often depends on multiple transportation modes including highway and rail (*i.e.*, multi-modal corridors of commerce) to bring goods and services to customers. Consequently, the proximity of rail and highway systems and their use in transporting goods (including hazardous substances) is a common occurrence through the United States.

While the location of hospitals adjacent to highways and railroads, which are utilized for interstate commerce, are common⁹⁶, it does not preclude the need for planners and decision-makers to be diligent in implementing measures to prevent adverse impacts, even if the probability of such an occurrence is small.

Consistent with SEQR implementing regulations regarding the content of an EIS (6 NYCRR § 617.9), this section will provide for an evaluation of the potential secondary impact, limited to:

- A general discussion of the likelihood that the catastrophic impact would occur
- The consequences of the potential impact
- A discussion of alternatives and mitigation measures intended to prevent such catastrophic impacts

⁹³ The SEQR Handbook provides agencies, project sponsors, and the public with a practical reference guide to the procedures prescribed by the SEQRA – Article 8 of the Environmental Conservation Law (http://www.dec.ny.gov/docs/permits_ej_operations_pdf/seqrhandbook.pdf).

⁹⁴ <https://www.dec.ny.gov/permits/55215.html>

⁹⁵ Bakken oil is a type of ‘light sweet crude,’ a relatively high quality oil, which is produced and transported, predominantly by rail, from North Dakota. Trains transporting Bakken oil pass through Utica on their way to the Port of Albany. The Material Safety Data Sheet (MSDS) for Bakken oil is available at <https://www.msdsdigital.com/bakken-crude-oil-sweet-msds>.

⁹⁶ Proximity to active railroads: St. Johns Riverside Hospital (Yonkers, NY) – 1,000± lf; Rochester Regional Health (St. Mary’s Campus) (Rochester, NY) – 1,500± lf; St. Joseph’s Medical Center (Yonkers, NY) – 1,500± lf).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

The assessment was based on coordination with the following agencies:

- Oneida County Department of Emergency Services⁹⁷
- City of Utica Fire Department

In addition, the following plans were reviewed:

- New York State Comprehensive Emergency Management Plan (CEMP)⁹⁸
- Oneida County CEMP (2017)⁹⁹
- Emergency Response Guidebook (2016)¹⁰⁰
- Executive Order (EO) 125 (2014)¹⁰¹
- MVHS Emergency Operations Plan (EOP)¹⁰²

The resultant evaluation is provided below.

Likelihood the Impact Would Occur

Freight train accident statistics are compiled by the USDOT's Federal Railroad Administration (FRA). The primary role of the FRA is to strategically monitor, inspect, and assess track conditions to determine whether a railroad is complying with federal safety standards (40 CFR Part 213). Investments in infrastructure and equipment, new technologies, safety training, and stringent FRA oversight have significantly improved the safety record of America's freight railroads. Figure 19 illustrates historical trends in national train accidents per 1

⁹⁷ The Oneida County Department of Emergency Services is responsible for implementing the County's Comprehensive Emergency Management Plan (CEMP), which is recognized by local governments as a fundamental strategy for community disaster preparedness and response, and is endorsed by the State of New York and the federal government as an essential policy for effective public safety. The Department coordinates with local, regional, state and federal emergency management stakeholders to provide for the region's emergency preparedness and response. Department staff anecdotally indicated that their largest emergency response concern (*e.g.*, most likely to occur) in the region is an ice storm.

⁹⁸ <http://www.dhSES.ny.gov/planning/CEMP/>

⁹⁹ <http://www.ocgov.net/sites/default/files/E911/CEMP/911%20-%20CEMP%20-%202017.pdf>

¹⁰⁰ Published by the United States Department of Transportation (USDOT), the guidebook (USDOT 2016) is intended for use by first responders during the initial phase of a transportation incident involving dangerous goods/hazardous materials.

¹⁰¹ In 2014, at the direction of Governor Cuomo, New York State agencies conducted a coordinated review of safety procedures and emergency response preparedness related to increased shipments of Bakken oil across nearly 1,000 miles of the State. A report containing 27 recommendations for state government, federal government and industry to take to reduce risks and increase public safety in the transport of crude oil was subsequently released (<http://www.dhSES.ny.gov/crude-oil/preparation.cfm>). State implemented actions include: preparing and training first responders, establishment of a New York State Foam Task Force, provision of spill response equipment, updating and enhancing response plans, and creation of an interagency (local, state and federal) work group to further integrate emergency response plans across all levels of government.

¹⁰² MVHS' EOP is activated during a situation/disaster and provides the necessary tools for Hospital Incident Command (HIC) to manage the incident. The EOP establishes full compliance with applicable provisions of the National Integrated Accreditation for Healthcare Organizations (NIAHO) accreditation requirements for emergency management systems, the elements of National Incident Management Systems (NIMS) implementation for hospitals, and National Fire Protection Association (NFPA) Standard 1600 (*Standard on Disaster/Emergency Management and Business Continuity Programs*). Plan review and evaluation is performed through the MVHS Emergency Preparedness Committee meetings, quality management performance improvement reviews, periodic emergency operations drills and exercises, and through response to actual events. The EOP includes a facility-specific vulnerability assessment as a comprehensive assessment of preparedness for naturally occurring, technological, human, and hazardous materials events.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

million train-miles from 1980 to 2017¹⁰³. In general, train accidents have decreased from over 11 accidents per 1 million train-miles in 1980, to approximately 2.3 train accidents per 1 million train-miles in 2017; a 79% decrease. Extrapolating this latest national safety data, the likelihood of a train accident occurring along the one-mile stretch of railroad northeast of the project area (or along any one-mile stretch of railroad between North Dakota and the Port of Albany) would be negligible.¹⁰⁴ The probability of a train accident involving Bakken oil is less. The probability of a train accident involving Bakken oil and a fire is even less, and so on.¹⁰⁵ The likelihood that such an event would impact the hospital is further influenced by additional variables including:

- Weather (*i.e.*, wind direction, wind speed, *etc.*)
- Nearby construction material/density
- Natural and man-made barriers (*i.e.*, highways, topography, *etc.*)
- Other local variables (training, preparedness, pre-positioning of fire suppression/response assets, *etc.*; see below).

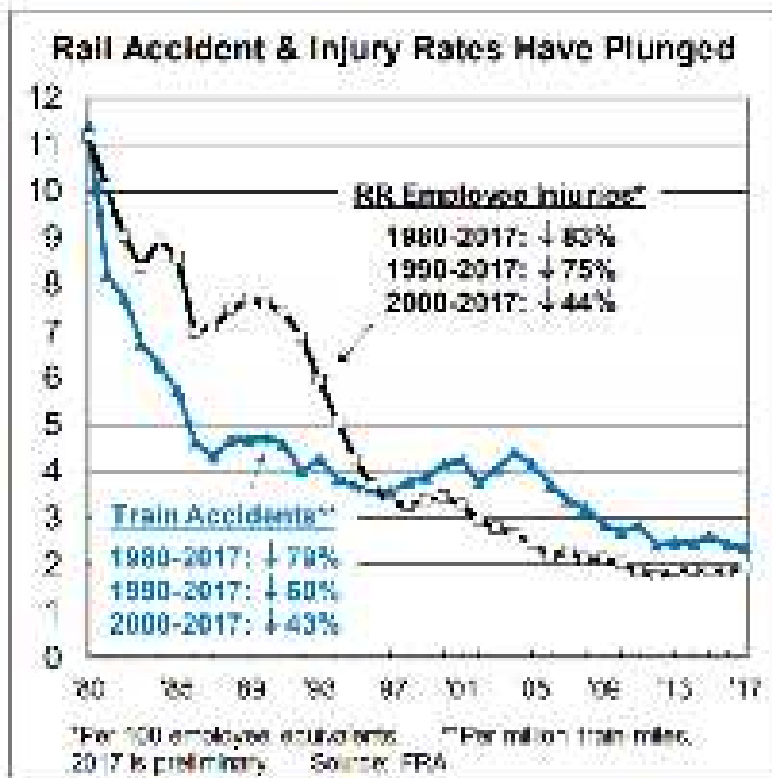

Figure 19. Historical Trends in National Train Accidents

¹⁰³ <https://www.aar.org/wp-content/uploads/2018/05/AAR-Railroads-Moving-America-Safely.pdf>

¹⁰⁴ 2.3 train accidents per 1 million train-miles equates to 2.3×10^{-6} train accidents per 1 train-mile.

¹⁰⁵ The NFPA compiled statistics of rail vehicle fires in the United States from 2003-2007. On average, tank cars only accounted for 2% of total fires involving rail vehicles (NFPA 2010, <https://www.nfpa.org/-/media/Files/News-and-Research/Fire-statistics-and-reports/Fact-sheets/railvehiclefires.ashx?la=en>).

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

Consequences of the Potential Impact

While the likelihood of an impact is negligible, due diligence and preparedness are prudent and necessary. Consistent with the USDOT's ERG and New York States' EO 125, the IHC will be identified as a special receptor within the site-specific Geographic Response Plan (GRP). GRPs are planning documents and spill response tools, prepared by the NYSDEC, in consultation with the New York State Division of Homeland Security and Emergency Services, NYSDOH, and local, regional and federal stakeholders, that are used to guide initial emergency response efforts associated with a major oil spill. The GRP for railroad mile-mark "QC 238" represents the area surrounding the existing railroad inclusive of the project area. To facilitate planning and training, the proximity of IHC operations will be accounted for in future training, preparedness and asset management activities guided by the County's CEMP. MVHS will coordinate with Oneida County to update and implement appropriate sections of the MVHS' EOP and the County's CEMP, respectively.

Alternatives and Mitigation Measures

While no alternatives were identified, the following mitigation measures have been or will be implemented:

- USDOT identified Bakken oil transport measures¹⁰⁶ agreed to, and implemented by, railroad companies including:
 - » Lowering speed limits for oil trains
 - » Increasing the frequency of track inspections
 - » Adding more brakes on trains
 - » Improving the training of emergency medical workers
- Continuation of regular, coordinated training programs¹⁰⁷ including:
 - » Oneida County Department of Emergency Services CEMP Emergency Response Training/Hazmat Drills
 - » Coordinated with other local, regional, state and federal stakeholders
 - » U.S. National Response Team (NRT) Training¹⁰⁸
 - » Emerging Risks Responder Awareness Training: Bakken Crude Oil
 - » Transportation Rail Incident Preparedness & Response Training
 - » Transportation Emergency Response Preparedness Training
 - » Office of Response and Restoration Hazardous Materials Training
 - » New York State Office of Fire Prevention and Control (OFPC) Training Programs
 - » Flammable and Combustible Liquid Emergencies
 - » Foam Trailer Training
 - » Live Fire Class B Foam Operations

¹⁰⁶ <https://www.transportation.gov/briefing-room/us-dot-announces-comprehensive-proposed-rulemaking-safe-transportation-crude-oil>

¹⁰⁷ The New York State Division of Homeland Security and Emergency Services operates the State Preparedness Training Center (SPTC) at the former Oneida County Airport. The mission of the SPTC is to "Provide first responders and governmental officials with the very best knowledge, skills and abilities necessary to safely and effectively prevent, prepare for, respond to and recover from terrorist acts and other man-made and natural disasters."

¹⁰⁸ The NRT is made up of 15 agencies including the USEPA (<https://www.nrt.org/>).

3.12 COMMUNITY CHARACTER

The proposed action may have an impact on community character. The following potential impacts, identified in the scoping process, are evaluated in this section:

Construction

- Acquisition (via voluntary negotiation and eminent domain) and demolition or alteration of properties in the proposed project area

Operation

- Land-use components will be different from current surrounding land use pattern(s); impact on City-owned and privately-owned lands within the project footprint
- Potential to result in secondary economic development impacts¹¹¹ (e.g., residential or commercial development)
- Potential to replace or eliminate existing facilities, structures, or areas of historic importance to the community
- Potential to displace affordable or low-income housing
- Potential secondary impacts resulting from the relocation and/or displacement of existing businesses/services (at proposed downtown and existing FSLH and SEMC locations)
- The proposed action may be inconsistent with the predominant architectural style and character of the area

3.12.1 Existing Conditions

The MVHS IHC will encompass approximately 25-acres within the City's CBD. The proposed location is proximal to the City's urban core, as well as the City's proposed "U" District, existing Brewery District, Bagg's Square and Utica Harbor Point. Land uses within this district are subject to the applicable standards codified in the City of Utica's Zoning Code (Section 2-29-193). As stated in Section 3.5, the project footprint contains approximately 80± tax parcels and a diversity of property types including mixed use, commercial, offices/warehouses, vacant/abandoned buildings, and parking. The existing building scale within the CBD and the surrounding area is a diverse mixture of building heights, consisting of mostly low rise (1-4 stories) and mid-rise (5-10 stories) buildings, with a few high-rise (11+ stories) buildings located to the east of Genesee Street. While the project area is characterized by buildings greater than 50+ years in age, many of them have undergone 20th and 21st century modifications (see Section 3.6; including Appendix E, which contains a photolog of existing buildings).

¹¹⁰ According to the Oneida County Department of Emergency Services, the first responders also have access to 3 hazmat trailers (2 County, 1 State).

¹¹¹ The DEIS will address the potential, non-speculative, decrease or increase in tax revenue resulting from the project only as it relates to the City's ability to continue to provide socio-economic services and infrastructure support. Disposition of City-owned land, as it relates to the project, will also be identified. Potential effects that a proposed project may have in drawing customers and profits away from established enterprises, possible reduction of property values in a community, or potential economic disadvantage caused by competition or speculative economic loss, are not environmental factors and will not be addressed in the DEIS.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

3.12.2 Potential Impacts

The proposed healthcare related land use is consistent with allowable uses designated for the CBD. In addition, the design character of the project is consistent with other community projects under development in the area (*i.e.*, “U” District and Utica Harbor Point redevelopment). To accommodate the proposed MVHS IHC, the proposed project will involve the acquisition of properties, modifications to existing public/private utility infrastructure, and closure of city streets. As stated in Section 1.1.4, it is anticipated that most of the property will be acquired through voluntary negotiation. However, it is likely that some property may need to be acquired via *eminent domain*. Many of the existing property owners and businesses will be required to relocate to other parts of Utica or Oneida County. The magnitude of the acquisition of 25± acres will be large, but most impacts are expected to be beneficial because it will better position the hospital to serve the largest and most diverse population in Oneida County, as well as creating the potential for secondary economic development opportunities, in a historically underutilized section of the city.

3.12.3 Mitigation Measures

The following mitigation measures are proposed to minimize or eliminate the potential for, and/or significance of, potential adverse impacts:

- MVHS, with the assistance of Mohawk Valley EDGE, obtained appraisal reports for each of the properties that would need to be acquired for the project. These appraisal reports provided the basis for MVHS to make offers to acquire the needed properties that were based on fair market value. Offers were sent to property owners between December 2017 and February 2018. Each property owner was afforded the opportunity to discuss their individual needs and concerns with MVHS or its representatives. In addition, representatives from the City of Utica, Oneida County and EDGE reached out to the property owners to discuss relocation needs and to offer assistance. MVHS, together with the City, the County and EDGE, worked with the Community Foundation of Herkimer and Oneida County to fund a position dedicated to assisting property owners with relocation. This individual immediately began coordinating the efforts between the City, County, EDGE and the property owner including: one on one meetings with owners to determine specific needs and to review potential alternate locations, creation of a catalog of available properties within the City and County to streamline the assessment of alternate properties. Finally, MVHS committed an additional \$1 million to the project dedicated for relocation assistance and has been negotiating relocation assistance payments with each of the owners. As a result, many of the property owners have agreed to sell their property(ies) to MVHS and the amount of property that will need to be acquired by eminent domain has been minimized
- Potential visual impacts will be mitigated as discussed in Section 3.5
- Potential cultural resource impacts will be mitigated as discussed in Section 3.6
- Growth-inducing aspects of the project will be managed as discussed in Section 8

3.13 SOLID WASTE MANAGEMENT

The proposed action may have an impact on solid waste. The following potential impacts, identified in the scoping process, are evaluated in this section:

Construction

- Temporary increase in the rate of disposal or processing of solid waste from construction/demolition activities
- The need to manage impacted soils/groundwater and/or hazardous building materials

Operation

- Waste generation, handling, transportation, and disposal (solid waste, hazardous waste and regulated medical waste [RMW])

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

3.13.1 Existing Conditions

Solid Waste Management – Oneida County

Solid waste management within the City of Utica is controlled by the Oneida-Herkimer Solid Waste Authority (OHSWA). The OHSWA Planning Unit is 2,708 square miles comprised of all towns, cities and villages within Oneida and Herkimer Counties, and consists of the following disposal facilities:

- The Oneida-Herkimer Recycling Center
- Green Waste Compost Facility
- Household Hazardous Waste Collection Facility
- Three transfer stations located in Webb, Utica, and Rome
- Two land clearing debris landfills located in Utica and Rome
- A wood pallet processing facility located in Utica
- A brush processing facility in Rome, NY
- A regional landfill in Ava, NY

Oneida and Herkimer County's Local Law No. 1 of 1990 establishes regulations for the collection and disposition of solid waste and recyclables within the two-county region. The laws mandate the separation of residential and commercial/industrial recyclable material from the waste stream, and requires all entities engaged in waste and/or recyclables collection to obtain a permit from OHSWA. The laws also have flow control provisions requiring waste generated within the county to be disposed of within the county.

Commercial/Industrial Waste

According to the Final 2010 Local Solid Waste Management Plan¹¹², there are approximately 20,000 operating businesses, industrial enterprises and commercial entities within the Planning Unit, which collectively make up approximately 50% of the region's waste. Businesses typically pay a hauler on an as needed or contract basis for waste and recyclables transportation to an OHSWA facility or private recycling center.

Recycling is also mandatory for local businesses and industries within the OHSWA service area. The local plan states that local industries and commercial establishments have been recycling their discards and benefiting financially from it for years; these entities are free to market their own materials, with OHSWA acting as the market of last resort for these generators during market down turns.

To promote recycling and waste reduction from local businesses, OHSWA established a no charge, comprehensive on-site waste characterization, reduction, and recycling evaluation program. Upon request, the Authority performs waste assessment/audits, which evaluates current solid waste and recycling practices, identifies waste generator points, assesses participation and compliance rates, and identifies potential opportunities for increasing recyclable material recovery.

Current & Future Projections

OHSWA projections indicate a continued decrease in solid waste generation through 2020. Estimates are based on census data, which indicates decreases in the region's population; as well as success through OHSWA's waste reduction and recycling programs. These programs have also decreased the rate at which landfill capacity is consumed at the Ava Landfill, which currently has a NYSDEC permit to receive solid waste into March 2019; as well as land to develop and permit additional landfill cells beyond. Current and future projections through 2020 from the Solid Waste Management Plan are included in Table 17, below. In summary, municipal solid waste, construction and demolition waste, and sewage sludge are projected to slightly decrease by approximately 0.2%

¹¹² <https://www.ohswa.org/about-us/final-local-solid-waste-management-plan/>

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

per year, as a result of the population decreasing, waste reduction efforts, and recyclables/organics recovery. OHSWA does not expect development or lack thereof to have a major impact in solid waste planning efforts.

Table 17. Current and Future Solid Waste Projections – Oneida County

Year	2018	2019	2020
Population Estimate	287,467	286,892	286,318
Municipal Solid Waste (tons)	158,101	154,146	151,338
Construction & Demolition Waste (tons)	47,969	46,892	44,755
Sewage Sludge (tons)	13,741	13,713	13,686
Industrial Waste (tons)	11,786	11,763	11,739
Total (tons)	231,597	226,484	221,519
Recyclables Recovered (tons)	292,748	295,248	298,248
Recycling Rate	56%	57%	57%

Source: <https://www.ohswa.org/about-us/final-local-solid-waste-management-plan/>

Regulated Medical Waste

New York State has provided regulatory oversight of Regulated Medical Waste (RMW) since the early 1980s, which covers all aspects of handling, storage, treatment and disposal of this waste.¹¹³ RMW activities are governed jointly by the NYSDOH and the NYSDEC, under the following regulatory framework:

- Title 15 of Article 27 of the ECL
- 6 NYCRR Subpart 360-10
- 6 NYCRR Subpart 360-17
- 6 NYCRR Part 364
- Public Health Law 1389 aa-gg
- 10 NYCRR Part 70

The NYSDOH is responsible for on-site waste management procedures for hospitals, freestanding diagnostic and treatment centers, residential health care facilities and clinical laboratories. In addition, the NYSDOH is responsible for developing treatment standards and approving alternate treatment technologies. The NYSDEC is responsible for overseeing storage, treatment and destruction processes for facilities not covered under NYSDOH jurisdiction, as well as off-site transport of RMW for all generators, tracking, responding to illegal disposal incidents, and for all off-site storage, transfer, treatment and disposal facilities.

Current Waste Streams & Quantities – MVHS

The existing MVHS medical center's waste streams and quantities are identified in Table 18.

Table 18. Estimated MVHS Waste Streams and Quantities

Waste Stream	FSLH & SEMC ¹¹⁴ (Annual)
Solid Waste	1,800 tons
Regulated Medical Waste (RMW)	365 tons
Hazardous Waste ¹¹⁵	3 tons
Sharps	28 tons

Source: MVHS

¹¹³ <https://www.dec.ny.gov/chemical/8789.html>

¹¹⁴ Combined FSLH and SEMC totals, unless noted.

¹¹⁵ Includes pharmacology waste.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

MVHS currently operates a RMW autoclave at its St. Luke's facility. RMW generated at FSLH and SEMC is currently shredded and autoclaved at the St. Luke facility, making it inert prior to being hauled off-site for disposal at a municipal solid waste management facility. Other wastes generated at these facilities are also stored on-site prior to transportation off-site by permitted vendors to regulated/permitted disposal facilities.

3.13.2 Potential Impacts

Construction

C&D Debris

Construction activities will result in the generation of several types of waste streams requiring management, including:

- Land clearing debris (including organic material and excess soils [spoils])
- C&D¹¹⁶
- Solid waste (as defined in 6 NYCRR § 360-1.2(a)(1))
- Recyclables (including construction and demolition materials, which could be reused or repurposed on other construction sites)

Based on the magnitude of proposed demolition and construction activities, approximately 63,000± tons of C&D¹¹⁷ will be generated during the construction phase. C&D may also consist of potentially hazardous building materials (*e.g.*, ACM, LBP, *etc.*) and impacted soils and groundwater. The generation of such waste streams will temporarily increase the rate of disposal and processing of wastes within the local area.

Operation

Once operational, the proposed IHC will generate solid waste (including food processing wastes), RMW and hazardous wastes. Wastes will be similar in character and magnitude to wastes currently generated at FSLH and SEMC. These wastes will require efforts on-site related to source separation, handling and storage, as well as transportation off-site for management at facilities permitted to receive such wastes. It is likely that the autoclave and shredding operations at the St. Luke's facility will cease operations upon the migration of health services to the IHC.

3.13.3 Mitigation Measures

The following mitigation measures are proposed to minimize or eliminate the potential for, and/or significance of, potential adverse impacts.

Construction

C&D Debris

Contractors will be required to comply with local and state requirements regarding the handling, disposal and/or management of waste streams and recyclables including on-site storage and transportation of materials to facilities permitted to handle the specific waste or recyclable stream. A CHASP will be developed, implemented and maintained to protect worker safety. Contractor(s) will be responsible for appropriately separating, handling, transporting, and disposing waste streams in accordance with applicable regulations; all waste streams will be disposed off-site at facilities permitted to receive such wastes. In addition, contractors may implement the following additional waste reduction measures:

¹¹⁶ Concrete, wood, asphalt, metals, bricks, glass, plastics, *etc.*

¹¹⁷ It is anticipated that approximately 28% of the C&D (18,000± tons) would be recycled by contractors using strategies of stacking and sorting metals to be salvaged; stacking brick, block and concrete; and potentially crushing for use as fill. Material would require testing to confirm that it is non-hazardous.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- An evaluation of material selection for interior and exterior building materials for recycled content and local material
- Diversion of construction and land clearing debris from landfill disposal
- Redirecting recyclable-recovered resources back to the manufacturing process
- Redirecting reusable materials to beneficial applications.

Operation

Waste generation rates at the proposed IHC are not expected to surpass quantities at the existing MVHS facilities. Solid waste and recyclables will be managed in accordance with applicable local, state, and federal requirements, including consistency with the county's Solid Waste Management Plan. RMW (including specialty wastes) and solid waste management practices will incorporate good housekeeping and best management practices including proper storage. Solid waste will be stored in covered receptacles, bins, and dumpsters, as appropriate, until it is transported by permitted haulers to an off-site, permitted facility for final disposal. RWM and other specialty wastes will also be hauled by NYSDEC-permitted waste transporters to facilities permitted to receive such wastes.

4. EFFECTS ON THE USE AND CONSERVATION OF ENERGY

Implementation of the project will use existing energy resources during both construction and operational phases. The implications of the use of energy, as well as potential conservation opportunities are summarized in this section.

4.1. PROPOSED ENERGY SOURCES AND ALTERNATIVES

Construction-related activities will require the use of electricity, as well as fuels to power equipment and vehicles. Construction vehicles are typically powered by diesel fuel; however, potential alternatives include natural gas (CNG and LNG), biodiesel, or LPG (propane).

During daily operations, the IHC, MOB, parking garage and other project elements will be serviced by existing electrical transmission lines and natural gas mains provided by National Grid. The existing utilities are anticipated to support the additional electric and natural gas usage associated with the IHC (including termination of service to existing facilities to be demolished). No significant adverse impacts on existing energy resources are anticipated (see Section 3.9).

4.2. ANTICIPATED SHORT-TERM/LONG-TERM LEVELS OF ENERGY CONSUMPTION

4.2.1 Short-term Energy Consumption

Construction activities will consume gas, diesel and electricity to power equipment and vehicles. Consumption activities are expected to continue throughout the construction phase, but are not expected to significantly impact existing reserves.

4.2.2 Long-term Energy Consumption

The proposed project will use electricity and natural gas. Although energy expenditures are anticipated to be offset by the termination of energy consumption from existing facilities and land uses to be demolished, overall power proposed consumption rates are expected to be within the capacities of National Grid's existing infrastructure.

4.3. INDIRECT EFFECTS ON ENERGY CONSUMPTION

The project will result in the following indirect effects on energy consumption, which are not expected to significantly impact existing reserves:

- Use of gasoline, diesel and alternative fuels in motor vehicles, both construction- and operations-related, traveling to and from the project site.

4.4. ENERGY CONSERVATION MEASURES

Contractor(s) will be offered the opportunity during construction-phase activities to select and implement a variety of energy conservation measures including:

- Implementation of a maintenance and protection traffic plan
- Use of alternative fuels and energy-saving equipment
- Evaluation of material selection for interior and exterior building use
- Redirecting reusable and/or recyclable materials
- Purchase of "green" products
- Promotion of mass transit or other less-energy consuming modes of transportation.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

During operations, conservation will be achieved from the use of high efficiency equipment and lighting whenever feasible. It is in the economic interest of MVHS to use less energy. In addition, regulatory standards for high efficient construction and lighting will be applied. Energy requirements will be consistent with energy policy recommendations established in the New York State Energy Conservation Construction Code.¹¹⁸

¹¹⁸ <https://www.dos.ny.gov/DCEA/pdf/2016%20EC%20Supp-Revised-2016-08-12-approved%20bycouncil%20V-A.pdf>

5. CUMULATIVE IMPACTS

As prescribed in the SEQR Handbook, cumulative impacts must be assessed when actions are proposed, or can be foreseen as likely, to take place simultaneously or sequentially in a way that the combined impacts may be significant. As with direct impacts, assessment of cumulative impacts should be limited to consideration of reasonably foreseeable impacts, not speculative ones.

5.1 CONSTRUCTION PHASE

5.1.1 NEXUS Project

The Upper Mohawk Valley Memorial Auditorium Authority (Aud Authority) is contemplating additional development adjacent to the Aud; the Aud is a multi-purpose arena and home to the Utica Comets of the American Hockey League. If constructed, the proposed NEXUS Center (NEXUS) would consist of an 170,000± sf tournament-based recreation play facility which would be utilized for ice hockey, box lacrosse, soccer, and other field sports that can be performed on a 200-foot by 85-foot playing surface. NEXUS would include three playing surfaces, 25± locker rooms, commercial office space, college classroom space, retail space, food and beverage services, and other multi-purpose training space.

NEXUS would be developed in the block between Charles Street on the west and Broadway on the east, and Oriskany Street on the south and Whitesboro Street on the north. Charles Street would be abandoned, and NEXUS would be connected to the existing Aud. No site plan applications in support of NEXUS have been submitted to the City and a construction schedule has not been identified. Therefore, cumulative construction phase impacts are not anticipated. However, if the NEXUS project becomes more than just speculation, construction-related impacts would be minimized through coordination and implementation of maintenance and protection of traffic plans, as well as implementation of project-related mitigation measures identified throughout this DEIS.

5.1.2 CSO Project

As identified in Section 3.9, the City has implemented a series of projects to reduce CSOs. One of the projects (CSO Control Project A9.1) is currently underway near the project area and is approximately 95% complete. Project sponsors expect the project to be fully completed by the end of 2018. Consequently, no overlap (and cumulative impacts) with the IHC project are anticipated.

5.2 OPERATIONS PHASE

Based on conversations with the NYSDOT and the Aud Authority (August 2018), current events at the Aud typically do not impact commuter peak periods and there is not enough detailed information available regarding the Aud expansion and NEXUS Center to include potential impacts in this TIS. Therefore, traffic generated during Aud events or potential traffic generated by the Aud expansion and NEXUS Center are not included in this study.

6. UNAVOIDABLE ADVERSE ENVIRONMENTAL IMPACTS

While Section 3 identifies potential project-related adverse impacts and mitigation or project modifications to minimize or eliminate those impacts, certain potential adverse impacts cannot be fully avoided. These potential adverse environmental effects are identified below. However, based on the information provided in Section 3, including mitigation to be implemented to reduce the significance of the impact, none of the unavoidable adverse environmental effects identified in this section are considered significant.

6.1. SHORT-TERM EFFECTS

The project will result in the following short-term effects that cannot be avoided:

- Short-term (construction phase) disruption to, and exposure of, soils
- Short-term and localized increases in construction-related dust and vehicle/equipment emissions
- Short-term disruptions to traffic due to construction activities, road closures and work within public rights-of way
- Temporary construction-related noise
- Increased energy expenditures associated with construction activities.

6.2. LONG-TERM EFFECTS

The project will result in the following long-term effects that cannot be avoided:

- Demolition of existing buildings within the project footprint (including relocation of existing businesses)
- New traffic patterns due to permanent closure of existing roads
- Periodic noise events from emergency helicopter access/egress
- Modified viewshed

7. IRREVERSIBLE AND IRRETRIEVABLE COMMITMENT OF RESOURCES

The natural and human resources that will be consumed, converted, or made unavailable for future use by implementation of the project are summarized below.

7.1. LAND

Implementation of the project will require the long-term commitment of resources from the land. Raw materials such as soil, sediment and other land resources will be utilized. These same land resources are currently utilized by the existing land uses, which will be removed to facilitate implementation of the project.

7.2. MATERIALS

Natural and anthropogenic materials will be consumed during the construction and operation of project. Materials will be utilized directly during the on-site construction and operation of proposed facilities and activities, as well as indirectly in the transportation of other materials, services, and people to and from the project site. Construction-related materials include lumber, petroleum products, metal, and synthetics. Implementation of the project will require the irretrievable commitment of these resources.

The project involves the demolition of existing facilities. As noted in Section 3.13, contractor(s) will develop waste management plans with incentives to reuse and/or recycle C&D debris, as appropriate. Contractors will have the option to select and implement alternative options and methodologies to lessen the commitment of natural resources including:

- Evaluation of material selection for interior and exterior building materials for recycled content and local material
- Diversion of construction and land clearing debris from landfill disposal
- Redirecting recyclable-recovered resources (including demolition materials) back to the manufacturing process
- Redirecting reusable materials to appropriate sites (other projects).

7.3. INFRASTRUCTURE AND SERVICES

Implementation of the project will require the commitment of infrastructure and services such as water, sewer, electricity, natural gas, telecommunications, highway, solid waste and police and fire protection services. The following infrastructure and services would be committed to the project; many of these same resources are currently committed to existing land uses within the project footprint:

- Water for potable, sanitary, and fire protection needs
- Sanitary sewer conveyance and treatment capacity for wastewater discharges
- Electricity and natural gas use
- Fiber optic/telecommunication capacity
- Solid and regulated medical waste management facility capacities
- Police and fire protection services (no anticipated increase)

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

8. GROWTH INDUCING ASPECTS

This section describes the likelihood that implementation of the project may induce further development. While growth-inducing effects (economic and social) of the IHC project may be beneficial to the region, induced growth may also be the source or cause of secondary environmental impacts. The growth inducement section of this DEIS describes potential additional development, which the proposed action may support or encourage, such as:

- Attracting significant increases in local population by creating or relocating employment
- Providing support facilities or services
- Increasing the development potential of the surrounding area

The growth inducement section of the DEIS relies on growth projections/predictions, which are based on available information. The purpose of the discussion of growth inducement in the DEIS is to enable Involved Agencies to reach findings concerning both positive and negative effects of induced growth proximal to the proposed project.

Growth inducing impacts will also address the future use/re-use of the existing facilities. MVHS is conducting an evaluation of the potential adaptive reuse of its existing facilities, which will form the basis of evaluation in the DEIS.

Future growth may result in the physical alteration of the land or other activities, which require discretionary local and/or state permits, or project elements with the potential to impact the environment. Activities may result in similar types of impacts and the implementation of similar mitigation measures as those impacts and mitigation measures identified throughout this DEIS. While such projects are speculative at this time, future projects, once they are proposed, would be required to comply with SEQRA and obtain necessary permits.

8.1 DOWNTOWN SITE

As previously stated in Section 1, the project is located in an area of the city designated as a Federal “Historically Underutilized Business” (HUB) Zone. MVHS has coordinated with local and regional economic development organizations, including the City, County, Mohawk Valley EDGE, and the Community Foundation to promote the potential secondary economic development opportunities afforded by the downtown siting of the IHC.

EDGE, in particular, provides a coordinated economic development program with a mission to strengthen and grow the Mohawk Valley economy. In August 2017, MVHS (with assistance from EDGE) performed a qualitative and quantitative analysis of the potential economic/growth-inducing impacts (MVHS 2017), which could result from implementation of the downtown IHC project. In their analysis, MVHS identified several growth-inducing aspects of the project including:

- The downtown campus creates future opportunities for medical education, research and for future growth and innovation.
- Integration of the medical campus into the downtown fabric will help to build a vibrant community through spatial efficiency, creative placemaking, historic preservation, and pedestrian-focused infrastructure.
- The site’s proximity to Bagg’s Square, Harbor Point, Varick Street, and the proposed U District, will strengthen demand for residential living and new commercial establishments.

Potential beneficial impacts are summarized below:

- Downtown residential living & downtown revitalization opportunities – MVHS concluded that the downtown location could be catalyst for an increased demand for downtown residential housing and mixed-use development. EDGE estimated that the project could potentially result in the need for 600+ units of downtown loft style apartments and townhouse development, which could be fulfilled by targeted development in and facilitated connectivity to Bagg’s Square, Harbor Point, the Brewery District (Varick Street) and other key downtown properties. MVHS also concluded that the downtown IHC would enhance opportunities for retail, hotel, and other commercial development.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- Improved & enhanced infrastructure improvements – MVHS indicated that the project will facilitate support for infrastructure upgrades, as well as the abandonment of city streets, and the potential reduction in City operation/maintenance obligations.
- Expanded downtown parking – The project will result in a net increase in downtown parking capacity, including the construction/operation of a new public parking structure (with reserved public parking spaces for non-IHC needs).
- Tax revenues & jobs – The MVHS analysis¹¹⁹ indicated that the project would generate tax revenues and create jobs, as well as creating higher economic values for adjacent properties that are fully depreciated and underutilized. Estimated revenues included:
 - » Taxable sales for downtown project (during 3-year construction period) – \$15 million to \$17 million; a mid-point estimate of \$16 million in sales would generate approximately \$320,000 in sales tax revenue for the City over 3 years (\$106,667/year).
 - » Taxable sales from 3500 employees (downtown operations) – \$19,162,500 (3,500 employees X \$15/day in taxable spending X 365 days = \$19,162,500); 50% assumed to be net increase in taxable sales within City (\$9,581,250). \$9,581,250 in annualized new spending within City X 2% generates \$191,625 in sales tax for the City.¹²⁰
 - » Taxable sales from IHC cafeteria/gift shops – \$42,000/year (estimated based on migration of existing FSLH sales [\$24,000/year] to City and City retaining SEMC sales [\$18,000/year]).
 - » Parking garage revenues (from IHC dedicated spaces).

8.2 ADAPTIVE REUSE OF FSLH AND SEMC

As summarized in Section 1, a majority of the MVHS services currently provided at FSLH and SEMC will be transitioned to the new IHC upon its completion, which will result in vacated space at the older campuses. MVHS recognizes that the health system and its community have a vested interest in finding a use for the campuses that will meet the needs of the local community, while preserving the legacy of each campus and providing a positive economic output for stakeholders.

MVHS is coordinating with the Community Foundation to evaluate options related to the repurposing and /or development of the FSLH and SEMC campuses. To identify the most realistic and viable future use scenarios and effectively target the most likely developers or end-users, the analysis will focus on the following questions:

- What are the local and regional needs that this campus could support (*i.e.* technology hub/incubator, higher education, senior living, *etc.*)?
- What is the value of the campus under different development scenarios?
- What governmental funding programs are available to help offset redevelopment costs and make the property more attractive to a developer?
- What range of future uses is MVHS willing to permit on the property? Which uses will need to be prohibited via a restrictive covenant to be applied to the site?

¹¹⁹ An additional post-siting analysis was conducted by Turner Construction to estimate construction phase local tax benefits (*i.e.*, “traveling manpower” tax generation from construction workers [hotels and restaurants]). Based on Oneida County’s tax structure: 8.75% sales tax (4% to NYS; 4.75% to Oneida County) and an additional 2% County tax on hotel stays, the County gets 6.75% on all hotel and 4.75% on restaurant, gas, food and other sales. This equates to approximately \$811,000 in estimated “traveling manpower” local taxes generated during the construction phase (Turner 2018).

¹²⁰ The MVHS analysis also recognized that the project would result in a loss of City property tax income (estimated to be approximately \$115,300/year). This amount will be more than accounted for by the gain in sales tax revenue to the City.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- Are there any liabilities (*i.e.* environmental contamination) that will impact the value of the property or otherwise need to be addressed during the course of a sale?
- What external organizations (civic, municipal, *etc.*) should be consulted for input into the scope of a future redevelopment (if any)? At what stage of the process should they be consulted?
- Are there municipal restrictions that should be understood prior to marketing the property? Does the city have preferences for the types of users that should be included in the redeveloped site?
- Of all the different redevelopment scenarios being contemplated, which ones are financially feasible and have the ability to actually be developed?
- What is the functionality and capacity of the existing infrastructure and buildings? What are the costs required to bring the existing facilities to a state capable of supporting various redevelopment scenarios?
- Based on the answers to the above questions, who are the most likely end-users or developers (both regionally and nationally)?

MVHS would like to see these properties redeveloped consistent with the Town of New Hartford and the City of Utica's long-term development plans and made capable of providing an economically positive contribution to the area. The properties are zoned as follows:

- FSLH – Institutional District¹²¹
- SEMC – Planned Development-Extraordinary District¹²²

In understanding the opportunities associated with these properties, MVHS developed the following issues they would like to have addressed in the adaptive reuse evaluation:

Basic Scope of Services

- Site inventory, including parcels to be included in the redevelopment plan
- Infrastructure inventory, including locations, capacities and current conditions
- Post-demolition (if any) identification and evaluation of conditions for redevelopment, including utilities, access points, street/highway alignments and any physical barriers to redevelopment
- Environmental/regulatory assessment
- Neighborhood assessment, including current or recommended zoning
- Comprehensive/Strategic Plan and other local, county or regional plans
- Demographic assessment
- Sector market analysis for commercial, retail, housing or other proposed redevelopment options
- Identification analysis and concept development of up to three alternative development options with estimated costs and preliminary cost/benefit analysis

¹²¹ Institutional Districts encompass a variety of public and private uses, including schools, health care services, residential care facilities, religious institutions and government buildings and other associated commercial uses that often serve, or are related to, the nearby institutional uses, including general offices and eating establishments.

¹²² A development not otherwise distinguishable under any previous classification, occupying a district consisting of any quantity of land area and containing less than the stated minimum proportions of any single or dominant use or function, and in which the proposed uses of interior and exterior spaces, although diverse or mixed, bear extraordinary design qualities resulting in a completely logical and complementary conjunction of uses and functions not ordinarily encountered in normal development.

MVHS INTEGRATED HEALTH CAMPUS | DRAFT ENVIRONMENTAL IMPACT STATEMENT

- Designation of preferred redevelopment model, with estimated costs and refined cost/benefit analysis
- Identification of potential funding sources (public and private)

MVHS is soliciting qualifications from firms to provide for the campus evaluation and redevelopment services; the results of the analysis will be presented by MVHS to the Town of New Hartford and City of Utica.

**Certificate of Need
Application**

Executive Summary

Mohawk Valley Health System (MVHS) is submitting the Full Review Certificate of Need (CON) Application that seeks approval for the construction of a new hospital campus. MVHS is the active parent and co-operator of St. Elizabeth Medical Center (St. Elizabeth) and Eastern St. Luke's Healthcare: St. Luke's Division (St. Luke's). St. Luke's (Operating Certificate #320200311, PEI #3599) is currently located at 1656 Champion Avenue, Utica (Oneida County), New York 13502. St. Elizabeth Medical Center (Operating Certificate #320200211; PEI #0596) is currently located at 2209 Genesee Street, Utica (Oneida County), New York 13501. Cardiac PCI and cardiac surgery services currently offered through the Mohawk Valley Heart Institute (Operating Certificate #3206004H; PEI #7528) are also provided on the campus of St. Elizabeth at 2209 Genesee Street, Utica (Oneida County), New York 13501. This CON Application will be funded, in part, through the Health Care Facility Transformation Program: Oneida County grant awarded to MVHS specifically for this purpose. This project is one (1) of at least two (2) Applications being submitted to the New York State Department of Health (NYSDOH) for the transformation of services within the Oneida County region, as described in detail below.

Through New York Public Health Law Section 2825-b, New York State created the "Oneida County Health Care Transformation Program" that set aside up to \$300 million in capital grant funding for the sole purpose of consolidating multiple licensed healthcare facilities into an integrated system of care, within the largest population center in Oneida County (i.e., Utica). Through a response to a Request for Applications (RFA #1515091321) from the New York State Department of Health (NYSDOH) and Ultimate Authority of the State of New York (DA&PF), MVHS was awarded \$300 million in grant funding for the project proposed in this CON Application (i.e., the creation of a new hospital campus), which will result in the transformation of healthcare services in the region.

This CON Application is the first of a series of (at least two (2)) Applications that Mohawk Valley Health System and its two (2) related facilities (St. Elizabeth and St. Luke's) will be submitting that will lead to the merger of St. Elizabeth and St. Luke's, and the relocation and consolidation of the majority of services comprising St. Elizabeth and St. Luke's to the new hospital campus in Utica, New York.

The new, consolidated hospital campus will be located on a 2.25-acre parcel of land generally bordered by the following streets in Utica (Oneida County), New York 13501: State Street, Broadway, Oriskany Street West, and Columbia Street. An address has not yet been assigned to the site. The new hospital campus will have the following inpatient bed complement: emergency care (eight (8) beds); intensive care (42 beds); maternity (33 beds); medical/surgical (252 beds); neonatal/intermediate care (eight (8) beds); pediatrics (16 beds); and psychiatric (44 beds). In addition, the St. Luke's campus will retain 24 physical medicine and rehabilitation beds. In total, MVHS (including its two (2) campuses) will reduce its overall inpatient bed complement by 174 beds, from 571 beds to 397 beds (including 173 beds at the new hospital campus and 24 PM&R beds at its St. Luke's campus).

Through this CON Application, all inpatient and most outpatient services from the current St. Elizabeth campus will be relocated to the new hospital campus, which will be known as the "Mohawk Valley Health System Campus". The current St. Luke's site will become a division of the Mohawk Valley Health System under this Application and will relocate all inpatient and outpatient services from the St. Luke's site to the new hospital campus (with the exception of 24 PM&R beds and some other outpatient services).

The St. Elizabeth site will be converted into an outpatient extension clinic to be known as "St. Elizabeth Campus". As a new extension of this site, it is expected to maintain its existing PEI number. In particular, sleep/wake services (Mohawk Valley Sleep Disorders Center), cardiac and thoracic surgery-related services (all of which are medical only services; no surgical services will be provided at this site), primary care services and a laboratory patient service center (PSC) will continue to be provided at this site.

The Total Project Cost for this project is estimated to be \$481,571,393, which is broken down into the following two (2) sub-projects:

New York State Department of Health
Certificate of Need Application

MOHAWK VALLEY HEALTH SYSTEM

BOARD RESOLUTION

AND

PROJECT NARRATIVE

**RESOLUTION
OF THE
BOARD OF DIRECTORS
OF
MONTAUK VALLEY HEALTH SYSTEM
ST. ELIZABETH MEDICAL CENTER
DAXTON-ST. LUKE'S HEALTHCARE
(the "Corporations")**

Adopted at a Meeting Held September 28, 2017

WHEREAS, \$200 million has been earmarked in the New York State budget to help create an integrated healthcare delivery system in Otsego County; and

WHEREAS, the legislature provides a new financial opportunity for the Montauk Valley Health System (MVHS) to build a new hospital in Ulster, NY and transform healthcare for our community consistent with the vision of Triple Aim; and

WHEREAS a new 670,000 \$2,192 Incentive bed, state-of-the-art hospital that would replace St. Elizabeth Medical Center (SEMC) built in 1977 and the St. Luke's Campus of Easton-St. Luke's Healthcare (ESLH) built in 1957; and

WHEREAS, a new hospital would reduce the number of beds in our community and consolidate patient services to one location in a Delivery System Incentive Payment Program (DSIP) aligned program; and

WHEREAS, the Hospital desires to construct a new health care facility in Otsego County in the City of Ulster;

NOW, THEREFORE, upon motion duly made, seconded and unanimously carried, it is

RESOLVED, that the officers of the Hospital hereby authorized and directed to file a Certificate of Need Application with the New York State Department of Health requesting its approval for the construction and operation of a new health care facility in Otsego County in the City of Ulster, and

IT IS FURTHER RESOLVED, that the officers of the Hospital are hereby authorized and directed to sign whatever notices shall be necessary and all documents and all be required to effect the intent of the foregoing resolutions; and

IT IS FURTHER RESOLVED, that the Hospital hereby adopts and incorporates by reference any form of special resolution to carry into effect the purpose and intent of the foregoing resolutions, or covering authority included in powers authorized in the foregoing resolutions, including forms of resolutions to come within, therewith that may be required by any state, institution, person or agency and the Hospital be, and hereby is, authorized to incur, in any and all manner, the full amount of the Hospital following this written action and to verify the same as having been duly adopted hereby.

These resolutions shall take effect immediately

Dated: September 28, 2017

Gregory A. Evans, Secretary

MOHAWK VALLEY HEALTH SYSTEM

PROJECT NARRATIVE

Proposal

Mohawk Valley Health System (MVHS) is submitting this Full Review Certificate of Need (C.O.N.) Application and seeks approval for the construction of a new hospital campus. Mohawk Valley Health System (MVHS) is the active parent and co-operator of St. Elizabeth Medical Center (SEMC) and Faxton St. Luke's Healthcare's St. Luke's Division (St. Luke's). St. Luke's is currently located at 1656 Champlain Avenue, Utica (Oneida County), New York 13502. St. Elizabeth Medical Center is currently located at 2209 Genesee Street, Utica (Oneida County), New York 13501. Cardiac PCI and cardiac surgery services currently offered through the Mohawk Valley Heart Institute are also provided on the campus of St. Elizabeth at 2209 Genesee Street, Utica (Oneida County), New York 13501. This C.O.N. Application will be funded, in part, through the Health Care Facility Transformation Program Oneida County grant awarded to MVHS specifically for this purpose. This project is one (1) of at least two (2) Applications being submitted to the New York State Department of Health (NYSDOH) for the transformation of services within the Oneida County region, as described in detail below.

Through New York Public Health Law Section 2825-b, New York State created the "Oneida County Health Care Transformation Program" that set aside up to \$300 million in capital grant funding for the sole purpose of consolidating multiple licensed healthcare facilities into an integrated system of care, within the largest population center in Oneida County (i.e., Utica). Through a response to a Request for Applications (RFA #1505050325) from the New York State Department of Health (NYSDOH) and Dormitory Authority of the State of New York (DASNY), MVHS was awarded \$200 million in grant funding for the project proposed in this C.O.N. Application (i.e., the creation of a new hospital campus), which will result in the transformation of healthcare services in the region.

Current Situation

MVHS is currently the active parent and co-operator of St. Luke's and St. Elizabeth. In addition, cardiac PCI and cardiac surgery services currently offered through the Mohawk Valley Heart Institute are provided on the campus of St. Elizabeth at 2209 Genesee Street, Utica (Oneida County), New York 13501. The location and NYSDOH identifying information for these facilities are as follows:

- **Enxron St. Luke's Healthcare St. Luke's Division – Operating Certificate #32020031E; PFI #03889**
1656 Champlin Avenue, Utica (Oneida County), New York 13502.
- **St. Elizabeth Medical Center – Operating Certificate #32020032H; PFI #0598 – 2209 Genesee Street, Utica (Oneida County), New York 13501.**
- **Mohawk Valley Heart Institute (MVHI) – Operating Certificate #32020040E; PFI #7328 – 2209 Genesee Street, Utica (Oneida County), New York 13501.**

Future Situation

This C.O.N. Application is the first in a series of (at least two (2)) Applications that Mohawk Valley Health System and its two (2) related facilities (St. Elizabeth and St. Luke's) will be submitting that will lead to the merger of St. Elizabeth and St. Luke's, and the relocation and consolidation of the majority of services comprising St. Elizabeth and St. Luke's to the new hospital campus in Utica, New York. A description of the expected Application submissions is as follows:

- **Application #1 – Full Review C.O.N. Application (Subject of this Application) – Construction of a new hospital campus.** The new, consolidated hospital campus will be located on a 25-acre parcel of land generally bordered by the following streets in Utica (Oneida County), New York 13501: State Street, Broadway, Oriskany Street West, and Columbus Street.¹ Please refer to Appendix J for a map of the proposed campus. An address has not yet been assigned to the site.

¹ The proposed property is comprised of several tent parcels, some of which have structures on them but will need to be demolished. Mohawk Valley Health System is in the process of working with the property owners to attempt to purchase the parcels of land for the proposed new hospital campus. Should an owner of the parcel of land elect not to negotiate with MVHS, the Hospital may need to proceed through the eminent domain process to acquire the parcel.

Through this C.O.N. Application, all inpatient and most outpatient services from the current St. Elizabeth campus will be relocated to the new hospital campus, which will be known as the "Mohawk Valley Health System Campus". A separate "Outpatient" C.O.N. Application will be submitted, as described in the next bullet point.²

The following programs and services will remain on the St. Elizabeth site, with no construction or relocation necessary.

- Article 28 Services – The St. Elizabeth site will be converted from an outpatient extension clinic to be known as "St. Elizabeth Campus". MVHS prefers that this site maintain its current PFI Number. In particular, sleep center services (Mohawk Valley Sleep Disorders Center), cardiac and thoracic surgery-related services (all of which are medical-only services; no surgical services will be provided at this site), primary care and laboratory patient service center (PSC) services will continue to be provided at this site.

The Mohawk Valley Sleep Disorders Center and some primary care services are currently located within the campus located at 2209 Genesee Street, Utica (Oneida County), New York 13501. The cardiac and thoracic surgery offices, other primary care services and the laboratory PSC are located within the Marian Medical Building at 2202 Genesee Street, Utica (Oneida County), New York 13501. This site will become an extension clinic, with no construction needed.³ MVHS prefers that a new operating certificate be created for the

² Upon implementation of the merger project, which will result in MVHS preferably having a single new operating certificate number and PFI number, through which the two (2) hospital sites will operate as divisions, MVHS will relocate all inpatient and outpatient services from the St. Elizabeth and the St. Luke's sites to the new hospital campus (with the exception of 24 PFI&R beds at the St. Luke's Campus and some other outpatient services as described within this C.O.N. application).

³ For purposes of this C.O.N. Application, we are assuming that, although these services will be located in different buildings they will remain in their current location and MVHS prefers that they share the same Operating Certificate and PFI number. MVHS is willing to discuss this issue with the State Health Department, should the Department prefer to verify the sleep center and outpatient endocrinologic services, primary care practice and laboratory PSC as separate extension clinics.

extension clinic while maintaining its current PFI number and being certified for the services of "Medical Services – Primary Care" and "Medical Services – Other Medical Specialties".

- o Non-Article 25 Services (St. Elizabeth College of Nursing) – This program is not an Article 25 service, but it will remain on the current site of St. Elizabeth.
- o Application 02 – Full Service C.O.N. Application – This project will represent the "merged" C.O.N. Application through which St. Elizabeth and St. Luke's will be merged to become a single hospital entity, preferably with a single operating certificate number and new PFI number. St. Luke's will become a division of MWH. In addition, through that C.O.N. Application, the majority of services from the St. Luke's and St. Elizabeth sites will be relocated to the new hospital campus. The "merged" project is expected to be implemented while the new hospital campus is being constructed.

The following programs and services will remain on the St. Luke's campus, with no construction or relocation necessary after the merger:

- o Article 28 Services – The St. Luke's site, which will be a hospital "division", will retain the following services, with no construction needed: 24 certified, inpatient PM&R beds, laboratory P&C service, outpatient primary care and obstetrics services, and outpatient urgent offices for medical visits/services.

This site will be known as the "St. Luke's Campus". As part of this C.O.N. Application, the majority of the inpatient and outpatient services will relocate to the new hospital campus, leaving behind the 24 PM&R beds and other outpatient services at 1656 Champlain Avenue, Utica (Oneida County). The laboratory P&C, primary care, obstetrics, and ambulatory surgery offices will continue to be located within a Physician Office Building on the St. Luke's

Campus.⁴ This campus will be certified for 24 inpatient PMA&R beds and the certified services of "Medical Services - Primary Care" and "Medical Services - Other Medical Specialties".

- b) Article 28 Services – The Operating Certificates of all extension clinics of MCVHS (St Elizabeth and St Luke's) will be consolidated under the single operating certificate of the operator. In addition, some of the extension clinics sites with different operating certificates have the same addresses. These sites will need to be consolidated in a single operating certificate for each extension clinic.
- c) Article 28 Services – To maintain service continuity, PCI and Cathlab Surgery services currently offered through Mohawk Valley Heart Institute will be provided on the new hospital campus. MCVHS will work with the NYSDOH to determine how to bundle the services offered through the Mohawk Valley Heart Institute, and if this entity can be eliminated.
- d) Other Article 28 and Article 26 Services:
 - St. Luke's Home – A 202-bed residential health care facility (RHC) with an Adult Day Health Care Program (ADHCP) affiliated with MCVHS.
 - Mohawk Valley Home Care – A licensed home care services agency (LH SA) affiliated with MCVHS.
 - Visiting Nursing Association of Otsego and Oneida County – A certified home health agency (CHHA) and a long-term home health care program (LTHHCP) affiliated with MCVHS.

⁴ For purposes of this LCOE Application, we are assuming that, although the inpatient PMA&R beds and the outpatient services will be located in different buildings, they will remain in their same locations and will continue to share the same Operating Certificate and PID number. MCVHS is willing to discuss the issue with the State Health Department, should the Department prefer to certify the outpatient services as a separate extension clinic from the PMA&R bed hospital division.

Impact of Overall Transformation on Operating Certificates

The overall transformation project (i.e. not just the implementation of the “new hospital campus” project, but also the merger project) will have an impact upon the operating certificates of the facilities, as follows:

Certified Inpatient Beds

Please refer to Appendix II for an inpatient bed complement analysis that shows the number of certified inpatient beds operated at St. Elizabeth and St. Luke’s before and after the implementation of the overall, proposed project, as well as a comparison of St. Elizabeth/St. Luke’s (combined) and the new hospital campus. The overall project will result in the decertification of 174 certified inpatient beds from the healthcare system. It should be noted that almost all 370 beds on the new hospital campus will be located in single-bedded rooms (five (4) rooms on each medical/surgical floor and four (4) rooms on the behavioral health unit will be constructed as semi-private for use only during high census), which is the standard of inpatient care in the 21st century.

St. Elizabeth is currently certified for 701 inpatient beds (please refer to Appendix II for the breakdown of beds by certified bed category). Upon the implementation of the overall project, all inpatient beds at St. Elizabeth will be relocated to the new, consolidated hospital campus. As explained above, the St. Elizabeth campus will retain some outpatient programs and services, and it will become an outpatient extension clinic.

St. Luke’s is currently certified for 370 inpatient beds (please refer to Appendix II for the breakdown of beds by certified bed category). Upon the implementation of the overall project, all but 24 inpatient PM&R beds will be relocated to the new, consolidated hospital campus. These 24 inpatient PM&R beds will remain in place on the St. Luke’s campus, with no construction required. As explained above, the St. Luke’s campus will retain other programs and services on its campus.

The St. Luke's campus will retain 24 PMA&R beds and the new hospital campus will ultimately have 373 beds. In some instances, beds of St. Elizabeth and St. Luke's will need to be decommissioned upon implementation of both the new hospital campus and the merger projects.

Please also refer to Appendix II for Transition Plans for St. Luke's and St. Elizabeth.

Certified Services on Hospital Campuses (Existing and New)

Please refer to Appendix III for an analysis of certified services and an analysis of program/services for the various campuses involved in the overall project.

Extension Clinics

St. Elizabeth currently operates eight (8) extension clinics and St. Luke's currently operates 21 extension clinics. Together, these 29 extension clinics will continue to be operated by these entities. In addition, St. Luke's has three (3) approved-but-not-operational extension clinics (approved under Project Nos. 112261, 171306 and 171478). Please refer to Appendix IV for a list of these extension clinic sites that are impacted by the overall project. As noted above, some of these extension clinics will be consolidated through the merger FCA Application that will be submitted while the new hospital campus project is under construction. In addition, the current St. Elizabeth campus will be converted to an extension clinic.

NYSDOH Designations

St. Elizabeth is currently designated by the NYSDOH as a Level III Adult Trauma Center. St. Luke's is currently designated by the NYSDOH as both a Level II Perinatal Center and a Stroke Center. MCHS plans to continue to maintain these three (3) NYSDOH designations – Level III Adult Trauma Center, Level II Perinatal Center and a Stroke Center – on the new Hospital campus.

Disposition of Former St. Elizabeth and St. Luke's Buildings

MVHS plans to engage with a third-party firm for the development of a repurposing plan for the campus spaces that will no longer be utilized by MVHS for healthcare services. It is possible that the properties may be sold or used for other functions, but the future disposition is still to be determined.

Non-Article 28 Spaces on New Hospital Campus

The new hospital campus will contain several spaces/buildings that will be non-Article 28 but are being shown on the drawings for this C.O.N. Application. These programs include the following:

- **Masonic Medical Research Lab (MMRL)** – The MMRL is a biomedical research institute founded in 1978. MMRL will lease certain space on the new hospital campus, within the new hospital building structure, from MVHS. The capital cost of the construction for the MMRL is included as a separate sub-project on C.O.N. Schedule 3B.
- **On-Campus Parking Garage** – MVHS will work with the City of Utica (the "City") and the County of Oneida (the "County") to develop an on-campus parking garage that will serve the parking needs of MVHS and the downtown Utica general public. Through a Memorandum of Agreement (MOA), MVHS, the City and the County have agreed to collaborate in the development of a new on-campus parking garage on the new hospital campus, as well as the refurbishment of another existing parking garage (the "Keurody Garage") in close proximity to the new hospital campus. At this time, it is expected that MVHS will operate and maintain the on-campus parking garage. Please refer to the Schedule 4 Attachment for the MOA. The capital costs of the parking garage are not being included in this C.O.N. Application because they will be jointly paid for by Oneida County and the City of Utica.

In addition, MVHS expects to modify this C.O.N. Application in the future to include a Medical Office Building (MOB) on the new MVHS campus that will likely contain Article 28 services. As of

the time of submission of this C.O.N. Application, MVTIS had not yet decided what services would be placed within the MOB, so it is not being included in this initial C.O.N. submission.

Project Background

MVTIS is the active parent and co-operator of both St. Luke's and St. Elizabeth. St. Luke's is a 370-bed, not-for-profit hospital located at 1655 Champlin Avenue, Utica (Oneida County), New York 13502. St. Elizabeth's is a 200-bed, not-for-profit hospital located at 2209 Geneva Street, Utica (Oneida County), New York 13501. The two (3) facilities are currently located 1.8 miles and six (6) minutes' travel time from one another.

The new Hospital campus and merger will enable MVTIS to consolidate two (2) existing acute care hospitals into one (1) integrated location, will provide greater access to residents of the City of Utica, Oneida County and the region, and it will improve operational efficiency, patient satisfaction and safety for both patients and caregivers. In particular, the overall project will create a structured delivery system, end the current service fragmentation, increase service integration and coordinate the work of the hospitals and other community-based organizations. Furthermore, the implementation of the overall project will reduce gaps/inefficiencies in care coordination, aligns with payment reform and rebalances healthcare delivery through the reduction in the number of hospital beds as care is shifted from an inpatient care model to an outpatient care model focused on population health.

The proposed location of the project on 25 acres of land adjacent to the central business district of Utica will accessize healthcare services for Oneida County in the most populated area of the County, which is a requirement of the \$300 million grant provided by the NYSDOH under New York Public Health Law Section 2825-b. The additional benefits include the utilization and support of existing parking, retail, restaurants, hotels, small businesses and community events. The new hospital, which

will be approximately 672,000 square feet in size, will also become a catalyst for ongoing and future development of the region.

In addition to improving the efficiency of staff workers, the proposed consolidation of the two (2) existing acute care facilities will result in a decrease in the total number of inpatient beds from a combined 571 inpatient beds at two (2) campuses to a more efficient model with 174 fewer beds, representing a reduction of about 30%. This is achievable through having 95% private patient rooms, improved throughput metrics, reduced length of stay and a general reduction of utilization in the region, which reflects the national, state, and local trends of a reduction in inpatient admissions and an increase in outpatient visits.

The new, consolidated hospital was designed with the following goals in mind:

- 95% of all inpatient rooms will be private to ensure patient privacy, eliminate transfers, promote healing and provide space for families. Private patient rooms also provide greater protection to patients who are highly susceptible to infections and help prevent infections from spreading.
- Patient rooms will be equipped with accommodations for family members and visitors, including seating, Wi-Fi access and a television.
- Patients will have personal control over their room temperature, lighting and window blinds.
- Room design will enable standardization of care and improved efficiency and safety.
- Hospital-wide communication systems will allow for a quieter, more calming environment.
- Critical supplies will be located adjacent to patient rooms to minimize time and travel distances when caring for patients.
- Department locations will be strategically located for maximum efficiency in patient transport and privacy.
- Ample and convenient parking will be constructed to serve various populations, such as patients, visitors, employees, medical staff, vendors and emergency vehicles.

Because of the reduction and deconcentration of inpatient psychiatric beds through the overall project (please refer to Appendix III), the New York State Office of Mental Health (NYSOMH) will also be involved in the review of the overall project. On August 7, 2017, MCVHS and its representatives met with representatives of the New York State Office of Mental Health (Mr. Keith McCarthy, Mr. Mark Simone and Ms. Sue Knapik) to discuss the proposed plans for MCVHS's new hospital campus. On October 6, 2017, MCVHS and its representatives met with Mr. Udu Amann of the New York State Department of Health and Mr. Keith McCarthy of the NYSOMH to again discuss its proposed plans.

Please refer to the **Schedule 6 Attachment** for architectural documentation for this project.

Background and Evolution of Public Need

The affiliation of MCVHS with St. Elizabeth's and St. Luke's, which occurred in 2014 (Order Project No. 132204), began a process of assessing the current operations of both hospitals and developing a plan to reduce/eliminate the duplication of clinical and building services. A number of services were consolidated to one (1) hospital location, which resulted in a reduction of operational costs, as well as improved patient experience and staffing efficiency. However, other programs and services such as inpatient care, emergency services, diagnostic imaging and surgery remained at both campuses because they are needed to help operate a full service acute care facility. A significant number of support services, including dietary, pharmacy, laboratory, administration, materials management, housekeeping, security, and engineering and maintenance staff – all needed to operate two (2) acute facilities – are currently duplicated at the two (2) sites, less than two (2) miles apart.

Multiple facility options were analyzed, including: (1) maintaining both hospital sites; (2) consolidating one facility into the other facility based upon available land, feasibility with phasing and logistics; and (3) consolidating both facilities to a brand new campus. Based upon its analysis, MCVHS decided that the option of consolidating both facilities to a new campus would be the most effective option. First, it would give MCVHS the opportunity to improve patient access to serve the

County's largest population center, which includes the 4th largest refugee program in the United States. Second, consolidating all services to a single site would improve operational efficiency and maximize resources (including physicians and employees). Third, a new, consolidated site will enable MCVHS to reduce infrastructure and energy consumption for decades to come. The existing St. Elizabeth and St. Luke's facilities were constructed in 1917 and 1957. A single campus would reduce the overall building square footage from 928,000 square feet to approximately 672,000 square feet (a 28% decrease).

By consolidating the two (3) facilities to a new campus, MCVHS can have nearly all private inpatient rooms, and it will be able to more appropriately segregate the outpatient and inpatient programs of care to meet the needs of population health management. Outpatient services adjacent to a new, integrated healthcare campus will provide a one-(1)-stop care environment for patients who need more specialized care, and a model of care delivery that is seamless and highly accessible.

Inpatient Utilization Statistics

Summary tables of the occupancy rates for St. Elizabeth's and St. Luke's (separately) between 2012 and YTD 2017 are as follows:

Table A. Occupancy Rate by Certified Bed Category at St. Elizabeth's, 2012-YTD 2017

	2012	2013	2014	2015	2016	YTD 2017*
Intensive Care	37.1%	45.7%	68.0%	36.8%	33.4%	35.0%
Medical/Surgical	64.4%	74.4%	76.4%	74.1%	72.0%	75.1%
Pediatric	11.1%	4.5%	12.7%	9.7%	7.5%	3.0%
Psychiatric	60.9%	61.5%	81.8%	43.8%	73.1%	62.8%
TOTAL	81.3%	79.8%	79.7%	74.2%	71.6%	71.4%

*Data is preliminary as of month September 30, 2017

Source: Internal Data from MCVHS

Table B. Occupancy Rate by Certified Bed Category at St. Luke's, 2013-YTD 2017

	2013	2014	2015	2016	YTD 2017*
Intensive Care/ Primary Care†	76.5%	75.0%	83.9%	82.9%	82.6%
Maternity	61.7%	59.0%	56.1%	56.0%	53.4%
Medical/Surgical	58.0%	57.8%	49.8%	48.0%	49.0%

Neonatal/Perinatal/Intermediate/Post-ICU ¹	47.1%	39.4%	31.5%	36.7%	40.4%	35.2%
Pediatric	23.5%	30.3%	27.7%	28.1%	13.4%	24.7%
Physical Medicine & Rehabilitation	81.7%	61.6%	57.4%	56.9%	52.3%	47.4%
Psychiatric	58.3%	61.8%	71.5%	68.1%	70.1%	66.7%
TOTAL	29.1%	54.3%	51.3%	51.9%	48.2%	47.4%

¹ From table 67 utilization of neonatal/intermediate/post-ICU

² Includes 22 neonatal intensive care beds and eight (8) certified coverage beds for 2013 and other contract beds for 2014

³ Includes four (4) certified neonatal/intermediate care beds and 49% (38) certified beds for pediatric coverage. (2013) and 40% certified beds for the combined 2014 utilization

Source: Internal Data from 2016

Through the overall project, MVTIS will decrease 174 inpatient beds, including three (3) maternity beds, 153 medical/surgical beds, four (4) neonatal/combined care beds, six (6) pediatric beds and six (6) psychiatric beds. Please refer to Appendix III for more detailed inpatient utilization statistics by certified bed category for both St. Elizabeth's and St. Luke's.

When the inpatient utilization of both St. Elizabeth's and St. Luke's is combined, the facilities have an overall occupancy rate of 56.4%. Please refer to these statistics in the following table:

Table C: Overall Occupancy Rate by Certified Bed Category at St. Luke's and St. Elizabeth's (Combined) Using 2016 Utilization Data - Current Bed Complement vs. Proposed Bed Complement

	Occupancy Rate	
	Current Bed Complement	Proposed Bed Complement
Intensive Care/Coronary Care	87.5%	87.8%
Maternity	23.6%	65.5%
Medical/Surgical	53.5%	87.2%
Neonatal/Combined/Intermediate Care	40.3%	61.2%
Pediatric	17.4%	23.9%
Physical Medicine & Rehabilitation	52.7%	52.7%
Psychiatric	71.5%	81.3%
TOTAL	56.4%	81.1%

Upon the implementation of the overall project, which removes 174 inpatient beds from the overall healthcare system, the two (2) facilities of MVTIS would have a combined, overall occupancy rate of 81.1% when using 2016 utilization statistics, which is more in line with norms for hospital occupancy in the 71st century and the needs of the hospital.

through the overall project, MWHHS will desertify six (6) inpatient psychiatric beds (i.e., from 50 to 44 beds). Not only is this desertification supported by the historical occupancy rates for inpatient psychiatric beds noted in Table C above, it is also supported by the following statistics:

- Although the number of patient days for inpatient psychiatric patients at the two (2) combined MWHHS facilities increased from 2012 to its peak in 2015, it has decreased considerably since 2015. Based upon 2017 data through September 30, 2017, the occupancy rate of the 50 inpatient psychiatric beds was 69.6% (down from the peak occupancy rate of 81.8% in 2015), meaning that almost 15 beds remained unused, on average, during that time in 2017.
- A large and growing percentage of inpatient psychiatric cases are originating from outside of Oneida and Herkimer Counties, which means that residents are likely bypassing other inpatient psychiatric units that are closer to home for many residents. These statistics are as follows:

Table B: Number and Percentage of MWHHS Inpatient Psychiatric Discharge from Oneida/Herkimer Counties vs. All Other Counties, 2012-YTD 2017

	2012	2013	2014	2015	2016	YTD 2017
Oneida/Herkimer Counties	1,812	1,707	1,728	1,303	1,766	1,112
All Other Counties	327	410	348	611	540	571
TOTAL	2,140	2,117	2,076	1,914	2,306	1,683
Oneida/Herkimer Counties	84.7%	79.1%	75.9%	68.1%	76.6%	66.2%
All Other Counties	15.3%	20.9%	24.1%	31.9%	23.4%	33.8%
TOTAL	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%

Source: MWHHS Policy Link System

In 2012, only 18.0% of the inpatient psychiatric cases at MWHHS were from patients residing outside of Oneida and Herkimer Counties. By 2017 (using data through September 30, 2017), 33.8% of the inpatient psychiatric cases at MWHHS were from patients residing outside of Oneida and Herkimer Counties. Based upon a review of inpatient psychiatric bed projects within the “Central New York” and the “Northeast” areas of New York State (i.e. NYSE-COIN) (which includes Oneida and Herkimer Counties, as well as the surrounding regions), since 2012, the only

inpatient psychiatric project that was implemented was the addition of one (1) psychiatric bed at Rome Memorial Hospital (Oneida County), which went from 11 beds to 12 beds through Project No. 132143. The fact that no psychiatric beds were de-certified means that many of the patients who travel from outside of Oneida or Herkimer Counties to receive inpatient psychiatric care at MWHH can likely be served on inpatient psychiatric units located closer to their homes. Nevertheless, it is clear that they are attracted to MWHH facilities for various reasons (one of which is likely the high quality of care provided at its facilities).

- MWHH expects to continue to experience a decrease in its inpatient psychiatric utilization, largely due to the transition of care from the inpatient realm to the outpatient realm, and from the expanded use of front-line important behavioral health services. To this end, MWHH and its two (2) hospital facilities operate numerous extension clinics throughout Oneida and the surrounding region that provide outpatient behavioral health services. Furthermore, as indicated below in the section entitled “Alignment with DSRIP”, MWHH is continuing to work with its partners through the DSRIP program to integrate behavioral health services into the primary care setting.

Traditionally Underserved Demographic Characteristics

The primary service area (PSA) for this project is comprised of Oneida County. This county contains the two (2) main hospitals (St. Elizabeth's and St. Luke's), as well as many of their extension clinics. Oneida County is located in Central New York and had a population of 231,198 in 2016.² The two (2) largest cities in Oneida County are Utica (with a 2015 population of 61,628 (most recent data available)) and Rome (with a 2015 population of about 22,916 (most recent data available)). MWHH's patients generally come from 45 towns and villages covering 1,257 square miles surrounding the facilities. Approximately two-thirds (67%) of the County's population resides in urban/suburban areas, while the remaining one-third (33%) resides in rural areas.

² U.S. Census Bureau. American Factfinder. https://factfinder.census.gov/servlet/table?_lang=en&_ss=1981&_tid=1101&_all_geo_types=N. Accessed on October 18, 2017.

With nearly 18.9% of the population 65 years and older, Oneida County had a median age of 41.1 in 2016.⁶ Furthermore, in 2016, the racial/ethnicity of Oneida County was broken down as follows: Hispanic (3.5%), non-Hispanic White (83.2%), non-Hispanic American-Asian/Pac (1.7%), non-Hispanic Asian (4.2%), non-Hispanic other minorities (2.9%).⁷ Furthermore, 17.1% of the population is living at or below the Federal Poverty Level (FPL), demonstrating the high poverty that exists in the region. In the City of Utica, 32.2% of the population is living at or below the FPL.⁸

Oneida County is the home to one of the largest refugee resettlement agencies in the country, Mohawk Valley Resource Center for Refugees (MVRCR). Since the 1980s, MVRCR has resettled more than 15,000 individuals in Utica, with ethnicities and nationalities including Vietnamese, Russian, Dnestrian, Somali (Bantu), Burmese and Nepali. Importantly, foreign-born residents constitute 18.9% of the Utica population in 2016. Furthermore, about 17.7% of Utica residents age five (5) and older spoke a language other than English in 2014.⁹

The new hospital campus in downtown Utica will improve access for all area residents, including the large refugee population. MVHS currently spends more than \$400,000 annually to provide language assistance associated with its healthcare services. In particular, the Hospital employs four (4) program specialists/interpreters and 22 per-diem interpreters, and it works with outside agencies to cover 30 different languages and dialects. Lastly, within the rural areas of Oneida County, there are also growing numbers of Amish and Mennonite residents.

PQI Statistics and Poor Health Outcomes

Relative to the PQI measures of the New York State Department of Health, geographic areas that need improved access to care in Oneida County include Utica, Rome and Waterville. These areas have total PQI rates that are up to 170% greater than expected.¹⁰ Please refer to Appendix V for

⁶ Ibid

⁷ Ibid

⁸ Ibid

⁹ Ibid

¹⁰ https://eps.health.ny.gov/indicators-press/municipality_indicators/summary

Documentation of these statistics

Residents of Oneida County also experience poor health outcomes for a number of conditions, including cardiovascular disease, diseases of the heart, coronary heart disease, acute myocardial infarction (heart attack), congestive heart failure, cerebrovascular disease (stroke), hypertension, chronic kidney disease, diabetes, chronic lower respiratory disease, asthma and cancer. Please refer to Appendix VI for documentation of these statistics.

Alignment with DSRIP

NYHS is actively involved in the New York State Delivery System Reform Incentive Payment (DSRIP) program, and this proposed project aligns with the goals and system transformation work being done through the program. The overall project supports the development of an integrated delivery system that reduces excess capacity, eliminates the duplication of services and focuses on patient-centered care while improving patient outcomes and reducing costs. The operational efficiencies gained through the new hospital, in concert with DSRIP project implementation, will enhance care coordination and allow resources to be repurposed to better support expanded models of care and to implement a population health approach for Oneida County.

St. Luke's is a corporate member of the Central New York Care Collaborative (CNYCC) Participating Provider System (PPS), and both St. Luke's and St. Elizabeth's serve as safety net partners within the PPS. The primary goal of DSRIP is to fundamentally transform the healthcare delivery system and reduce avoidable hospital use by 25%. Avoidable hospital use encompasses not only avoidable hospital readmissions, but also inpatient admissions that could have been avoided if the patient had received proper preventive care. NYHS's DSRIP project work is aimed at reducing Potentially Preventable Emergency Room Visits (PPERVs), Potentially Preventable Readmissions (PPRs) and improving Prevention Quality Indicators for adults and pediatrics (PQIs and PQIs, respectively). In addition, NYHS is implementing, evidence-based strategies for disease management in high

risk/affected populations: strive to improve the management of cardiovascular disease and its associated risk factors. This project addresses blood pressure control, cholesterol management, tobacco cessation, and prevention efforts for stroke and cardiovascular disease.

MVHS is working toward achieving these objectives through the implementation of 11 DSRIP projects designed to support system transformation, clinical improvement and population health. The proposed new hospital project provides the physical infrastructure that removes many of the barriers and challenges currently impeding improvements to these measures. The overall project aligns with DSRIP objectives because it allows for enhanced access to high quality primary care, reduced care gaps and inefficiencies and alignment with payment reform focused on outcomes and population health management. Specific DSRIP performance measures aligned with the project are as follows:

- Increasing the number of practices with PCQA Level 4 Patient-Centered Medical Home (PCMH) recognition: Implementation of DSRIP Project 2.a.i – Create an Integrated Delivery System that supports the County patients receiving the right care, at the right time and in the right setting. This involves enhancements to primary care, communication and access to health information. MVHS is working with CNYCC to implement a population health management system as a tool for increasing communication, efficiency and closing gaps in care for County residents.
- Reducing ED visits for ambulatory sensitive conditions: Implementation of DSRIP Project 2.b.iii – Emergency Department Care Triage for At-Risk Populations provides for a patient navigation program in the proposed Emergency Department to coach patients regarding appropriate ED utilization, address social needs and connect with primary care.
- Reducing hospital admissions for super-utilizers: Implementation of DSRIP Project 2.b.iv – Care Transitions Intervention Model to Reduce 30-Day Readmissions. A key element of this project involves enhancements to care planning and coordination among the healthcare team for those patients most at risk for readmission.
- Integration of behavioral health into the primary care setting: Implementation of DSRIP Project 2.a.ii – Integration of Primary Care and Behavioral Health Services enhances a behavioral health network and improves access to behavioral health services for the County.
- Increasing referrals to Health Home: Implementation of DSRIP Project 2.a.ii – DSRIP Care Management will enhance care coordination and management, supporting appropriate utilization of healthcare services.

Background of Mohawk Valley Health System

Mohawk Valley Health System (MVHS) is an integrated delivery system of Faxon-St. Luke's Healthcare and St. Elizabeth Medical Center. MVHS is the active parent and co-operator of St. Luke's and St. Elizabeth's. St. Elizabeth Medical Center is a Catholic hospital, co-sponsored by the Sisters of St. Francis of the Neumann Communities. The Sisters of Francis reserve power related to the mission of St. Elizabeth only. St. Luke's is a secular hospital, and the new proposed hospital (that will result from the implementation of this CCM Application) will also be a secular hospital.

MVHS is also the active parent and co-operator of Mohawk Valley Home Care, LLC, Senior Network Health, LLC, St. Luke's Home Residential Healthcare Facility, LLC, and the Visiting Nurse Association of Ulster and Oneida County, Inc. These entities will not be affected by this hospital campus consolidation project.

In 1957, SLMHC opened at its current location in New Hartford. Furthermore, in 1992, the Board of Directors of both Faxon and SLMHC affiliated, forming the Mohawk Valley Network. Between 1998 and 2000, a single management team formed and Faxon St. Luke's Healthcare formed. In 2000, Faxon Hospital (Faxon) and St. Luke's Memorial Hospital Center (SLMHC) merged to form Faxon St. Luke's Healthcare. In 2002, all inpatient services consolidated at the St. Luke's campus, and all outpatient services were consolidated to the Faxon campus. The St. Elizabeth's and St. Luke's affiliation began in December 2011, and in March 2014, the Public Health and Health Planning Council approved the active parent and co-operator status for MVHS.

Program Management

MVHS conducts a program of services to reach an underserved population, and an operating philosophy that embodies the principle that comprehensive, coordinated, high-quality care is the right of every person, regardless of age, sex, sexual orientation, race, creed, religion, disability, source of

payment or any other personal characteristics. Services provided through the overall project will be sensitive to the needs of the population and responsive to the desires of the Hospital's patients.

The general operations of the consolidated hospital will adhere to the standards required under 10 NYCRR. MCHS's standards of patient care emphasize accuracy and timeliness of diagnosis, and referral to appropriate medical practitioners. All existing policies and procedures in place at the two (2) hospitals will be incorporated into the operation of the consolidated hospital, which will be operated under the same high standards of care currently in practice at the hospitals.

All administrative aspects of the consolidated hospitals will be directed by an individual who is qualified for such duties by education and experience. The Quality Assurance (QA) Program associated with the consolidated hospitals will be administered by the Chief Quality Officer, Yara Yoss, M.D., F.C.C.P., and the appropriate Medical Director for the services, with the overall oversight from the Chief Medical Officer of MCHS, Michael E. Trevisani, M.D., M.B.A., C.P.E., F.A.S.C.R.S., F.A.C.M.T.. Please refer to Appendix VII for the curriculum vitae of Dr. Trevisani. The QA Program and operational protocols will be followed for the consolidated hospitals. The QA Program ensures that patients receive the highest level of quality. There are continuing education activities to provide staff with the opportunity to learn the newest technology, techniques and protocols in the provision of services at the Hospital.

INPATIENT BED COMPLIMENT ANALYSIS

The following tables show the current and proposed number of certified inpatient beds of the current St. Elizabeth Medical Center (St. Elizabeth), the current Proton-St. Luke's Healthcare St. Luke's Division (St. Luke's) and the new hospital campus. The post-implementation period represents the time after the new hospital campus and merger projects are complete.

Table A. Inpatient Bed Complement at Current St. Elizabeth Campus, Pre- and Post-Implementation

	St. Elizabeth (Before)	Change	St. Elizabeth* (After)
Intensive Care	20	-20	0
Medical/Surgical	149	149	0
Pediatric	8	-8	0
Psychiatric	24	-24	0
TOTAL	201	-201	0

Table B. Inpatient Bed Complement of Current St. Luke's Campus, Pre- and Post-Implementation

	St. Luke's (Before)	Change	St. Luke's (After)
Coronary Care	8	-8	0
Intensive Care	22	22	0
Maternity	26	-26	0
Medical/Surgical	238	-238	0
Neonatal/Coronating Care	2	0	0
Neonatal Intermediate Care	8	8	0
Pediatric	14	-14	0
Physical Medicine and Rehabilitation	24	0	24**
Psychiatric	26	26	0
TOTAL	370	-346	24**

Table C. Inpatient Bed Complement at St. Elizabeth (St. Luke's (Continued)) and New Site

	Continued (Before)	Change	St. Luke's (After)	New Site (After)
Coronary Care	8	0	0	8
Intensive Care	22	0	0	22
Maternity	26	-8	0	23+1-
Medical/Surgical	182	-152	0	29
Neonatal/Coronating Care	4	4	0	0
Neonatal Intermediate Care	8	0	0	8
Pediatric	22	-6	0	16
Physical Medicine and Rehabilitation	24	0	24	0
Psychiatric	20	-6	0	43
TOTAL	370	-174	24	373

* The current St. Elizabeth campus will become an outpatient extension clinic of the new hospital campus, which will be called the "St. Elizabeth Campus".

+ All 24 physical medicine and rehabilitation beds will remain at the St. Luke's campus to the same location (i.e., within the same building that houses St. Luke's Home, the 202-bed residential health care facility operated by MVHSL and with no construction necessary).

+1-1 Represents the 21 post-partum and two (2) ante-partum mother baby rooms. Excludes labor and delivery rooms.

Note: Mohawk Valley Health System currently has separate operating certificates and PPH numbers (Operating Certificate #121000111; PPH #05201) - MVHSL will work with the NYSDOH to determine how to handle the services offered through the Mohawk Valley Health System, and if this entity can be eliminated.

- Detailed financial statements for the period ending 31/12/2017

- Each financial statement is prepared in accordance with the International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB)

- The financial statements are prepared on the basis of the accounting records and other supporting documents maintained by the Company and are subject to audit by the external auditors.

TRANSITION PLAN

FAXTON-ST. LUKE'S HEALTHCARE ST. LUKE'S DIVISION

Purpose

To ensure the smooth transition of inpatient and outpatient services of Faxton-St. Luke's Healthcare St. Luke's Division (St. Luke's) from their current location at 1746 Champlain Avenue, Utica (Orleans County), New York 13502 to a new hospital campus on a 25-acre parcel of land generally bordered by the following streets in Utica (Orleans County), New York 13501: State Street, Broadway, Christian Street West, and Columbia Street. Faxton-St. Luke's Hospital (FSLH) / Mohawk Valley Health System (MVHS), the New York State Department of Health (NYSDOH) and the New York State Office of Mental Health (NYSOMH) will work collaboratively during the transition process.

Anticipated Date of Transition

The date of transition to the new hospital campus is anticipated to be on or about June 1, 2022 and is dependent on Mohawk Valley Health System receiving all necessary approvals from NYSDOH and NYSOMH for it to construct a new hospital campus in Utica, New York. Furthermore, this date is based upon the timing of the actual construction of the new hospital campus.

Proposed Schedule for Phasing of Transition

Based on the construction timing for the project, FSLH/MVHS will work to identify patients who can appropriately be discharged to community care from the inpatient unit on the existing FSLH campus, to lessen the number of patients who need to be transferred to the new hospital campus on the actual date of transition.

Notification

Once the C.O.N. Application to construct the new hospital campus is approved by the NYSDOH and the NYSOMH, and the construction of the new facility is nearing its end, FSLH/MVHS will begin to provide notice to all constituent populations, including staff, providers, patients and elected officials, that the transition of the services to the new hospital campus will be occurring with an anticipated date on or about June 1, 2022. Signage will also be placed in prominent locations at FSLH, notifying people of the pending transition and providing them with a contact number.

Maintenance, Storage and Retrieval of Records, Including Medical Records

There will be no change to the maintenance of records, including medical records, of patients. All records will continue to be maintained by Mohawk Valley Health System in compliance with State and Federal statutes. Patients will be advised on how to obtain copies of their medical record from the Health Information Management Department at FSLH/MVHS.

Proposed Disposal of Medications, Biologicals, Chemicals and Medical Supplies

Excess medical supplies will be brought in the new hospital campus.

Disposition of Equipment

A number of pieces of equipment from the existing FSLH campus will be used, as appropriate, at the new hospital campus. Equipment that is beyond its useful life will be disposed of according to policy.

Link to Alternative Programs

ESF.H is part of the larger behavioral health service delivery system in and around Oneida County, which includes other inpatient providers and outpatient, community-based organizations that provide healthcare services to the residents of the service area. Hospital staff, which is knowledgeable of these programs/providers and how to access them, will refer to and provide linkages to such programs/providers as:

Hospital Hospitals

- New Hospital Campus of NYHS
- Cobleskill Regional Hospital
- Community Memorial Hospital
- Cruise Hospital
- Cruise Hospital – Commonwealth Division
- Foxton-Sr. Luke's Healthcare St. Luke's Division (remaining 24-bed P&A/R)
- Little Falls Hospital
- Mary Imogene Bassett Hospital
- Nathan Littauer Hospital
- Oneida Healthcare
- Rome Memorial Hospital
- St. Joseph's Hospital Health Center
- St. Mary's Healthcare
- University Hospital SUNY Health Science Center
- Upstate University Hospital of Community General

Inpatient Psychiatric Units and Outpatient Psychiatric Programs

- New Hospital Campus of NYHS
- Mohawk Valley Psychiatric Center
- Rome Memorial Hospital
- Cath Char RC DnSyr, NY, Inc-Oneida/Madison
- Center for Family Life and Recovery, Inc.
- Central New York Psychiatric Center
- Central New York Services, Inc.
- House of the Good Shepherd
- Human Technologies Corporation
- NYS ARC Oneida-Lewis County Chapter
- Oneida County Department of Mental Health
- Rescue Mission of Utica, Inc.
- Resource Center for Independent Living
- The Neighborhood Center, Inc.
- Upstate Careval Pils, Inc.

As it has done successfully in the past, ESF.H/NYHS will continue to work with these entities in order to ensure that patients receive needed healthcare services. This includes making sure that alternative programs have agreed to accept the referral, that the patient has appropriate transportation, and that follow-up occurs or confirms recipient linkage to the programs.

TRANSITION PLAN

ST. ELIZABETH MEDICAL CENTER

Purpose

To ensure the smooth transition of inpatient and outpatient services of St. Elizabeth Medical Center (SEMC) from their current location at 2209 Geneva Street, Utica (Oranida County), New York 13501 to a new hospital campus on a 25-acre parcel of land generally bordered by the following streets in Utica (Oranida County), New York 13501: State Street, Broadway, Chiskony Street West, and Columbus Street. St. Elizabeth Medical Center / Mohawk Valley Health System (MVHS), the New York State Department of Health (NYSDOH) and the New York State Office of Mental Health (NYSOMH) will work collaboratively during the transition process.

Anticipated Date of Transition

The date of transition to the new hospital campus is anticipated to be on or about June 1, 2022 and is dependent on Mohawk Valley Health System receiving all necessary approvals from NYSDOH and NYSOMH for it to construct a new hospital campus in Utica, New York. Furthermore, this date is based upon the timing of the actual construction of the new hospital campus.

Proposed Schedule for Phasing of Transition

Based on the construction timing for the project, SEMC/MVHS will work to identify patients who can appropriately be discharged to community care from the inpatient unit on the existing SEMC campus, to lessen the number of patients who need to be transferred to the new hospital campus on the actual date of transition.

Notification

Once the U.G.M. Application to construct the new hospital campus is approved by the NYSDOH and the NYSOMH, and the construction of the new facility is nearing its end, SEMC/MVHS will begin to provide notice to all constituent populations, including staff, providers, patients and elected officials, that the transition of the services to the new hospital campus will be occurring with an anticipated date on or about June 1, 2022. Signage will also be placed in prominent locations at SEMC, notifying people of the pending transition and providing them with a contact number.

Maintenance, Storage and Retrieval of Records, including Medical Records

There will be no change to the maintenance of records, including medical records, of patients. All records will continue to be maintained by Mohawk Valley Health System in compliance with State and Federal statutes. Patients will be advised on how to obtain copies of their medical record from the Health Information Management Department at SEMC/MVHS.

Proposed Disposal of Medications, Biologicals, Chemicals and Medical Supplies

Flammable medical supplies will be brought to the new hospital campus.

Disposition of Equipment

A number of pieces of equipment from the existing SEMC campus will be used, as appropriate, at the new hospital campus. Equipment that is beyond its useful life will be disposed of according to policy.

Link to Alternative Programs:

SEMC is part of the larger behavioral health service delivery system in and around Oneida County, which includes other important providers and outpatient, community-based organizations that provide healthcare services to the residents of the service area. Hospital staff, which is knowledgeable of these programs/providers and how to access them, will refer to and provide linkages to such programs/providers as:

General Hospitals

- New Hospital Campus of NYHS
- Cobleskill Regional Hospital
- Community Memorial Hospital
- Crouse Hospital
- Crouse Hospital – Commonwealth Division
- Tuxton-St. Luke's Healthcare St. Luke's Division (removing 24-hr ED PVI&R)
- Little Falls Hospital
- Mary Imogene Bassett Hospital
- Nathan Littauer Hospital
- Otsego Healthcare
- Rome Memorial Hospital
- St. Joseph's Hospital Health Center
- St. Mary's Healthcare
- University Hospital SUNY Health Science Center
- Upstate University Hospital of Community General

Major Psychiatric Living and Outpatient Psychiatric Programs

- New Hospital Campus of NYHS
- Mohawk Valley Psychiatric Center
- Rome Memorial Hospital
- Cath Char RC Diox/Syr, NY, Inc-Oneida/Madison
- Center for Family Life and Recovery, Inc.
- Central New York Psychiatric Center
- Central New York Services, Inc.
- House of the Good Shepherd
- Human Technologies Corporation
- NYS ARC Oneida-Lewis County Chapter
- Oneida County Department of Mental Health
- Rescue Mission of Utica, Inc.
- Resource Center for Independent Living
- The Neighborhood Center, Inc.
- Upstate Cerebral Palsy, Inc.

As it has done successfully in the past, SEMC/NYHS will continue to work with these entities in order to ensure that patients receive needed healthcare services. This includes making sure that alternative programs have agreed to accept the referral, that the patient has appropriate transportation, and that follow-up occurs to confirm reciprocal linkage to the programs.

APPENDIX III

MOLLAWE VALLEY HEALTH SYSTEM

ANALYSIS OF CERTIFIED SERVICES

AND

ANALYSIS OF PROGRAMS/SERVICES

MOHAWK VALLEY HEALTH SYSTEM

ANALYSIS OF CERTIFIED SERVICES (HOSPITAL CAMPUSES)

The tables below include the list of certified services at St. Elizabeth Medical Center, FoxCOU-St. Luke's Healthcare St. Luke's Division, Mohawk Valley Heart Institute and the New Hospital Campus, separately, before and after the implementation of the overall project. The "proposed" period represents the time after the new hospital campus and merger projects are complete.

Table A. Certified Services at St. Elizabeth Medical Center

	Current (Hospital Campus) 2207 Geneva Street Utica, NY 13501	Proposed* (Extension Clinic) 2207 Geneva Street Utica, NY 13501
<u>Amplatory Surgery - Multi-Specialty</u>	X	
<u>Cardiac Catheterization - Adult Diagnostic</u>	X	
<u>Cardiac Catheterization - IP*</u>	X	
<u>Cardiac Catheterization - PCI</u>	X	
<u>Cardiac Surgery - Adult</u>	X	
<u>Urologic Part-Time Services</u>	X	
<u>Dental GIP</u>		
<u>Emergency Department</u>	X	
<u>Lithotripsy</u>		
<u>Medical Services - Other Medical Specialties</u>		X
<u>Medical Services - Primary Care</u>	X	X
<u>Renal Dialysis - Acute</u>	X	

* Once the new hospital campus is complete and services from the St. Elizabeth campus move to the new site, the former St. Elizabeth campus will become an outpatient extension clinic. Please refer to the section of the Project Narrative entitled "Impact on Operating Certificate" for documentation of services to be provided at the extension clinic site.

Table B. Certified Services at FoxCOU-St. Luke's Healthcare St. Luke's Division

	Current (Hospital Campus) 1656 Chaplin Ave. Utica NY 13502	Proposed* (Hospital Campus) 1656 Chaplin Ave. Utica NY 13502
<u>Amplatory Surgery - Multi-Specialty</u>	X	
<u>Cardiac Catheterization - Adult Diagnostic</u>		
<u>Cardiac Catheterization - IP</u>		
<u>Cardiac Catheterization - PCI</u>		
<u>Cardiac Surgery - Adult</u>		
<u>Urologic Part Time Services</u>	X	
<u>Dental GIP</u>	X	
<u>Emergency Department</u>	X	
<u>Lithotripsy</u>	X	
<u>Medical Services - Other Medical Specialties</u>		X
<u>Medical Services - Primary Care</u>	X	X
<u>Renal Dialysis - Acute</u>	X	

* Once the new hospital campus is complete and services from the St. Luke's campus move to the new site, the St. Luke's campus will remain an IP&R track, along with some outpatient services. Please refer to the section of the Project Narrative entitled "Impact on Operating Certificate" for documentation of services to be provided at this site.

Table C. Certified Services at Mohawk Valley Heart Institute

	Current (Hospital Campus) 2309 Geneva Street Utica, NY 13501	Proposed* (Hospital Campus)
Ambulatory Surgery – Multi-Specialty		All Services
Cardiac Catheterization – Adult Diagnostic	X	Will Move To
Cardiac Catheterization – EP		New Hospital
Cardiac Catheterization – PCI	X	Campus
Cardiac Surgery – Adult	X	
Clinic Part-Time Services		
Dental OP		
Emergency Department		
Lifeline		
Medical Services – Other Medical Specialties		
Medical Services – Primary Care		
Renal Dialysis – Acute		

* Once the new hospital campus is complete and services from the Mohawk Valley Heart Institute move to the new site, the address of the Mohawk Valley Heart Institute will change to the address of the new hospital campus.

Table D. Certified Services at the New Hospital Campus

	Current	Proposed (Hospital Campus) Address Is To Be Determined
Ambulatory Surgery – Multi-Specialty		Y
Cardiac Catheterization – Adult Diagnostic		X
Cardiac Catheterization – EP	Does	X
Cardiac Catheterization – PCI	No	Y
Cardiac Surgery – Adult	Just	X
Clinic Part-Time Services		X

APPENDIX VI

MOLAYK VALLEY HEALTH SYSTEM

POOR HEALTH OUTCOMES

MOHAWK VALLEY HEALTH SYSTEM

POOR HEALTH OUTCOMES

County Health Assessment Indicators

Per the County Health Assessment Indicators (CHAI) from the NYSDOH, residents of Oneida County experience poor health outcomes that support the need for continued service provision through the Mohawk Valley Health System. Following are supporting statistics:

Cardiovascular Disease

- The three-(3)-year average (2012-2014), crude mortality rate due to cardiovascular disease for residents of Oneida County was 400.9 deaths/100,000, as compared to 368.4/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted mortality rate due to cardiovascular disease for residents of Oneida County was 215.6 deaths/100,000, as compared to 211.9/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), premature mortality rate due to cardiovascular disease for residents of Oneida County was 117.8 deaths/100,000, as compared to 99.1/100,000 for residents of New York State overall. Premature death is defined as the death of an individual aged 35-64.
- ✓ The three-(3)-year average (2012-2014), pre-transport mortality rate due to cardiovascular disease for residents of Oneida County was 225.3 deaths/100,000, as compared to 147.1/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude hospitalization rate due to cardiovascular disease for residents of Oneida County was 189.9 admissions/10,000, as compared to 156.3/10,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted hospitalization rate due to cardiovascular disease for residents of Oneida County was 143.3 admissions/10,000, as compared to 136.8/10,000 for residents of New York State overall.

Diseases of the Heart

- ✓ The three-(3)-year average (2012-2014), crude mortality rate due to diseases of the heart for residents of Oneida County was 291.9 deaths/100,000, as compared to 218.4/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted mortality rate due to diseases of the heart for residents of Oneida County was 159.4 deaths/100,000, as compared to 180.1/100,000 for residents of New York State overall.

- ✓ The three-(3)-year average (2012-2014), premature mortality rate due to diseases of the heart for residents of Oneida County was 96.7 deaths/100,000, as compared to 80.7/100,000 for residents of New York State overall. Premature death is defined as the death of an individual aged 25-64.
- ✓ The three-(3)-year average (2012-2014), pre-transport mortality rate due to diseases of the heart for residents of Oneida County was 178.9 deaths/100,000, as compared to 126.5/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude hospitalization rate due to diseases of the heart for residents of Oneida County was 122.1 admissions/10,000, as compared to 105.4/10,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted hospitalization rate due to diseases of the heart for residents of Oneida County was 91.5 admissions/10,000, as compared to 59.4/10,000 for residents of New York State overall.

Coronary Heart Disease

- ✓ The three-(3)-year average (2012-2014), crude mortality rate due to coronary heart disease for residents of Oneida County was 70.4 deaths/100,000, as compared to 170.6/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), premature mortality rate due to coronary heart disease for residents of Oneida County was 66.1 deaths/100,000, as compared to 65.3/100,000 for residents of New York State overall. Premature death is defined as the death of an individual aged 25-64.
- ✓ The three-(3)-year average (2012-2014), pre-transport mortality rate due to coronary heart disease for residents of Oneida County was 141.0 deaths/100,000, as compared to 103.0/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude hospitalization rate due to coronary heart disease for residents of Oneida County was 19.8 admissions/10,000, as compared to 36.5/10,000 for residents of New York State overall.

Heart Attack (Acute Myocardial Infarction)

- ✓ The three-(3)-year average (2012-2014), crude mortality rate due to heart attack for residents of Oneida County was 76.0 deaths/100,000, as compared to 36.1/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted mortality rate due to heart attack for residents of Oneida County was 50.7 deaths/100,000, as compared to 29.9/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude hospitalization rate due to heart attack for residents of Oneida County was 18.5 admissions/10,000, as compared to 36.8/10,000 for residents of New York State overall.

Congestive Heart Failure

- ✓ The three-(3)-year average (2012-2014), crude mortality rate due to congestive heart failure for residents of Oneida County was 16.9 deaths/100,000, as compared to 15.1/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), pre-transport mortality rate due to congestive heart failure for residents of Oneida County was 10.6 deaths/100,000, as compared to 8.4/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude hospitalization rate due to congestive heart failure for residents of Oneida County was 35.3 admissions/10,000, as compared to 28.3/10,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted hospitalization rate due to congestive heart failure for residents of Oneida County was 27.7 admissions/10,000, as compared to 24.2/10,000 for residents of New York State overall.

Cardiovascular Disease (Stroke)

- ✓ The three-(3)-year average (2012-2014), crude mortality rate due to stroke for residents of Oneida County was 50.1 deaths/100,000, as compared to 41.6/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted mortality rate due to stroke for residents of Oneida County was 33.0 deaths/100,000, as compared to 25.6/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), premature mortality rate due to stroke for residents of Oneida County was 15.4 deaths/100,000, as compared to 10.5/100,000 for residents of New York State overall. Premature death is defined as the death of an individual aged 15-64.
- ✓ The three-(3)-year average (2012-2014), pre-transport mortality rate due to stroke for residents of Oneida County was 26.6 deaths/100,000, as compared to 11.6/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude hospitalization rate due to stroke for residents of Oneida County was 38.8 admissions/10,000, as compared to 26.4/10,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted hospitalization rate due to stroke for residents of Oneida County was 28.8 admissions/10,000, as compared to 22.8/10,000 for residents of New York State overall.

Hypertension

- ✓ The three-(3)-year average (2012-2014), crude hospitalization rate due to hypertension for adult (18+) residents for any diagnosis of Oneida County was 61.7 admissions/10,000, as compared to 54.5/10,000 for residents of New York State overall.

- ✓ The three (3)-year average (2012-2014), Emergency Department visit rate due to hypertension for adult (18+) residents of Oneida County (based on any diagnosis) of Oneida County was 1,087.1 visits/10,000, as compared to 938.8/10,000 for residents of New York State overall.
- ✓ A total of 31.6% of adult residents of Oneida County were told they have high blood pressure, as compared to 27.3% of all residents of New York State.

Chronic Kidney Disease

- ✓ The three-(3)-year average (2012-2014), crude hospitalization rate due to chronic kidney disease for residents of Oneida County was 158.3 admissions/10,000, as compared to 116.8/10,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted hospitalization rate due to chronic kidney disease for residents of Oneida County was 134.1 admissions/10,000, as compared to 101.0/10,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude Emergency Department visit rate due to chronic kidney disease for residents of Oneida County was 162.5 visits/10,000, as compared to 120.4/10,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted Emergency Department visit rate due to chronic kidney disease for residents of Oneida County was 121.2 visits/10,000, as compared to 104.4/10,000 for residents of New York State overall.

Diabetes

- ✓ A total of 9.1% of adult residents of Oneida County were diagnosed with diabetes by a physician, as compared to 8.9% for New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude mortality rate due to diabetes for residents of Oneida County was 29.6 deaths/100,000, as compared to 20.4/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted mortality rate due to diabetes for residents of Oneida County was 21.5 deaths/100,000, as compared to 17.4/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude hospitalization rate due to diabetes (as a primary diagnosis) for residents of Oneida County was 20.2 admissions/10,000, as compared to 18.6/10,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted hospitalization rate due to diabetes (as a primary diagnosis) for residents of Oneida County was 18.5 admissions/10,000, as compared to 17.1/10,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude hospitalization rate due to diabetes (as any diagnosis) for residents of Oneida County was 238.6 admissions/10,000, as compared to 217.6/10,000 for residents of New York State overall.

- ✓ The three-(3)-year average (2012-2014), age-adjusted hospitalization rate due to diabetes (as not diagnosed) for residents of Oneida County was 119.8 admissions/10,000, as compared to 107.9/10,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), hospitalization rate due to short-term complication from diabetes for residents of Oneida County aged six (6) to 17 was 5.4 admissions/10,000, as compared to 3.9/10,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), hospitalization rate due to short-term complication from diabetes for residents of Oneida County aged 18+ was 7.5 admissions/10,000, as compared to 6.8/10,000 for residents of New York State overall.

Health Risk and Behavior

- ✓ A total of 69.1% of adult residents of Oneida County are overweight or obese (with a BMI of 25 or higher). This was higher than the 60.5% of residents who are overweight or obese in New York State overall.
- ✓ A total of 36.6% of adult residents of Oneida County are obese (with a BMI of 30 or higher), as compared to 24.6% of all New York State adult residents.

Chronic Lower Respiratory Disease

- ✓ The three-(3)-year average (2012-2014), crude mortality rate due to chronic lower respiratory disease for residents of Oneida County was 57.0 deaths/100,000, as compared to 35.0/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted mortality rate due to chronic lower respiratory disease for residents of Oneida County was 29.7 deaths/100,000, as compared to 29.8/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude hospitalization rate due to chronic lower respiratory disease for residents of Oneida County was 43.7 admissions/10,000, as compared to 34.5/10,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted hospitalization rate due to chronic lower respiratory disease for residents of Oneida County was 35.4 admissions/10,000, as compared to 42.3/10,000 for residents of New York State overall.

Asthma

- ✓ A total of 12.1% of adult residents of Oneida County were diagnosed with asthma by a physician, as compared to 10.1% for New York State overall.
- ✓ The three-(3)-year average (2012-2014), hospitalization rate due to asthma for residents of Oneida County aged 15 to 44 was 8.5 admissions/10,000, as compared to 8.1/10,000 for residents of New York State overall.

- ✓ The three-(4)-year average (2012-2014), crude mortality rate due to asthma for residents of Oneida County was 1.7 deaths/100,000, as compared to 1.4/100,000 for residents of New York State overall.
- ✓ The three-(5)-year average (2012-2014), age-adjusted mortality rate due to asthma for residents of Oneida County was 1.5 deaths/100,000, as compared to 1.3/100,000 for residents of New York State overall.

Lung

- ✓ The three-(4)-year average (2012-2014), crude incidence rate of all cancers for residents of Oneida County was 651.3 cases/100,000, as compared to 550.9/100,000 for residents of New York State overall.
- ✓ The three-(5)-year average (2012-2014), age-adjusted incidence rate of all cancers for residents of Oneida County was 513.4 cases/100,000, as compared to 459.2/100,000 for residents of New York State overall.
- ✓ The three-(4)-year average (2012-2014), crude mortality rate due to all cancers for residents of Oneida County was 229.2 deaths/100,000, as compared to 180.7/100,000 for residents of New York State overall.
- ✓ The three-(5)-year average (2012-2014), age-adjusted mortality rate due to all cancers for residents of Oneida County was 172.4 deaths/100,000, as compared to 158.6/100,000 for residents of New York State overall.
- ✓ The three-(4)-year average (2012-2014), crude incidence rate of lip, oral cavity and pharynx cancer for residents of Oneida County was 15.1 cases/100,000, as compared to 12.1/100,000 for residents of New York State overall.
- ✓ The three-(5)-year average (2012-2014), age-adjusted incidence rate of lip, oral cavity and pharynx cancer for residents of Oneida County was 11.6 cases/100,000, as compared to 10.3/100,000 for residents of New York State overall.
- ✓ The three-(4)-year average (2012-2014), crude mortality rate due to lip, oral cavity and pharynx cancer for residents of Oneida County was 2.0 deaths/100,000, as compared to 2.5/100,000 for residents of New York State overall.
- ✓ The three-(5)-year average (2012-2014), crude incidence rate of colon and rectum cancer for residents of Oneida County was 49.0 cases/100,000, as compared to 46.7/100,000 for residents of New York State overall.
- ✓ The three-(4)-year average (2012-2014), crude mortality rate due to colon and rectum cancer for residents of Oneida County was 19.1 deaths/100,000, as compared to 15.6/100,000 for residents of New York State overall.

- ✓ The three-(3)-year average (2012-2014), crude incidence rate of lung and bronchus cancer for residents of Oneida County was 103.8 cases/100,000, as compared to 69.5/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted incidence rate of lung and bronchus cancer for residents of Oneida County was 80.8 cases/100,000, as compared to 61.6/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude mortality rate due to lung and bronchus cancer for residents of Oneida County was 69.9 deaths/100,000, as compared to 46.4/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted mortality rate due to lung and bronchus cancer for residents of Oneida County was 53.2 deaths/100,000, as compared to 41.0/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude mortality rate due to female breast cancer for residents of Oneida County was 29.2 deaths/100,000, as compared to 24.5/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude mortality rate due to cervix uteri cancer for residents of Oneida County was 2.7 deaths/100,000, as compared to 2.7/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted mortality rate due to cervix uteri cancer for residents of Oneida County was 2.8 deaths/100,000, as compared to 2.4/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude incidence rate of ovarian cancer for residents of Oneida County was 19.6 cases/100,000, as compared to 14.2/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted incidence rate of ovarian cancer for residents of Oneida County was 14.6 cases/100,000, as compared to 12.5/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude incidence rate of prostate cancer for residents of Oneida County was 185.9 cases/100,000, as compared to 156.7/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), age-adjusted incidence rate of prostate cancer for residents of Oneida County was 134.0 cases/100,000, as compared to 145.5/100,000 for residents of New York State overall.
- ✓ The three-(3)-year average (2012-2014), crude, late-stage incidence rate of prostate cancer for residents of Oneida County was 25.4 cases/100,000, as compared to 21.5/100,000 for residents of New York State overall.

- ✓ The three (3)-year average (2012-2014), crude mortality rate due to prostate cancer for residents of Oneida County was 29.7 deaths/100,000, as compared to 18.3/100,000 for residents of New York State overall.
- ✓ The three (3)-year average (2012-2014), crude mortality rate due to melanoma cancer for residents of Oneida County was 3.4 deaths/100,000, as compared to 2.7/100,000 for residents of New York State overall.
- ✓ The three (3)-year average (2012-2014), age-adjusted mortality rate due to melanoma cancer for residents of Oneida County was 2.7 deaths/100,000, as compared to 2.2/100,000 for residents of New York State overall.

Tobacco Use

- ✓ Approximately 27.7% of adult residents of Oneida County smoke, as compared to 15.9% of adult residents of New York State overall.

Maternal and Infant Health

- ✓ The three (3) year average (2012-2014), infant (less than one (1) year) mortality rate for residents of Oneida County was 7.5 deaths/1,000 live births, as compared to 4.8/1,000 for residents of New York State overall.
- ✓ The three (3)-year average (2012-2014), neonatal (less than 28 days) mortality rate for residents of Oneida County was 4.9 deaths/1,000 live births, as compared to 3.3/1,000 for residents of New York State overall.
- ✓ The three (3) year average (2012-2014), post-neonatal (one (1) month to one (1) year) mortality rate for residents of Oneida County was 2.6 deaths/1,000 live births, as compared to 1.5/1,000 for residents of New York State overall.
- ✓ The three (3)-year average (2012-2014), perinatal (20 weeks gestation to less than 78 days of life) mortality rate for residents of Oneida County was 10.9 deaths/1,000 live births, as compared to 9.6/1,000 for residents of New York State overall.
- ✓ The three (3) year average (2012-2014), perinatal (28 weeks gestation to less than seven (7) days of life) mortality rate for residents of Oneida County was 8.0 deaths/1,000 live births, as compared to 5.3/1,000 for residents of New York State overall.
- ✓ The three (3)-year average (2012-2014), maternal mortality rate for residents of Oneida County was 38.7 deaths/100,000 live births, as compared to 18.3/100,000 for residents of New York State overall.
- ✓ Approximately 1.6% of all births to Oneida County residents were for infants of a very low birthweight (defined as less than 1.5 kg), as compared to 1.4% of all births to all New York State residents.

- ✓ Approximately 1.2% of all singleton births to Oneida County residents were for infants of a very low birthweight (defined as less than 1.5 kg), as compared to 1.0% of all births to all New York State residents.
- ✓ Approximately 8.1% of all births to Oneida County residents were for infants of a low birth weight (defined as less than 2.5 kg), as compared to 7.9% of all births to all New York State residents.
- ✓ Approximately 6.2% of all singleton births to Oneida County residents were for infants of a low birthweight (defined as less than 2.5 kg), as compared to 6.0% of all births to all New York State residents.
- ✓ Approximately 2.4% of all premature births to Oneida County residents were for infants who were born at less than 32 weeks gestation, as compared to 1.8% of all premature births to New York State residents overall.
- ✓ Approximately 10.2% of all premature births to Oneida County residents were for infants who were born between 32 and 37 weeks gestation, as compared to 9.1% of all premature births to New York State residents overall.
- ✓ Approximately 12.6% of all premature births to Oneida County residents were for infants who were born at less than 37 weeks gestation, as compared to 10.8% of all premature births to New York State residents overall.
- ✓ Approximately 0.8% of all births to Oneida County residents were for infants with a five-minute Apgar score of less than six (6), as compared to 0.6% of all births to New York State residents overall.

APPENDIX VII

MOHAWK VALLEY HEALTH SYSTEM

CURRICULUM VITAE – CHIEF MEDICAL OFFICER

Michael F. Trevisani, MD, MBA, CPE, FASCRS, FACME

167 Saterly Drive
Norwich, NY 13815

Mitrevisani@aol.com

Cell: 315-272-0286
Home: 507-335-9486

SUMMARY

Healthcare Leader with experience in complex integrated hospital and outpatient settings. Background includes roles at academic training centers, integrated healthcare systems, community hospitals, rural hospitals and private practices. Demonstrated experience and success in physician recruiting, establishing and growing new service lines and leading a multi-specialty group practice. Combines a strong sense of business and operational improvement with the goals of patient-centered care. A skilled leader of quality management, peer review utilization review, case management and revenue cycle management employing team-based approaches and principles toward realizing process and outcomes goals.

PROFESSIONAL EXPERIENCE

MOHAWK VALLEY HEALTH SYSTEM, Utica, NY 2014 – Present

A recent affiliation (March 6, 2013) between Faxton-St. Luke's Healthcare (FLSH) and St. Elizabeth Medical Center (SEMC) created the Mohawk Valley Health System (MVHS). This is a 573-bed acute care system (456 staffed beds) plus 202 long-term care beds with revenue of \$900M per year. Includes an employed multi-specialty group, an Imaging Center, Mohawk Valley Home Care, Senior Network Health, the Visiting Nurse Association of Oneida County, the Advanced Wound Care Center, a Family Medicine Residency Program, a Dental Residency Program and a College of Nursing. The system has 900 credentialed providers, total annual revenue of \$828,690,000, 4,740 employees, 28,000 inpatient admissions, 18,500 operating room cases, 78,000 Emergency room visits, 40,000 urgent care visits, and 232,000 primary care visits.

Vice President and Chief Medical Officer – Faxton St. Luke's Healthcare and Medical Group (Jan 2014 – May 2015); then Senior Vice President/Chief Medical Officer (April 2015 – Present) of the MVHS

Member of the Senior Executive team reporting to the CEO of MVHS. Responsible for the employed medical group, the Dental Residency Program, the Laborist Program, the Hospitalist Program, the Designated Institutional Official for the EMR program, the Family Medicine Medical Staff Office, Library, Physician Support Services (recruiting) of contract physicians (Anesthesia, Radiology, Psychiatry, Intensivists, and Advanced Endoscopy, Cardiothoracic Surgery).

- Developed the 2013 – 2017 MVHS Strategic Plan: Physician Engagement
- Transitioned the Adirondack Community Physician Medical Group (FSLH) and St. Elizabeth Medical Group to the MVHS Medical Group (133 Providers)
- Led the MVHS Medical Group – developed a Strategic Plan and budget
- Recruited 27 physicians in 2014; 25 in 2015
- Established a Hospitalist program at a partner hospital in Oneida, NY
- Achieved Meaningful Use goals for CPOE 2014
- Coordinated and managed program and finances for the 13th, 14th, 15th, and 16th Annual Campaign for Quality symbols – quality conferences for providers, staff and community for 800 attendees
- Oversees, manage and negotiate contractual agreements with providers and Medical Directors
- Created the OPPE process
- Developed focus reviews for mortality, length-of-stay and readmissions
- Saved \$257,000/year in reorganizing culture protocol in ICU
- Saved \$807,000/year in developing the CPOE order set process
- Reduced the Medical Staff office staffing by 23%
- Established Core Privileging

Michael F. Trevisani, MD

2

- Crossing the new EMR/EHR system.
- Improved DR efficiency, 23% on-line audits to 52% in one year
- Established the first Medical Education Program in partnership with SUNY Upstate Medical Center in Syracuse, NY – the first step in establishing a clinical campus for medical students.

UHS CHENANGO MEMORIAL HOSPITAL, Norwich, NY

2007 – 2018

A 138-bed healthcare facility with 58 licensed acute care beds and an 80-bed Residential Healthcare Facility in the United Health Services Hospitals system. Includes an employed multi-specialty group practice with outpatient offices in Upstate, NY, Norwich, Sherburne, Oxford, Sidney, and an ambulatory imaging center. Service lines include Family Medicine, Internal Medicine, Hospitalist Medicine, Geriatric Medicine, General Surgery, Orthopedic Surgery, ENT, Dentistry, OB/GYN, GI, Anesthesiology, Radiology and Emergency Medicine. The second largest employer in Chenango County with an operating budget of \$93,000,000.

Vice President of Medical Affairs/Chief Medical Officer

Member of the Senior Executive team reporting directly to the President/CEO. Responsible for identifying, developing and executing the strategic goals toward Clinical Excellence, Service Excellence, Financial Strength and Market Share; established, monitored and managed Quality and Patient Safety initiatives. Budgetary responsibilities include forecasting patient and service volumes, developing operational expenditure forecasts, determining staffing requirements, and allocating capital expenditures. Simultaneously carrying out VPM/CMO duties at UHS Delaware Valley Hospital.

- **Quality and Patient Safety**
 - o Developed the process to consistently achieve 95-100% on Core measures
 - o Developed the Pre-Procedure Risk Assessment process and tool
 - o Created the currently utilized Generalized Standard Admission Orders sets
 - o Decreased radiology turn around times: 88-hour Outaround times from 26% to less than 2%; 24-hour turn around times from 23% to 64%
 - o Improved operating room turn around times from 45 minutes to 25 minutes
 - o On time Operating Room starts from 30% to 70%
- **Interim Emergency Medical Services Medical Director 2011-2012**
 - o Increased in-system referrals from 30% to 95%
- **Hospitalist Medical Director from inception in 2007-2012**
- **Chairman of the Risk Management Committee**
 - o Identified opportunities to improve patient satisfaction
- **Created, developed and directed the 2008 Pandemic Flu Hospital Response Plan**
 - o Directed allocation of vaccines and set up community vaccination plan.
- **Direct Utilization Management**
 - o Improved form management
 - o Reduced LOS from 5+ days to 2.88 days
 - o Coordinated efforts with area nursing homes to improve service delivery and improve resident satisfaction
 - o Integrated system-wide Denial Management and Case Management Program
 - o Working with Hospice to create a Palliative Care Program
 - o Developed the Trip Coverage Program
- **Lead the Chenango Medical Group – an employed physician group**
 - o Created the Ongoing Professional Practice Evaluation (OPPE) tool
 - o Created the Physician compensation model
 - o Identified practice efficiency opportunities by implementing open access scheduling
 - o Established and improved quality monitors in diabetic management, chronic anticoagulant therapy and screening recommendation efficiency
- **Manage the Medical Staff Office**
 - o Converted from laundry list privileging to case privileging
 - o Directed the credentialing process

Michael T. Trevisani, MD

- Created a single medical staff application process for the four United Health Services Hospitals
- Review, modify and update medical staff and administrative policies and procedures
- Physician Recruitment
 - Successfully recruited to Family Medicine, General Surgery, ENT, Ob-Gyn, ER, GI, Pediatrics, Orthopedics and Hospitalist services
- Growth initiatives included creation of new service lines
 - Lymphedema care, Breast Care, Wound Care, GI Hospitalist Program at CMH, integrated CMH Hospitalist program with the United Health Services Program
- Established a two-physician ENT practice
- Developed Professional Service Agreements
 - ENT, GI, Pediatrics, Hospitalist, Oncology
- Health Information Technology
 - Provided operational support for EMR rollout to the outpatient practices
 - Established CPOE in the Emergency Services Department
 - Establishing an EHR and CPOE in the Hospital setting

UHS DELAWARE VALLEY HOSPITAL, Milton, NY

2009 – 2013

A 25-bed Critical Access Hospital with an outpatient Primary Care group. Service Lines include Family Medicine, Behavioral Medicine, Emergency Services, Geriatrics and General Surgery. Responsibilities include oversight of the service lines and quality management.

Vice President of Medical Affairs/Chief Medical Officer

Held the simultaneous role at JHS Chenango Memorial Hospital

- Established Cardiology and General Surgery as part of recruiting and integration of the multi-specialty groups.
- Created action plans to achieve Core Measures results

ASSOCIATED COLON and RECTAL SURGEONS, PA, Winter Park, Florida

1990 – 2008

President/Sole Proprietor

Community private practice specializing in colon and rectal surgery.

SIGNIFICANT LEADERSHIP ROLES

Clinical Assistant Professor in the Department of Surgery - SUNY Health Sciences Center, Syracuse, NY – Rural Medical Education Program

Florida Society of Colon and Rectal Surgeons

President: 2005-07

Secretary: 2005 Re-established the State Society.

IHI Patient Safety Executive Development Program, Cambridge, MA, 2012

Team STEPPS Master Trainer, Syracuse, NY – 2012

Corporate Physicians' Committee - Adventist Health System, Orlando, Florida 2005-2008

Team leader in developing Computerized Physician Order Entry (CPOE) order sets as related to assigned disciplines in endoscopy, general surgery, peri-operative care, urology and surgical infection prophylaxis.

Chairman, Department of Colon and Rectal Surgery, Florida Hospital 2005-2008

Directed the Colon and Rectal Surgery services at 7 campuses.

Vice Chief of Staff – 2005; Secretary 2004-2005; Chairman, Department of Colon and Rectal Surgery 1998-1997; Chairman Surgical Services 2004-2008, Winter Park Memorial Hospital, Winter Park, Florida (as a non-profit community hospital, then as a division of Florida Hospital, An Adventist Hospital).

Michael E. Trevisani, MD

4

Attending Surgeon in the Fellowship Training Program, Orlando Regional Healthcare System, Orlando, Florida 1992-2008.

EDUCATION

MBA University of South Florida, College of Business Administration, Tampa, Florida 2002-2003

MD State University of New York, Health Sciences Center, Syracuse, New York, 1980-1984

BA Hamilton College— Cum Laude, Major: Chemistry; Clinton, New York 1976-1980

IHI Patient Safety Executive Development Program, Cambridge, MA 2012

Proficiency in Entrepreneurship Certificate Course—University of Central Florida College of Business Administration 2004

The Business of Medicine Program, College of Business Administration, Tampa, Florida, Distance Learning Program 2001

POST-DOCTORAL TRAINING

Residency 1984-1989, General Surgery, Robert Packer Hospital, Guthrie Clinic, Sayre, Pennsylvania

Fellowship 1989-1990, Colon and Rectal Surgery, UMDNJ-Robert Wood Johnson Affiliated Hospitals, Plainfield, New Jersey

LICENSURE

Florida: #50918 – Active Issued June 1987

New York #179812 Active Issued April 1987

BOARD STATUS

Certified American Board of Colon and Rectal Surgeons: January '82 Recertified '90, Recertified 2011 #1135

Certified American Board of Surgery November 1990 Certificate #35878

SELECTED AWARDS and HONORS

Florida Hospital Value Award for Balance 2008 - Chosen among 2400 physician staff

Outstanding Surgical Resident 1989, Guthrie Clinic, Sayre, PA

2nd Prize – Stanley D. Corlith Resident's Research Paper Award 1987

"The effect of vitamin A and zinc on wound healing in steroid-treated mice."

2nd Prize – Laboratory Research – American College of Surgeons Central Pennsylvania Chapter 1987 "The effect of vitamin A and Zinc on wound healing in steroid-treated mice".

3rd Prize - Stanley D. Corlith Resident's Research Paper Award 1986

"Calcifications of the adrenal gland in a 46- year old woman: Ganglioneuroma".

Schedule 5

Working Capital Financing Plan

1. Working Capital Financing Plan and Pro Forma Balance Sheet:

This section should be completed in conjunction with the monthly Cash Flow. The general guidelines for working capital requirements are two months of first year expenses for changes of ownership and two months' of third year expenses for new establishments, construction projects or when the first year budget indicates a net operating loss. Any deviation from these guidelines must be supported by the monthly cash flow analysis. If working capital is required for the project, all sources of working capital must be indicated clearly. Borrowed funds are limited to 50% of total working capital requirements. If borrowed funds are a source of working capital, please summarize the terms below, and attach a letter of interest from the intended source of funds, to include an estimate of the principle, term, interest rate and payout period being considered. Also, describe and document the source(s) of working capital equity.

List Titles of Attachments related to Borrowed Funds	List Filenames of Attachments
Example: First borrowed fund source	Example: first_bor_fund.pdf
N/A	

In the section below, briefly describe and document the source(s) of working capital equity.

Working capital needs for this project will be funded using existing cash equity from ongoing operations. Please refer to the Schedule 5 Attachment for the Cash Flow Analysis, and to the Schedule 9 Attachment for the Financial Narrative, a recent 2017 Internal Financial Statement for MVHS, the 2016 Audited Financial Statement for St. Luke's, the 2016 Audited Financial Statement of St. Elizabeth, the Oneida County's Transformation Grant Award Letter, the Memorandum of Agreement (Parking) and the Financing Letter of Interest.

New York State Department of Health Certificate of Need Application

Schedule 5

2. Pro Forma Balance Sheet N/A

This section should be completed for all new establishment and change in ownership applications. On a separate attachment identified below, provide a pro forma (opening day) balance sheet. If the operation and real estate are to be owned by separate entities, provide a pro forma balance sheet for each entity. Fully identify all assumptions used in preparation of the pro forma balance sheet. If the pro forma balance sheet(s) is submitted in conjunction with a change in ownership application, on a line-by-line basis, provide a comparison between the submitted pro forma balance sheet(s) the most recently available facility certified financial statements and the transfer agreement. Fully explain and document all assumptions.

ARCHITECTURAL NARRATIVE – MWHS INTEGRATED HEALTH CAMPUS

Background

Former St. Luke's Healthcare (LSH) and St. Elizabeth Medical Center (SEMC) affiliated in 2014 to become the Michiana Valley Health System (MVHS). MVHS's mission is to provide excellence in healthcare for its communities. Substantial effort has been focused on consolidating existing resources, eliminating redundancies, expanding the depth and breadth of services, improving access, and elevating the quality of healthcare services in the region. MVHS has been successful in its efforts thus far, but has been constrained by the age and physical limitations of the existing facilities.

SEMC opened in 1917 and the St. Luke's Campus opened in 1957. Since they were built in a time when healthcare was much different than it is today, these facilities were not designed to accommodate the programs, equipment and overall patient-care delivery and safety that are part of MVHS's service today.

MVHS incurs considerable expenses in order to remain in compliance and significant duplication of services for two hospital settings. Current services are provided in a space that is not optimal for patient flow, staff efficiency or patient/family experiences. The two existing campuses, especially SEMC, are also constrained by size and location and cannot easily accommodate much needed parking areas.

In order to deliver high quality, more efficient care with better community outcomes and at a lower cost, a single new hospital which combines services from both campuses will be built and transform healthcare for the community consistent with the vision of *Triple Aim*. The new MVHS integrated health campus and state-of-art hospital will replace MCH and HCU, will reduce the number of beds in the community and consolidate patient services to one campus.

The decision to consolidate the two hospital campuses to a single facility represents the logical progression of efforts to address the MVHS mission and was spurred by several key factors:

- The desire and need to build a facility with the newest technology, services and advancements in patient safety and quality so that our community can receive the most up-to-date healthcare services that rival those found in large cities.
- The growing demand for healthcare due to the rapidly increasing and aging population in this region.
- The increasing need to improve accessibility and availability by attracting specialists and providing services that otherwise would not be available to our community.
- The opportunity to gain greater operational efficiencies through the elimination of duplicate and redundant functions will help to reduce the rate of increase in healthcare spending and to achieve improved financial stability.

DESCRIPTION BY FLOOR LEVEL AND SERVICE PROGRAM

LEVEL 3

General Description

Level 3 represents the primary public and service components for the building. A public circulation concourse follows the north and a separate service, "back-of-house" corridor to the south effectively create an on-stage/off-stage environment and setting.

Public artiles and drop-offs are positioned along the Lafayette Street corridor. A glass-enclosed atrium provides for patient drop-off and easy access to the MWH parking garage. This concourse connects all public-facing programs and services including the chapel, outpatient imaging, visitation elevators, the gift shop, dining and conference center spaces.

The primary service corridor runs along Columbia Street. To the west are both emergency department walk-in entries and the ambulance entry. To the east is the service yard with access to docks, a service center and the Central Utility Plant. A controlled staff entry along the south is planned.

320 Public Areas (Public Entry, lobby, Waiting)

The single, main entrance and lobby is accessed from the drop-off. A canopy extends past the drive-side door on arrival cars to protect visitors from the elements. Visitors arriving via the parking garage are directed towards the main entry via a covered walkway. A large vestibule provides street-hair storage and secure entry to the hospital.

The two-story lobby welcomes visitors, patients and the community with simple and clear way-finding along the main concourse. To ensure a secure environment, the security department staffs the information desk. This entry is designed to accommodate metal detection, should that be required. Otherwise, visitors check in at the security monitoring desk and are given a visitor badge.

Along the public concourse is an array of seating options directly adjacent to and along the Lafayette corridor. The outdoor area here is intended to serve as an amenity space with walkways, gardens and outdoor seating elements helping to create a healing environment. The concourse seating area should be light-filled and lively.

Additionally, the concourse is connected to the Emergency Department waiting area so that family members in the ED can access other public functions and so that patients ambulating the waiting area can access needed services.

The main vision elevators are directly off the lobby. These are convenient to visitors accessing important floors or to outpatients awaiting to procedures.

320 Public Areas (Gift Shop)

Central to the lobby area is the MWH's gift shop where staff, visitors and patients have access to sundries such as newspapers, magazines, books, snacks and other gift items. The gift shop is run by volunteer services.

Patron access is directly off the main lobby. Volunteer staff can visualize the gift shop area, staff use a walk-out and access the storage room from a single point. There is back-of-house access to the storage room for

area of smoking and gift shop.

920 Public Areas (Public Dining, Vending)

A welcoming dining and servery area is conveniently located off the main lobby. This setting will serve healthy food choices and provide a variety of menu choices for visitors and staff. The new seating area will offer different seating options and is positioned to allow views to the outdoors. A separate physician dining area is also considered to enhance the physician experience at MCHS. Vending areas will be accessible 24/7.

930 Administration (Security)

Security is prioritized to allow easy access for officers throughout the building. The main security monitoring room is off the concourse and positioned such that staff can also man the main check-in/out desk. While security officers are stationed in other high priority areas, including the ED and Waiting Center, this location allows for a central point of control. The monitoring area here will also function as the law command center for the hospital.

940 Administration (Volunteers)

The volunteer office serves as home base for volunteer director and coordinators. While some lockers and workstations are available in this location, most volunteers report directly to their assigned positions. The first floor location allows volunteer coordinators to easily recruit and advise potential volunteer applicants.

950 Admitting (Patient Access)

Nearly all admitting and outpatient registration processes are completed prior to patient arrival, or at the bedside in the case of the ED and inpatient direct admits. Outpatients only access the imaging/diagnostic department on this level and the interventional/procedure suite on the second level.

Sticks will be available in the main lobby area as well as on the second level for self-service check-in. The reception desk at imaging is staffed by registration personnel and serves as a reception point for admitting/patient access.

This department offers additional financial counseling for patients who require additional services. Three private patient interview spaces (2 certified admitting counselors (CAC) offices and 1 flex office) are directly off the imaging working area. The reception point at the imaging area serves as reception for this location as well.

The director manager and administrative staff comprise the remaining areas of the department.

Direct admissions from physician offices or other locations will be identified by the Patient Flow Coord and Center and arrivals will be coordinated such that they are directed to medical unit to the waiting patient room. If patients arrive for admits or without the prior notification they will be escorted to the emergency department where appropriate monitoring may occur.

960 Chapel/ Meditation

A non-denominational chapel provides spiritual comfort for those of all faiths. The main chapel area will be designed to convert easily for services as needed for various requirements. This includes supporting holistic services, Protestant, Jewish and Muslim services. Movable seating and storage for faith implements are provided in the space.

A shared office is provided for visiting clergy members and is easily accessible for the public.

104 Emergency Department

Emergency Department unit room overview:

- + 2 Trauma
- + 4 Quick/Turn
- + 2 Trauma
- + 6 Delivery/Obstetrics
- + 10 Observation
- + 44 ED Treatment rooms

The Emergency Department is located on the first level with access at grade from the west side of the building (State St) and is designed to support clear wayfinding and provide separate entry flows for walk-in patients and those arriving by EMS/Ambulance.

The ambulance/walk-in entrance on the west side of the building is directly adjacent to the parking garage which also has a covered connector to the ED entrance to provide protection from outdoor elements. At the entry, there has been adequate space provided for wheelchair storage that is easily accessible for patients and staff.

The ambulance drive up and entrance is restricted and a tiered stack of the staff-in entrance on the west side of the building. Patients arriving by ambulance will be taken immediately to a treatment station within the ED. A Helipad is directly adjacent to the EMS/Ambulance entrance with clear paved connection to the ambulance entrance to deliver patients to the ED or to take them directly up a dedicated back elevator to the OR or ICU.

Patients arriving via the walk-in entrance will pass through a metal detector, triaged by security and then be greeted for treatment at the main triage/quick look desk. This patient-first philosophy provides a welcoming destination staffed by nurses who can make immediate decisions about a patient's disposition. The organization and layout of this area is based on improving patient flow to ensure patient safety and to support a strategy that incorporates immediate triaging, split flow for lower acuity patients, case tape assessment for others to provide appropriate patient treatment.

There is waiting space provided for families and patients adjacent to the main desk so that the area is in direct line of sight of nursing and security to ensure safety of patients, and it is designed to provide a calm environment with access to lighting and amenities as a connection to the main entrance of the hospital. There is also consultation space provided in this area when needed.

Directly behind 2 triage rooms are 4 quick turn exam rooms for further triage and treatment of lower acuity patients. This area has a designated provider, nurse and tech assigned in this space and staff have ready access to all equipment and supplies needed for triage exams, EKG and medications. All exam rooms in quick turn are private and equipped the same as all EKG exam rooms along with a patient lift/shower in this area. This area has direct access to all triaging modalities that are adjacent to the ED.

The main Emergency Department is comprised of 5 pods that are organized across the floorplate in groupings of 2 to support flexibility in acuity, staffing ratios for nursing and physicians, and provide ability to flex up and down during fluctuations in volume. A degree of standardization has been carried out across the pod configuration so that each pod contains the same supply/equipment resources, workstations, medication rooms and patient support located within the center of the pod. This concept results with minimizing staff travel, improved communication between providers, and enhanced timely care to patients. Isolation rooms (all Airborne Infection Isolation) with dedicated trailers have been provided within 2 of the main ED pods. Lab services within the hospital will be accessible via pneumatic tube with point of care

being appropriate within the department. Pharmacy services will also be accessible via pneumatic tube within the hospital or supporting retail pharmacies to dispense/deliver medications with patient instructions and education.

In order to service the many types of needs of the ED patient population and reduce admissions, one of the pods is designed to care for observation patients and is dedicated for those that have been seen in the ED but need to be monitored for a period of time before they can be discharged. All of the observation beds meet the standards of ADA & are the same square footage as the treatment rooms, which include one side space for family, med cases, emotional/mental concerns, and wheelchair for storage. There are dedicated patient rollers within the pod to support this area. In this pod there is also an isolation room (IR) that has its own dedicated toilet. The central support area is the same as the other ED pods with space for the clinical staff, clean supplies, wheelchair, medication, and a nourishment station.

To address trauma/critical care patient needs and the Behavioral Health patient population, one pod with a direct back of house connection to EMS and closest access to imaging and critical care services was identified to be the best location for both patient types. This created a division of a pod with one side consisting of 2 trauma rooms with equipment and support and a separate 6-bed behavioral health unit on the other side. Each area has its own designated support, trauma with equipment/supplies, imaging and medication areas with direct access, an articulated large elevator to transport patients to the operating rooms or critical care.

The Behavioral side of the pod is a closed area with secure doors controlled access, a dedicated room space, all support services, behavioral health toilet/shower room and a location for security and monitoring equipment to assist with safety of patients and staff.

A Decontamination treatment room is located near the ambulance entry. It provides one way flow for patients from the ambulance into the treatment area, as well as, one way flow for staff into the treatment area via an anteroom. This space is designed to accommodate 2 patients at a time with 2 shower heads. Locker spaces are divided into men and women's rooms. Each locker room will provide space for potential use of shoe sanitizing machines, toilet and shower areas and storage for one's own outer furniture. This locker space will be shared between the ED and Imaging staff. In addition, there is a staff lounge that will be shared for breaks and lunches. Administrative offices that support the ED and Imaging are also in this zone to provide close proximity to key program elements and provide a co-workation space for those who are not within the hospital.

110 Diagnostic Imaging

The Diagnostic Imaging & Radiologic diagnostic suite consists of the following:

- + 1 General Radiology
- + 2 Fluoroscopy
- + 3 CT
- + 1 MRI
- + 3 Ultrasound
- + 2 Echo/Scans
- + 2 SPECT
- + 1 Mammography

Diagnostic Imaging will provide state-of-the-art imaging services to inpatients and outpatients at MHS. The imaging department has been strategically located on the 1st floor so that it can be directly adjacent to

The Emergency department for quick access and near the main hospital entry and inpatient elevators for patients coming to the hospital for outpatient testing or for quick access to back of house inpatient elevators reducing travel distances for patients and staff.

The entry point for imaging is off of the main hospital lobby concourse and will have a key entry point with secondary storage for point of check-in. It is planned that all patients will be pre-registered prior to department and will stop at a main check-in point to notify of arrival. A dedicated waiting space has been provided for patients and family along with consultation rooms for private consultations in review of results.

Inpatients coming to the diagnostic imaging department connect vertically from all floors and will use the dedicated elevators adjacent to imaging for transport. This quick connection will reduce transport time for all patients.

The imaging department opens directly into the Emergency department with 1 CT and 1 Gen Rad room dedicated to consulting the ED. Staff within imaging will effectively coordinate flow of patients between rooms to ensure maximum utilization. Both the General Radiology/CT pod and Cardiology testing pod have a dedicated core with workstations for team support and medications. This core area will enhance communication for all team members. Each CT contains a control room with 1 large for 2 rooms and the other CT independent.

All Gen Rad, Fluoroscopic and CT rooms have patient toilets. Toilet rooms will be used for patient changing and will contain lockers and gowns to support privacy.

The MRI concourse suite contains an MRI, control room, wait/loading area, MRI equipment room, storage, linen and MRI work room. All necessary facility radiation safety measures including the four MRI safety zones will be implemented.

2 SPECT nuclear medicine tomographic imaging rooms are located together contiguous to a hot lab and radiopharm waste storage. Segregated patient and staff flows ensure that there is no exposure to radiation. Radiology offices for physicians have been provided within the department for digital reading capabilities. Full access to electronic interface will be required to facilitate communication with other physicians on-site/off-site.

Access are provided to support outside imaging devices. Where possible equipment is being distributed throughout departments to improve accessibility to key imaging tests, minimize wait time and ensure quicker turnaround time on results.

9.30 Education & Research

A robust education center offers a variety of learning environments for community, staff and patients. The large auditorium seats up to 150 and is convertible to smaller conference/lecture rooms for use in a variety of settings. Storage for chairs and tables in adjacent rooms allows these conference rooms to be arranged as the demand requires.

In addition to the main auditorium, several other conference rooms and training rooms are outfitted with the latest Audio/Video technology. The IT computer training room and Patient Simulation room are for staff use only. While conference rooms throughout the facility are intended to be shared resources and are managed by the education staff, the Level 1 conference rooms are typically dedicated to broader learning needs. The location adjacent to the kitchen allows for easy catering.

734 **Residential Dietetic (Kitchen, Serving, Diet Room-Office)**

The main kitchen, server and nutrition offices support both public catering and inpatient meal service. The kitchen area has high-rise-hubcap access, including sinks, both clean and dirty, as well as simple access to a service elevator dedicated primarily to food, and pharmacy transport. A 4000-lb size type manual is a kid-proof for patient needs.

735 **Resident Clinical Laboratory Services**

The Clinical Laboratory at MCHS efficiently performs and coordinates all inpatient and on-site and off-site outpatient clinical specimen tests ordered by physicians and providers. The Clinical Lab examines materials derived from the human body for the purpose of providing information on diagnosis, prognosis, prevention, or treatment of disease. The Clinical Lab also manages procurement, storage, testing and dispensing of clinical products for MCHS. The department processes specimens (platelets, smears, or RR collected specimens), processes specimens, performs STAT and test method, and communicates results to a physician/provider accurately, in a timely manner.

Services Provided:

- **Outpatient Blood Draw:** The lab will not have a phlebotomy area within the lab, but there will be a phlebotomy area in an adjacent medical office building.
- **Phlebotomy Services / Specimen Acquisition:** Provides phlebotomy services to the Hospital and other outpatient clinic sites. Phlebotomists also work in the Lab, to mainly obtain blood and urine specimens in the facility. Other specimens are acquired by on-site RN's or physicians. A number of specimens will be acquired from off-site and on-site physician offices/clinics. Specimens collected at medical office buildings off-campus will be picked up by MCHS courier service and processed at this lab.
- **Assays and Processing:** Assays are performed primarily specimens submitted from blood bank, RN's, and physicians. All specimens will be processed at this lab as it will be the designated Reference Lab for testing including other microbiology, special chemistry, molecular serology and other specimens scheduled for more testing.
- **Pathology:** performs surgical specimen processing, frozen sections, and transcription and reporting on pathological findings.
- **Frozen Section:** Specimens from the Surgery Suite will be processed/assayed and evaluated in the Histology area.

Testing:

- Provides STAT testing for inpatients and outpatients (Chemistry, Hematology, Coagulation, and Microbiology) and routine testing for inpatients and outpatients (Chemistry, Hematology, Coagulation).
- Assume to provide Anatomical Pathology.
- Could provide back-up to other MCHS locations and clinics if their instruments go down.

Results Reporting: Analyzes results and sends to physicians. Performs initial tests as required. Some specimens for a prescribed period of time after testing.

Blood Banking: Receives blood product from outside providers. Tests pattern specimens. Cross-Matches specimens and blood product. Prepares and stores blood products. Dispenses blood product as needed for the hospital or the clinics.

Test Coordination: Coordinates, calibrates, and services point-of-care testing equipment.

Blood gas analysis will be provided by Respiratory Therapists outside of the purview of the lab

Key Interdepartmental Support Relationships

- Close relationship with Blood Bank which must, in turn, be accessible to outpatients in the future
- Phlebotomists cross cover Blood Bank, Clinical Lab and point-of-care draws to level work load
- Theories back of the House access from Island point-of-care station common. This has been created with a direct connection from the dock to the crew lift location as is. Dedicated parking for courier to be provided
- Location of Lab requires access to Loading Dock for delivery of supplies and packages, therefore the Lab is directly adjacent to the loading dock on the west side of the building
- While some blood can be tubed to the patient, essential bank blood will need to be picked-up and delivered to Surgery, ED, and other critical areas via the back of house service elevators directly adjacent to the lab
- All phlebotomists will have their blood draw carts stored on inpatient units and will descend/ascend from the lab. Carts will not be stored in the lab, and will be restocked on the unit. Proximity to the back of house elevators is currently planned to enhance delivery of specimens to the clinical lab if they cannot be tubed
- Phlebotomy supplies will be available on the units to limit need for phlebotomists to go to the Lab
- Precanalic tubes will transport specimens and blood from the docks to the lab

Changes in Practice

- Addition of additional equipment to the hospital lab creating a broader test menu, more STATs, and blood banking
- Drive for greater efficiency (Lean), as well as the need for faster turnaround times and broader test menus have made total lab automation systems a viable alternative to individual instruments for some test categories. Continue to add automation and will find more evaluate opportunities
- Test volume is growing due to aging population, expanding market share, additional mandated tests, new technology, broadened test menu, taking on additional outpatient testing and community standards. Some additional tests will be accommodated by available instruments over for growth.
- Some rapid molecular tests (HIV, TB, MRSA) will continue to be done in house.
- Team planning to enhance staffing complement, enable test ranges for supplies, increase turnaround time and reduce greater reliability is now an integral part of design
- Using of blood product packages to be used for a satellite blood bank in the ICU. A blood bank refrigerator will be available to and monitored by CN staff. Potential for use in the ICU for transfusion
- Emerging pathogens (H5N1, SARS, MERS, etc) require greater attention to staff and public safety
- Intra-departmental
- Public system to provide access to all patient care areas

Staff Areas

- Lab staff will have a dedicated locker and lounge for storage of coats, personal effects and a rest for respite

Access and Circulation

- Entry/exit for hospital staff and couriers delivering/picking up blood products, delivery/picking out resident at 3 locations: Rural Park, Hoteling and Main Lab.

ANATOMICAL PATHOLOGY

Operational Objectives: Departmental and Integrative

- The core function of Pathology services is diagnostic pathology. The Pathology Laboratory at MVMHS will provide Frozen Section and Grossing, and STAT cytology services for on-site patients. The Pathology Department examines human tissues and body fluids for the purpose of providing information on diagnosis, prognosis, and treatment planning.

Services:

- **Specimen Acquisition:** Pathologists may advise other physicians on the acquisition of special tests or obtain cytology specimens directly from patients such as Fine Needle Aspiration (FNA).
- **Accessioning:** Staff will accession specimens into the Pathology US in the Pathology Laboratory, or in future, at point-of-care.
- **Frozen Section:** Unfixed STAT specimens, acquired intra-operatively, will be prepared, stained and taken directly to the lab for analysis.
- **Grossing:** Grossing stations for pathologists and pathology assistants will be provided in conjunction with Frozen Section to level workload between frozen cases.
- **Histology:** Blocks prepared at MVMHS will be sent to the on-site Pathology Department for processing and interpretation.
- **Cytology:** STAT body fluids will be rapidly processed in Frozen / Grossing Lab. Routine specimens will be sent to the on-site Pathology Department for processing and interpretation.
- **Autopsy:** Autopsies will be performed at MVMHS. A morgue has been provided adjacent to the lab with an area for autopsies and family viewing.

Key Interdependencies / Support Relationships:

- Pathologists require access to the Hospital Suite and to clinics where specimens are collected.
- Pathologists need to be accessible to other physicians for consults using multi-headed microscopes, therefore offices will incorporate required space to support a multi-headed scope with pathology.
- Frozen/Grossing has direct access to the Loading Dock for delivery of supplies and packages.

Key Design Features: Clinical Lab/ Pathology

- Planned the processing and testing areas of the lab as a large open, rectangular space to maximize future flexibility and reconfiguration of workflow, benches and equipment. The open lab concept permits team members to see each other, enhances supervision and night shift can also see each other, entrance, and pneumatic tubes more easily to increase efficiency and security.
- Offices and other hard elements are located on the perimeter.
- Direct access to Blood Bank for product delivery provides with a separate entry door off main level of house corridor.
- Frozen/Grossing currently planned as a large open space to permit flexible workflow and also provide an environment for pathologists to discuss cases.

Features:

- Including provisions to temporarily hold bio hazardous waste.
- Incorporated II waste access features to provide security to staff.

Patent and Staff Safety:

- Biosafety cabinets to control pathogens.
- Chemical fume hood to control odors.
- Hand washing sinks distributed in all areas for staff.

- Adjustable recessed systems to request work surface height for staff ergonomics.

1. Environmental Quality and Utilities

- Appropriate air exchanges – 100% exhaust, single pass air for labs. Design a minimum of 6 air exchanges per hour but air exchange may be governed by heat load from equipment.
- 110 mgd chem RO/DI water is required to support the chemistry instruments and some reagent prep.
- Power will run in wire mold mounted to casework frames or on rails, or in overhead service carriers.
- Gas data will run in the casework cases or in wire mold or overhead service carriers with adapters.
- Cup sinks will be provided in the casework cases 18" AFF for drainage.
- Given the impervious floor, a grid of drains (12" x 6") starting in the perimeter walls will be provided under the slab to permit equipment and casework changes over time.
- Central uninterruptible power supply (UPS) system will be located where possible to avoid providing UPS at each instrument. UPS is required for all equipment requiring calibration after emergency shutdown (most data bases, computers).
- Providing emergency power for all equipment including computers and refrigerators.
- Providing LEA compliant monitoring of all blood bank refrigerators and freezers.
- Provision for future wireless teledata access for instruments, computers, and PDAs.
- Key Card access at all entrances.
- Include cable trays on the ceiling.
- Emergency Eyewash and Shower Station with trap drain in floor drain and emergency cover will be provided.
- Lab waste system capable of collecting and holding chemicals intended for use in lab (while them can be stored until we secured down the drains, an accident could occur). C/PVC is not acceptable.
- Lab sinks will have a combination foot controlled hot/cold faucet which hot/wash sinks could have both eyes faucet as well as an emergency eyewash/shower built in it.

943 Maintenance & Housekeeping (Loading Dock)

A dedicated clean area/water loading dock for the MWH hospital is located directly off of Columbia on the east side of the building at ground level and provides 2 truck loading/drain receiving bays, and 3 bays for self-d (trash/recycle/ables/medical waste)/flent and 3-4 locations for short term parking for small truck or courier deliveries/dock up. Two of the bays will be equipped with a dock leveler and one bay will have a dock lift. This space supports the receipt and staging of all incoming clean equipment, supplies, mail, linen, and food with a dedicated separation for waste stream management to the soiled bays. The new receiving docks have direct and immediate access to service elevators that are within the receiving area that can go directly to the Interventional platform, CSP and Pharmacy on the 2nd floor and a direct dedicated room area service connection to an additional back of house elevator bank that services the upper Inpatient floors. A receiving check-in office, dedicated portable gas storage tank room, secure welding room, clean linen and temporary cart staging is direct y connected in the unloading areas and provides space for primary supply distribution and staging areas/ transferring III boxes for the supply chain department.

943 Maintenance & Housekeeping (Gas Storage Room)

The gas storage room located adjacent to the dock will provide temporary storage for receiving and unloading gases. The gas storage rooms are limited to the maximum allowable gas quantities by code. Full and empty cylinders will be clearly marked and a gas manifold will be provided adjacent to the dock area and be part of the facilities department responsibility.

942 Maintenance & Housekeeping (Central Storage)

The main warehouse storage area is to be located in a separate facility. A central storage room is located adjacent to the loading docks and serve as a storage which allows for ease of distribution or pick up from our suppliers to same bulk non-IT items, including IV fluids, disaster preparedness stock, and routine high-use items in low unit of measure format will be stored will in the MCHS material management storeroom. Most supplies will be shipped to reusable totes from our vendors so ease for warehouse distribution. All STAT supply storage will be maintained in the storeroom. Bulk supplies, such as IV fluids will be de-cased within the storeroom and delivered to Pharmacy for preparation and distribution.

Materials management will handle the restocking of most supplies to all areas of the hospital including SPO (for redistribution in the case cart system), with a gateway to other clinical departments. Security will assist materials management with monitoring receipt of supplies and pedestrian traffic in and around the loading dock area.

943 Maintenance & Housekeeping (Linen)

A linen service area for receiving of clean linen is located on the dock with limited access to service elevators to provide dedicated storage, cart make up, dispatch and distribution of clean linen throughout the hospital. The linen room will accommodate a secure area for additional carts to serve as emergency linen backup supply.

944 Maintenance & Housekeeping (Trash & Linen (Line Rooms))

The waste stream management, including the collection, transport, and disposal of general trash, recyclables, and RHW (regulated medical waste) is maintained using manual cart transport via vertical lift and trash gravity chutes along dedicated color-coded distribution routes, which terminate on the Ground floor level in separate dedicated collection rooms. EVS carts will transport trash and linen collection carts to the staging area of the dock for pick up.

945 Maintenance & Housekeeping (Facilities & EVS Admin)

Facilities and EVS leadership and supervisors are located adjacent to the Materials Management area, which and connected by a tunnel to the main dock. This general location of offices and shared conference room provides direct consultation and supervision to these departments, creates opportunities of collaboration and communication between staff and leaders, and provides an area to host department meetings, team discussions or education. Senior Facilities Leadership and the Safety Director are located on the 2nd floor.

946 Maintenance & Housekeeping (Shop)

Shop space has been dedicated contiguous to the CEF to provide space for work benches, as well as storage for multiple items that support the daily operations of the hospital. HVAC, Plumbing, Paint, Electrical, Carpentry, Metal Element shops have dedicated spaces to support the work of each specialty. In addition, the shop area is located off a corridor that connects directly to the IT processing park access if needed. Staff in this area will share a common locker room and lounge on the dock and materials management team directly adjacent to their area.

LEVEL 2

General Description

Level 2 is the main procedural & intervention center for the MGH Hospital. A combination of interventional platform for outpatients, same day procedure patients, inpatient and trauma patients provides the flexible and shared services necessary to enhance patient care delivery. Administrative functions as well as clinical support areas, including pharmacy and sterile processing, occupy the remainder of the floor.

This level also supports a front of house and back of house organization. The main visitor elevators offer access to the lobby and lobby-to-corridor, aiding in wayfinding. Visitor, family and patient access is controlled to the main second floor lobby and waiting areas.

Surgical and Interventional areas are controlled access and allow for private, back of house transport for patients, services and staff.

A future expansion office building located on Columbia could potentially have controlled staff-only access to this level at the east end of the building.

700 Public Areas (Toliet, Waiting)

Outpatients arriving for outpatient surgery, cath, intervention or endoscopic procedures come to the second level with family to be checked in and wait for the procedure. The main visitor elevators bring patients directly to a second floor lobby overlooking the main entry. The intervention center reception desk is immediately off the lobby.

Amenities for family waiting in the lounge include a variety of seating choices, adjacent public restrooms and access to refreshments. Patient tracking technology will be utilized to keep family informed of patient progress throughout their care procedure. This would allow family to remain on this level or use the first floor amenities as desired.

Consult rooms are immediately adjacent to the family lounge area. Concierge staff will notify family when physicians are ready to speak with them and will direct family to the appropriate consult room. Physicians/surgeons arrive from the opposite direction.

When appropriate, family will be able to stay with patients during pre and post-operative care via direct access to these areas.

714 Operating Recovery Room (PreOp, PostOp, PACU)

Directly off the waiting area is a large PreOp unit, consisting of PreOp, PACU and Phase 2 recovery functions. This suite is designed as a highly flexible suite to allow for flexing of function based on schedule demands. It is universally designed so that each holding bay or room is able to accommodate both pre-op and post-op patients' requirements.

This suite supports the operating rooms, Cat labs, EP labs, interventional labs, Hybrid OR and training rooms. It consists of the following areas:

- 34 PACU bays (including 1 isolation with attached toilet, 5 isolated rooms)
- 50 Prep Rooms (2 are isolation with attached toilet)
- 3 Preop refreshment rooms
- Supporting care giver work, med, clean, toilet, nutrition and other support functions

The Periop suite is consists of several clusters of 5 to 10 Periop patient rooms surrounding support functions. These areas are provided to flex as needed, but will be sited such that patients are generally positioned nearer to the procedure rooms to which they are scheduled. For instance, the two clusters south of the main elevator bank are adjacent to the emergency suite and main utility rooms. This area will primarily serve those procedure rooms.

The Periop areas are connected via controlled access corridors where staff and materials are free to move, but public access is limited and controlled. These controlled corridors are located to the entry of the semi-restricted corridors of the adjacent utility suite as well as patient, staff and service elevators. The control desk areas are central to the entire suite in order to manage traffic and flow within these areas.

74a Baseline Operating Room (OR, Cath/EP, IR, Endo)

The intervention platform creates a dedicated suite for all procedure-based services. This includes the following:

- 8 General ORs
- 4 Specialty ORs (Cath, U/Intr, Hybrid)
- 3 Cath Labs
- 2 EP Labs
- 2 IR rooms
- 1 Hybrid OR
- 6 Endoscopy rooms, including 1 Advanced Endo room and 1 Flex Fluoro room

The suite is comprised of 4 cores with procedure rooms surrounding a clean core, these are organized as follows:

- 1 core (6) ORs (general ORs)
- 4a Core (2 general, 1 Hybrid, 1 regular) plus soft space for 2 future ORs
- Four Intervention rooms (1 IR, 1 Hybrid/IR)
- Four cardiac Intervention rooms (2 EP, 2 Cath)
- An Endoscopy suite (1 Advanced Endo, 1 Flex Endo/Fluoro (Includ TEE/TILT/EMBD), 4 beds with 1 capable for Bronchoscopy)

The presence of the clean core will supply core for the procedure rooms means that each will have two points of entry - one off the semi-restricted corridor for patients, staff and the other off the restricted clean core. The relative assignment of the specialty assignment of the procedure rooms (cardiovascular, neurology, etc.), initially, the procedure rooms will all be designed to basic operating room standards, but technologically rich. This includes providing the capability of obtaining OR air exchange rates; specifying cleanable surfaces; and integrating lights, monitors, and booms. The procedure rooms will also include nurse/sterilization centers with lighting controls, audio-visual components for monitoring and education, emergency power, and supply cabinets. Rooms that have significant imaging equipment provisions also integrate a control room.

The Intervention suite will follow the trend of keep both surgical and interventional rooms behind the "redline" for flexibility and to help mitigate infection risks. However, the endoscopy rooms and potentially a set of cath lab rooms will follow similar protocols but will not be within the semi-restricted corridors. This arrangement does grant flexibility to change in the future should it be necessary.

Infection risks will also be mitigated with a strong sterile processing department solely responsible for the sterilization of heat labile, scope and other materials. A closed case cart system will be employed to bring

(clean and dirty instruments) to and from the operating rooms.

Staff support areas, including offices, lounges, and locker rooms, are provided at the west-most edge of the suite. The staff locker and lounge are shared by all interventional staff and physicians as well as all interventional department staff.

900 Administration (Quality)

The northeast area of the second floor is comprised of several administrative functions. Quality management and analytics are distributed to two locations in the hospital. The administrative suite on Level 2 across from family waiting supports twelve quality management professionals in open office workstations. These staff members support many departments throughout the hospital. They interact with staff and have a particularly strong relationship with physicians, therefore the location adjacent to physical services proves useful.

900A Administration (Physician Services, GME)

Physician services and the General Medical Education department are co-located on the west-end floor of the hospital adjacent to administration and the interventional platform. This location provides a dedicated space for a Resident lounge, doctor lounge, medical library, lockers, kitchenette and haberdashery for residents in the MCHS program. The GME space supporting Internship, residency, sub-specialty and fellowship programs has an office for the Director, Chairperson, 1 Credentialing staff and space for credentialing needs. The space provides a quiet calm atmosphere with access to light and amenities to support the program. This location provides a hall that is close to easy access to elevators for the patient tower or to access conference space for meetings and group education.

901 Administration (Administration, Nursing Administration)

The senior executive Administration suite and nursing administration are located in adjacent areas. The Administration suite supports the CEO, Top level VP offices and associated administrative professionals. This suite is accessible by visitors if directed to the area. A dedicated consultation room is provided to meet with family, patients or visitors as needed.

A large board room supports the hospital's mission of community involvement. Adjacent catering, restrooms and direct access to the Administrative suite allow for its use serving a number of functions. Nursing Administration is a primarily distributed service. This suite allows the three NAs to share an office suite with dedicated staff support and the central location supports easy access for physicians, nurses, staff and service administration.

902 Administration (Employee Health)

The MCHS employee health program will primarily be located off site and will have a robust telehealth presence. However, a small suite is on site for on-site staff access when needed. This location may primarily support quick checks and serve as a bridge station for other staff needs.

903 Maintenance & Housekeeping (Facilities Administration)

The ACP for facilities, facilities manager, safety officers and training rooms are dispersed on this level. Other facilities staff are situated on the first floor and/or near the server building.

904 Equipment & Maintenance (Clinical Engineering)

A remote clinical engineering program supports all clinical services. The main clinical engineering work room include work benches for 8 engineers and is located adjacent to the bed repair shop. This second floor location allows to serve the interventional platform effectively and gives the staff here central access to

elevators for easy access throughout the building.

641 Equipment & Maintenance (Patient Transport)

Patient transport staff will be deployed throughout the hospital and will be equipped with a minivan that can be deployed rapidly as needed. The dispatch staff are located with the Patient Flow Command Center on the 2nd floor. This patient transport area is a quick touchdown area for staff and holds additional stretchers and wheelchairs for use if the decentralized transport is not available.

742 Baseline Pharmaceutical Services

The pharmacy department is located on the second floor and is adjacent to the interventional laboratory and central sterile processing departments. The location provides important support services in the place of highest use and close to vertical circulation to support the bed turnover. The development of the strategy plan focused on bringing the most efficient methods of dispensing and services to support inpatient needs. Determining the method of medication distribution on the inpatient units was critical to determining the physical layout of the pharmacy as well as the use of automated technology and medication management throughout the hospital. The pharmacy will utilize the compounding system for comprehensive medication inventory management. This allows for fewer personnel needed in the pharmacy due to the efficiency for compounding, which supports the organization's goal to have pharmacists out on the units. The pharmacy space contains dedicated area for techs and pharmacist, IV Prep and hood, Anteroom and pass thru, Barcode Vault, Bulk receiving, Pneumatic Tubes and Carousels with a packaging area.

In addition, there is a service window for clinical staff that may need to pick up medication directly from the Pharmacy, which is located on the West end of the department, closest to the elevators. This window assumes physician order entry which will be utilized for medication ordering.

Key Services Provided

- Bulk purchasing of stock medications for pharmacy dispensing
- Dispensing medications to all clinical areas
- Administration of IV solutions for distribution to clinical areas and for inpatient administration
- Clinical pharmacy activities, pharmacists deployed to inpatient units, departments to consult with physicians/providers, provide patient education and counseling
- Employee prescription dispensing – potential relocation to Medical Office Building

Changes in Practice

- Potential for additional personnel to maintain pharmacy for discharge medications
- Workload changes and new efficiencies due to having a pneumatic tube system that goes to all departments and can carry other medical (not just currently sterile) to be dispensed via tube.
- Multiple Pys locations that will require pharmacy support

The pharmacy staff has a dedicated lounge and locker room and 2 staff toilets adjacent to the department. Pharmacy offices are connected to the main pharmacy within a suite and also accessible through the pharmacy. Spaces for clinical pharmacist, director, operations manager, purchasing, IT and admin are located in this area to support the department.

943 Central Sterile & Supply (Sterile Processing Department)

Central Sterile (now the Sterile Processing Department (SPD)) will employ the latest equipment technology and clean processes, including a better design, employing automated pass-through steam sterilizers and automated instrument washer-disinfectors. Low temperature sterilization will exclude high-risk

ethylene oxide in favor of the efficiency and safety of gas plasma technology. The total configuration will include four (4) (1-4) instrument washer decontaminators, one automated cart and one table washers and one manual cart washer, four (4-4) large capacity floor-loading pass through steam sterilizers, plus one (1) (1-1) smaller sterilizer to support rapid turnover. The department will be staffed 24 hours daily, 7 days each week. The Sterile Processing department is located on the 2nd floor of the hospital and adjacent to the Interventional suite for ease of access and quick turnaround on instrumentation.

Operational Objectives: Departmental and integrative

- SPD will adhere to the highest standards of care through evidence, uniform training and staff certification and the use of advanced technology for reprocessing and sterilization
- SPD is designed to be the single point of responsibility for routine decontamination, sterilization and infection control for IM/HE
- The department design, reprocessing equipment and workflows will be consistent with contemporary infection control protocols and will support the department's role as the final point of the Interventional supply chain
- Together with Materials Management, SPD will coordinate the supply and instrument requirements for the Interventional Suite, primarily via a pass cart system.

Services

- Decontamination of critical medical devices, including surgical instruments, floor and procedural trays
- Decontamination and modification of all scopes which will not be processed at the point-of-care. This includes provisions in the upcoming 2018 P&I to help optimize the quality of processing
- Sterilization of all critical medical devices including surgical instruments & sets, powered tools and individual instruments used in any surgical/interventional setting
- Storage and distribution of surgical supplies that are maintained within SPD for the pass cart system, as well as most consumables supplies, implants and other materials used in any surgical/interventional setting
- Assembly of case carts, specialty carts, room carts and procedure carts/sets up.
- Monitoring and quality assurance testing of all sterilization equipment used throughout the campus including any point of use decontamination or sterilization units used in patient care settings
- Reprocessing of all flexible scopes used throughout the Hospital system

Physical Layout

Decontamination

- Equipment will include high level washer decontaminator, ultrasonic cleaner/flusher and an automatic cart washer
- An automated cart washer shall have a unload cart/tray return to handle hand held washers and subject instrument containers and miscellaneous utensils that do not require high level decontamination
- Equipment washroom will be provided to accommodate the washing of large equipment and will provide a back up option to washing carts, scooters and other wheeled loads
- A utility sink and the appropriate number of 2, and 3 basin clean-up sinks will be provided. A pass-through window from decontam will be provided to allow delicate instruments to be processed and then wrapped and sterilized in the Prep and Pack area
- A vendor drop off area for loaner tools and sets will be provided. Vendors will also use this area to pick up the loaned items.
- Decontam will be accessible from the equipping service area where vendors take their equipment. This transitional area will include a hand wash sink PPE storage anyone entering or leaving the decontam area.

Scope Processing

- SPD will be processing all scopes from Endoscopy
- A dedicated area for the arrival of dirty scopes is located adjacent to endoscopy. Dirty scopes will arrive in totes to the decontam side of scope processing
- Scopes will be cleaned in scope processing and returned to endoscopy to be stored in cabinets within the department

Prep and Pack

- The equipment clean up room and automated cart washer will exit into the clean side of SPD. The cleaned but still empty case carts will be staged awaiting assembly
- The completed/filled case carts will be postbanned in cart staging
- Instrument carts will exit the washer decontaminated via an additional conveyor system. Staff will now transfer carts to move the racks from the conveyor to the prep & pack workstations. The racks will be moved to the assembly area for re-assembly and wrapping. As the racks are emptied, they will be returned to Dermham via a return conveyor
- Once the instruments and instrument sets are wrapped, the heat stable carts will be loaded on to special carts and moved to the steam sterilizer.
- Heat and moisture sensitive items will be processed using gas plasma technology such as STERRADTM or another replacement technology for ethylene oxide (EtO) sterilization.
- The hot, sterile instruments will exit upon removal from the steam sterilizer. The sterilized gases will be stored on carts to await picking (case carts) or dispatch (cart trays, etc.)
- Ink sheets or print-out cards from the surgical information system (SIS) will be printed at a workstation. Technicians will assemble the case carts for distribution to the surgical/interventional suite and other defined users

Store and Clear Stores

- SPD will have the capability to store/min 80% of the surgical instruments, instrument sets and the routine supplies used by the interventional Suite. The rest of the Interventional instrumentation and supplies will be stored in the clean core, and within the individual operating and/or procedure rooms.
- SPD technicians will pick the required items using the preference cards generated by the surgical information system (SIS). Supplies and instrument sets will be placed into the case cart, and then swept according to their scheduled use and destination.
- Case carts will be transported via a dedicated lane of house corridor in the restricted zone of the platform and delivered to the Interventional Suite
- General floor trays and other cart trolleys will be held for pick-up and delivery by Materials Management distribution staff
- Supply replenishment within SPD will be provided by Materials Management. Items will be de-cased prior to delivery to SPD or to the Interventional Suite
- De-casing can occur at the loading dock or at the vendor facility if a case/kit system is employed

Planning Guidelines

Technology Implications

- Use of a computerized information system with instrument management, production monitoring and inventory tracking capabilities
- Potential use of robotics to facilitate the routine delivery and return of surgical case carts
- Use of automated loading/unloading capabilities for the instrument washers

- Access to the site for facility system for comprehensive management of use carts and physical preferences requirements
- Utilize equipment and/or information technology to streamline departmental operations and support local vendors

Infrastructural

- Design automation flow will include work stations for unloading case carts and separating instruments, clean up sinks will allow for initial heat supplemental cleaning; steam/autoclave will be achieved using automated pass through washers and exit into the prep and pack area
- Staff working in decontamination will enter and depart through an anteroom where they will don protective cover garments
- Staging area will be required for holding soiled case carts. Space will also be needed for ongoing washing and cleaning of special instrumentation prior to loading on an ultrasonic cleaner.
- Cleaning solutions will be maintained in room, with close proximity to the washers
- Dedicated environmental service closets are located in the decontamination area and for the case cart area of SPD
- The storage will accommodate case cart staging along with sighted bins or storage systems with access from both ends and alternate aisle space

Staff Areas

- Restrooms male and female, locker, breakroom and lockers are directly across the corridor from SPD and will be shared with the interventional staffroom.

Access and Circulation

- Physical layout reflects the appropriate flow of staff and instrumentation from uncleaned to clean areas as outlined. appropriate storage of sterile goods within department is essential

Auxiliary Services – Support from / for

- Materials Management is a key supplier to SPD.
- Materials Management will replenish supplies to the Interventional suite from case cart items and to all other patient care areas including the most out-reaching units.

Key Design Features

- Equipment will require standardized power, enclosure systems and water, steam and drain lines. Decontamination systems should have a piped in the decontamination room
- HVAC system will be designed to meet ASHRAE/SMI 57-79, state health department and NIOSH infection control standards.
- Exhaust handling exhaust air from the instrument washers, case washer and sterilizers must be run outside of building as well as other non-exhausting, non-ryging material
- Emergency power will be required to keep certain equipment operational at all times
- Floor and wall surfaces must be waterproof and finished with non-organic materials.
- Local steam generators will be required if house steam boilers are not part of the building central plant.

Patient and Staff Safety

- Appropriate personal protective equipment (PPE) storage will be planned for the decontamination area
- Emergency eyewash stations and separate hand washing units to be provided in the decontamination area
- Floor surfaces will be slip resistant

Environmental Quality

- Equipment and activities within SPD create unique environmental and mechanical requirements; the entire area must be located, planned and designed to mitigate potential damage to adjacent areas from water leakage or water vapor accumulation
- Sealed areas of SPD must be maintained under negative air pressure; all other areas within the department must be maintained under positive air pressure (see ANSI/APMA ST-79)
- There should be sufficient air exchanges, humidity and temperature controls (see ANSI/APMA ST-79) to mitigate the heat dispersion of the SPD equipment. This is for staff comfort as well as to protect the sterility of instrument packs

LEVELS ID'S

General Description

The design of the typical inpatient care unit is consistent throughout the remaining seven levels. The major functional layout of the floors are based on achieving superior patient-centered care with integrated, multi-disciplinary care teams, working for patient safety, reducing error, accommodating families and providing the opportunity for an enhanced patient, family and staff experience.

Each level generally consists of two (2) inpatient units along with shared and other support functions occupying the center hub. The programs throughout the bed tower include:

- Level 3: Critical Care, Administrative, Respiratory Care, Tenant, Holding On Call, Case Management, Risk Management, Infection Prevention
- Level 4: Birthing Center (LDR), Postpartum, Neonatal Intensive Care
- Level 5: Intermediate Care, Inpatient Dialysis
- Level 6: Medical/Surgical Care, Pediatric support, Therapy Gym, PT/OT/Speech Clinics
- Level 7: Medical/Surgical Inpatient Care, Therapy Gym, Specialty Clinics
- Level 8: Medical/Surgical Inpatient Care, IT Help desk staff
- Level 9: Behavioral Health

Open Care Inpatient Unit Bed Model (Basis for Design of Inpatient Units)

The basis of design for all inpatient care units is the open care model. This arrangement and configuration was developed supported by and validated for by nursing, physician and support staff involved in the design process, which included both testing of various floor plan designs and visiting numerous unit examples.

The premise of this plan is to increase visibility and communication between nursing, physicians, patients and other staff. It also strives to bring care closer to the patients and allow the care team to work in a more decentralized manner while still benefiting from team connections.

The overall unit organization consists of patient rooms surrounding a 16-foot wide patient care corridor. One side (8') of the corridor is clear for patient movement. The other 8' zone of the corridor includes alternating call light stations and supply/equipment alcoves along with clear 8' access to patient rooms.

The caregiver station support every four patient rooms – two pairs across from each other. It includes two seated workstations, two standing sinks, stairs and counter area for team use. There is line of sight between each caregiver station as well as throughout the unit. Assistential work hub will be included along corridors and surrounding the care team stations. Patients and families benefit from knowing that the care team is nearby.

The supply/equipment alcoves are standardized along the corridor and will be the same unit to unit so that staff may work anywhere and undisturbed throughout the unit. While these details have not yet been determined, it is anticipated that alcoves will be dedicated in function such as linen carts, equipment, standard high use supplies and other functions.

Central to each unit is an additional support zone. This area houses the central medication room, nutrition, clean and clean rooms. Additional equipment rooms are located towards the center area of the patient floor. It is important to note that medications are retrieved from patient rooms which also aids in reducing noise levels on the units. To reduce steps by nursing and enable pharmacists/pharmacy, these med rooms are planned per medical/surgical unit – including nursing areas room for every 10 rooms.

The entry to each unit includes the "team center". This is an open desk for the unit clerk and charge nurse

and serves as a reception point on the unit. In the middle of each unit is an enclosed collaboration room to support conversations between core team members and providing additional workspace for physicians and other staff.

Wings arrive on the floor via the main elevator, and are oriented northwards towards the family waiting area. They would then go towards the west or south to reach a particular patient's room. At the end of each wing will be a family respite area, accompanied by a few seats, in a low-traffic area to get away from the patient room. Otherwise, family are welcome in patient rooms and are invited to stay overnight. Specific rules regarding numbers of visitors and timing will be determined by hospital and unit leadership.

Staff support is located centrally and shared by both units. A large conference room, staff lounge, lockers and offices create the support zone.

Each ward/zone or intermediate care unit consists of all patient rooms, 1 of which is an isolation room. 100 rooms per unit also are capable of flexing up to 200 in peak times in the event of unexpected surge capacity needs. Thus, the actual capacity of the typical unit is 82 beds.

Typical Patient Room

Details of the typical patient room will be design further in the next phases. There are several principles upon which the room layout is based. This includes:

- Standardization of all rooms for easy of use
- Large patient door openings to support patient movement
- Areas for caregivers, patient and family
- Simple direct access from bed to toilet room

Each room is anticipated to support mobile documentation stations dedicated to the patient, nurse. While this could be a "workstation on wheels", the capability to support future technology, including tablet technology is expected.

Each patient room may include dedicated toilet, automatic bedpan washer, sink and shower. P21 rooms do not include a shower, but otherwise are similar to typical acute-care rooms.

Each patient room has a small cabinet for Personal Protection Equipment (PPE). The intention is that this will be accessible from both inside and outside of the patient room. To be developed in future design phases.

LEVEL 3

167 Critical Care (Intensive Care) (new term 'Critical Care' terminology to be consistent with IGH)

West Unit:	22 Total Critical Care Beds
1	Critical Care (Airborne Infection Isolation) room
2	Critical Care ADA rooms
19	Critical Care typical rooms
East Unit:	20 Total Critical Care Beds
1	Critical Care (Airborne Infection Isolation) room
2	Critical Care ADA rooms
17	Critical Care typical rooms
12	TOTAL Critical Care BEDS

The Critical Care Units follow the typical acute inpatient room design with modifications to meet requirements for Critical Care level of care.

All the rooms on the Critical Care floor meet the clinical requirements of Critical Care level care, including 11' clear floor area, clearances around bed, technology integration, and observation into patient rooms, with some additional space for family presence. The toilet room contains toilet, automatic bidet, paper towel, and sink. 10% of the rooms are fully ADA accessible. Two separate shower rooms are located in each unit for patients who may require a shower.

Care Team Stations

- Decentralized care team stations are positioned around every four patient rooms, approximately. These stations provide seated documentation for 2 staff and standing documentation for another 2 staff. In addition, a central desk is positioned on each unit to support unit clerk, charge nurse and other team members. An enclosed documentation workstation allows secondary team members, physicians and nursing staff to collaborate with in the unit.

Supply/Equipment

- Clean supply rooms, medication rooms, equipment rooms and storage and soiled utility rooms are positioned both centrally and distributed along the patient care unit. Equipment storage SF requirement of 1161 per patient room has been met with a per room equipment storage per unit and four equipment/supply closets per unit with additional equipment storage for stretchers/service chairs near the patient ramp and elevators.

Family Spaces

- FGI requirements for critical care include a ratio of 1.5 visitor seats per patient room. This has been accommodated through family lounge space on each unit, and floor lounge space at the main visitor elevators. Additionally, because all rooms are single bedded rooms, family presence is welcomed within the room and a family member may sleep overnight. Per FGI, seating for 2 visitors will be provided in each patient room. There are a number of other family support spaces throughout the hospital.

903 Administration (Infection Prevention, Case Management, Risk Management)

Infection Prevention staff offices and Case Management administrative offices are located within the 5th floor center core area. These functions serve the entire hospital. Other case managers and support work staff are located on each inpatient unit, supervisory/lead staff and support staff are located on the administrative suite.

Infection prevention staff use an open workstation environment and use this office suite as their lockdown space. Infection prevention staff travel to other department areas when meeting with clinical team members.

904 Administrative (Patient Flow Command Center)

The Patient Flow Command Center is a multi-tier primary suite integrated linking all components of patient flow and movement together. This suite includes bed control, transfer center, dispatcher and EMS dispatch into a single center. A large bank of monitors create a visual real-time patient flow information for all team members.

226 Respiratory Care

The Respiratory Care department specializes in treating respiratory illnesses including chronic lung problems such as asthma, emphysema, and COPD, as well as acute breathing problems associated with serious or life-threatening conditions such as traumatic injury, heart attack, or stroke. CRRTS Respiratory Therapists are specialists in managing life support devices, airway management, mechanical ventilation, and other aspects of critical care medicine.

The respiratory care department includes lockdown space for RT staff who are assigned to various care areas, administrative offices and spaces for cleaning and repairing equipment such as ventilators, C-pop and nebulizers. Critical Care nursing unit, IT, and PACU all have an amount of stock of clean ventilators. Minimal storage is located in this area.

Tenant: Masonic Lab

The Masonic Lab is a tenant space to be developed. The location is intended to house research lab space associated with heart tissue procurement. There is a relationship with the cardiac operating rooms on the level directly below this area.

412 Housing On-Call

Six (6) single occupant on-call rooms with attached toilet/showers are positioned centrally on this floor. These are shared use on-call rooms by physicians, residents or others requiring sleeping quarters. Additional on-call rooms are located on the Bathing Center floor (level 4).

LEVEL A

General Description

Maternity services, at WCHS called the "Birthing Center", occupies the entire fourth floor.

West Unit:

1	Butterfly PP room (for fetal demise patients)
20	<u>Typical Postpartum single patient rooms with toilet/shower</u>
21	Total Postpartum patient rooms

Center Unit:

1	MCU A1 (Airborne Infection Isolation) room
7	<u>MCU regular rooms</u>
8	MCU beds

East Unit:

2	<u>MCU regular patient rooms</u>
31 TOTAL INPATIENT BIRTHING CENTER beds (includes MCU)	

East Unit	0 - ICU rooms (1 A&E Room, Airborne Infection Isolation)
1	1 - antepartum labor exam rooms
2	0 - Section Operating Rooms
3	Recovery beds

Please note that the LDR beds are not considered inpatient beds on the operating certificate. The total number of inpatient beds on this unit is 27 (comprised of 20 post-partum + 1 butterfly room + 2 ante partum).²

The Birthing Center is located on the 4th floor of the main bed tower which can be directly accessed from the main entry via elevator or through the Emergency Department via a dedicated back of house elevator. Patients arriving in the ED in active labor will be assessed at ED triage and escorted via cart or wheelchair to the Birthing Center. The overall strategy and approach is to create a unit that supports birthing, postpartum care, and Specialty Care nursery needs within a unified environment that is safe, relaxing, and supportive of new mothers. Minimizing patient and infant safety spending the entire continuum of care is paramount and patient, staff and visitor flows are optimized to support this approach.

214 Maternity (Birthing Center - LDR)

Patients arrive via patient dedicated elevators and are greeted on the unit at a single intake point and triaged and evaluated in an exam room pod. Registration will occur at beds for the patient population. The area is supported by 2 exam rooms, 1 patient toilet and clinical exam station. After evaluation, the patient can be moved directly to one of the 2 antepartum rooms adjacent to the triage/exam area or to an LDR room. The LDR rooms are positioned on the back of the unit, closest to exam and lab areas, nurse stations and decentralized nursing hubs to ensure line of site and patient safety. Dedicated toilet, clean, medication rooms and a pneumatic tube are located in the center to provide ease of access and reduce travel for staff and provide timely care.

LDR rooms (8) are designed to provide care to a delivering mother from arrival to delivery. This room also provides space for the baby after delivery for assessment and examination. The rooms are designed to

support all clinical situations for mother and baby and will be equipped with the following items: Rillling bed and ceiling mounted light warmer, wall mounted gases for mother and baby, cabinets for storage at headwall for fetal monitoring and emergency equipment, clinical documentation workstation and cabinet, with sink upon arrival to support hand hygiene practices, linen storage, and PPE. Waste provisions are included for fully after delivery, a separate infant to-wash or room is also provided to support the unit.

Antepartum rooms (2) adjacent to triage will provide initial care or post delivery care in minutes that will be delivering in the C-Section room. These rooms are also equipped to provide an exam room for initial problem exam, ultrasound or other evaluation. The room will be equipped with the following: Maternity bed, overhead table and bedside chair, heat mats or warmer, wall mounted gases, clinical documentation workstation and cabinet and sink upon arrival to support required hand hygiene practices, linen storage, supplies and PPE.

31.3 Maternity (Birthing Center – C-Section Suite)

The C-Section suite consists of 2 C-Section ORs and 3 PACU bays. It is an isolated and the large room space with connection from both bridge and LOR's via semi-restricted corridor. Surgery/delivery staff entering this space will need to enter via the central core thru a dedicated locker room with staff locker/shower, change into appropriate attire and exit into the suite on the restricted side. All staff entering from the patient floor side will wear appropriate PPE located before entering surgery suite and will require badge scans only. The restricted area has 3 PACU bays with a nurse station supporting north flow of patients coming in and out of suite and monitoring of PACU patients. The PACU bays are adjacent to the ORs and are easily accessed via the restricted corridor. The bays have a standard configuration with 3 walls and a curtain for privacy.

Hand washing sinks will be provided at the bays. Bays will contain post procedure patient care supplies and emergency equipment at the headwall. Each bay will have required med gases and clinical workstation for documentation and medication administration.

The OR suite is also supported by a dedicated called room, clean room/med/gas room, Anesthesia work/supply and environmental service room. A locker area supports the unit and C-Section suite. All instrument clean trays and case carts will be processed by SPD on the secure floor with some frequently used processed trays to be stored within the OR suite clean supply room.

31.4 Maternity (Birthing Center – Post Partum)

The Postpartum unit is located in the existing of the birth center on the same floor as labor and delivery. A separate waiting or family arrival zone is directly off the main visitor elevator bank with central access to the unit. The postpartum unit is designed to reflect the typical inpatient room type and also accommodate IGI post-partum requirements and provides a locker/shower room and place for family and visitors. All rooms support a complete care approach for mother/baby bonding and care. There is one isolation room in the unit to support any airborne infection control situations. A small well baby nursery, contiguous to the special care nursery is located at the beginning of the unit if the mother is away at a procedure or needs a break to rest. The nursing staff are at decentralized hubs throughout the unit with decentralized supplies and medications distributed across the floor area.

In a central hub on the floor, there is dedicated water, clean supply, and a medication room and pneumatic tube to decrease travel distance for these utilities. This design is reflective of all inpatient floors and is standardized throughout the hospital tower to ensure ease of access, reduce errors and improve timeliness of patient care. The unit also has a team space for huddles or quick conferences with multidisciplinary providers located at the front of the unit. One post-partum room is a dedicated "Buddy Room" for those mothers and families that have experienced a loss. The room will be located at the end of

the unit and reflect a slightly different design and experience to help mothers and families cope during a difficult time.

To support physician and resident needs, there are 3 sleep rooms for OB/GYN physicians and Anesthesiologists services located at the end of the unit for on-call services when needed.

21.4 Maternity (Birthing Center – Staff Offices, Support)

Additional support services and staff offices are located within the main table (hub) of the birthing. Nurse Manager offices are located near their respective units with offices for case management, social work, clinical educators and laborists collocated. A staff lounge, locker and conference room space is also set for the hub and can be accessed from the back of house stairs/elevator area. This space will be shared by all units on this floor.

21.9 Neonatal Intermediate Care

Located between the Level III level III unit and the postpartum unit is an 8 bed special care nursery with space for 12 well baby bassinets. This level II nursery supports and provides basic care to infants that are moderately ill with problems that are expected to resolve rapidly or who are recovering from serious illness that was treated in a level III nursery. If the level of complexity of an infant should change, the infant would be transported via ambulance or helicopter to another facility. The unit has immediate and direct access to a dedicated large structure that leads directly to the ambulance entrance and helipad location.

All private Special Care Nursery rooms are equipped with chairs to provide privacy for families and an environment conducive for neonates. All rooms will have ceiling fixed wall gases, workstations for documentation, sinks to support appropriate handwashing and space for family to stay overnight if needed.

There is a central team station in the center providing the office to all bays to ensure visibility of patients. Access are located within the unit for different bed types, requires in addition for square tables, crash carts and emergency equipment. A dedicated space for the new integrated specialized adjacent to the unit for documentation and a sleep space if needed. Additional accommodations for long term stay will be provided outside the hospital.

The unit will be controlled by Ledge access and an infant abduction system will be employed throughout the Birthing Center platform for infant safety. Within the unit, the area is supported by a clean & equipment supply, soiled utility and medication room. Staff will utilize the centrally located staff lounge.

LEVEL 5

West Unit	32	Total 32 Intermediate-Care Beds and 32 Concomitant Care beds
	1	GI Isolation room (6 rooms Intermediate-Care Unit)
	2	Semi-private rooms (typically used as private rooms. Used for 2 patients for emergency use)
	27	Typical patient rooms
East Unit	32	Total Intermediate-Care Beds
	1	GI Isolation room (6 rooms Intermediate-Care Unit)
	2	Semi-private rooms (typically used as private rooms. Used for 2 patients for emergency use)
	29	Typical Acute Inpatient patient rooms
	64	TOTAL Concomitant Care Inpatient Beds
Center	1	Inpatient Dialysis Units

The hospital has typical acute care inpatient floor comprised of two (2) separate units each with 30 inpatient rooms. These units will operate as 30 private bed room in all typical situations. Two (2) rooms on each unit are capable of flexing up to a semi-private room in times of emergency need. Thus, the actual bed capacity on the floor is 54 beds.

Tab. Baseline Medical Surgical (Intermediate Care Unit) – West Unit

All the rooms on the floor meet the clinical requirements of intermediate level care, including SF, wall height, view, clearance around bed, headwall dimension, and observation into patient rooms, with additional space for family presence. The toilet rooms contain toilet, automatic handpan washer, shower and sink. All patient toilet rooms accommodate ADA requirements. Each GI (Airborne Infection Isolation) room (one per unit) includes a dialysis box.

Nurse Team Stations

- Decentralized care team stations are positioned around every four patient rooms. These stations provide seated accommodation for each staff and standing accommodation for another two staff. In addition, a team station desk is positioned at the entry of each unit to support unit clerk, charge nurse and transient care team. A centrally located, enclosed collaboration room (labeled “Documentation”) offers ancillary team members, physicians and nursing staff to collaborate within the unit. This room will have glass or other transparent walls on the front edge to maintain overall visualization of the unit.

Supply/Equipment

- Clean supply rooms, medication rooms, equipment rooms and closets are to be located within units and positioned both centrally and distributed along the patient care unit. Equipment storage SF requirement of 10'4" per patient room has been met or exceeded, with a central equipment storage per unit and vs. equipment's supply closets per unit with additional equipment closets for stretchers, bed-rails near the patient transfer sleepers.

Family Spaces

- All rooms are single bedded rooms and family presence is equipped within the room and a family member may sleep overnight. A family lounge is located at the entry on the floor by the visitor elevator. A small respect space is also provided at the end of each unit. There are a number of other family support spaces throughout the hospital.

303 Acute Renal Dialysis

The inpatient dialysis unit supports all acute care units with dialysis needs. The dialysis team moved to the Under Care pods and isolation rooms for patient dialysis. All other acute care inpatients are transported to this setting for dialysis. Light patient care surrounds a team care station. These bays accommodate appropriate distances and work areas for staff.

Dialysis staff clean and store portable units in this suite. Additional spaces include, office (manager), water treatment room, clean supply, equipment storage, cart closets, a patient table and staff locker.

LEVEL 6**General Description**

West Unit	33	Typical Acute Med/Surg Beds
	1	All private room (high-care intermediate)
	2	Semi-private rooms (typically used as private room - bed for 2 patients for emergency use)
	37	Typical Acute Inpatient private rooms
East Unit	33	Typical Acute Med/Surg Beds
	1	All private room (high-care intermediate)
	2	Semi-private rooms (typically used as private room - bed for 2 patients for emergency use)
	37	Typical Acute Inpatient private rooms
Center	64	TOTM Acute-Care Inpatient Beds
	1	Therapy Gym
	1	Pediatric Support space (toy/gun play, exam and staff work)

This represents a typical acute care inpatient floor comprised of two (2) separate units each with 30 inpatient rooms. These units will operate as 30 private rooms in all typical situations. Two (2) rooms on each unit are capable of flexing up to a semi-private room in times of emergency need. Thus, the actual bed capacity on the floor is 64 beds.

736 – Baseline Medical Surgical (Medical/Surgical Unit) – East and West Unit

The unit follows the typical acute care unit design. This medical/surgical is designated as the location for pediatric patients when needed.

218 Pediatrics

The East wing med/surg inpatient unit houses a variety of pediatric inpatients requiring general medical/surgical care. Currently, pediatrics has a 1 or 2 day average daily census. An exam room, multi-purpose play room and a child life staff workstation are near the unit entrance.

302 – Medical Rehabilitation

Level 6 and Level 7 have a shared inpatient therapy gym. The therapy gyms support all inpatients needing therapy, with a mix of acute/critical and/or the patient room in unit. One of these floors will be the primary orthopedics from one another will be for neuro/trauma/stroke patients.

The gym includes mat, stairs, parallel bars, suspended bar and an ADL toilet room and floor space for additional treatment. A ceiling lift provides safe patient handling for patients as needed.

Administrative furniture for program therapy, occupational therapy and speech therapy are located on Level 6. Therapists are decentralized to their assigned units, but frequently return to this home-base for collaboration or meetings with managers.

Level 7

General Description

West Unit:	22	Total Acute Med/Surg Beds
	1	All private room (All for the Infection Control)
	2	Semi-private rooms (typically used as private room. Sted for 2 patients for emergency use)
	27	Typical acute inpatient private rooms
East Unit:	27	Total Acute Med/Surg Beds
	1	All private room (All for the Infection Control)
	2	Semi-private rooms (typically used as private room. Sted for 2 patients for emergency use)
	27	Typical acute inpatient private rooms
	62	TOTAL Acute Care Inpatient Beds
Center:	1	Therapy Gym
	1	Quality Management/Analytics offices

This represents a typical acute care inpatient floor comprised of two (2) separate units – each with 111 inpatient rooms. These units will operate as 30 private rooms in all typical situations. Two (2) rooms on each unit are capable of being up to a semi-private room in times of emergency need. Thus, the actual bed capacity on the floor is 62 beds.

705 Baseline Medical Surgical (Medical Surgical Unit – West Unit)

This unit follows the typical acute care unit design. No additional features have been added.

716 Baseline Medical Surgical (Medical Surgical Unit – East Unit)

This unit follows the typical acute care unit design. No additional features have been added.

802 Medical Rehabilitation

Floors 5 and Level 7 have a small inpatient therapy gym. The therapy gyms support all inpatients needing therapy, which is now introduced within the patient room or unit. One of these floors will be the primary orthopedics floor and another will be for neurovascular/stroke patients.

The gym includes mat, stairs, parallel bars, suspended gait and an ADL toilet room and floor space for additional treatment. A ceiling lift provides safe patient handling for patients as needed.

808 Administration (Quality)

This suite is the main administrative suite for quality analytics and management programs. It includes offices for director, QIP and a workroom for quality improvement physicians. Workstations for administrative support staff in this location.

Level 8

General Description

West Unit	52	Total Acute Med/Surg Beds
	1	10 private room (for acute inpatient isolation)
	2	2 semi-private rooms (typically used as private room - used for 2 patients for emergency use)
	27	Typical Gens - equivalent private rooms
East Unit	52	Total Acute Med/Surg Beds
	1	10 private room (for acute inpatient isolation)
	2	2 semi-private rooms (typically used as private room - used for 2 patients for emergency use)
	27	Typical Gens - equivalent private rooms
	64	TOTAL Gens Care Inpatient Beds
Canteen	1	11 beds - canteen IT private meals
	1	116/2 uses - gen office area

This represents a typical acute care inpatient floor comprised of two (2) separate units each with 50 inpatient rooms. These units will operate as 10 private bed room in all typical situations. Two (2) rooms on each unit are capable of flexing up to a semi-private room in times of emergency need. Thus, the actual capacity can be flexed to 64 beds.

716 Regline Medical Surgical (Medical Surgical Unit - West Unit)

This unit follows the typical acute care unit design. No additional features have been added.

716 Regline Medical Surgical (Medical Surgical Unit - East Unit)

This unit follows the typical acute care unit design. No additional features have been added.

902 Administration (IT Systems)

The administrative suite on Level 8 houses IT help desk staff and other IT professionals needed for support of the hospital functions. The suite includes mainly open office workspace for approximately 16 staff, a director office and a small area for IT storage and set up. This area is intended for small scale work and is supplemented by other off-site IT functions.

LEVEL 5

General Description

West Unit:	22	Behavioral Health Beds
	18	Private rooms
	2	Shared-Private rooms
East Unit:	22	Behavioral Health Beds
	18	Private rooms
	2	Shared-Private rooms
	44	TOTAL Behavioral Health Beds

The inpatient mental health unit at MVAH is located on the 5th floor of the inpatient bed tower and has direct connection to the Emergency Department via a dedicated back-of-house elevator that is in close proximity to the behavioral health pods in the ED. This allows convenient access for patient, families and staff and facilitates safe transport of this patient population. The goal of this inpatient unit is to promote a safe, recovery-oriented environment. Some key concepts of this unit level include bright spaces, non-situational home-like environment and configuration, neighborhood or pod-like design to promote social engagement and interaction with staff.

101 Psychiatric (Behavioral Health) Beds

There are two behavioral health units with 20 patient bedrooms in each bed wing. Each room has a bathroom that is designed to provide patient safety while maintaining a normal environment that respects privacy and dignity. The overall unit design supports a neighborhood configuration with a security room, group room, dining area, individual rooms, common/quiet space, laundry, and access to secure outdoor space directly off the unit. The space is free of blind corners and the nursing station is located at the beginning of the unit and can view the entire unit and arrival and exit points.

Ample to each unit consists of two interlocking doors at the entrance fully purified and is required for patient safety. Equipment and personal items are not brought on to the unit that could compromise the welfare of others. Behavioral health staff and security will man these entrances based on time of day. Lockers will be provided within a waiting space external to the unit for visitors to utilize when visiting the unit. A small waiting area for family is directly off the main elevator and a consult room is available for private conversations in this zone.

A small suite of 2 individual rooms are provided directly off the back of house elevator and hallway to provide safety for patients requiring this level of behavioral control. Space is provided for staff and security to monitor patients directly and document safety requirements. In addition to seclusion, 3 patient rooms are directly adjacent from each unit within the core for initial triage from the Emergency department and utilization for placement decisions within the neighborhood. This provides the opportunity to assess patient prior to being within the milieu.

Staff lockers, lounge and conference room are located in the common hub towards the north side of the building to provide opportunity to get off the unit and decompress. The area provides daylight and views. Additional offices are also located in the hub area for nurse managers, social work, and counselors. Shared equipment and other storage provided within the core for secure storage.

201 Psychiatric (Outdoor Courtyard)

High behavioral health unit (high/low level) has direct, controlled access to an outside secured courtyard. The space will be made available for activities, group work, and other events which also providing the opportunity to take meal accommodations. This area can only be accessed via code reader and staff will be accompanying and supervising the patients in this area. Patients will not be permitted to utilize this space without staff. The goal is to provide a garden like space for patients to relax and enjoy outdoor space. Walls and screening will be designed to provide safety for all patients.

BUILDING EXTERIOR – ARCHITECTURE and CLADDING

The MUHS Integrated Health Campus consists of a 2 story podium and a 7 story building. All elevations of the building, both the podium and the tower, incorporate a mix of curtain wall glazing and a primary brick cladding system referencing the history of the architecture in Lucknow and the adjacent context.

The various solar orientations of the project necessitate a solution that allows for a maximum standardisation in natural daylight and views, while simultaneously mitigating solar heat gain maximums. Facades are glazed with a glazing system with high-performance coatings along with a mechanical system that mitigates heat gain. Other elevations that contain back-of-house support spaces do not require expansive views. Accordingly, these walls have been designed with considerably less glazing, further reducing solar loads.

Vertical and pedestrian entrances are marked by canopy systems that provide adequate coverage for public drop-off, pick-up and loading. Vestibule geometries are designed to mitigate the prevailing seasonal winds on the site. Circulation traffic is provided with a fully panoramic view to the podium.

Behavioral Health, located on level 9, has 2 outdoor areas that are surrounded by vertical enclosure that is designed to be non-climbable and at 7 height to provide proper security for the patient population. The building roofs are understood as a multi-layered facade that will have a major impact on the energy performance of the project. All project roofs have high insulative values and highly sealed roof technologies in order to minimize heat island effect. Rooftop mechanical equipment, on the roof of level 2 and roof of level 8 and 9, is screened with an opaque vertical cladding system, such as above, screening direct views from the patients and staff as well as the community.

The 3 story Central Utility Plant, serving the building, is designed in the podium and clad in a material to integrate with the overall project, brick and the appropriate amount of louvers providing air intake and exhaust for the equipment.

MOHAWK VALLEY HEALTH SYSTEM HOSPITAL PROJECT

Preliminary Structural Engineering Design Narrative

Version 1

I. CODES, REGULATIONS AND DESIGN STANDARDS

A. All design will satisfy the applicable portions of the following codes, regulations and standards:

1. IRC, International Building Code
2. ACI 117, Specifications for Tolerances for Concrete Construction and Materials
3. ACI 307-1R, Guide for Concrete Form and Reinforcement
4. ACI 318, Building Code Requirements for Structural Concrete
5. ACI 347R, Recommended Practice for Concrete Formwork
6. ACI Detailing Manual, SP66 (04)
7. ASCE 7-10, Minimum Design Loads for Buildings and Other Structures
8. CRS "Placing Reinforcing Bars"
9. Design Manual No. 31 for Composite Decks, Form Decks and Roof Decks, by the Steel Deck Institute
10. Diaphragm Design Manual, Third Edition (DCM3D), by the Steel Deck Institute
11. Factory Mutual (FM)
12. Specification for the Design of Steel Buildings, by the American Institute of Steel Construction (AISC)
13. Specification for Structural Joints using ASTM A325 or A490 Bolts
14. Specification for Structural Steel Buildings
15. Structural Welding Code - Steel AWS D1.1/D1.1M Paragraph C.6.3 specifically excluded
16. Underwriters Laboratories, Inc. (UL)
17. Vibration Manual of Standard Practice July 2001, NF Edition
18. Steel Design Guide 11, Floor Vibrations due to Human Activity

II. STRUCTURAL SYSTEMS

A. Design Details

Floor Loading:

Stairs, First floor eandors	Live Load	100 psf
Corridors above first floor	Live Load	50 psf
Operating Rooms	Live Load	80 psf
Patient Rooms	Live Load	40 psf
Offices	Live Load	50 psf
Mechanical Rooms	Live Load	150 psf
Note: Use the maximum per (B)		
Super imposed dead load		15 psf

Risk Category: IV

Roof Loading:	Mechanical Units	Self Weight
	Slab	50 psf plus the effects of drifting snow
	Importance Factor	1.2
Wind Loading	Basic Wind Speed	120 MPH
	Importance Factor	1
	Exposure Category	B
Seismic Loading	0.2 Second Spectral Response Acceleration (S _a)	0.17g _s
	1 Second Spectral Response Acceleration (S _a)	0.08g _s
	0.7 Second Spectral Response Acceleration (S _a)	T.B.D.
	1 Second Spectral Response Acceleration (S _a)	T.B.D.
	Site Class	T.B.D.
	Seismic Design Category	T.B.D.
	Importance Factor	1.5

B. Foundations

1. A subsurface investigation report is underway. Based on experience with the general area, deep foundations will be used. Most likely drilled shafts will support the columns and the concrete shear cores.
2. Grade beams will span between the drilled shafts to support the perimeter walls and provide protection against frost.

C. Slab on Grade

1. All slab areas founded on grade will be of slab-on-grade construction. Its composition will be 5" of concrete on gravel sub-base over a polyethylene vapor barrier. The vapor barrier may be placed either below or on top of the gravel base. If there is heavy medical equipment in the basement, such as MRIs and CT's, then thicker and reinforced slab-on-grade will create a path for the transport of the equipment. The slab on-grade within the rooms housing this equipment may need to be depressed.
2. The slab on grade will be reinforced with synthetic fibers for control of cracks due to shrinkage and flexural stresses. It will have control joints or construction joints, spaced at a maximum of 12' to 15' apart, for the control of shrinkage cracks. If some of the finish materials require control joints to control cracks due to shrinkage, the joints in the

during initial cure compared to the joints in the concrete so to minimize cracking through the filler material. This would include casting materials like tar seal or similar good air retaining flooring. Slab areas with stained concrete, terrazzo, or similar finishes will be reinforced with rebar.

3. The strength of concrete used in the floor slabs on grade will be specified as 3,500 psi at 28 days, and 2,400 psi at 8 days of age.
4. All interior slabs on grade will be finished to meet flatness and levelness requirements that are typical for hospitals.

E. Interior Floor Structures

1. The floor framing system will consist of 13-16 inch deep composite steel beams spaced at about 7' 0" on center and supported by 24-inch deep composite steel girders. The slab construction will be 3,500 psi normal weight concrete fill on a 3 inch galvanized composite metal deck reinforced with #5-#2 @ 18" on center wide flange. The typical slab thickness will be 7-12 inches and the overall structural depth 32".
2. The steel beams and girders will be cambered in order to reduce the weight of the member.
3. The floor will need a 2-hour fire resistance rating but the steel beams and girders must be protected with fire resistive material such as spray-on fireproofing.
4. The steel framing will be designed to meet 0.5% of gravity acceleration due to walking except for as recommended by Design Guide 11 endorsed by AISC.

F. Roof Structure

1. The roof framing will consist of steel beams and 36-inch deep galvanized metal deck with a metal deck rib depth of 27 inches. The structural steel and metal deck must be protected with fire resistive material.
2. The roof framing will be designed to support a significant load of mechanical equipment. All mechanical equipment will be supported on a separate frame constructed above the roof steel and supported directly from the building columns which will extend above the roof. There will be no concrete fill on the roof deck.

G. Lateral Force Resisting System

1. The building will be designed to withstand the wind pressure and seismic forces according to BC.
2. Concrete shear walls will be used as lateral force resisting systems. They will be placed around stairwells and elevator shafts. The wall thickness will vary from 12 to 14 inches. The concrete strength will be in the 4-5 ksi range at 28 days.
3. The seismic design category for the building will be determined once the site engineer determines the Site Class. If the resulting Seismic Design Category is C, then lateral resistance for life essential mechanical and electrical systems will be required.

11 Expansion Joints

1. The building is approximately 437'-0" long and 240'-0" wide. This length would normally require ONE expansion joint.
2. Given the locations of the concrete shear cores, the decision to use two temporary expansion joints, one at line 2 and the second at line 15. These two joints will separate the building into three sections and will allow the building to expand and contract towards the cores during construction.
3. Once the building is enclosed, the steel and slab along the temporary joints will be tied to form continuous framing and the temporary joints will be eliminated.

Mohawk Valley Health System – New Hospital

SSR Project No. 17420570

November 1, 2017

MEP DESIGN NARRATIVE

Project Description

Project location: Utica, NY

The project will be classified as Institutional F2 per 2012 NYPE 101.

The building consists of approximately 870,000 square feet of new construction. The highest occupied floor will be at the ninth level. There is no basement or occupied floor below grade.

The building will be classified as a High Rise building as defined in IBC Chapter 2 and will be designed to comply with the requirements of IBC 403.

Codes and Standards:

The project will be designed under the following codes, standards and guidelines:

- NY State Building Code (adoption of the International Building Code, 2015 with amendments)
- NY State Energy Conservation Code (adoption of the International Energy Conservation Code, 2015)
- FGI/ASHRAE 170 Ventilation for Healthcare Facilities, 2014
- ASHRAE 62-1 Ventilation for Acceptable Indoor Air Quality
- ASHRAE 55 Environmental Conditions for Human Occupancy
- ASHRAE 90-1 Standard for Energy Conservation, 2010 (amending 2014)
- NFPA 10 Portable Fire Extinguishers
- NFPA 13 Installation of Sprinkler Systems
- NFPA 16 Installation of Standpipe and Hose Systems
- NFPA 20 Flammable and Combustible Liquids
- NFPA 45 Laboratories Using Chemicals
- NFPA 70 National Electric Code
- NFPA 90A Air Conditioning and Ventilation Systems
- NFPA 99 Ventilation Control and Fire Protection of Commercial Cooking Operations
- NFPA 99 Health Care Facilities Code, 2012

2.1.2

- NFPA 101 Life Safety Code 2012
- NFPA 110 Emergency and Standby Power Systems
- ANSI 5.5 Laboratory Ventilation
- OSHA 29 CFR 1910 Occupational Exposure to Hazardous Chemicals in Labs
- NIH Design Requirements Manual
- AAMI (Control Sterile environmental conditions)
- USP 797 Pharmaceutical Compounding
- USP 800 Pharmaceutical Compounding of Hazardous Drugs

Page 7

MECHANICAL SYSTEMS

Design Criteria

Outdoor design conditions:

Building envelope heat gain	ASHRAE 0.4% DE/CWAD
Building envelope heat loss	ASHRAE 99.8% DE

Indoor design conditions and air change rates:

Space Type	Heating	Cooling
Hospital spaces	ASHRAE Table 7-1 as listed in NY DOH Center for Healthcare Planning Bureau of Architecture and Engineering Review	
Non Hospital spaces	Per IFCB	

Space Type	Filtration
Spaces used for in-patient care and treatment	MERV 8 prefilters upstream of fans and cooling coils of central air handling units MERV 14 final filters downstream of fans and cooling coils of central air handling units
Non patient care areas	MERV 8 prefilters upstream of fans and cooling coils of central air handling units MERV 12 final filters downstream of fans and cooling coils of central air handling units

System Description - Airside

Central station air handling units will be provided on the roof. The air handling units will be double wall construction with no thru-metal thermal conduction and consist of the following sections:

- Return plenum
- Return fan array- provide design cfm with 1 fan down, 2 VFTs (MFD) to serve fan array
- Return damper
- 4" MERV-8 prefilter
- Access section
- Unithaloy plate/plate heat exchanger connected to exhaust air stream for heat recovery to comply with IFCB requirements
- Access section
- Hot water preheat coil
- Access section

Fig. 1

- Steam humidifier
- Chilled water cooling coil
- Ultraviolet light section
- Supply fan array- provide design cfm with 1 fan driver, 2 VFDs (N+1) to serve fan array
- 12" cartridge MERV-14 final filters
- Duct leakage plenum

Return air from spaces shall be ducted back to the air handling unit

Air from spaces such as toilets, etc. shall be ducted to the roof and exhausted via roof mounted exhaust fans

Provide separate exhaust fan systems for following equipment (lab hoods in same space may be manifolded together kitchen hoods will have separate exhaust systems):

- Lab fume hoods
- Lab Bio Safety Cabinets (separate from fume hoods)
- Pharmacy Compounding hoods
- Kitchen hoods
- Dishwasher hood
- Isolation room exhaust (multiple isolation rooms may be manifolded together)
- General exhaust

Supply, return and exhaust ductwork passing through 1 and 2 hour rated walls shall have type C curtain dynamic rated fire dampers. Ductwork passing through smoke barriers shall have airtight blade fire/smoke dampers with end switches. Duct mounted smoke detectors shall be located within 5' of smoke dampers. BAH shall monitor and record fire/smoke damper position by monitoring end switches on dampers.

System – Terminal Devices

The air handling units will supply conditioned air via medium pressure ductwork to double wall pressure independent constant and variable volume terminal boxes with hot water reheat coils. Tempered air from the boxes shall be supplied via low pressure ductwork to ceiling diffusers. Terminal units shall reheat supply air from 55 F to 90 F using 130 F hot water supply.

Pressure independent air valves, equal to Phoenix, Lok-Air or Accuvalve, will be utilized in following areas:

- Operating rooms- supply and return, for night setback provide hot water reheat coils on supply valves.
- Laboratory- supply and exhaust, for pressure control provide hot water reheat coils on supply valves.
- Isolation rooms – supply and exhaust, for pressure control provide hot water reheat coils on supply valves.

Air grille and vents to spaces shall be as follows:

- Ceiling diffusers unless noted otherwise: Tilia TMS lowered face, 4 way flow
- Ceiling diffusers (Waiting areas, public corridors): slot diffusers, Tilia MLF

Part 5

- Ceiling diffusers (OR, isolation rooms, labs with fume hoods): laminar flow Tibus 11L
- Ceiling return registers: 112" eggcrate aluminum grid Tibus 50 L
- Sidewall supply and return registers: Tibus 350

Hot water radiant panels will be used along the perimeter wall of patient rooms

Hot water fin tube heating, pedestal mount, with extruded aluminum grilles and custom cover architectural enclosures, shall be utilized in the following spaces:

- Lobbies with curtain wall glazing
- Vestibules

System – Heat/Cool Source

New centrifugal water cooled chillers will be located in the CCR.

- Centrifugal chillers: 3 chillers at 750 tons each
- Cooler capacity: 52 F entering chilled water, 42 F leaving chilled water
- Compressor efficiency: maximum 52 kw/ton full load
- Condenser capacity: 85 F entering condenser water, 95 F leaving condenser water
- Motor/drive: hermetic motor, unit mounted VFDs
- Arrangement/operation: parallel, variable primary flow
- Chillers are sized so that, if largest chiller is down, remaining chillers can provide 80 % of peak cooling demand.
- Chilled water pumps shall be arranged and sized one per chiller using VFDs.
- Cooling towers: induced draft, cross or counterflow, arranged in parallel.
- Cooling towers shall have remote pump inside the CCR
- Cooling tower quantity and size: 3 towers, each at 2250 gpm from 85 F to 85 F, 76 F and 70
- Condenser water pumps shall be arranged and sized one per tower
- 10" chilled water mains will be extended from the CCR to the hospital.
- Double wall plate/frame exchanger to preheat domestic hot water from condenser water
- Closed circuit cooler: 1 cooler at 400 tons to provide chilled water in winter conditions

New heat recovery chiller shall be located in the CCR

- Quantity and size: 1 chillers at 300 tons.
- Arrangement/operation: sidestair, upstream of centrifugal chillers
- Cooler capacity: 52 F entering chilled water, 42 F leaving chilled water
- Condenser capacity: reject heat to 130 F heating hot water system
- Chilled water and condenser pumps sized for the heat recovery chiller shall use VFDs.

New steam boilers will be provided in the boiler room for domestic hot water, sterilizer and humidifier steam

- Operating pressure: 130 psig design pressure, 80 psig operating setpoint
- Type: equal to Fulton VMP
- Fuel: natural gas and #2 fuel oil
- Quantity and size: 4 boilers at 5000 lb/hr each.
- Boilers shall be sized to provide redundancy so that, if the largest boiler is down, the remaining boilers can provide 100% of the peak demand

Notes:

- Drains: 60" coil, 5 psig operating pressure, sized for the total capacity of all connected boilers; equal to Filtern FD-400H

New hot water heating condensing boilers will be provided in the boiler room.

- Supply water temp: 180 F
- Fuel: natural gas and 02 fuel oil
- Average use operation: variable primary flow (boilers shall not require separate primary circulating pumps)
- Quantity and size: 8 Boilers at 8 mmBtu/hr input each
- Boilers shall be sized to provide redundancy so that if the largest boiler is down, the remaining boilers can provide 100 % of the peak space heating demand.
- New heating hot water pumps each sized at 50% of peak load (2 and 1 standby, VFD control) will be installed in the central energy plant.
- 12" hot water mains will be extended from the CEP to the hospital

Systems- Fuel Systems

One fuel oil tank, 50,000 gallons, will be installed to store No. 2 fuel oil

- Location: underground
- Type: double wall fiberglass, U.L. listed
- Connecting supply and return piping: double wall, U.L. listed for fuel oil piping
- Sized to provide 60 hours of operation of the generators at a demand of 100% of full load demand and 48 hours of operation of the boilers at a demand of 70% of full load demand.
- Circulating pumps: rotary gear, one and one standby, located in the boiler room to draw fuel from the main storage tank, circulate fuel to the generator day tanks and boilers and return unused fuel to the main storage tank.
- A fuel oil filter/oil system will be provided to periodically clean the fuel when there is no demand for fuel supply.
- Packaged controls for operation of fuel oil circulating pumps, tank level monitoring and leak detection of tank and underground piping; provide status and alarms with communication capability to the Building Automation System. Control and interface between generator controls and pump controls shall be hard-wired.

Controls

All valve and damper actuators and thermostats shall be DDC.

A new Building Automation System will be installed to monitor and have central control capability for all mechanical equipment, including real-time information from equipment VFDs. The BAS shall web-based communication capability. The BAS shall also monitor main pressure transducers, decrease hot water supply temp as well as misc equipment alarms (leak and pressure refrigerator temperatures, etc.).

Commissioning

The owner will direct the services of an Independent Commissioning Agent. The CoA will develop and establish a commissioning plan for all of the systems listed herein.

10/1/20

Special Project Requirements

Isolation rooms will have Phoenix air valves on the exhaust air system.

Room pressure maintains equal in Sema will be provided for each Isolation room, each OR, Central sterile cleaning area (Candries), laboratory area boundaries and shall communicate to the S/G. Isolation room exhaust fan systems shall be plume type with effective stack height of 25 ft. with redundant fan equal to Strobe Air.

The laboratory area will have Phoenix tracking air valves on supply and exhaust to maintain negative pressure in the lab area. Lab hoods shall use gas monitors to control exhaust air valves. The laboratory exhaust system shall be plume type with effective stack height of 25 ft. with redundant fan equal to Strobe Air.

Stair pressurization fans shall be provided on the roof near each patient tower stairwell. Elevator shafts shall have smoke weathered roof hoods. A fireman's control panel shall be provided in accordance with operational capability per state and local fire marshal requirements.

Materials of Construction

- + Medium pressure ductwork: galvanized steel sheet metal, SMACNA pressure class 0
- + Low pressure supply ductwork: galvanized steel sheet metal, SMACNA pressure class 1
- + All ductwork longitudinal and transverse seams and joints shall be sealed using water based brush-on mastic UL 181 compliant (pressure sensitive tape not acceptable).
- + Ductwork insulation (all materials to have max flame spread/smoke developed rating of 25/50).
 - o Concealed supply: 2" 1/4 lb density fiberglass batt, alum foil facing
 - o Exposed supply in mechanical rooms: 2" 1-1/2 lb density rigid fiberglass, alum foil facing
 - o Insulate return duct in top floor same as supply.
 - o Exposed insulation (supply, return, exhaust) on roof: 2" rigid fiberglass with weather proof wrap. Use 1" on exhaust to hold the weather proof covering.
- + Return ductwork: galvanized steel sheet metal, SMACNA pressure class 2
- + Exhaust ductwork: galvanized steel sheet metal, SMACNA pressure class 2
- + Fume hood and BioSafety Cabinet ductwork: match same material as hood or cabinet connection.
- + Kitchen grease duct: welded black steel installed per NFPA 98
- + Dishwasher exhaust duct: welded aluminum or stainless steel
- + Stentzer exhaust duct: welded aluminum or stainless steel to riser
- + HVAC: water piping: black steel, schedule 40, threaded or welded joints; o Type L copper with soldered joints
- + HVAC: steam and condensate piping: black steel, seamless, threaded or welded joints; use schedule 40 for steam and 80 piping for condensate
- + Refrigerant piping: ACP copper flared fittings
- + Piping insulation (all materials to have max flame spread/smoke developed rating 25/50 and thickness in accordance with IECC):
 - o Chilled water: rigid fiberglass

2.2.2.2

- Heating hot water, rigid fiberglass
- Refrigerant piping: closed cell polyurethane, Armaflex
- Steam and hot water, rigid fiberglass
- Valves HVAC circulating water:
 - Isolation valves: 2" and below- full port, 600 psi bronze ball valves, 2-1/2" and above- lug type 200 psi class 125 iron body butterfly valves. All isolation valves shall be 1/4" fractional and rated for dead end service.
 - Check valves at pumps: iron body, bronze seat, class 125 iron-steam check valves
 - Check valves at coils: iron body, bronze swing check valves, class 125
 - Balancing valves, or terminal devices with water coils: Antiflow pressure independent valves preset for terminal water flow.
 - Balancing valves at air handling units and fan coils: B & G circuit setter.
- Valves, Steam and Condensate:
 - Isolation valves: 2" and below- class 150 bronze gate valves; 2-1/2" and above- class 125 iron body gate valves
 - Check valves: 2" and below- class 150 bronze swing check valve, 2-1/2" and above- class 125 iron body swing check valve.

ELECTRICAL SYSTEMS

Utility Service

Underground utility service will be provided by National Grid from the Terminal Substation. Two independent 15.2kV utility feeders will be terminated in a hospital-owned 15kV metal-enclosed primary switchgear assembly located in the hospital central plant. The normal power primary switchgear assembly will use ANSI class cyclotolition and circuit draw-out style vacuum breakers and be arranged in a main tie main configuration, with a closed transition auto transfer scheme between utility sources. It is 500 mVA rated and will feed 480Y/277V secondary unit substations in the hospital.

Two means of egress per National Electrical Code (NEC) requirements will be provided from the normal power service switchgear room.

Normal Power Distribution

The secondary unit substations will be radially fed from the 15kV normal service switchgear and constructed as double ended with main-tie-main secondary's voltage auto transfer to provide full redundancy. Each will consist of primary vacuum breakers class-coupled to a cast oil transformer connected to a secondary buses with electrically-operated low-voltage, draw-out, power circuit breakers, all constructed to ANSI requirements. Transformer protection will be provided via a transformer differential protective relay which will maintain the arc flash incident energy level on the transformer secondary bus. All unit substations will be 12.2kV-480Y/277V switchgear and will be metal enclosed, rear connected, with secondary main buses braced for 100,000 AIC fault duties. Available interrupting capacities will range from 65,000A to 100,000A. Power for the hospital will originate from four (4) unit substations and power for the central plant will originate from one (1) unit substation. Each unit substation transformer will be dual rated, voltage forced air cooling to achieve a power capacity rating that is 133% of the base power rating. The secondary main and feeder distribution breakers in the substation switchgear will also be provided with ground fault protection to provide the two levels required by the National Electrical Code (NEC).

The secondary main overcurrent protective devices will be electrically-operated low voltage power circuit breakers, draw-out type, 100% rated with adjustable trip units with long time, short time and ground fault (LRG) characteristics. Each main breaker will display, as a minimum, voltage, current, real, reactive and apparent power, frequency, and power factor as well as perform diagnostic functions in an integrated digital display.

The distribution sections in the switchgear will serve the distribution switchboards, power panelboards, and the normal feed to all automatic transfer switches. The overcurrent protective devices in the distribution sections of the switchgear will be electrically-operated, 100% rated low-voltage draw-out power circuit breakers. Trip units on the breakers will have long time, instantaneous and ground fault (LIG) tripping characteristics. The distribution circuit breakers will have the same interrupting capacity as the secondary main breakers.

1.4.3.3

Distribution panelboards (1200A-rated and below) or switchboards (1200A-2000A rated) will serve the remainder of the building loads, including mechanical equipment, branch circuit panelboards, and elevators. This equipment will utilize molded case circuit breakers equipped with solid-state electronic trip units. All panel racks and switchboards will be provided with 25% spare capacity, for both available ampacity and circuit breaker spaces.

Two means of egress per NEC requirements will be provided from all electrical switchgear rooms, including those of the Essential Electrical System (EES), which fall under NEC Article 110.26 requirements.

Grounding System

The facility electrical system will utilize a solid grounded system. Main switchgear grounds will be bonded to the incoming main water line, the existing tripod ground rod system, any building steel components as well as the existing two 500 kcmil bare copper conductors in the footing under one wall of the Main Electrical Room. 500 kcmil bare copper conductors will be run from the main switchboard ground bus to each Electrical and Telecommunications equipment room and extended vertically up through the building. The bare conductors will terminate at two 4" x 3/4" x 24" long copper ground bars with two 500 kcmil legs. Additional holes will be provided in the ground bars to terminate eight (8) #2 legs. The eight legs will be available to ground transformer secondaries and telephone backbone grounding conductors.

Surge Protection

A surge arrester will be installed at the 15KV main service switchgear. A minimum of three (3) levels of surge protection equipment will be provided in the power distribution system (downstream of the unit substations). Surge protective devices will be installed at unit substation secondary mains (load side) and at all downstream locations such as switchboards, distribution panelboards, branch circuit panelboards, including the Essential Electrical System (EES). They will be installed at the fire pump controller, all automatic transfer switches, and panelboards on secondary, separately derived systems.

Motor Control

No motor control centers are projected for the Hospital. Equipment requiring starters will be provided with individual combination starters. Variable Frequency Drives (VFD) will be provided for fan and pump motors noted indicated. VFD's will serve as disconnecting means if within sight of the motors. Harmonic mitigation measures will be required due to the significant number of VFD-controlled motors.

Uninterruptible Power System (UPS)

UPS power will be provided by a central 750 kVA, 480Y/277V static system. Power will be distributed to each telecommunications equipment room, the central hospital lab, and the central pharmacy via a dedicated distribution system. The UPS system will be connected to both normal power and the Essential Electrical System (EES) via automatic transfer switches. This system will provide adequate "ride-through" time to allow the generator system to pick up these loads.

Page 11

Essential Electrical System (EES) Power Distribution

Emergency power will be provided by two (2) parallel 1750KW diesel generators at 13.2kV. Paralleling switchgear construction will match the normal power 13kV switchgear construction with respect to style and type. The paralleling switchgear will feed the secondary unit substations dedicated to essential systems in the hospital and central plant. These substations will match the normal power secondary unit substations with respect to style and type.

The Essential Electrical System (EES) will be sized to supply generator power for the hospital and central plant automatic transfer switches supplying loads from the Life Safety, Critical, and Equipment Branches. It will also provide limited generator power for the chilled water system, ensuring some service of the hospital to maintain cooling. Automatic transfer switches will be three or four pole, closed transition, bypass isolation type.

Loads served from the Life Safety branch will include:

- Egress lighting
- Exit signs
- Fire Alarm Systems
- Medical Gas Alarm Systems
- Communication systems used for issuing instructions during emergency situations
- Elevator cab lighting, control, communications, and signal systems
- Generator set locations, accessories, and auxiliaries
- Automatic doors used for building egress

Loads served from the Critical branch will include:

- Critical Care spaces utilizing anesthetizing gases, task illumination, selected receptacles and fixed equipment
- Isolated power systems
- Patient care spaces, task illumination and selected receptacles in Infant Nurseries, Medication Prep areas, Pharmacy Dispensing areas, Acute Nursing areas, Psychiatric bed areas, and Nurse Stations
- Nurse Call System
- Code Blue System
- Blood, Bone and Tissue Banks
- Telecommunications equipment rooms
- Specimen and lab refrigeration equipment
- Task lighting, selected receptacles, and power outlets for general care patient beds, Angio labs, Cath labs, CCU, hemodialysis areas, Emergency room treatment areas, human physiology labs, ICU, and postoperative recovery rooms
- Patient Information Network data servers
- Security Systems

Loads served from the Equipment branch will include:

- Medical air compressors (but will have power restored in 10 seconds or less)
- Medical vacuum pumps (but will have power restored in 10 seconds or less)
- Selected elevators
- Kitchen hoods, including the hood fire suppression system

Per 17

- Stair pressurization fans
- Smoke control fans and smoke control system auxiliaries
- Sump pumps, sewage ejector pumps, and sanitary pumps
- Domestic water booster pumps
- Hospital boiler system, including controls and fuel oil pumps
- Exhaust fans removing toxic, explosive or flammable fumes
- Air handling equipment
- Water treatment equipment
- Building Automation Control System
- Pneumatic tube system
- Fire suppression jockey pump
- Electrically-driven fire pump (not will have power restored in 10 seconds or less)
- Selected Kitchen refrigeration
- General purpose receptacles for Electrical Rooms, Fluorox Equipment Rooms and Telecommunications equipment rooms
- Sterilizers
- Automatically operated doors

Isolated Power System (IPS)

Isolated power panelboards will be provided in Operating Rooms, Bath Labs, and Treatment Rooms, and any other locations which are deemed "wet location" and interruption of power due to ground fault cannot be tolerated. The isolated power panelboards will be rated at 7.5kVA and include an isolated transformer and line isolation monitor. Each isolated panelboard will include provisions for twelve circuits. A separate 3-phase isolated power panel shall feed laser outlets in the operating rooms.

Vertical Power Distribution

Separate vertical conduit and wire risers will be provided in the tower for normal, Life Safety, Critical, and Equipment branch systems. These risers will be housed in stacked electrical rooms in order to minimize horizontal offsets. "Emergency" feeders as defined by the NEC will be protected either by installation in fully sprinklered spaces or by the use of 2-hour rated installations.

Power Monitoring

All medium voltage switchgear, unit substation main breakers and automatic transfer switches will be provided with multi function meters with Modbus RTU (RS 485) and Ethernet connectivity. These meters will be networked and include waveform capture as well as harmonics measurement capability. All draw-out breaker trip units will be monitored for status and alarm conditions, and will include basic metering of volts, amperes, frequency, and power functions. All unit substation transformers will be provided with temperature monitor and fan control with Modbus RTU and/or Ethernet connectivity.

7-13

Power Distribution System Coordination

Protective device selective coordination for all systems, including normal power, will meet the 0.1 second threshold. This exceeds the requirement as set forth in the NEC, Article 517.31, paragraph G.

Lighting System

An LED type lighting system will be provided for both interior and exterior lighting. The Illuminating Engineering Society's Illuminance Selection Procedure will be used for establishing target maintained illuminance levels throughout all areas. Specific influences of glare, task complexity, surface reflectance characteristics, veiling lightness and user eye are addressed with this procedure.

Local codes will take precedence when they dictate the use of alternative procedures or require minimum lighting levels for specific areas. Lighting power density requirements indicated in the energy code will be observed.

Lighting and Receptacle Controls

Control of lighting and selected receptacles will comply with IECC 2015 (as amended) and/or ASHRAE 90.1, 2013 edition (as amended).

Lightning Protection System

The building shall be provided with a lightning protection system, which shall conform to the requirements of Underwriters Laboratories for a Master Label. The lightning protection system will include roof-mounted air terminals, down conductors and grounds. All metal items on roofs, such as exhaust fans, pipes, gutters, downspouts, and ladders will be connected to the lightning protection system. Conductors, terminals and lulls at the roof line will be Aluminum. Components below the roof line will be copper. Down conductors will be installed in PVC conduit.

Fire Alarm System

The building will be provided with automatic, multiplexed, addressable, microprocessor based fire alarm system. The main fire alarm control will be located in the Fire Command Center. Supplementary power supply and terminal cabinets will be required in different areas and floors of the building.

Manual pull stations will be provided at egress stair entries, building exits and nurse stations. Automatic, ceiling mounted smoke detectors will be located 30 feet on center in all corridors, in all patient bedrooms, at all elevator lobbies, at the top of stairways and hoistways, in Electrical Rooms, Telecommunications Rooms, Mechanical Rooms, Storage Rooms and Elevator Equipment Rooms. Duct-mounted smoke detectors will be provided in the supply and return ducts of every air handling unit. The fire protection systems (wet pipe, dry pipe, and pre-action) will be supervised via flow and temperature.

2.4.11

Occupant notification of an alarm will be achieved with ADA-compliant audiovisual appliances in the corridors, lobbies and general common use areas, and visual only appliances in Restrooms. Interlocks will be provided for smoke sensors, air handling unit controllers, and smoke gas deluge control as well as all smoke door hold open devices, with elevator control panels (for elevator recall) with air handling unit controllers (for shutdown) and with smoke removal systems. The fire alarm system will be capable of being connected, through a telephone line, to a remote monitoring station utilizing a built-in modem.

The fire alarm system will comply with applicable high-rise codes. A transfer control panel shall be provided in accordance with operational capability per local fire installed requirements.

Medical Gas Wiring System

Power wiring will be provided to medical gas alarm panels, bulk gas supplies, and manifolds. Signal wiring will be provided between alarm panels, manifolds, bulk gas supplies, sensors, pressure and vacuum switches.

Commissioning

The owner will direct the services of an independent Commissioning Agent (CxA). The CxA will develop and establish a commissioning plan for all of the systems listed herein.

PLUMBING, FIRE PROTECTION, MEDICAL GAS SYSTEMS

Design Criteria

System Descriptions

Domestic Water

The domestic water system will be supplied by a new domestic water service as shown on civil drawings. Two separate water utility mains will serve the facility. The incoming service lines will connect to reduced pressure backflow preventers located in the MEP. Separate backflow preventer assemblies shall be provided for the following building services:

- Main building domestic water supply: 2 assemblies
- Central Energy Plant boiler/cooling tower make up water supply: 2 assemblies
- Central Sterile domestic water supply: 4 assemblies
- Laboratory domestic water supply: 2 assemblies
- Landscape irrigation water supply: 1 assembly
- Medical equipment chiller backup domestic water: 2 assemblies
- Each janitor closet mop sink: 2 DCV assemblies each sink or DVS faucet

A new domestic water booster pump will be provided to serve the upper levels as follows:

- Type: multiple centrifugal pumps, arranged in parallel with factory control system
- Quantity: 2 pumps, each at 135 gpm, 165 ft. head, 10 hp with variable frequency drives and sized to provide 100% demand with one pump down.

A copper silver ionization system will be provided on the building's domestic water service.

Domestic Hot Water

New domestic hot water heaters will be provided for domestic hot water service to the building. Two separate systems will serve lower levels and upper levels as follows:

Main building (lower levels):

- Type: steam fired, semi-instantaneous, equal to Verco 3M/D/W 45
- Quantity: 2 (N + 1)
- Incoming water supply temp: 45 F
- System delivery supply temp: 140 F
- Outlet mixing valves: Armstrong (2) DRV50 dual pre-piped digital temp control (N+1) set at 120 F supply temp

Main building (upper levels):

- Type: steam fired, semi-instantaneous, equal to Verco 3M/D/W 45
- Quantity: 2 (N + 1)
- Incoming water supply temp: 45 F
- System delivery supply temp: 140 F
- Outlet mixing valves: Armstrong (2) DRV50 dual pre-piped digital temp control (N+1) set at 120 F supply temp

Fig. 10

Heaters will be sized so that if one heater is out of service, remaining heater can supply 100% of demand.

Each domestic hot water heating system will have a recirculation system:

- Flow balancing valves used to maintain a maximum of 0.5 degree drop
- Recirculation pumps with variable frequency drives

In addition, there will be the following scenarios domestic hot water systems:

- Laboratory area:
 - o Type: electric
 - o Incoming water supply temp: 40F
 - o System delivery supply temp: 120F
- Dishwashing:
 - o A booster heater will be provided by the dishwashing equipment vendor

The main building domestic hot water heating system will connect to the mechanical chiller condenser water system to preheat domestic hotwater using chiller condenser water via a flexible wall water/water plate frame heat exchanger.

Filtered/Reverse Osmosis Water System

A pure water system will supply water to the Central Sterile and lab areas with reduced pressure backflow preventers at each system.

Fire Suppression Systems

Fire suppression systems will be supplied by a nearby water service as shown on civil drawings. The service line will be provided with a free standing post indicator valve located on site. Service line will be routed to connect to an reduced pressure backflow preventer located in a mechanical room inside the building with free standing fire department flammable connection (FFC) will be located on site. A remote fire department connection will be provided. All valves will be electronically supervised by the alarm system.

The facility will utilize 6" standpipes and 3" standpipe drains to all egress stairwells.

Fire department valves shall be located at intermediate landing of all egress stairs and provided within 200 ft. of any location, including adjacent to both sides of horizontal exits to compliance with NFPA 14.

The facility will be fully sprinklered throughout in compliance with NFPA 13 and listing agent requirements. All sprinkler heads will be fully concealed, quick response type. Sprinkler heads are to be located in center of ceiling tiles. Extended coverage heads will not be allowed. All major components will be ULFM rated. The system will be hydraulically calculated.

A dry pipe system will be used for coverage for the following areas:

- Loading dock
- Unheated atria between interior spaces and outside
- Emergency generator room

Fire

A double interlocked protection system will be utilized for the following spaces:

- Back into the IT (sterile) rooms primary FM-200 systems
- MRI medical equipment rooms

A new fire pump and associated emergency storage supply tank will be provided as follows:

- Type: electric centrifugal pump with jockey pump and U.L. factory control system
- Pump shaft: provide 1000 gpm, 500 ft. head, 250 hp
- 30,000 gallon above ground storage tank with heater, solenoid fill valves, ladder, ultrasonic level controls, monitored by BAS. Tank will comply with NFPA 22.
- (2) 4" dry pipe valves will be provided in the loading dock and ED ambulance areas

Recessed wall mounted fire extinguisher cabinets (ABC type) will be located throughout the facility in accordance with NFPA 10. In addition, surface wall mounted fire extinguishers will be located in the following rooms:

Space type	Extinguisher type
Electrical equipment rooms	CO2
Fire pump room	CO2
Information technology rooms	CO2
Kitchen	Type K wet agent for grease fires
Mechanical equipment rooms	ABC
Operating rooms	CO2

Firewater

Plumbing fixtures will be hospital grade. Electronic sensor controls will be provided on water closet flush valves and lavatory faucets in public restrooms.

Freeze proof wall hydrants will be installed every 100' around perimeter of building and two free standing type hydrants on roof.

Compressed Air System (Non-Medical)

Compressed air will be supplied by a new medical grade air compressor system as follows:

- Type: scroll
- Quantity: multiple compressors, to provide 100% demand with one compressor down; provide with factory packaged controls

Non-Medical Vacuum Pump

Vacuum for non-medical use will be supplied by a new vacuum system as follows:

- Type: claw compressors with silencers and mufflers
- Quantity: minimum of two pumps

Medical Gas Systems

Oxygen will be supplied by a new oxygen tank provided by others. Oxygen supply will be routed underground from the oxygen tank to the building. Oxygen Tank will be located in accordance with NFPA 55. Emergency oxygen connection will be provided.

Part 2

Medical air will be supplied by a new medical air compressor system as follows:

- Type: scroll compressors
- Quantity: multiple compressors manifolded together, sized to provide 100% demand with one compressor down, provide with factory packaged controls.
- System will be located in a conditioned space.

Medical vacuum will be supplied by a new medical vacuum system as follows:

- Type: claw type pumps with VFDs
- Quantity: multiple pumps manifolded together, sized to provide 100% demand with one pump down, provide with factory packaged controls.
- System will be located in a conditioned space.

Nitrous oxide will be supplied by a new cylinder storage area with supply/distribution 14 x 14 primary reserve high pressure cylinder manifold located in a conditioned space.

Nitrogen will be supplied by a new cylinder storage area with supply/distribution 14 x 14 primary reserve high pressure cylinder manifold located in a conditioned space. Nitrogen control panels for pressure regulation will be located near the point of use.

CO2 will be supplied by a new cylinder storage area with supply/distribution 14 x 14 primary reserve high pressure cylinder manifold located in a conditioned space.

Each medical gas system shall be installed in accordance with NFPA 99 and will have the following components:

- Outlets per FGI space requirements
- Area zone locking service valves
- Zone pressure area alarm panels
- Two major alarm panels
- Communication of alarms to the Building Automation System

Natural Gas System

Natural gas will be supplied by a new service as shown on civil drawings. The gas line will enter the mechanical room at 5 psig. Natural gas pressure will be reduced to 2 psig for distribution to the halos and kitchen requirements.

Softeners

New domestic water softener will be provided as follows:

- Location: Central plant
- Service: boiler makeup water

Storm Water System

The primary storm water system will be roof drained and will be collected together and routed down through the building to below slab to underground storm water mains, which will exit the building and connect to the site storm water system. Grip pans will be provided beneath all drainage piping where specified in FGI guidelines.

Key 10

The secondary storm water system will be overflow drains that will be collected and routed down through the building, separately from the primary roof drain system, and will terminate to daylight at the ground floor. Overflow drains and the daylight termination will be heat traced. Drip pans will be provided beneath all drainage piping above areas listed in I-GI guidelines.

Foundation drains will be routed along the underground structure to connect to the site storm water system. All sub-surface drainage systems will be designed by Geotechnical Engineer.

Waste and Vent System

Waste piping will be routed through the building to below slab to underground waste main, which will exit the building and connect to the site sanitary sewer system. Vent piping will be routed to the roof and terminated as required to maintain code clearances from outdoor intakes to the building. Drip pans will be provided beneath all drainage piping above areas listed in I-GI guidelines.

Sewage ejection pumps/lift stations and/or sump pumps will be provided to route waste to the site sanitary sewer system connection points from the following points:

- Elevator pits (pump to include oil filtration/collection if the elevator is hydraulic type)

The emergency department will have a decontamination tank from the decontamination shower drains) with high water alarm monitored by the BAS.

The laboratory area will have acid waste and vent piping with an acid neutralization basin located on site.

The kitchen will have two grease intercepter traps located on site.

Metering and Building Control Interface

The following services will be metered with interface to the Building Automation System:

- Building main/steaming water use – gal/day
- Rigler water use – gal/day
- Central plant water use – gal/day
- Cooling tower water use – gal/day
- Domestic hot water use – gal/day
- Domestic hot water delivery temperature – degrees F
- Food service water use – gal/day
- Food service hot water delivery temperature – degrees F
- Irrigation system water use – gal/day
- Laboratory water use – gal/day
- Natural gas use – cu/day (coordinate metering with gas company)

All meters shall be labeled and recorded per day, per month and for one, three and five year periods.

4.12.10

The Building Automation System shall receive and report the following alarms:

- Domestic hot water temp above/below setpoint
- Fresh service hot water temp above/below setpoint
- Medical gas pressure alarms
- Sewage lift station high level alarms
- Holding tank high level alarms

Commissioning

The owner will direct the services of an Independent Commissioning Agent. The CxA will develop and establish a commissioning plan for all of the systems listed herein.

Materials of Construction

- Domestic water and hot water type L copper, soldered joints
- Filtered/Reverse Osmosis water schedule 80 CPVC meeting ASTM E-84 and UL 723 for flame and smoke spread/generation
- Fire suppression: black steel, schedule 40 for piping through 2 1/2" and schedule 10 for 3" and up threaded or grooved joints
- Compressed air type L copper, soldered joints
- Insulation: rigid fiberglass; AIAI covering indoors, aluminum covering exposed to weather, provide on cold water, 1/2" thickness; hot water, thickness sized per energy code, and on horizontal runs of storm water piping, 1" thickness
- Medical gases type K copper, seamless, grooved joints per NFPA 99. Floor underground piping inside protective outer pipe of standard weight cast iron
- Natural gas black steel, threaded or welded joints
- Storm water
 - o Below grade: cast iron, standard weight, gasket, bellspigot or PVC
 - o Above ground: cast iron standard weight no-hub heavy duty 4-band ASTM 1540C couplings
- Waste and vent:
 - o Below grade: cast iron, standard weight, gasket, bellspigot or PVC
 - o Above ground: cast iron standard weight no-hub heavy duty 4-band ASTM 1540C couplings
- Valves:
 - o Isolation valves: full port, 300 psi bronze ball valves. All isolation valves shall be bi-directional and rated for dual-end service
 - o Check valves: bronze body, bronze seat, swing check valves.

TELECOMMUNICATIONS SYSTEMS

Telecommunications Entrance Facilities

Telecommunications Entrance Facilities shall consist of redundant and physical diverse data communications entrances into the new hospital. Each path (Primary and Redundant) shall consist of (3) 4" metallic conduits (total of 6) originating from the new hospital's property line to two different, Ground Level TR/ETFR (Telecommunications Equipment Room/Entrance Facility) telecommunications Room(s). Connection to the health systems network shall be through data services from the Mohawk Valley Health System (MVHS) selected service provider as per of the master MVHS network expansion and disaster recovery plan. The physical separation of the two conduit paths shall be as great as practical, but no less than four as per BICSI Standards. Appropriate lightning protection shall be installed for copper services entering the Facility.

Telecommunications Room/Telecommunications Equipment Rooms (TR/ETFR)

Each TR/ETFR shall be located to meet the NFPA 99 2012 code which states that a TR/ETFR can only serve 20,000 sq. ft. of usable space and where the longest distance to any Work Area Out of (WAO) is less than 275'. The shall be stacked vertically to decrease the length of riser conduit and fiber cables. A minimum of two walls of the TR shall be expandable meaning two walls that are not adjacent to non-removable building structure. Each TR shall be 12' x 14' in size. The ETFR shall be 10' x 20'. As a rule, horizontal WAO connections shall start and finish (TR to WAO) on the same floor (no cross-floor connections). Columns in the middle of the room or curved walls are not acceptable in any of the TRs/ETFR.

Each TR/ETFR shall contain both building and emergency power as well as separate UPS units (provided by MVHS IT) to manage any transition (loss of service) to emergency power. The number, type and location of emergency power outlets shall be confirmed with MVHS IT before installation. Two convenient building power quadruplex outlets, 20A, 110V shall be installed on each wall at a height of 6' AFF.

HVAC design for the TR/ETFR shall be designed to maintain continuous and dedicated environmental control (24 hours per day, 365 days per year). Remote monitoring by MVHS Facilities of the room cooling will be provided. Cooling size requirements shall be designed by the project's mechanical engineer (S&B) with help from S&B and MVHS IT to determine each room's RTU requirements. The room's HVAC shall maintain positive pressure with a minimum of one air change per hour. These rooms shall maintain a temperature and humidity level of 18 °C to 24 °C (64 °F to 75 °F). The humidity range shall be 30% to 55% relative humidity.

TRs shall have a monitored room with card reader access and an IP addressable camera system located within the room with temperature and humidity trending capabilities. All walls within the rooms including across the door shall be covered with four by eight four 3/4" AC grade plywood, mounted vertically from 8 1/2 inches above the finished floor, painted with fire retardant paint. The plywood shall be installed with grade C surface facing the wall. No infrastructure or element shall be mounted directly to any wall without plywood. Each room shall be equipped with a grounding bar connected to the building ground system (provided and installed by the project's Electrical Contractor). All low voltage equipment housed in the TR shall be grounded back to the room's ground bar. Automatic, quick response sprinkler heads with head guard protection shall be

TRs/TER

provided to ensure 100% AHS coverage per local authority having jurisdiction. The rooms do not require a drop ceiling and the floor shall be casted concrete. Lighting shall be mounted at a minimum of 2' A-F-H and shall be centered above the workspace and the racks. Doors shall be 30" wide and 84" tall. Each TR/TER shall be equipped with a 1-port data outlet for a wall mounted telephone.

TRs/TER shall be equipped with 18" wide ladder rack installed around the perimeter of the room and over the floor mounted racks. Ladder rack shall be installed at a height of 8' and a minimum of 7' 4" to the bottom. Floor mounted racks shall be 2' h x 15' w installed with front mounted 10" w vertical cable management on each side of the rack. There shall be a minimum of 36" in front and behind the row of racks.

Primary and Horizontal Cable Pathways

A cable tray system shall be installed above ceiling as the primary horizontal pathway for all low voltage cables. Cable tray size shall be 24" w x 6" h. Cross vendor sleeves, TR/TER entrance sleeves and vertical conduit sleeves shall be a reusable sleeve (HDI Speed Sleeve or equivalent). (2) 2" entrance sleeves shall be required for any patient care rooms (patient rooms, ED Exam, Prep/Recovery, PACU, etc.) and (1) 2" for all other locations. Conduit sleeves shall be used for cables passing over a hard ceiling area. Conduit pathway is required for any cable when passing through or being installed in an open ceiling area.

The following wall outlet conduit and back box sizes shall be required:

Data Outlet: 1.00", 4" X 4" X 2.125" with a single gang plaster ring

Conduit Outlet: 1.00", single gang box with 1.075" minimum depth

Wall Telephone Outlet: 1.00", 4" X 4" X 2.125" with a single gang plaster ring

Alarm Call Devices: 1.00", determined as needed

Security Devices: 1.00", determined as needed

All conduits shall be installed with out string.

Structured Cabling System

The new facility shall have backbone cables from the two entrance facility rooms to each TR in the facility to provide main and redundant connections respectively. Each pathway shall be installed to achieve the most physically diverse path as possible. TRs/TERs shall be connected using 4" conduits for rear installation. Each 4" conduit shall be installed with one (3) 4" cell Maxcell innerduct or approved equal. There shall be a minimum of (4) 4" conduits connecting TRs/TER. All conduits/innerducts shall be installed with pull strings.

Fiber riser shall be a combination of multi-mode optical fiber (OM3 laser optimized 50/125 um OM3 band alternative) and single mode optical fiber. Fiber riser shall be terminated in rack mounted fiber patch panels of OM3/MTP/OM3 type connector. Fiber distribution shall be placed in flex duct in the ladder rack between the backbone pathway and the rack mounted fiber panel. Copper riser shall consist of Category 3 multi-pair cable or plating in the TR and extending into each new TR room. Copper riser shall be terminated on 110 blocks equipped with 5-pair connector blocks. Copper riser pairs shall be determined by S&R and M&E/IT.

Panel 24

Voice, data and networked video requirements will be supported using Category 6 non-plenum Unshielded Twisted Pair (UTP) cables extending from each TR/TF in each Work Area (W/A) (WAO). Each typical WAO will contain at least six (6) CAT 6 cables (more if equipment needs require) terminated in a 4-port receptacle with 2 blanks. Each cable shall be considered Universal (not dedicated to a specific technology). Certain exceptions in the Outlet Standard include single CAT 6 non-plenum cables located for but not limited to employee timekeeping systems, wall-mounted telephone sets, and medicine distribution cabinets.

In the TRs, all horizontal station cables will be terminated rack-mounted 110 style patch panels with rear cable management bar.

PBX/VoIP

This is the system over which all voice communications will travel and be routed. The system will include wired and wireless Voice over IP (VoIP) and a limited PBX presence to service those functions that are not appropriate for the proposed IT network.

Wireless Local Area Network (WLAN) / Wireless Voice / Distributed Antenna System

A building wireless system will accommodate real-time point-of-care/caregiver information retrieval (COP-IT) as well as radio frequency identification (RFID) tracking, patient tracking, asset management. WLAN access point coverage shall be designed to carry wireless traffic for voice and data systems including but not limited to internal wireless device communication, wireless patient tracking, RTLS, Security, Nurse Call Patient Monitoring, Alarm/Alert Notification and Management, and Patient Registration capabilities. The locations of the wireless antennas/devices shall be dependent upon several factors including structural makeup of the new facility, desired coverage areas, signal strength of accessing devices, and frequencies required. Wireless access points shall be connected to the hospital's network via horizontal data cabling and will be powered via Power over Ethernet technology. Each wireless access point location shall be installed with (2) Category 6A cables terminated on a surface mount box with 20' of cable slack for future adjustments. All horizontal cables installed for wireless access points shall terminate on a separate, dedicated Category 6A patch panel.

Wireless data access shall be available in all elevator cars and shaftwells for continuity of service. There shall be two (2) Ethernet wires (Cat 6) included in the elevator travel cable served from the TR to the elevator control rooms. Travel cable to be provided and installed by the Elevator Contractor. Access points shall be mounted on the top of each elevator car. The data cable shall be designed to be installed utilizing the same travel cable as the Elevator Emergency Phone.

A separate Distributed Antenna System shall be installed to enhance cellular signal, repeat UHF and 700-800mhz. Separate radio repeaters shall be installed for two-way radio systems.

Audio Visual Systems

Systems providing audio-visual services and teleconferencing services external and internal. The new hospital will contain several conference, training and education rooms, patient entertainment spaces (clinical and non-clinical), and employee lounges that may be used for presentations.

4.1.21

Typical Conference Room Audio Visual Design: (2) large flat panel wall mounted monitors with audio visual connections, (2)A and (2)B over ceiling mounted behind each. Ceiling speakers and microphones, floor connections with data and audio visual connections. Floor connection box requires a 1" conduit direct from the floor outlet to the wall mounted monitor back bar and (2) 1.25" conduits stubbed up above ceiling installed with pull strings. Wall mounted touchscreen control unit and wireless audio visual connection device. The project shall utilize electronic scheduling screens for Conference Rooms.

Cable Antenna Television (CATV)

Systems providing patient information and entertainment information in patient rooms, waiting areas, treatment areas, etc. Cable television shall feed the new facility via external connections from the MVHS preferred service provider. Cable television service shall be distributed to each TR over RG-11 coaxial cable. HomeRun RG-8 coaxial cable and Category 8 cable will provide connectivity from the TR to each individual television set. At the television set, coax cables shall be terminated with an F connector housed in a faceplate that shall contain data and nurse call connections for televisions in patient rooms. In the TR, these cables shall be terminated on tape and/or splitters which will provide connectivity to amplifiers and/or direct connection to the CATV system equipment. In addition, via the Category 8 cable, two feeds from in house seminars, Chapel Services, telemedicine, and pre-recorded feeds to such sources as patient and staff education and training and movie stations shall be available to each television set. Television sets shall be hospital grade where required. The recommended minimum television display size for patient rooms is 42".

Public Address

One to one, one to group, one to all paging and two-way voice communications. System performs in alarm and non-alarm conditions. Overhead paging shall be provided through a series of paging amplifiers and overhead speakers, some of which may be controlled through individual volume controls. This system shall provide a means of public broadcast for fire safety announcements or any other desired public announcements. The system will provide "zone" and "all call" paging as required. Amplifiers shall be distributed throughout the TRs. The new hospital shall plan for 2" x 2" drop-in" paging speakers.

Real Time Locating System (RTLS)

The new hospital shall be equipped with a Real Time Locating System. The system's backbone shall be carried over the hospital's wireless network with Power over Ethernet (PoE) devices providing room level accuracy. Each patient care area shall require a PoE device to track staff and integrate with the Electronic Medical Record. Wireless temperature monitoring shall be required for medication, lab and pharmacy refrigerators. MVHS currently utilizes the Stanley Armscout system.

Nurse Call System

A new nurse call/care blue system will be required. The new system will be comprised of nurse master stations, patient stations, staff stations, emergency call stations, alarm lights and tracking sensors. Individual systems will be required for each floor and will be networked together to facilitate centralized management functions. The new system will provide a means of two-way communication between patients and clinical staff. The new system shall interface with the Voice over IP (VoIP) telephony system and shall offer such integration of nurse calls, lab results and physiological monitoring to the wireless handset. The care blue system shall provide the capability of alerting the staff of life threatening code conditions that need immediate response. The system shall be capable of interfacing with hard wired or wireless telephone service and overhead paging system. The system shall interface with other HL-7 compliant systems, i.e. ADT and electronic medical record systems, providing patient information in a fashion that enhances efficient delivery of patient care and improves patient satisfaction. With the exception of staff lockers, all restrooms shall contain Emergency Pull Cord elements.

The Nurse Call devices for the new Facility shall be planned per NFPA 99 - IFC Guidelines for design and construction of healthcare facilities requirements, and user's requests. 37-pin bed connector shall be required in all patient rooms with beds. The bed connector is not required for nonutilizing stretchers only.

Wireless Clock System

System consisting of clocks, transmitters, and receivers using global positioning system (GPS) wireless technology to synchronize time without the need to re-set clocks for time changes or power outages. System shall include additional tvd propagator and repeaters in IT rooms where required by system manufacturer to expand existing system signal coverage.

Analog Clocks shall be battery powered models located in wall area and show electronic only. Digital Clocks and Digital timers in procedure rooms shall be wired or wireless communication AC powered (hardwired) models. The current MHS wireless clock system is Primox.

Access Control and CCTV System

Systems allowing authorized access to restricted areas, and general public access control. Various devices and methodologies exist to allow authorized, monitored physical access. Card readers/keypads are utilized for internal and external access control. Currently MHS utilizes proximity card technology. CCTV cameras and network video sensors are used for security surveillance. Both of these systems are "networkable" and allow system access as needed to provide real time monitoring and archival and retrieval of stored data. IP cameras are used and 90 days of storage are required. System components shall be installed as specified by the owner. Parking lot gates for physician parking, site emergency phones and site cameras shall be required. The project shall also include a Pediatric Abduct or System Incorporated with building security (door and elevator control). Hugs is the current MHS Pediatric Application System. MHS utilizes Special Care System as a mail/dress system that notifies security through radios. The panic devices are wireless. The E2 Lobby system is currently used for visitor management; visitors are issued a sticker badge at Front Entrance. ED and Maternity has a visitor badge

Page 2.

station.

All door hardware is installed by a door hardware provider, the Access Control Contractor will install a coil of wire in ceiling above locking mechanism long enough for the hardware installer to wire to their lock.

Typical MVI'S Areas of Control

Pharmacy, Medication Supply Rooms, ICU, Surgery, Peds, LDR, Lab, Behavioral Health, Maternity Elevators, Staff Lounge, Dr. Lounge, Retail Pharmacy, Emergency Department, Imaging.

Radio Systems

The project shall require multiple radio systems. A two-way radio system with repeaters will be installed for use by Security, Facilities Incident Command, Surgery (a local, departmental system). The Emergency Department will be equipped with an EMS radio system to communicate with the incoming ambulance services. MCHS utilizes pagers for EMS and Bed Tracking communication. Long-range signal shall be required for radio systems.

Mohawk Valley Health System

1/10

Behavioral Health Products and Systems

The following is the initial selection of materials, products and systems chosen for the Behavioral Health Nursing Unit on the 9th floor of the patient tower and the DR portion of the Emergency Department. The selections will continue to be refined during the Design Development Phase and we will review those changes with NYS Office of Mental Health. Initial selections are highlighted.

Seclusion Room Standards

- **Secured**
 - **Multi-Point Deadbolt Mortise Lock**
 - Select lock function from options.
 - **USL-K3 II I62 (slam)**
 - Latches upon closure
 - Key only projects/retracts bolts and latch
 - Exterior side of door has freely rotating lever/pull
 - Interior cylinder optional
 - **UML-K34HB2**
 - Does not latch upon closure
 - Key only projects/retracts bolts
 - Exterior side of door has freely rotating lever/pull
 - Interior cylinder optional
- **Marathon Engineering Corporation**
 - **Gold Medal Safety Padding** – Resinous coating is scuff-resistant and long lasting. Padding material is uniform and smooth with no cracks or open seams.

Anti-Barricade Strategies

- **Nova Plastics, Inc. Patient toilet/shower rooms**
 - **Talked Partitions, Sentinel Event Restriction (SER) Door with Shield Top**
 - Use only inside of gang bathrooms. Never use in bathrooms shared between two bedrooms. Expanded PVC door can be painted with latex paint to match desired color scheme. To be used with roller latch hardware.
- **Fixon**
 - **340 Center Hung Top Fix**
 - Center hung, non-handed walking beam type hinge. Fully concealed when door is closed.
 - **117-224 Center Hung Fixed Fix**
 - Fully concealed, parallel arm, non-handed. Can be combined with a concealed overhead closer.
- **Accurate Lock & Hardware**
 - **Keyed Emergency Stop ADL CCK, ADL 2&K**
 - Double tip strikes with keyed emergency stop. Designed to restrict and protect against unauthorized out swinging door. Key locks emergency stop into projected position.

Mohawk Valley Health System

06/21

Behavioral Health Products and Systems

Division 07 Sealants

- Security Sealants Tamper Resistant
- Master Builders Solutions
 - Master Seal CR 125 – one component, moisture curing, aliphatic, non-sag polyurethane sealant.
- Sika Corporation
 - Sikaflex 11FC – one component, gun grade moisture cure polyurethane based elastomeric sealant

Division 08 Openings

- Door Hardware, Door Top Sensors
 - Stanley Security Solutions/Granger Industrial Supply
 - SEEA (Stanley emergency Door Alarms) / Lisa (Ligature-Resistant Door Alarm)
 - A pressure activated switch mounted on the face of a door, provides notification when a foreign object passes over the door and a downward pressure is applied. Notification is sent to a console indicating where a response is required.
- Door Hardware, Continuous Hinges
 - Architectural Builders Hardware MFG. Inc
 - A500HT
 - Stainless steel pin and barrel full mortise, full concealed edge mount with hospital tops
 - MARKAR Architectural Products
 - FT4300-HT
 - Edge mount stainless steel
- Door Hardware, Locks & Handles
 - Accurate Lock & Hardware
 - Freedom handle (CH) & 9100 Mortise Lockset
 - Ramerit
 - BHM Trim (Mortise)
 - The BHM style door trim is not a traditional lever design and can be safely used in a high risk environment.
- Door Hardware, Lever Handles
 - East Access Systems/Granger Industrial Supply
 - Ligature Resistant Lever Set SP5L Series - LISULISE (Mortise)
 - The ligature resistant lever handle "freewheels" in both directions on both sides of the door whether the door is locked or unlocked. Proprietary finish resists looping by earbuds.
 - Town Steel Architectural Hardware Manufacturing
 - Ligature Resistant Lever Set TRXL Series (Cylindrical)

Mohawk Valley Health System

nbby

Behavioral Health Products and Systems

- o hollow metal frames with a 1" continuous edge bite: bite if dry glazed or 1/2" continuous edge bite: if silicone glazed
- o Sheffield Plastics Inc.
 - Makrolon 15 Polycarbonate Glazing
 - 3/8" thick. Use with NYS-GMH 15 year warranty. Installed in hollow metal frames with a 1" continuous edge bite.
- o 3M
 - Ultra 5000 Film
 - 3M film is scratchable. When damaged, it may be removed from the glass panel and new film installed by trained maintenance staff. Drying time for the film installation is two weeks minimum. Erection time should be verified with the manufacturer. Maintenance staff should be advised to keep spare stock that is fully cured to eliminate down time.
- o OutPut
 - Sunlight/CPET Film
 - Hard coated PET film helps stop the showering of small glass particles (called 'spall') that can occur when conventional glass fails.
- Glazing, Interior Windows, Fire Rated
 - o Technical Glass Products
 - FireLite PLUS
 - 5/16" thick laminated, polished, fire rated, and impact safety rated glazing. Listed for use in doors, sidelites, and transoms with fire rating requirements ranging from 20 minutes to 3 hours.
 - o SafeFire
 - SuperLite Fire Rated Glazing
 - 3/4" mono lite safety and positive pressure fire rated glazing. For use in wood, hollow metal, aluminum or an equally fire rated framing systems.
- Glazing, Observation Mirrors
 - o Plexiglas, Inc.
 - See-thru Mirror
 - Two way observation polycarbonate mirror, 0.226" thick minimum. Product is semi transparent.
- Access Doors
 - o Gendrox
 - PF Series Fire Rated Access doors

Division 09 Finishes

- Ceiling Assemblies, General
 - o OMH Ceiling Assembly 1: 1 layer 3/8" or 5/8" drywall with metal framing/suspension system.

Mohawk Valley Health System

01/11/21

Behavioral Health Products and Systems

- o DMH Ceiling Assembly 2: 1 layer 5/8" very high impact (VHI) abuse resistant drywall with metal framing/ceiling suspension system.
- o DMH Ceiling Assembly 3: 3/4" suspended acoustic tile on intermediate duty suspension system.
- **Wall Base**
 - o **Custom Wood Base**
 - **Custom Designed Wood Base**
 - Solid 3/4" hardwood with 3/8" top bullnose top and corners. Provide ramp resistant sealant at joint between floor and base, base and wall surface.
 - o **Johnsonite**
 - **Milwork Contoured Wall Base**
 - Thermoplastic solid rubber base. Various profiles range in height from 2 1/2" to 9" high, 1/2" to 3/8" thick.
 - **300-XX-A Cove Cap Moulding**
 - Vinyl cove cap moulding accessory for 1/8" cove base material.
 - o **Flexco**
 - **Health Design Wall Base**
 - Thermoplastic rubber base layers from 1/8" thick to adjacent floor thickness. All seams are heat welded.

Division 10 Specialties

- **Shower & Privacy Curtains**
 - o **InPro Corporation**
 - **Clickeze Ultra Cubicle Track**
 - Extruded aluminum track provides heavy duty strength. For use with Clickeze accessories.
 - **Clickeze Whisper Cubicle track**
 - Extruded PVC track allows for noise reduction during curtain movement. For use with Clickeze accessories.
 - **Clickeze Pop Out Carrier**
 - Hook or carrier releases, allowing the curtain to fall and disengage at approximately 10 lbs of pressure. For use with both Clickeze Ultra and Whisper Curtain Tracks.
 - o **Construction Specialties**
 - **Breakaway Corner #975P**
 - Hook or corner is designed to pop out of the side when approximately 22 lbs of pressure is applied to the hook, and can be reused.
 - o **Architex**
 - **For Privacy Curtain**
 - Made with 100% Avora polyester, style #52019717-1000
 - o **ArchCom**
 - **Options Curtain**

Behavioral Health Products and Systems

- + Customizable textiles to increase durability and fire resistances. Stain repellent.

CONSTRUCTION PROJECT CERTIFICATION LETTER FOR AFR REVIEWS ARCHITECTS & ENGINEERS

(For projects not meeting the provisions for Self-Certification submissions.)

Date: November 1, 2017

CLC Number: To be determined

Facility Name: Mohawk Valley Health System

Facility ID Number: PTA00598

Facility Address: Bounded by Onebunk and Columbia Streets, and Broadway and Stone Streets, Utica, NY 13501

NYS Department of Health/Office of Health Systems Management
Center for Health Care Facility Planning, Leasing, and Finance
Bureau of Architectural and Engineering Review
OSU, Corning Tower, 15th Floor
Albany, New York 12242

To The New York State Department of Health:

I hereby certify that:

1. I have been retained by the aforementioned facility, to provide professional architectural/engineering services related to the design and preparation of construction documents, including drawings and specifications for the aforementioned project. During the course of construction, periodic site observation visits will be performed, and, as necessary, standard of care, work progress, quality and ongoing conformance of the work with documents provided for all regulatory approvals associated with the aforementioned project;
2. I have ascertained that, to the best of my knowledge, information and belief, the completed structure will be designed and constructed, in accordance with the functional program for the referenced construction project and in accordance with any project definitions, waivers or deviations approved or required by the New York State Department of Health;
3. The above-referenced construction project will be designed and constructed in compliance with all applicable local codes, statutes, and regulations, and the applicable provisions of the State Hospital Code – 10 NYCRR Part 710 (General Standards for Construction) and Parts (check all that apply):
 - a. 710 (Standards of Construction for General Hospital Facilities)
 - b. 711 (Standards of Construction for Nursing Home Facilities)
 - c. 714 (Standards of Construction for Adult Day Health Care Program Facilities)
 - d. 715 (Standards of Construction for Transcending Ambulatory Care Facilities)
 - e. 716 (Standards of Construction for Rehabilitation Facilities)
 - f. 717 (Standards of Construction for New Hospice Facilities and Units)

PLEASE PRINT ANY FACILITY NUMBERS:

1. I understand that as the design of this project progresses, if a component of this project is inconsistent with the State Hospital Code (10 NYCRR Parts 711, 712, 713, 714, 715, 716, or 717), I shall bring this to the attention of the Bureau of Architectural and Engineering Review (BAER) of the New York State Department of Health, prior to commencing building final drawings for compliance resolution.

ARCHITECTURAL AND ENGINEERING LETTER OF CERTIFICATION

- Understand that upon completion of construction, the costs of any subsequent construction necessary to achieve compliance with applicable requirements of 16 NYCRR Parts 211, 212, 213, 214, 215, 216 and 217, when the project work was completed properly as certified herein, may not be considered allowable costs for reimbursement under 16 NYCRR Part 218.

This certification is being submitted in furtherance of the U/M review and subsequent to formal plan approval by your office. It is understood that an electronic copy of final, stamped documents on U/M meeting the requirements of DSU-05 must be submitted to PHA for all projects involving amended, administrative, bill review, self-certification and reviews performed and completed by DASNY.

Re: CON Project #: ED
Facility Name: MVHS (Mohawk Valley Health System)
Facility Location: located by Corning and Conduent Centers and Bruckley and Lane Streets, Utica, NY 13501.
Project Description: New Hospital Campus

To the New York State Department of Health:

I certify that, as an employee or contractor of the above-named facility, it is my duty to design and prepare plans, sketches, and specifications relating to radiation protection for the facility. I further certify that I have exercised the diligence and, to the best of my knowledge, information and belief, the radiation protection designed and specified for the above-referenced project is in substantial compliance with the requirements of the relevant technical standards listed in 10 NYCRR 17, and that the radiation exposure to the public and staff is designed to be as low as is reasonably achievable (ALARA), based on the workload provided to me by the facility for the proposed equipment and sound radiation protection principles.

Further, I agree to ensure that a current report detailing the extent of the radiation protection by the facility and the design of the protection systems will be made available to the Regional Office staff of the NYS Department of Health during final inspections of the facility. I have informed the applicant that such report must be maintained on site as a permanent record.

I attest that I have been authorized by the above named facility to make this certification.

--	---	---	--	---

Environmental Assessment**Part I.**

The following questions help determine whether the project is "significant" from an environmental standpoint.

1.1	If this application involves establishment, will it involve more than a change of general ownership, any, or a change of stock or partnership or membership interests, any, or the conversion of existing bonds to the same or lesser number of a different level of new bonds? <i>This project does not involve establishment.</i>	Yes <input type="checkbox"/>	No <input type="checkbox"/>
1.2	Does this plan involve construction and change land use or density?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
1.3	Does this plan involve construction and have a permanent effect on the environment if temporary land use is involved? <i>This plan involves the construction of a new surgical facility and structural features to a previously developed and disturbed site area.</i>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
1.4	Does this plan involve construction and require work related to the disposition of asbestos?	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Part II.

If any question in Part I is answered "yes" the project may be significant and a Part II final assessment is required. If all questions in Part II are answered "no" it is likely that the project is not significant.

2.1	Does the project involve physical alteration of ten acres or more?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2.2	If an expansion of an existing facility, will the area physically altered by the facility expanding by more than 50% and will the total existing and proposed altered area ten acres or more? <i>This is not an expansion project.</i>	<input type="checkbox"/>	<input type="checkbox"/>
2.3	Will the project involve use of ground or surface water or discharge of wastewater to ground or surface water in excess of 2,000,000 gallons per day?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2.4	If an expansion of an existing facility, will use of ground or surface water or discharge of wastewater by the facility increase by more than 50% and exceed 2,000,000 gallons per day?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2.5	Will the project involve parking for 1,000 vehicles or more?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2.6	If an expansion of an existing facility, will the project involve a 50% or greater increase in parking spaces and will total parking exceed 1,000 vehicles? <i>This is not an expansion project.</i>	<input type="checkbox"/>	<input type="checkbox"/>
2.7	In a city, town, or village of 150,000 population or fewer, will the project entail more than 100,000 square feet of gross floor area?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2.8	If an expansion of an existing facility in a city, town, or village of 150,000 population or fewer, will the project expand existing floor space by more than 50% so that gross floor area exceeds 100,000 square feet? <i>This is not an expansion project.</i>	<input type="checkbox"/>	<input type="checkbox"/>
2.9	In a city, town, or village of more than 150,000 population, will the project entail more than 240,000 square feet of gross floor area? <i>Urban population 62,235 (2010 Census)</i>	<input type="checkbox"/>	<input type="checkbox"/>

New York State Department of Health
Certificate of Need Application

Schedule 7

2.10	For an expansion of an existing facility in a city, town, or village of more than 100,000 population, will the project exceed existing flood risk by more than 50% so that gross floor area exceeds 240,000 square feet? <i>This question will be examined as part of the EIS.</i>	<input type="checkbox"/>	<input type="checkbox"/>
2.11	Is a facility wholly or partially within a flood plain? Will the project contain any structure extending 100 feet above the original ground level? <i>There is no restriction in the Code. The Atlantic Canal Gateway District already has guidelines of 7 stories and 70 feet. Approval height of new facility is 145 feet.</i>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2.12	Is the project wholly or partially within an agricultural district certified pursuant to Agricultural and Markets Law Article 25, Section 309?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2.13	Will the project significantly affect drainage flow on adjacent sites? <i>Drainage will be studied to understand storm water or to two ponds infrastructure constructed as part of the project.</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2.14	Will the project affect any threatened or endangered plants or animal species?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2.15	Will the project result in a major adverse effect on air quality? <i>This question will be examined as part of the Environmental Impact Statement (EIS).</i>	<input type="checkbox"/>	<input type="checkbox"/>
2.16	Will the project have a major effect in visual character of the community or scenic views or vistas known to be important to the community? <i>This question will be examined as part of the EIS.</i>	<input type="checkbox"/>	<input type="checkbox"/>
2.17	Will the project result in major traffic problems or have a major effect on existing transportation systems? <i>This question will be examined as part of the EIS.</i>	<input type="checkbox"/>	<input type="checkbox"/>
2.18	Will the project regularly cause objectionable noise, noise-glass vibration, or excessive disturbances as a result of the project's operation? <i>This question will be examined as part of the EIS.</i>	<input type="checkbox"/>	<input type="checkbox"/>
2.19	Will the project have any adverse impact on health or safety? <i>This question will be examined as part of the EIS.</i>	<input type="checkbox"/>	<input type="checkbox"/>
2.20	Will the project affect the existing community by directly causing a growth in residential population of more than five percent over a one-year period or have a major negative effect on the character of the community or neighborhood? <i>This question will be examined as part of the EIS.</i>	<input type="checkbox"/>	<input type="checkbox"/>
2.21	Is the project wholly or partially within or is it contiguous to any facility or site listed on the National Register of Historic Places, or any historic building, structure, or site, or prehistoric site that has been processed by the Committee on the Registers for recommendation by the New York State Board on Historic Preservation for recommendation to the State Historic Officer for nomination for inclusion in said National Register?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2.22	Will the project cause a beneficial or adverse effect on property listed on the National or State Register of Historic Places or on property which is determined to be eligible for listing on the State Register of Historic Places by the Commissioner of Parks, Recreation, and Historic Preservation? <i>This question will be examined as part of the EIS.</i>	<input type="checkbox"/>	<input type="checkbox"/>
2.23	Is this project within the Coastal Zone as defined in Executive Law, Article 427? If Yes, please complete Part IV.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Part IV. Storm and Flood Mitigation

Please use the FEMA Flood Designations scale below as a guide to answering Part IV. Refer to Attachment A on page 6.

1.	Are you in a flood plain? If so, what classification? a. Moderate to Low Risk Area _____ b. High Risk Area _____ c. High Risk Coastal Area _____ d. Undetermined Risk Area _____	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2.	Are you in a designated evacuation zone? If so, which zone _____	<input type="checkbox"/>	<input checked="" type="checkbox"/>
3.	Does this project reflect the post-Hurricane Lee and to hence, the Susquehanna Sandy mitigation standard? 100-Year Floodplain _____ 500-Year Floodplain _____	<input type="checkbox"/>	<input type="checkbox"/>

The Elevation Certificate provides a way for a community to document compliance with the community's floodplain management ordinance.

Attachment A - FEMA Flood Designations

Definitions of FEMA Flood Zone Designations

Flood zones are geographic areas that the FEMA has defined according to varying levels of flood risk. These zones are depicted on a community's Flood Insurance Rate Map (FIRM) or Flood Hazard Boundary Map. Each zone reflects the severity or type of flooding in the area.

Moderate to Low Risk Areas

In communities that participate in the NFIP, flood insurance is available to all property owners and renters in these zones:

ZONE	DESCRIPTION
B and X C and X	Area of moderate flood hazard, usually the area between the limits of the 100-year and 500-year floods. Areas also tend to designate base flood hazard or other hazards, such as those protected by levees from 100-year flood, or shallow flooding areas with average depths of less than one foot or drainage areas less than 1 square mile.
	Area of minimal flood hazard, usually outside of FEMA's 500-year flood level.

High Risk Areas

In communities that participate in the NFIP, mandatory flood insurance purchase requirements apply to all of these zones:

ZONE	DESCRIPTION
A AE	Areas with a 1% annual chance of flooding and a 20% chance of flooding over the life of a 30-year mortgage. Because cost of analyses are not performed for such areas, no depths or base flood elevations are shown within these zones. The base flood elevation where base flood elevations are provided, AE Zones are now used on new FIRM's instead of AE-A50.
AI, AO	These are zones as mentioned in Zones (e.g., AI or AO). This is the base flood elevation where the FEMA shows a BFE (old format).
AO	Area with a 1% annual chance of shallow flooding, usually in the form of a pond, with an average depth ranging from 1 to 3 feet. These areas have a 20% chance of flooding over the life of a 30-year mortgage. Base flood elevations derived from detailed analyses are displayed at selected intervals within these zones.
AO	Area of stream flood hazard areas and areas with a 1% or greater chance of shallow flooding each year, usually in the form of stream flow, with an average depth ranging from 1 to 3 feet. These areas have a 20% chance of flooding over the life of a 30-year mortgage. Average base depths derived from detailed analyses are shown within these zones.
AO	Areas with a temporarily increased 1% or greater chance of flooding or reduction of a flood control system (such as a levee or a dike). Mandatory flood insurance purchase requirements still apply, but rates will not exceed the rate for unimproved AO zones if the structure is built or modified in compliance with Zone AO flood risk management regulations.
AO	Areas with a 1% annual chance of flooding that will not be protected by a Federal flood control system where construction has reached specified legal requirements. No depths or base flood elevations are shown within these zones.

High Risk - Coastal Areas

In communities that participate in the NFIP, mandatory flood insurance purchase requirements apply to all of these zones:

ZONE	DESCRIPTION
V	Coastal areas with a 1% or greater chance of flooding and an additional hazard associated with storm waves. These areas have a 20% chance of flooding over the life of a 30-year mortgage. No base flood elevations are shown within these zones.
VI, VI - 30	Coastal areas with a 1% or greater chance of flooding and an additional hazard associated with storm waves. These areas have a 20% chance of flooding over the life of a 30-year mortgage. Base flood elevations derived from detailed analyses are shown at selected intervals within these zones.

Undetermined Risk Areas

ZONE	DESCRIPTION

Schedule 9 Proposed Plan for Project Financing:

I. Summary of Proposed Financial plan:

Check all that apply and fill in corresponding amounts

	Type	Amount
<input type="checkbox"/>	A. Loans	
<input checked="" type="checkbox"/>	B. Cash	\$331,271,583
<input type="checkbox"/>	C. Land	
<input type="checkbox"/>	D. Other	
<input checked="" type="checkbox"/>	E. Mortgage, Notes, or Bonds	\$150,000,000
<input checked="" type="checkbox"/>	Total Project Financing (Sum A to E) (equals line 13 Column C of Sch. Bb)	\$481,271,583

If refinancing is used, please complete form below

<input type="checkbox"/>	Refinancing	
<input type="checkbox"/>	Total Mortgage/Notes/Bonds (Sum F) plus Refinancing	

II. Details

A. Leases N/A

	Not Applicable	Title of attachment
1. List each lease with corresponding cost as if purchased each leased item. Breakdown each lease by total project cost and subproject costs, if applicable.	<input checked="" type="checkbox"/>	
2. Attach a copy of the proposed leases.	<input checked="" type="checkbox"/>	
3. Submit an affidavit indicating any business or family relationships between applicant and landlord and tenant.	<input checked="" type="checkbox"/>	
4. If applicable, provide a copy of the lease assignment agreement and the Landlord's consent to the proposed lease assignment.	<input checked="" type="checkbox"/>	
5. If applicable, identify separately the total square footage to be occupied by the Article 20 facility and the total square footage of the building.	<input checked="" type="checkbox"/>	
6. Attach two letters from independent realtors verifying square footage rate.	<input checked="" type="checkbox"/>	
7. For all capital leases as defined by FASB Statement No. 13 "Accounting for Leases", provide the net present value of the monthly, quarterly, or annual lease payments.	<input checked="" type="checkbox"/>	

New York State Department of Health Certificate of Need Application

Schedule 9

B. Cash - Not required for limited review

Type	Amount
Accumulated Funds	\$31,391,583
Sale of Existing Assets	
Gifts (fundraising program)	
Government Grants - <u>Onondaga County Transformation</u>	\$3,900,000,000
Other	
TOTAL CASH	\$35,291,583

	Not Applicable	Title of attachment
1. Provide a breakdown of the sources of cash. See sample table above.	<input type="checkbox"/>	See Table Above
2. Attach a copy of the latest certified financial statement and current internal financial reports to cover the balance of time to date. If applicable, address the reason(s) for any operational losses, negative working capital and/or negative equity or net asset position and explain in detail the steps implemented to improve operations.	<input type="checkbox"/>	Please refer to the Schedule 9 Attachment
2a. In establishment applications for Residential Health Care Facilities, attach a copy of the latest certified financial statement and current internal financial reports to cover the balance of time to date for affiliated Residential Health Care Facilities. If applicable address the reason(s) for any operational losses, negative working capital and/or negative equity or net asset position and explain in detail the steps implemented to improve operations.	<input type="checkbox"/>	Please refer to the Schedule 9 Attachment
3. If amounts are listed in 'Accumulated Funds' provide cross-reference to certified financial statement or Schedule 2b, if applicable.	<input type="checkbox"/>	Please refer to the Schedule 9 Attachment
4. Attach a full and complete description of the assets to be sold, if applicable.	<input checked="" type="checkbox"/>	
5. If amounts are listed in 'Gifts (fundraising program)' <ul style="list-style-type: none"> Provide a breakdown of total amount expected, amounts already raised, and any terms and conditions offered to pledges. If a professional fundraiser has been engaged, submit fundraiser's contract and fundraising plan. Provide a history of recent fund drives including amount pledged and amount collected. 	<input checked="" type="checkbox"/>	
6. If amounts are listed in 'Government Grants' <ul style="list-style-type: none"> List the grant programs which are to provide the funds with corresponding amounts. Include the date the application was submitted. Provide documentation of eligibility for the funds. Attach the name and telephone number of the primary person at the issuing Agency/ies. 	<input type="checkbox"/>	Please refer to the Schedule 9 Attachment (NYSUHC Grant Award Letter)
7. If support is listed in 'Other' attach a description of the source of financial support and documentation of its availability.	<input checked="" type="checkbox"/>	
8. Current Department policy requires a minimum equity contribution of 10% of total project cost (Schedule 8b line 10), for all Article 28 facilities, with the exception of Residential Health Care Facilities that require 25% of the total project cost (Schedule 8b line 10).	<input type="checkbox"/>	10% Equity Met

**New York State Department of Health
Certificate of Need Application**

Schedule 9

C. Mortgage, Notes, or Bonds - Not required for limited review

1. Provide a breakdown of the terms of the mortgage. See sample table below:

	Total Project	Units
Interest	5.25%	%
Term	20	Years
Payout Period	25	Years
Principal	\$150,000,000	\$

	Not Applicable	Title of attachment
2. Attach a copy of a letter of interest from the intended source of permanent financing that includes principal, interest term, and payout period.	<input type="checkbox"/>	Please refer to the Schedule 9 Attachment
3. If New York State Dormitory Authority (DASNY) financing, then attach a copy of a letter from a mortgage banker.	<input checked="" type="checkbox"/>	
4. If the financing of this project becomes part of a larger overall financing, then a new business plan inclusive of a feasibility package for the overall financing will be received by DOH review prior to proceeding with the combined financing.	<input checked="" type="checkbox"/>	

D. Land: Not required for limited review N/A

1. Provide details for the land including but not limited to appraised value, historical cost, and purchase price. See sample table below:

MOHAWK VALLEY HEALTH SYSTEM

FINANCIAL NARRATIVE

Proposal

Mohawk Valley Health System (MVHS) is submitting this Full Review Certificate of Need (C.O.N.) Application that seeks approval for the construction of a new hospital campus. MVHS is the active parent and co-operator of St. Elizabeth Medical Center (STEMC) and of Fusion St. Luke's Healthcare St. Luke's Division (St. Luke's). St. Luke's is currently located at 1656 Champlin Avenue, Utica (Onondaga County), New York 13502. St. Elizabeth Medical Center is currently located at 2209 Genesee Street, Utica (Onondaga County), New York 13501. Cardiac PCI and cardiac surgery services currently offered through the Mohawk Valley Heart Institute are also provided on the campus of St. Elizabeth at 2209 Lawrence Street, Utica (Onondaga County), New York 13501. This C.O.N. Application will be funded, in part, through the Health Care Facility Transformation Programs Onondaga County grant awarded to MVHS specifically for this purpose. This project is one (1) of at least two (2) Applications being submitted to the New York State Department of Health (NYSDOH) for the transformation of services within the Onondaga County region, as described in detail below:

Through New York Public Health Law Section 1925-h, New York State created the "Onondaga County Health Care Transformation Program" that set aside up to \$200 million in capital grant funding for the sole purpose of consolidating multiple licensed healthcare facilities into an integrated system of care, within the largest population center in Onondaga County (i.e., Utica). Through a response to a Request for Applications (RFA #1505060325) from the New York State Department of Health (NYSDOH) and Documentary Authority of the State of New York (DASNY), MVHS was awarded \$300 million in grant funding for the project proposed in this C.O.N. Application (i.e., the creation of a new hospital campus), which will result in the transformation of healthcare services in the region.

Current Situation

MVHS is currently the active parent and co-operator of St. Luke's and St. Elizabeth. In addition, cardiac PCI and cardiac surgery services currently offered through the Mohawk Valley Health Institute are provided on the campus of St. Elizabeth at 2209 Genesee Street, Utica (Oneida County), New York 13501. The licensing and NYSDOH identifying information for these facilities are as follows:

- Bayou St. Joseph's Healthcare System - Utica's Division – Operating Certificate #02020098; PFI #0559 – 1656 Champlin Avenue, Utica (Oneida County), New York 13502.
- St. Elizabeth Medical Center – Operating Certificate #020200211; PFI #0598 – 2209 Genesee Street, Utica (Oneida County), New York 13501.
- Mohawk Valley Health Institute (MVHI) – Operating Certificate #020200411; PFI #7526 – 2209 Genesee Street, Utica (Oneida County), New York 13501.

Future Situation

This C.O.M. Application is the first in a series of (at least two (2)) Applications that Mohawk Valley Health System and its two (2) related facilities (St. Elizabeth and St. Luke's) will be submitting, and will lead to the merger of St. Elizabeth and St. Luke's, and the relocation and consolidation of the majority of services comprising St. Elizabeth and St. Luke's to the new hospital campus in Utica, New York. A description of the expected Application submissions are as follows:

- Application #1 – Full Review C.O.M. Application (Subject of this Application) – Construction of a new hospital campus. The new, consolidated hospital campus will be located on a 25-acre parcel of land generally bordered by the following streets in Utica (Oneida County), New York 13501: State Street, Broadway, Oriskany Street West, and Columbus Street. Please refer to Appendix A for a map of the proposed campus. An address has not yet been assigned to the site.

* The proposed property is comprised of several land parcels, some of which have structures on them that will need to be demolished. Mohawk Valley Health System is in the process of working with the property owners to attempt to purchase the parcels of land for the proposed new hospital campus. Should an owner of a parcel of land object to the regulations with MVHS, the hospital may need to proceed through the eminent domain process to acquire the parcel.

Through this C.O.N. Application, all inpatient and most outpatient services from the current St. Elizabeth campus will be relocated to the new hospital campus, which will be known as the "Mohawk Valley Health System Campus". A separate "merger" C.O.N. Application will be submitted, as described in the next bullet point.⁴

The following programs and services will remain on the St. Elizabeth site, with no construction or relocation necessary:

- o Article 28 Services – The St. Elizabeth site will be converted into an outpatient extension clinic to be known as "St. Elizabeth Campus". MVHS prefers that this site maintain its current PFI number. In particular, sleep center services (Mohawk Valley Sleep Disorders Center), cardiac and thoracic surgery-related services (all of which are medical-only services, no surgical services will be provided at this site), primary care and laboratory patient service center (PSC) services will continue to be provided at this site.

The Mohawk Valley Sleep Disorders Center and some primary care services are currently located on the campus located at 2209 Genesee Street, Union (Oneida County), New York 13501. The cardiac and thoracic surgery offices, other primary care services and the laboratory patient service center (PSC) services are located within the Marian Medical Building at 2209 Genesee Street, Union (Oneida County), New York 13501. This site will become an extension clinic, with no construction needed.⁵ MVHS prefers that a new

⁴ Upon implementation of the merger project, which will result in MVHS having a single operating certificate number and PFI number through which the two (2) hospital sites will operate as divisions, MVHS will relocate all inpatient and inpatient services from the St. Elizabeth and the St. Luke's sites to the new hospital campus (with the exception of 24 PM&R beds at the St. Luke's Campus and some other outpatient services as described within this C.O.N. Application)

⁵ For purposes of this C.O.N. Application, we are assuming that, although these services will be located in different buildings, they will remain in their current locations and MVHS prefers that they share the same Operating Certificate and PFI numbers. MVHS is willing to discuss this issue with the State Health Department should the Department prefer to certify the sleep center and outpatient cardiovascular services, primary care practice and laboratory PSC as separate extension clinics.

operating certificate be created for the extension clinic while minimizing its current PFI number and being certified for the services of "Medical Services – Primary Care" and "Medical Services – Other Medical Specialties".

c. Non-Article 28 Services (St. Elizabeth College of Nursing) - This program is not an Article 28 service, but it will remain on the current site of St. Elizabeth.

➤ Application #2 – Full Review C.O.N. Application - This project will represent the "merger" C.O.N. Application through which St. Elizabeth and St. Luke's will be merged to become a single hospital entity, preferably with a single operating certificate number and new PFI number. St. Luke's will become a division of MVIHS. In addition, through this C.O.N. Application, the majority of services from the St. Luke's and St. Elizabeth sites will be relocated to the new hospital campus. The "merger" project is expected to be implemented while the new hospital campus is being constructed.

The following programs and services will remain on the St. Luke's campus, with no construction or relocation necessary after the merger:

c. Article 28 Services - The St. Luke's site, which will be a hospital "division", will retain the following services, with no construction needed: 24 certified, inpatient PM&R beds, laboratory PSC service, outpatient primary care and obstetrics services, and outpatient urgent clinics for medical visits/services.

This site will be known as the "St. Luke's Campus". As part of this C.O.N. Application, the majority of the inpatient and outpatient services will relocate to the new hospital campus, leaving behind the 24 PM&R beds and other outpatient services at 1656 Champlin Avenue, Utica (Oneida County), New York 13502. The laboratory PSC, primary care, obstetrics, and

outpatient surgery offices will continue to be located within a Physician Office Building on the St. Luke's Campus.¹ This campus will be certified for 24 inpatient PM&R beds and the certified services of "Medical Services - Primary Care" and "Medical Services - Other Medical Specialties"

- o Article 28 Services – The Operating Certificates of all extension clinics of MVHS (St. Elizabeth and St. Luke's) will be consolidated under the single operating certificate of the operator. In addition, some of the extension clinic sites with different operating certificates have the same addresses. These sites will need to be consolidated to a single operating certificate for each extension clinic.
- o Article 28 Services – To maintain service continuity, PCI and Cardiac Surgery services currently offered through Mohawk Valley Heart Institute will be provided on the new hospital campus. MVHS will work with the NYSDOH to determine how to handle the services offered through the Mohawk Valley Heart Institute, and if this entity can be eliminated.
- o Other Article 28 and Article 36 Services
 - St. Luke's Home – A 202-bed residential health care facility (RHC) with an Adult Day Health Care Program (ADHCP) affiliated with MVHS.
 - Mohawk Valley Home Care – A licensed home care services agency (LHCSA) affiliated with MVHS.
 - Visiting Nursing Association of Oneida and Onondaga County – A certified home health agency (CHHA) and a long-term home health care program (LTHHCP) affiliated with MVHS.

¹ For purposes of this C.O.C. Application, we are assuming that, although the inpatient PM&R beds and the outpatient services will be located in different buildings, they will remain in their same locations and will continue to share the same Operating Certificate and JCI numbers. MVHS is willing to discuss this issue with the State Health Department should the Department prefer to certify the outpatient services as a separate extension clinic from the PM&R bed hospital division.

The new hospital campus will have the following inpatient bed complement: coronary care (eight (8) beds); intensive care (40 beds); maternity (23 beds); medical/surgical (232 beds); neonatal intermediate care (eight (8) beds); perinatal (16 beds); and psychiatric (44 beds). In addition, the St. Luke's campus will retain 24 physical medicine and rehabilitation beds. In total, MCHS (inclusive of its two (2) divisions) will reduce its overall inpatient bed complement by 174 beds, from 571 beds to 397 beds (including 373 beds at the new hospital campus and 24 PM&R beds at its St. Luke's Campus).

Project Funding

The Total Project Cost for this project is estimated to be \$481,371,583, which is broken down into the following two (2) sub-projects:

- Sub-Project No. 1 – Article 28 New Hospital Campus (\$480,000,000, including C.O.N. Application and Processing Fees). This amount will be funded through the Outside County Health Care Transformation Program grant funds that MCHS was awarded (in the amount of \$400,000,000), as well as financing (in the amount of \$150,000,000) and existing cash equity (in the amount of \$30,000,000).
- Sub-Project No. 2 – Non-Article 28 Masonic Medical Research Lab (\$1,371,583). This amount will be funded through existing cash equity of MCHS. The Masonic Medical Research Lab will lease certain space on the new hospital campus, within the new hospital building structure, from MCHS.

Please refer to this Attachment for the Financial Narrative, a recent 2017 Internal Financial Statement for MCHS, the 2016 Audited Financial Statement for St. Luke's, the 2016 Audited Financial Statement of St. Elizabeth, the Outside County Transformation Grant Award Letter, the Memorandum of Agreement (Packaging) and the Financing Letter of Interest. For purposes of the

financial analysis for this project, we have assumed a 30 year term and a fixed rate of 5.25%, which is higher than the 4.00% tax-exempt interest rate noted in the Loan Letter of Interest.

Working capital needs will be funded through existing cash equity and ongoing operations. Please refer to this Attachment for the Financial Narrative, several 2017 Annual Financial Statements for MVHS, the 2016 Audited Financial Statement for St. Luke's, the 2016 Audited Financial Statement of St. Elizabeth.

asis for Utilization, Revenues and Expenses

The operating budget for this project aligns with the operating budget approved within the Oneida County Health Care Transition Program grant application of MVHS. In particular, the incremental utilization is based upon the expected growth of services upon the consolidation and relocation of services to the new hospital campus, given the historical experience of the hospital. Incremental expenses are related to capital depreciation and interest, as well as the incremental utilization associated with the operating budget. Likewise, the incremental revenues are related to the incremental utilization projected for this project, in line with the reimbursement experience of Mohawk Valley Health System. Please refer to the backup Operating Budget documents under the Schedule I3 Attachment for additional information.

Consolidated Financial Statements

December 31, 2016 and 2015

INDEPENDENT AUDITOR'S REPORT

The Board of Directors
Mohawk Valley Health System

We have audited the accompanying consolidated financial statements of Easton-St. Luke's Healthcare and Affiliate, which comprise the consolidated balance sheets as of December 31, 2016 and 2015, and the related consolidated statements of operations and changes in net assets and consolidated cash flows for the years then ended, and the related notes to the consolidated financial statements.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America, this includes the design, implementation and maintenance of internal control relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with auditing standards generally accepted in the United States of America. These standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making these risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design and perform procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

(Continued)

The Board of Directors
Page 2 of 2

Opinion

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Faxium-St. Luke's Healthcare and Affiliates as of December 31, 2016 and 2015, and the results of its operations, earnings per net assets and cash flows for the years that ended in accordance with accounting principles generally accepted in the United States of America.

Other Matters

Our audits were conducted for the purpose of forming an opinion on the consolidated financial statements as a whole. The consolidating information in Schedules 1 and 2 is presented for purposes of additional analysis of the consolidated financial statements rather than to present the financial position, results of operations and changes in net assets of the individual organizations, and is not a required part of the consolidated financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the consolidated financial statements. The consolidating information has been subjected to the auditing procedures applied in the audits of the consolidated financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the consolidated financial statements or to the consolidated financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the consolidating information is fairly stated in all material respects in relation to the consolidated financial statements as a whole.

A handwritten signature in cursive script, appearing to read 'Frost & Chambers LLP'.

FAXTON-ST LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

December 31, 2016 and 2015

(1) Description of Organization and Summary of Significant Accounting Policies

(a) Organization

Faxton-St. Luke's Healthcare (Healthcare), located in Utica, New York, is a not-for-profit healthcare delivery system providing inpatient, outpatient, emergency care, cancer treatment, rehabilitation, dialysis, maternity, child care, long term care, surgical, psychiatric and community services to residents of the Mohawk Valley Region. Admitting physicians are primarily practitioners in the local area.

Faxton-St. Luke's Healthcare Foundation (Foundation) is a not-for-profit tax-exempt corporation that carries out fund raising activities which benefit Healthcare and certain affiliates. Healthcare is the sole member of the Foundation.

Mohawk Valley Health System (MVHS), a not-for-profit corporation, is the sole corporate member of Healthcare and various other organizations involved in providing health care services to the Mohawk Valley Region.

(b) Base of Accounting

The accompanying consolidated financial statements include the consolidated accounts of Healthcare and Foundation (the Corporation). Included on the equity method of accounting are SLM Medical Office Building, Inc. (SLM), whose stock is owned by a trust of which Healthcare is the sole beneficiary, and Paraffin, LLC (Paraffin), of which Healthcare is the sole member. All significant intercompany balances and transactions have been eliminated in the consolidated financial statements.

SLM is a for-profit corporation that promotes, encourages and aids in the acquisition and construction of a medical office building to promote the operations of Healthcare. During 2016, Healthcare assumed the assets and liabilities of SLM, which primarily consisted of debt and fixed assets. Paraffin is a not-for-profit limited liability company that provides laboratory services to a local hospital.

PAXTON-ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies, Continued

(b) Base of Accounting: Continues

As a member of MVHS, Healthcare is affiliated with and transacts business with other health-care providers in the MVHS network. St. Elizabeth Medical Center (SEMC), a subsidiary of MVHS, provides acute care. Senior Network Health, LLC (SNH), a wholly owned subsidiary of MVHS, provides medical managed care to seniors. Mohawk Valley Home Care, LLC (MVHC), a wholly owned subsidiary of MVHS, provides nursing services. Visiting Nurse Association of Ulster and Oriskany County, Inc. (VNA), a wholly owned subsidiary of MVHS, provides home health care services.

(c) New Accounting Pronouncement

In April 2015, the FASB issued ASU 2015-03, "Interest - Imputation of Interest (Subtopic 835-30): Simplifying the Presentation of Debt Issuance Costs," which simplifies the presentation of debt issuance costs to be presented as a deduction from the corresponding debt liability. Amortization of debt issuance costs shall be reported as interest expense. ASU 2015-03 is effective for consolidated financial statements issued for fiscal years beginning after December 15, 2015 and is to be applied on a retrospective basis for all previous periods presented. Healthcare adopted ASU 2015-03 as of and for the year ended December 31, 2016. The retrospective adoption of ASU 2015-03 resulted in a decrease in long-term assets and long-term liabilities of approximately \$396,000 on the balance sheet for the year ended December 31, 2015, a reclassification of approximately \$76,000 of amortization of debt issuance costs from depreciation and amortization to interest expense on the consolidated statement of operations and changes in net assets and consolidated cash flows (cash flows from operations) for the year ended December 31, 2015, but had no effect on excess of revenues over expenses or net assets as of or for the year ended December 31, 2015.

(d) Use of Estimates

The preparation of consolidated financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

FAITH+ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies (Continued)

(e) Collective Bargaining Agreements

At December 31, 2016, Healthcare has approximately 65% of its employees working under collective bargaining agreements. The agreements will expire in June 2017.

(f) Cash and Cash Equivalents

Cash and cash equivalents include certain investments in highly liquid debt instruments with original maturity of three months or less, excluding temporary investments included in investments.

(g) Investments and Assets Limited as to Use

Investments in equity securities with readily determinable fair values and all investments in debt securities are measured at fair value which is determined utilizing quoted market prices. Investments in insurance group fixed annuity contracts (Guaranteed Investment Contracts) are valued at contract value, which is considered the best representation of fair value. Investment income or loss (including realized gains and losses on investments, interest and dividends) is included in the excess of revenues over expenses unless the income or loss is restricted by donor or law. Unrealized gains and losses on investments are excluded from the excess of revenues over expenses since none of the investments are classified as trading securities.

Certain investments that do not have readily determinable fair values are valued by using the net asset value (NAV) per share (or its equivalent), as a practical expedient permitted under the Fair Value Measurement Topic of the FASB Accounting Standards Codification.

The Corporation invests in various investment securities. Investment securities are exposed to various risks such as interest rate, market, and credit risks. Due to the level of risk associated with certain investment securities, it is at least reasonably possible that changes in the values of investment securities will occur in the near term and that such changes could materially affect the Corporation's net assets.

Assets limited as to use are comprised of cash held by a financial institution as required for the Corporation's major contractual commitments.

FAXIOMSE, L.L.P.'S HEALTH CARE AND AFFILIATE**Notes to Consolidated Financial Statements****(1) Description of Organization and Summary of Significant Accounting Policies, Continued****(h) Inventories**

Inventories are stated at the lower of average cost or net realizable value.

(i) Property and Equipment

Property and equipment acquisitions are recorded at cost. Depreciation is calculated over the estimated useful life of each class of depreciable asset ranging from 3 - 60 years using the straight line method. Property and equipment under capital leases and leasehold improvements are amortized on the straight-line method over the lesser of the lease term or the estimated useful life of the asset. Amortization of equipment under capital leases and leasehold improvements is included in depreciation and amortization expense.

Gifts of long-lived assets, such as land, buildings or equipment are reported as unrestricted support and are excluded from the excess of revenues over expenses, unless explicit donor stipulations specify how the donated asset must be used. Gifts of long-lived assets with explicit restrictions that specify how the assets are to be used and gifts of cash or other assets that must be used to acquire long-lived assets are reported as restricted support. Absent explicit donor stipulations about how long-lived assets must be maintained, explanations of donor restrictions are reported when the donated or acquired long-lived assets are placed in service.

(j) Amortized Debt Issuance Costs

Debt issuance costs are amortized using the straight-line method, which approximates the effective interest method, over the term of the related debt. Accumulated amortization of approximately \$769,000 and \$243,000 was recorded at December 31, 2016 and 2015, respectively. Amortization expense amounted to approximately \$76,000 in 2016 and 2015, and is included in interest expense within the consolidated statements of operations and change in net assets.

(k) Insurance Claims and Related Recoveries

The Corporation recognizes liabilities associated with malpractice claims or similar contingent liabilities when the incidents that give rise to the claims occur. Further, the liability shall not be presented net of anticipated insurance recoveries. Any amounts expected to be reimbursed from an insurance company are presented in other assets.

FAXTON-ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies, Continued

(b) Pledges Receivable

Pledges receivable are stated at the amount management expects to collect from outstanding balances. Management provides for probable non-collectible amounts through a provision for bad debts and an adjustment to a valuation allowance based on its assessment of the current status of individual accounts. Balances that are still outstanding after management has used reasonable collection efforts are written off through a charge to the valuation allowance and a credit to pledges receivable. At December 31, 2016 and 2015, no allowance was recorded. The original pledge amount at December 31, 2015 was discounted approximately \$8,000 using a discount rate of 1.91% to reflect the net present value. The original pledge amount at December 31, 2015 approximated the net present value. The pledges receivable, net of discount, due to be collected during 2017 is approximately \$171,000 and during 2014-2020 is approximately \$164,000.

(c) Beneficial Interest in Charitable Trusts

The Foundation has beneficial interests in various irrevocable split-interest agreements that are administered by independent trustees, which consist of charitable remainder trusts. The Foundation's interest in these trusts is recorded at the present value of the estimated future cash flows from the trust's assets using a discount rate that reflects current market conditions and is included in temporarily restricted net assets for property and equipment. At December 31, 2016, the value of the beneficial interest in these agreements approximated net present value as a result of the death of one of the unitrust holders. The Foundation used a discount rate of 2.06% at 2017. Changes in the fair value of the beneficial interest are reflected as change in value of charitable trusts in the consolidated statement of changes in net assets.

(d) Temporarily Restricted Net Assets

Temporarily restricted net assets are those whose use has been limited by donors to a specific time period or purpose.

HAXTON ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies (Continued)

(a) Permanently Restricted Net Assets (Endowment Funds)

The Corporation maintains various donor-restricted and board-designated funds whose purpose is to provide long-term support for its charitable programs. In classifying such funds for consolidated financial statement purposes as either permanently restricted, temporarily restricted or unrestricted net assets, the Board of Directors looks to the explicit directions of the donor where applicable and the provisions of the law of the State of New York. To constitute an endowment under New York state law, the restriction must arise from a clearly expressed donor limitation, not a limitation from within the beneficiary organization. The Board of Directors has determined that, absent donor stipulations to the contrary, the provisions of New York state law do not impose either a permanent or temporary restriction on the income or capital appreciation derived from the original gift. Therefore, all income and appreciation derived from the original gift are transferred to unrestricted net assets, absent any restrictions on the use made by the donor. Permanently restricted net assets consist of endowment funds of \$4,578,164 at December 31, 2016 and 2015, and are included in long-term investments in the consolidated balance sheets.

The Corporation utilizes an investment strategy that emphasizes preservation of principal and total return consistent with prudent levels of risk. Investments are allocated over a diversified portfolio of multiple asset classes of domestic and international equities and pooled investment funds.

Interpretation of Relevant Law

Prior to September 17, 2010, New York State law required the preservation of an endowment fund's historic dollar value. Historic dollar value is defined as the aggregate fair value in dollars of an endowment fund at the time it becomes an endowment fund, each subsequent donation to the fund at the time it is made and each accumulation made pursuant to a direction in applicable gift instrument at the time an accumulation is added to the fund. The law permitted an organization to spend the income earned by an endowment fund (i.e. interest, dividends), as well as the net appreciation (realized with respect to all assets and unrealized with respect to readily marketable assets) of such fund.

PAXTON-ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies, Continued

(c) Permanently Restricted Net Assets (Endowment Funds), Continued

Interpretation of Relevant Law, Continued

On September 17, 2010, the New York Prudent Management of Institutional Funds Act (NYPMIFA) was signed into New York State law. The most prominent feature of NYPMIFA is the elimination of the requirement to preserve an endowment fund's historic dollar value which allows an organization to spend from an endowment whose market value has dropped below the historic dollar value, as long as it is deemed prudent under the organization's policies. In accordance with NYPMIFA, an organization must consider the following factors in exercising a standard of prudence:

1. The duration and preservation of the endowment fund
2. The purposes of the organization and the donor-restricted endowment fund
3. General economic conditions
4. The possible effect of inflation and deflation
5. The expected total return from income and the appreciation of investments
6. Other resources of the organization
7. The investment policies of the organization
8. Where appropriate, alternatives to spending from the endowment fund and the possible effects of those alternatives on the organization

NYPMIFA requires compliance with donor intent when making investment or spending decisions with respect to an endowment fund. In addition, NYPMIFA creates a restriction on the portion of an endowment fund that is not classified as permanently restricted net assets, even in the absence of a donor restriction. Such portion is classified as temporarily restricted net assets until appropriated for expenditure by the organization.

The Corporation has interpreted NYPMIFA as requiring the preservation of the purchasing power of the donor restricted endowment funds absent explicit donor stipulations to the contrary. As a result, Healthcare continues to classify permanently restricted net assets at the historic dollar value of the fund in accordance with donor instructions.

Funds with Deficiencies

From time to time, the fair value of assets associated with individual donor-restricted endowment funds may fall below the level that the terms of NYPMIFA requires the Corporation to retain as a fund of perpetual duration. If this situation were to occur, the deficiency would be recorded in the Corporation's unrestricted net assets. A deficiency did not exist at December 31, 2016 or 2015.

Asset Objectives, Strategies, Spending Policy and Investment Objectives

The Corporation has adopted investment and spending policies for endowment assets that attempt to provide a predictable stream of funding to programs supported by its endowment. Under this policy, as approved by the Board of Directors, the endowment assets are to be invested in a well-diversified asset mix that can be expected to generate acceptable long-term returns at an acceptable level of risk. The Corporation targets a diversified asset allocation that places a greater emphasis on equity-based investments and seeks to achieve its long-term return objectives with a prudent risk constraints.

FACTON-ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(1) Description of Characteristics and Summaries of Significant Accounting Policies, Continued

(a) Net Patient Service Revenues and Patient Accounts Receivable

Healthcare has agreements with third-party payers that provide for payments to the various organizations within its healthcare delivery system at amounts different from their established rates. Payment arrangements include prospectively determined rates per discharge or visit, case-based reimbursement, discounted charges, per diem payments and fee-for-service payments. Healthcare recognizes patient service revenues associated with services provided to patients who have third-party coverage on the basis of contractual rates for the services rendered, including estimated retroactive adjustments due to future audits, reviews and investigations. Retroactive adjustments are included in the recognition of revenue on an estimated basis in the period the related services are rendered and adjusted in future periods as adjustments become known. As years are no longer subject to such audits, reviews and investigations, Healthcare recognizes revenue for uninsured patients who do not qualify for charity care at standard rates, less a 40% self-pay discount. On the basis of historical experience, a significant portion of Healthcare's uninsured patients will be unable or unwilling to pay for the services provided. Thus, Healthcare records a provision for bad debts related to uninsured patients in the period the services are provided. Patient service revenues, net of contractual allowances and discounts (but before the provision for bad debts) from these major payer sources, is as follows for the years ended December 31:

	<u>2016</u>			<u>Total</u>
	<u>Government payers</u>	<u>Commercial insurers and others</u>	<u>Self-pay</u>	
Patient service revenue (net of contractual allowances and discounts)	<u>\$ 163,075,720</u>	<u>161,638,548</u>	<u>1,845,045</u>	<u>326,559,313</u>
	<u>2015</u>			
	<u>Government payers</u>	<u>Commercial insurers and others</u>	<u>Self-pay</u>	<u>Total</u>
Patient service revenue (net of contractual allowances and discounts)	<u>\$ 151,712,147</u>	<u>112,022,692</u>	<u>3,380,118</u>	<u>267,115,057</u>

FANTOM-ST. LOUIS HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(1) Description of Hospital Operations and Summary of Significant Accounting Policies, Continued

(c) Net Patient Service Revenue and Patient Accounts Receivable, Continued

Revenue from the Medicare and Medicaid programs accounted for approximately 60% and 57% of Healthcare's patient service revenue, net of contractual allowances and discounts (net before the provision for bad debts) for 2016 and 2015, respectively. Laws and regulations governing the Medicare and Medicaid programs are extremely complex and subject to interpretation. As a result, there is at least a reasonable possibility that recorded estimates will change by a material amount in the near term. Patient service revenue increased approximately \$1,444,000 and \$60,000 in 2016 and 2015, respectively, related to either settlement of prior year issues or changes in estimates associated with third party issues. As of December 31, 2016, all cost reports through 2015 have been filed and Medicare cost reports through 2012 have been final settled.

Healthcare grants unsecured credits to its patients, most of whom are local residents and are covered under third-party payer agreements. The mix of revenues from patients and third-party payors at December 31 was as follows:

	<u>2016</u>	<u>2015</u>
Medicare	59%	57%
Medicaid	18%	19%
Private payors	4%	5%
Insurance and all others	19%	<u>19%</u>
	<u>100%</u>	<u>100%</u>

Patient accounts receivable are reduced by a reserve for doubtful accounts. In evaluating the collectability of patient accounts receivable, Healthcare analyzes past payment history and identifies trends for each of its major payer sources of revenue to estimate the appropriate reserve for doubtful accounts and provision for bad debts. For receivables associated with patients who have third party coverage, Healthcare analyzes contractually due amounts and provides a reserve for doubtful accounts and a provision for bad debts, if necessary (for example, for expected uncollectible deductibles and copayments, or for payors who are known to be having financial difficulties that make the realization of amounts due unlikely). For receivables associated with self-pay patients (which includes both patients without insurance and patients with deductibles and copayment balances due for which third-party coverage equals the part of the bill), Healthcare records a reserve for doubtful accounts and a provision for bad debts in the period of service based on its past experience, which indicates that many patients are unable or unwilling to pay the portion of their bill for which they are financially responsible. The difference between the standard rates for the discounted rates of negotiating and the amount actually collected after all reasonable collection efforts have been exhausted is charged off against the allowance for doubtful accounts.

FAXTON-ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies, Continued

(p) Net Patient Service Revenue and Patient Accounts Receivable, Continued

Healthcare's reserve for doubtful accounts was approximately 79% and 42% of self-pay accounts receivable at December 31, 2016 and 2015, respectively. Healthcare has not changed its charity care policy during 2016 or 2015. Healthcare does not maintain a financial allowance for doubtful accounts from third-party payors, nor did it have significant write-offs from third-party payors.

(q) Charity Care

Healthcare provides care to patients who meet certain criteria under its charity care policy without charge or at amounts less than established rates. Because Healthcare does not pursue collection of such amounts, they are not reported as net patient service revenue. During 2016 and 2015, costs incurred by Healthcare in the provision of charity care were based on the ratio of Healthcare's costs to gross charges and approximated \$740,000 and \$170,000, respectively.

(r) Contributions

Unconditional promises to give cash and other assets are reported at fair value at the date the promise is received. Conditional promises to give and indications of intentions to give are reported at fair value at the date the gift is received. Contributions are reported as either temporarily or permanently restricted support if they are received with donor stipulations that limit the use of the donated assets. When a donor restriction expires, that is, when a stipulated time restriction ends or purpose restriction is accomplished, temporarily restricted net assets are reclassified to unrestricted net assets and reported in the consolidated statements of operations and changes in net assets as net assets released from restrictions. Donor restricted contributions whose restrictions are met within the same year as received are reported as unrestricted contributions in the consolidated statements of operations and changes in net assets.

Conditional contributions or intents to give are recorded when donor-imposed stipulations have been substantially met.

PARSONS ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(L) Description of Organization and Summary of Significant Accounting Policies, Continued

(s) Excess of Revenues over Expenses

The consolidated statements of operations and changes in net assets include excess of revenues over expenses. Changes in unrestricted net assets which are excluded from excess of revenues over expenses, consistent with monetary practice, include changes in unrealized gains and losses on investments other than trading securities, the effective portion of gains and losses on derivative instruments, permanent transfers of assets to and from affiliates for other than goods and services and contributions of long-lived assets (including assets acquired using contributions which, by donor restriction, were to be used for the purpose of acquiring such assets).

(t) Income Taxes

Healthcare and the Foundation are non-for-profit corporations and have been recognized as tax-exempt pursuant to Section 501(c)(3) of the Internal Revenue Code. As of December 31, 2016 and 2015, Healthcare and the Foundation did not have any unrecognized tax benefits or age-related accrued interest or penalties. The tax years open to examination by federal and state taxing authorities are 2012 through 2016. Healthcare and the Foundation do not anticipate the total unrecognized tax benefits will change in the next twelve months.

(u) Concentration of Credit Risk

The Corporation invests cash and cash equivalents with financial institutions, and has determined that the amount of credit exposure at any one financial institution is immaterial to the Corporation's financial position.

(v) Subsequent Events

In April 2017, MVHS was notified by the New York State Department of Health of an award of \$200 million grants under the Statewide Health Care Facility Transformation Program. This program provides funds to health care providers for the purpose of strengthening and protecting continued access to health care services in communities throughout New York State which are associated with a merger, consolidation or significant corporate restructuring activity that is part of an overall transformation plan intended to create a financially sustainable system of care. This award will be used by MVHS to consolidate inpatient care from Healthcare and SEMC into una new integrated health campus. The cost projection for the new campus is estimated to be \$400 million for a 250,000 square foot facility. The remaining \$180 million will come from MVHS capital, bonds and fundraising. The planning and construction for this project is expected to take approximately 3 years.

Subsequent events have been evaluated through May 31, 2017, which is the date consolidated financial statements were issued.

(7) Investments and Assets Limited as to Use - Continued

The Corporation continually reviews investments for other-than-temporary impairment whenever the fair value of an investment is less than amortized cost and evidence indicates that an investment's carrying amount is not recoverable within a reasonable period of time. In the evaluation of whether an impairment is other-than-temporary, the Corporation considers the reasons for the impairment, its ability and intent to hold the investment until the market price recovers or the investment matures, compliance with its investment policy, the severity and duration of the impairment, and expected future performance.

The Corporation's investments in common stocks, mutual funds and pooled investment funds consist of investments diversified in several different industries. The Corporation evaluated the near-term prospects of the issuer in relation to the severity and duration of impairment. Based upon the evaluation and the Corporation's ability and intent to hold the securities for a reasonable period of time sufficient for a potential recovery of fair value the Corporation does not consider the securities in an other-than-loss position or be other-than-temporarily impaired at December 31, 2016 or 2015.

The following table presents the gross unrealized losses and fair value of the Corporation's investment portfolio with unrealized losses that are not deemed to be other-than-temporarily impaired, aggregated by investment category and length of time that individual securities have been in a continuous unrealized loss position at December 31, 2016 and 2015.

Property and equipment, net	<u>\$ 78,352,500</u>	<u>77,867,623</u>

Depreciation and amortization expense amounted to approximately \$14,373,600 and \$16,078,008 for the years ended December 31, 2016 and 2015, respectively.

(4) Direct Financing Lease

In 2011, Healthcare completed construction of a medical office building with a cost of approximately \$5 million in total owned by an affiliate of Stearns-Dickson Medical Group, P.C. (SDMG). The building is leased to SDMG under a direct financing lease for minimum lease payments of approximately \$45,000 per month through November 2021.

The consolidated balance sheet presentation of the direct financing lease at December 31 is as follows:

	<u>2016</u>	<u>2015</u>
Minimum lease payments receivable	\$ 2,671,815	3,218,131
Unearned lease income	<u>(436,942)</u>	<u>(614,168)</u>
Net investment in direct financing lease	2,234,873	2,603,963
Less current portion, included in other current assets	<u>547,116</u>	<u>547,116</u>
Long-term net investment in direct financing lease, included in other assets	<u>\$ 1,687,757</u>	<u>2,056,847</u>

RAXTON-ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(5) Extended Sick Leave

The Corporation employees are permitted to accumulate unused extended sick leave time up to specified maximum amounts. The Corporation accrues the estimated expense related to extended sick leave based on pay rates currently in effect. Upon retirement, employees who have met certain criteria shall have the option to receive payment or receive sick leave credits to pay for post-employment health insurance payments based upon the formula in place. The Corporation has accrued an estimated liability of approximately \$11,405,000 and \$10,895,000 at December 31, 2016 and 2015, respectively, for these anticipated termination payments.

Amounts are included in the accompanying consolidated financial statements as follows at December 31:

	<u>2016</u>	2015
Accrued payroll, payroll taxes and benefits	\$ 980,000	658,000
Other liabilities	<u>10,825,000</u>	<u>10,237,000</u>
	<u>\$ 11,405,000</u>	<u>10,895,000</u>

(6) Long-Term Debt and Lease Obligations

Long-term debt consists of the following at December 31:

	<u>2016</u>	2015
Variable rate demand 2006 Civic Facility Revenue Bonds (a)	\$ 15,120,000	15,740,000

(a) Healthcare, through the Oneida County Industrial Development Agency (OCAIDA), has issued serial and term Civic Facility Revenue Bonds as follows:

<u>Series</u>	<u>Term</u>	<u>Annual principal payments</u>
FAXTON-ST. LUKE'S HEALTHCARE:		
2004F - tax-exempt	10-31	\$250,000 - \$535,000
2005F - taxable	10-31	\$250,000 - \$255,000

EASTON-ST. LUKE'S HEALTHCARE AND AFFILIATE**Notes to Consolidated Financial Statements****(6) Long-Term Debt and Lease Obligations, Continued**

The bonds are insured and are collateralized by Healthcare's gross receipts (as defined), including all rights to receive such receipts whether in the form of accounts receivable, contract rights or other rights. Healthcare entered into a lease agreement with OCIDM, which also acts as security for payment of the revenue bonds. Additional security is provided by a Master Trust Indenture under which the initial Members of the Obligated Group (Healthcare and MVTIS) are jointly and severally responsible for payment of the bonds. Various agreements relating to the bonds establish covenants with which Healthcare has agreed to comply, including provisions regarding liquidity ratio, minimum debt service coverage ratio and liquidity re-funded debt. At December 31, 2016 and 2015, the obligated Group was in compliance with the covenants that are considered events of default.

The bonds bear interest based on one of three modes - the weekly rate, the term rate, or the fixed rate - the periods selected by Healthcare. The interest rate for each mode will be the current market interest rate as determined by the remarketing agent of the bonds. Healthcare used the weekly rate during 2016 and 2015. At December 31, 2016, the bonds earned interest at rates of 0.87% (tax-exempt) and 0.88% (taxable). At December 31, 2015, the bonds earned interest at rates of 0.63% (tax-exempt) and 0.40% (taxable).

The bonds are remarketed by a remarketing agent in accordance with the terms of a remarketing agreement. The bonds will be remarketed whenever a new interest rate is in effect. If the bonds cannot be remarketed, they would be due and payable under the terms of the remarketing agreement; however, the bonds are first-encumbered by an irrevocable letter of credit, which is set to expire June 26, 2018. In the event that the remarketing agent is unable to remarket the bonds, the bond trusts will make a draw on the letter of credit and the tendered variable rate bonds will become bank bonds.

FAYTON ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(6) Lease-Term Held and Lease Obligations, Continued

As a result of the aforementioned 2006 bond issuances, Healthcare has entered into two interest rate swap contracts to reduce its risk of exposure to changes in interest rates. The interest rate swaps effectively convert the variable rates of the 2006 bonds to fixed rates of 5.978% and 4.216% through June 2031. The swaps have been designated as cash flow hedges of the variable interest rates and are recorded at fair value as a liability of \$3,964,349 in other liabilities on the accompanying consolidated balance sheet as of December 31, 2016. The amounts exchanged are based on the notional amounts whereby Healthcare pays the swap counter-party interest as a fixed rate (12.16% - tax-exempt, 5.978% - taxable) and the swap counter-party pays Healthcare a variable rate (based on 75% of 1 month LIBOR 12-exempt, BMA rate - taxable). The notional amounts and fair values based on quoted market prices, of Healthcare's interest rate swaps are as follows at December 31, 2016:

	<u>Notional amount</u>	<u>Liability fair value</u>
Healthcare - Series L	\$ 5,000,000	1,140,636
Healthcare - Series F	9,400,000	2,797,713
	<u>\$ 14,400,000</u>	<u>\$ 3,938,349</u>

The mark-to-market adjustments resulted in an increase of approximately \$654,100 and \$239,000 in unrestricted net assets for the years ended December 31, 2016 and 2015, respectively. Changes in value of the swaps determined to arise from ineffectiveness of the hedges, as determined through the hypothetical derivative method, are recorded as a component of interest expense in the consolidated statements of operations and changes in net assets. For the years ended December 31, 2016 and 2015, there was no significant ineffectiveness. Healthcare reports that the loss existing in unrestricted net assets due to contractual net loss from operations within the next 12 months will not be significant.

FAXTON-ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(c) Long-Term Debt and Lease Obligations. Continued

(b) At December 31, 2016 and 2015, Healthcare had a \$24,500,000 revolving note payable with a bank, collateralized by certain investments. The revolving note payable on short term borrowings bears a daily interest rate at prime (2.75% at December 31, 2016). The revolving note payable on long-term borrowings bears a monthly interest rate at 1 month LIBOR plus 95 basis points (1.73% at December 31, 2016). The revolving note payable is available through July 2017. At December 31, 2016, a portion of the revolving note payable was reserved for four letters of credit totaling approximately \$4,112,000 primarily related to self-insured liabilities. At December 31, 2015, Healthcare had \$624,000 outstanding on the short-term borrowings. At December 31, 2016 and 2015, Healthcare had \$0 and \$5,000,000 outstanding on the long-term borrowings, respectively. The revolving note payable contains financial covenants including a debt service coverage ratio requirement, a days cash on hand requirement and a minimum unrestricted liquidity to funded debt ratio. At December 31, 2016 and 2015, Healthcare was in compliance with the covenants that are considered events of default.

(c) The note payable bears interest at a rate of 1 month LIBOR plus 2.12% (2.92% at December 31, 2016). In connection with the note payable, Healthcare has entered into an interest rate swap contract to reduce its risk of exposure to changes in interest rates. The interest rate swap effectively converts the variable rates of the note payable to a fixed rate of 3.02% through April 2017. The swap has been designated as a cash flow hedge of the variable interest rate and is recorded at fair value as a liability of \$2,701 in other liabilities on the accompanying consolidated balance sheet as of December 31, 2016. The amounts exchanged are based on the notional amounts whereby Healthcare pays the swap counter-party interest at a fixed rate (3.02%) and the swap counter-party pays Healthcare a variable rate. The notional amount and fair value based on quoted market prices of Healthcare's interest rate swap is as follows at December 31, 2016:

	Notional amount	Liability fair value
Healthcare - note payable	\$ 12,000,000	2,201

The mark-to-market adjustments resulted in an increase of \$2,711 in unrestricted net assets for the year ended December 31, 2015. Healthcare did not record mark to market adjustments for the year ended December 31, 2016. Changes in value of the swap determined to arise from ineffectiveness of the instrument as determined through the hypothetical derivative method, is recorded as a component of interest expense in the consolidated statements of operations and changes in net assets. For the years ended December 31, 2016 and 2015, there was no significant ineffectiveness. Healthcare expects that the loss existing in unrestricted net assets to be reclassified into net loss from operations within the next 12 months will not be significant.

Notes to Consolidated Financial Statements

(f) Long-Term Debt and Lease Obligations. Continued

(d) In May 2016, SLH's note payable, with principal balance of \$3,683,324, of which approximately \$1,160,000 was already allocated and recorded by Healthcare, was assigned to Healthcare. In conjunction with the assignment the bank agreed to extend the maturity date of loan through May 2021. The note payable is collateralized by the building constructed with the original funds. The note payable agreement contains various covenants including provisions regarding minimum days cash on hand, minimum debt service coverage ratio, and minimum unrestricted liquidity to funded debt ratio. At December 31, 2016, Healthcare was in compliance with the financial covenants but not considered events of default.

Healthcare leases certain equipment under capital leases. Healthcare also leases equipment and facilities under operating lease agreements, including leases with off-balance. The net book value of the equipment capital lease agreements at December 31, 2016 and 2015 amounted to approximately \$10,305,906 and \$10,551,900, respectively.

The table below reflects principal payments and the present value of future minimum capital lease payments over the next five years and beyond and assumes that the letter of credit related to the 2006 Series E and F Bonds are renewed in 2018 and that Bank of New York does not exercise its put option for the 2006 Series Bonds in 2018. If the letter of credit is not renewed, the outstanding of the 2006 Series Bonds would be due on demand, as described above, in 2018.

Years ended December 31,	Long-term Debt	Capital Lease Obligations	Operating Leases	
			Advances	Other
2017	\$ 3,185,206	4,354,064	624,113	2,530,391
2018	2,215,749	2,814,022	624,113	1,627,291
2019	2,284,524	1,577,161	624,413	475,012
2020	1,670,431	917,621	624,413	428,556
2021	1,301,287	440,530	624,413	362,623
Thereafter	<u>11,507,279</u>	<u>254,240</u>		
Total payments	\$ 22,925,177	10,184,622		
Less amounts representing Interest		<u>625,190</u>		
Present value of capital lease obligations		9,559,797		
Less current portion		<u>4,076,565</u>		
Capital lease obligations, net of current portion		\$ 5,483,232		

Rent expense under operating leases amounted to approximately \$3,619,500 and \$3,767,000 in 2016 and 2015, respectively.

FAXTON-ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(7) Temporarily and Permanently Restricted Net Assets

Temporarily restricted net assets are available for the following purposes at December 31:

	<u>2016</u>	<u>2015</u>
Funds held in trust by others (for capital)	\$ 1,483,000	1,365,000
Children's Medical Network	795,729	676,974
Cocumens Learning Center	117,978	117,827
Scholarship assistance	31,199	31,199
Programs	311,354	709,970
Renovations	<u>339,869</u>	<u>1,199,162</u>
	<u>\$ 3,879,129</u>	<u>4,359,132</u>

Permanently restricted net assets at December 31 are restricted to:

	<u>2016</u>	<u>2015</u>
Investments to be held in perpetuity; the income from which is to support charity care, health care services, scholarships and facility maintenance	<u>\$ 4,523,164</u>	<u>4,523,164</u>

(8) Pension Plans

The Corporation sponsors a 401(k) plan that covers substantially all full-time non-union employees. The Corporation contributes 4% of eligible compensation to this plan (5% for employees hired before December 1, 2001). The Corporation also makes a matching contribution up to 100% of the first 4% of employee contributions to the 401(k) plan. The Corporation also sponsors a 403(b) plan that covers union and certain other employees. The Corporation contributes 5% of eligible compensation to the plan and also makes a matching contribution for employees with a year of service, up to 100% of the first 5% of employee contributions to the 403(b) plan.

Pension expense under all plans aggregated approximately \$6,486,000 in 2016 and approximately \$6,166,000 in 2015.

FAXTON-ST. LUKE'S HEALTHCARE AND AFFILIATE**Notes to Consolidated Financial Statements****(9) Contingencies***Professional Liability Insurance*

Malpractice insurance coverage is provided under a blanket-made basis policy, which provides for \$1,000,000 coverage for each claim, not to exceed \$3,000,000 in aggregate annual coverage. Additionally, the insurance policy includes a per claim \$50,000 uninsured deductible, not to exceed \$250,000 in aggregate annual coverage. A deposit for the \$250,000 has been established as required. In addition, the Corporation has purchased excess insurance policies. Claims alleging malpractice have been asserted against the Corporation and are currently in various stages of litigation. There are known claims and incidents that may result in the assertion of additional claims, as well as claims from unknown incidents that may be asserted relating to services provided to patients. Accrued malpractice losses in management's opinion provide an adequate reserve for loss contingencies. The Corporation has accrued a liability included in other liabilities of approximately \$3,933,000 and \$12,012,000 at December 31, 2016 and 2015, respectively. A corresponding receivable included in other assets of approximately \$16,575,000 and \$6,152,000, respectively, has been recorded to record anticipated recoveries from the insurance company.

Self-Insured Risks

The Corporation and certain affiliates are self-insured for employee healthcare costs. The group has obtained a stop loss coverage policy for healthcare costs to supplement its self-insurance coverage. An accrual for healthcare claims, including those incurred but not reported, is included in the current period estimated self-insured liabilities.

Workers' Compensation Insurance

The Corporation is primarily self-insured for employee workers' compensation and disability claims along with certain of its affiliates for certain years 2007 and prior. During 2016 and 2015, the Corporation and certain of its affiliates were enrolled in a high deductible plan with an insurance company with a deductible of \$500,000 for each employee and occurrence, and an aggregate deductible of \$7,900,000. Self-insured and high deductible liabilities are based on claims filed and estimates for claims incurred but not reported. As required by the State of New York Workers' Compensation Board, the Corporation has purchased letters of credit to guarantee payment of workers' compensation claims. Stop loss insurance for losses exceeding certain amounts has been purchased for workers' compensation. Each affiliate is jointly and severally liable for the satisfaction of all obligations. These liabilities are recorded at discounted amounts using a 3% and 4% interest rate in 2016 and 2015, respectively. From 2010 to 2014, the Corporation and certain of its affiliates were insured in a retrospectively rated workers' compensation and disability policy and premiums are accrued based on the ultimate cost of the experience to date of the Corporation and its affiliates. The Corporation has accrued a liability included in other liabilities and a corresponding receivable in other receivables for anticipated recoveries from the insurance company of approximately \$7,375,000 and \$6,647,000 as of December 31, 2016 and 2015, respectively.

<u>2016</u>	SLM	Paraffin
Total assets	\$ -	241,363
Total liabilities	-	158,333
Net assets	\$ -	83,030
Total revenues	1,241,621	1,916,562
Total expenses	(1,140,472)	(1,621,299)
Excess of revenues over expenses	\$ 101,149	295,263
 <u>2015</u>	 SLM	 Paraffin
Total assets	\$ 4,548,163	145,743
Total liabilities	3,800,291	152,542
Net assets (deficit)	\$ 747,872	(6,799)
Total revenues	1,326,114	1,826,796
Total expenses	(1,214,396)	(1,902,501)
Excess (deficiency) of revenues over expenses	\$ 111,718	(75,705)

The following are approximate dollar amounts of significant transactions and balances with affiliated entities:

20. Affiliate Medical Center

During 2016 and 2015, Healthcare advanced funds to the Medical Center. As of December 31, 2015, there was \$3,750,000 outstanding on this advance which is included within current portion of due from affiliates. There were no amounts outstanding as of December 31, 2016. Total interest charged in 2016 and 2015 amounted to approximately \$28,030 and \$11,000, respectively.

PAXTON-ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(19) Affiliated Entities, Continued

St. Luke's Medical Center, Continued

Healthcare has contracted with the Medical Center to provide certain operational services, including shared employment, provider coverage, patient care, rental of office space, and other shared services as needed. In 2016 and 2015, Healthcare purchased services totalling approximately \$2,609,000 and \$1,720,000 respectively, from the Medical Center and sold services totalling approximately \$3,968,000 and \$2,115,000 respectively.

During 2015, Healthcare forgave a \$450,000 liability payable from the Medical Center which related to a joint venture prior to their affiliation. This was recorded as a transfer to affiliate for the year ended December 31, 2015.

St. Luke's Home

Healthcare has contracted with the Home to provide certain operational services. In 2016 and 2015, Healthcare purchased approximately \$1,233,000 and \$1,132,000, respectively for services rendered and rental of space within the Home. Healthcare billed the Home for services totalling approximately \$495,000 and \$469,000, respectively.

Living Future Association

Healthcare charges VNA for certain shared operating expenses paid on its behalf. Additionally, during 2015, Healthcare requested funds to VNA to pay down the outstanding balance on their short-term borrowing arrangement. At December 31, 2016 and 2015, there was \$500,000 outstanding on this advance. Healthcare charged interest on a monthly basis through May 2016 using a monthly LIBOR rate plus 70 basis points. Total interest charged in 2016 and 2015 amounted to approximately \$2,000. The net receivable, before reserve, as of December 31, 2016 and 2015 was approximately \$1,280,000 and \$1,602,000, respectively. In 2015, Healthcare recorded a reserve for \$1,665,000 on the amounts due from VNA based on management's evaluation of VNA's historical and expected future cash flows. This reserve for doubtful accounts was recorded in the consolidated statements of operations and consolidated changes in net assets as a reduction of unextracted net assets.

Healthcare billed VNA for certain shared services totalling approximately \$47,000 and \$109,000 in 2016 and 2015, respectively.

FAXTON-ST. LUKE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(10) Affiliated Entities—Continued

Health Network Health

During 2016, Healthcare paid in full amounts previously loaned from SNH. The balance of the loan was approximately \$90,000 at December 31, 2015.

Healthcare billed SNH for certain shared services totaling approximately \$169,000 and \$229,000 in 2016 and 2015, respectively.

New Hartford Scanner Associates

New Hartford Scanner Associates (NHSA) is a joint venture between Healthcare and several radiologists to provide CT scan services. Healthcare receives income from NHSA, which amounted to approximately \$663,000 and \$621,000 in 2016 and 2015, respectively. Healthcare charges NHSA for equipment, which amounted to approximately \$129,000 in 2016 and 2015.

Midmark Valley EC, LLC

Faxton-St. Luke's Healthcare, St. Elizabeth Medical Center and Midmark Valley EC Holdings, LLC entered into an agreement for the purpose of owning and operating a single-specialty ambulatory surgery center, exclusively providing gastroenterology services in Oneida County. As part of the agreement, the three members formed the Midmark Valley EC, LLC (MVEEC), a New York limited liability company. Healthcare maintains a 50% interest and sharing ratio in MVEEC. The amount recognized as income based on Healthcare's share is approximately \$219,000 and \$210,000 for the years ended December 31, 2016 and 2015, respectively.

Healthcare recognizes income from these joint ventures in other revenue.

FAXI ON-ST. LUCIE'S HEALTHCARE AND AFFILIATE

Notes to Consolidated Financial Statements

(13) Fair Value of Financial Instruments

The Fair Value Measurement Topic of the FASB Accounting Standards Codification requires disclosures that categorize assets and liabilities measured at fair value based on a fair value hierarchy. The hierarchy prioritizes the inputs into three levels based on the extent to which inputs used in measuring fair value are observable in the market. Each fair value measurement is reported in one of the three levels which is determined by the lowest level input that is significant to the fair value measurement in its entirety.

The following methods and assumptions were used by the Corporation in estimating the fair value of its financial instruments:

Cash and Cash Equivalents: The amount reported on the balance sheet for cash and cash equivalents approximates fair value.

Market Funds and Common Stock: The fair values, which are the amounts reported on the consolidated balance sheets, are based on quoted market prices, if available, or estimated using quoted market prices for similar securities.

Fooled Investment Funds: Fair values are based on NAV per share as determined by the fund's investment manager or general partner.

Estimated Third-Party Payor Settlements: The amount reported on the consolidated balance sheet for estimated third-party payor settlements approximates its fair value.

Long-Term Debt: The fair value of fixed rate issues was determined by price quotes from an investment banker or estimated using discounted cash flow analysis based on the current incremental borrowing rate of similar types of borrowing arrangements (considered a Level 2 input). The fair value of variable rate debt approximates its reported value on the consolidated balance sheet. Fixed rate long-term debt is the only financial instrument with a difference between recorded and fair value. The recorded value of fixed rate long-term debt on the consolidated balance sheet at December 31, 2015 approximates its fair value.

The following tables present information about assets and liabilities that are measured at fair value on a recurring basis as of December 31 and indicate the fair value hierarchy of the valuation techniques utilized to determine such fair value. In general, fair values determined by Level 1 inputs utilize quoted prices in active markets for identical assets or liabilities. The Corporation considers a security that makes at least weekly to have an active market. Fair values determined by Level 2 inputs utilize data points that are observable, such as quoted prices, interest rates and yield curves. Investments valued using NAV as a practical expedient are classified as Level 3 if the investment is redeemable at NAV (as adjusted for subsequent gains or losses through the effective date of redemption) in the near-term, generally within a 3-month period, without significant restrictions on redemption. Fair values determined by Level 2 inputs are unobservable data points for the asset or liability, and include situations where there is little, if any, market activity for the asset or liability. Investments valued using NAV as a practical expedient are classified as Level 3 if the investment is not redeemable in the near-term or has significant restrictions.

	\$ 35,325,259		
<u>Paired investment funds</u>	2015		
	Total fair value	Redemption frequency	Redemption notice periods
Hedge funds	\$ 19,124,150	Monthly	90 days
Real estate funds	4,816,977	Monthly	None
Bond funds	3,956,277	Monthly	14 days
Foreign equity funds	7,475,230	Monthly	14 days
	\$ 35,360,634		

Hedge Funds

Hedge fund strategies involve funds with investment managers who have the authority to invest in various asset classes at their discretion and who have the ability to employ multiple investment strategies within their respective portfolios. Investment strategies may include the following categories: merger arbitrage, distressed, long/short credit, fixed income arbitrage and convertible arbitrage. These funds attempt to reduce individual manager risk by allocating capital among multiple investment managers. Funds with hedged strategies generally hold securities or other financial instruments for which a ready market exists and may include index bonds, put or call options, swaps, currency hedges, and other instruments and are valued accordingly.

FAXTON-ST. LEGER'S HEALTHCARE AND AFFILIATE**Notes to Consolidated Financial Statements****(13) Fair Value of Financial Instruments, Continued*****Real Estate Funds***

Real estate funds hold interests in publicly traded equity securities issued by real estate investment trusts ("REIT"), private real estate partnerships, and privately held REITs. Strategies of these funds often require the estimation of fair values by the fund managers in the absence of readily determinable market values. Because of the inherent uncertainties of valuation, these estimated fair values may differ significantly from values that would have been used had a ready market existed, and the differences could be material. Such valuations are determined by fund managers and generally consider variables such as operating results, comparable earnings multiples, projected cash flows, recent sales prices, and other pertinent information, and may reflect discounts for the illiquid nature of certain investments held. Moreover, the fair values of the Corporation's interests in shares or units of these funds, because of the liquidity and capital commitment terms that vary depending on the specific fund or pertinent agreement, may differ from the fair value of the funds' underlying net assets.

Bond Funds

Bond funds are invested in a globally diversified portfolio of primarily debt and debt-like securities. The funds are controlled by an investment manager. The investment manager generally will acquire positions in debt securities and currencies that are rated investment grade by Standard & Poor's Credit Market Services, or, if unrated, an equivalent rating determined by the investment manager at its sole discretion.

Foreign Equity Funds

Foreign equity funds are invested in a diversified portfolio of equity securities of companies and/orally located in any country other than the United States and Canada. The funds are controlled by an investment manager.

Consolidated Financial Statements

December 31, 2016 and 2015

INDEPENDENT AUDITORS' REPORT

The Board of Directors
Midweek Valley Health System

We have audited the accompanying consolidated financial statements of St. Elizabeth Medical Center and Affiliate, which comprise the consolidated balance sheets as of December 31, 2016 and 2015, and the related consolidated statements of operations and changes in net assets and cash flows for the years then ended, and the related notes to the consolidated financial statements.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with auditing standards generally accepted in the United States of America. These standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

The Board of Directors
Page 3 of 3

Opinion

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of St. Elizabeth Medical Center and Affiliates as of December 31, 2016 and 2015, and the results of its operations, changes in net assets and cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

ST. ELIZABETH MEDICAL CENTER AND AFFILIATE

Notes to Consolidated Financial Statements

December 31, 2016 and 2015

(1) Description of Organization and Summary of Significant Accounting Policies

(a) Organization

St. Elizabeth Medical Center (the Medical Center) is a voluntary non-for-profit acute care facility located in Utica, New York. The Medical Center provides medical, surgical, and psychiatric inpatient services. In addition, the Medical Center offers outpatient general diagnosis, ambulatory care, physical therapy, and emergency care services.

St. Elizabeth Medical Center Foundation, Inc. (the Foundation) is a non-for-profit organization whose primary purpose is to solicit, collect, and invest funds on behalf of the Medical Center.

Mohawk Valley Health System (MVHS), a non-for-profit corporation, and Partners in Ministries, Inc., which is sponsored by the Sisters of St. Francis of the Neumann Communities, are co-members of the Medical Center. MVHS is also the sole corporate member of various other organizations involved in providing healthcare services in the Mohawk Valley Region.

(b) New Accounting Pronouncements

In April 2015, the FASB issued ASU 2015-02, "Interest - Imputation of Interest (Subtopic 835-30): Simplifying the Presentation of Debt Issuance Costs", which simplifies the presentation of debt issuance costs to be presented as a deduction from the corresponding debt liability. Amortization of debt issuance costs shall be reported as interest expense. ASU 2015-02 is effective for financial statements issued for fiscal years beginning after December 15, 2015 and is to be applied on a retrospective basis for all previous periods presented. The Medical Center adopted ASU 2015-02 as of and for the year ended December 31, 2016. The retrospective adoption of ASU 2015-02 resulted in a decrease to long-term assets and long-term liabilities of \$665,561 on the balance sheet for the year ended December 31, 2015, a reclassification of \$88,641 of amortization of debt issuance costs from depreciation and amortization to interest expense on the consolidated statement of operations and changes in net assets and cash flows (cash flows from operations) for the year ended December 31, 2015, but had no effect on deficiency of revenues over expenses or net assets as of or for the year ended December 31, 2015.

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies, Continued

(c) Basis of Accounting

The accompanying consolidated financial statements include the accounts of the Medical Center and the Foundation. The Medical Center is the sole corporate member of the Foundation. For financial reporting purposes, the Medical Center is considered the reporting entity. All significant intercompany balances and transactions have been eliminated in the consolidated financial statements.

As a member of MVHS, the Medical Center is affiliated with and transacts business with other healthcare providers in the MVHS network. Foxon-St. Luke's Healthcare (Healthcare), provides acute care. Saint's Network Health, LLC (SNH), provides Medicaid managed care to seniors. St. Luke's Residential Healthcare Facility (SLHF), provides long-term healthcare. Mohawk Valley Home Care, LLC (MVHC), provides nursing services. Visiting Nurse Association of Utica and Oneida County, Inc. (VNA), provides home healthcare services.

(d) Basis of Estimates

The preparation of consolidated financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from these estimates.

(e) Collective Bargaining Agreements

As December 31, 2016, the Medical Center had approximately 58% of its employees working under collective bargaining agreements. Certain agreements expire in September 2017. One agreement expires in June 2019.

(f) Cash and Cash Equivalents

Cash and cash equivalents include certain investments in highly liquid debt instruments with original maturity of three months or less at date of purchase excluding amounts classified as assets limited as to use.

ST. ELIZABETH MEDICAL CENTER AND AFFILIATE

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies, Continued

(g) Investments and Assets Limited as to Use

Investments, profits limited as to use and payment plan assets are reported at fair value. FASB ASC No. 820, Fair Value Measurement (ASC 820), defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. See note 12 for discussion on fair value measurements.

Investment income or loss (including realized gains and losses on investments, interest and dividends) is included in the excess (deficiency) of revenues over expenses unless the income or loss is restricted by donor or law. Unrealized gains and losses on investments are excluded from the excess (deficiency) of revenues over expenses since none of the investments are classified as trading securities.

The Medical Center invests in various investment securities. Investment securities are exposed to various risks, such as interest rate, market and credit risks. Due to the level of risk associated with certain investment securities, it is at least reasonably possible that changes in the values of investment securities will occur in the near term and that such changes could materially affect the Medical Center's net assets.

(h) Inventories

Inventories are stated at the lower of average cost or net realizable value.

(i) Property and Equipment

Property and equipment acquisitions are recorded at cost, if purchased, or at fair value at the date of acquisition when acquired by gift. Property and equipment which is purchased under capital leases is stated at the lower of the present value of minimum lease payments at the beginning of the lease term or the fair market value at the inception of the lease.

Depreciation of property and equipment is calculated over the estimated useful life of each class of depreciable asset ranging from 2-40 years using the straight-line method. Property and equipment held under capital leases is amortized on the straight-line method over the lesser of the estimated useful life of the asset or the lease term. Amortization of equipment under capital leases is included in depreciation and amortization expense.

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies, Continued

(i) Property and Equipment, Continued

Gifts of long-lived assets, such as land, buildings or equipment are reported at the restricted support and are excluded from the excess (deficiency) of revenues over expenses, unless explicit donor stipulations specify how the donated assets must be used. Gifts of long-lived assets with explicit restrictions that specify how the assets are to be used and gifts of cash or other assets that must be used to acquire long-lived assets are reported as restricted support. Absent explicit donor stipulations about how long these long-lived assets must be maintained, expectations of donor restrictions are reported when the donated or acquired long-lived assets are placed in service.

(j) Amortized Debt Issuance Costs

Debt issuance costs are amortized using the straight-line method, which approximates the effective interest method over the terms of the related debt obligations. At December 31, 2016 and 2015, the accumulated amortization on the debt issuance costs was approximately \$1,255,000 and \$1,167,000, respectively. Amortization expense amounted to approximately \$86,000 in 2016 and 2015, respectively, and is included in interest expense within the consolidated statements of operations and changes in net assets.

(k) Temporarily Restricted Net Assets

Temporarily restricted net assets are those whose use has been limited by donors to a specific time period or purpose.

(l) Permanently Restricted Net Assets (Endowment Funds)

The Medical Center maintains various donor-restricted and limited-designated funds whose purpose is to provide long-term support for its charitable programs. In classifying such funds for financial statement purposes as either permanently restricted, temporarily restricted or unrestricted net assets, the Board of Directors looks to the explicit directions of the donor when applicable and the provisions of the laws of the State of New York. To constitute an endowment under New York State law, the restriction must arise from a clearly expressed donor limitation, not a limitation from within the beneficiary organization. The Board of Directors has determined that, absent donor stipulations to the contrary, the provisions of New York State law do not impose either a permanent or temporary restriction on the income or capital appreciation derived from the original gift. Therefore, all income and appreciation derived from the original gift are transferred to unrestricted net assets absent any restriction on the use made by the donor. Permanently restricted net assets consist of endowment funds of \$528,864 and \$513,105 at December 31, 2016 and 2015, respectively, and are included in assets limited as to use in the consolidated balance sheet.

ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE

Notes to Consolidated Financial Statements

(1) Discussion of Organization and Summary of Significant Accounting Policies, Continued

(i) Permanently Restricted Net Assets (Endowment Funds)

The Medical Center utilizes an investment strategy that emphasizes preservation of principal and total return consistent with prudent levels of risk. Investments are allocated over a diversified portfolio of multiple asset classes.

Integration of Relevant Law

Prior to September 17, 2010, New York State law required the preservation of an endowment fund's historic dollar value. Historic dollar value is defined as the aggregate fair value in dollars of an endowment fund at the time it becomes an endowment fund, each subsequent donation to the fund at the time it is made, and cash accumulation made pursuant to a restriction in a specific gift instrument at the time an accumulation is added to the fund. The law permitted an organization to spend the income earned by an endowment fund (i.e. interest, dividends), as well as the net appreciation (realized with respect to all assets and unrealized with respect to readily marketable assets) of such fund.

On September 17, 2010, the New York Prudent Management of Institutional Funds Act (NYPMIFA) was signed into New York State law. The most prominent feature of NYPMIFA is the elimination of the requirement to preserve an endowment fund's historic dollar value which allows an organization to spend from an endowment whose market value has dropped below the historic dollar value, as long as it is deemed prudent under the organization's policies. In compliance with NYPMIFA, an organization must consider the following factors in exercising a standard of prudence:

1. The duration and preservation of the endowment fund
2. The purposes of the organization and the donor-restricted endowment fund
3. General economic conditions
4. The possible effect of inflation and deflation
5. The expected total return from income and the appreciation of investments
6. Other resources of the organization
7. The investment policies of the organization
8. Where appropriate, alternatives to spending from the endowment fund and the possible effects of those alternatives on the organization

NYPMIFA requires compliance with donor intent when making investments or spending decisions with respect to an endowment fund. In addition, NYPMIFA creates a reservation on the portion of an endowment fund that is not classified as permanently restricted net assets, even in the absence of a donor restriction. Such portion is classified as temporarily restricted net assets until appropriated for expenditure by the organization.

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies, Continued

(f) Permanently Restricted Net Assets (Endowment Funds), Continued

Interpretation of Relevant Law, Continuance

The Medical Center has interpreted NYPMHA as requiring the preservation of the purchasing power of the donor restricted endowment funds absent explicit donor stipulations to the contrary. As a result, the Medical Center continues to classify permanently restricted net assets at the historic dollar value of the fund in accordance with donor instructions.

Stock with Deficiency

From time to time, the fair value of assets associated with individual donor restricted endowment funds may fall below the level that the donor or NYPMHA requires the Medical Center to maintain as a fund of perpetual duration. If the situation were to occur, the deficiency would be recorded in the Medical Center's unrestricted net assets. A deficiency did not exist at December 31, 2016 or 2015.

Asset Objectives, Strategies, Spending Policy, and Investment Objectives

The Medical Center has adopted investment and spending policies for endowment assets that attempt to provide a predictable stream of funding to programs supported by its endowment. Under this policy, as approved by the Board of Directors, the endowment assets are to be invested in a well-diversified asset mix that can be expected to generate acceptable long-term returns at an acceptable level of risk. The Medical Center targets a diversified asset allocation that places a greater emphasis on equity-based investments and seeks to achieve its long-term return objectives within prudent risk constraints.

(g) Insurance, Claims and Related Reserves

The Medical Center recognizes liabilities associated with malpractice claims or similar contingent liabilities when the incidents that give rise to the claims occur. Further, the liability shall not be presented net of anticipated insurance recoveries. Any amounts expected to be reimbursed from an insurance company are presented in other assets. For the years ended December 31, 2016 and 2015, \$345,000 and \$702,000, respectively, has been recognized in these statements as a liability and a corresponding asset has been recorded to account for the anticipated recovery from the insurance company.

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies (Continued)

(n) Net Patient Service Revenue and Patient Accounts Receivable

The Medical Center has agreements with third party payors that provide for payments at amounts different from their established rates. Inpatient acute care services rendered are paid on a prospectively determined rates per discharge in accordance with the Federal Prospective Payment System (PPS) for Medicare and generally at negotiated or otherwise pre-determined amounts under the provisions of the New York Health Care Reform Act (HCRA) and related legislation for all other payors. Reimbursement rates for Medicaid, Workers' Compensation, and No-Fault are determined on a prospective basis defined by HCRA that is based on clinical, diagnostic, and other factors. Inpatient outpatient and outpatient services are paid at various rates under different arrangements with third-party payors, commercial insurance carriers and health maintenance organizations. The basis for payment under these agreements includes prospectively determined per diem and per visit rates, discounts from established charges, fee schedules, and reasonable cost. Medicare outpatient services are paid under a prospective payment system whereby services are reimbursed on a predetermined amount for each outpatient procedure, subject to various mandated modifications.

Net patient service revenue is recognized in the period services are performed, is reported at estimated net realizable amounts from patients, third party payors, and others for services rendered and includes estimated retroactive revenue adjustments due in future audits, reviews and investigations. Retroactive adjustments are considered in the recognition of revenue on an estimated basis in the period the related services are rendered, and such amounts are adjusted in future periods as adjustments become known or as years are no longer subject to such audits, reviews, and investigations.

In addition, under HCRA, all Non-Medicare payors are required to make surcharge payments for the subsidization of indigent care and other health care initiatives. The percentage amounts of the surcharge varies by payor and applies to a broader array of health care services. Also, certain payors are required to make a covered lives payment to further fund the indigent care pool and other health care initiatives for inpatient services or through voluntary election to pay a covered lives assessment directly to the New York State Department of Health (DOH). The funds are distributed to the hospitals based on each hospital's level of bad debt, in relation to all other hospitals. The Medical Center recorded distributions of approximately \$1,165,000 and \$1,200,000 for the years ended December 31, 2016 and 2015, respectively, from the indigent care pool.

ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies, Continued

(ii) Net Patient Service Revenue and Patient Accounts Receivable, Continued

Both federal and New York State regulations provide for certain adjustments to current and prior years' payment rates and indigent care pool distributions based on industry-wide and hospital-specific data. The Medical Center has established estimates based on information presently available of the amounts due to or from Medicare, Medicaid, workers' compensation and no-fault payors and insurers due from the indigent care pool for such adjustments. Those adjustments which can be reasonably estimated have been provided for in the accompanying consolidated financial statements. The Medical Center has estimated the potential impact of such adjustments based on the most recent information available.

The Medical Center is required to prepare and file various reports of actual and allowable costs annually. Provisions have been made in the consolidated financial statements for prior and current years' estimated final settlements to the Medicare program and other third-party payors. The difference between the amount provided and the actual final settlement is recorded as an adjustment to net patient service revenue in the year the final settlement is determined. The Medical Center recorded adjustments for estimated settlements with third-party payors related to either settlement of prior year issues or changes in estimates resulting in an increase of approximately \$3,610,000 and \$987,000 in net patient service revenue for the years ended December 31, 2016 and 2015, respectively. The laws and regulations governing the reimbursement for healthcare services are extremely complex and subject to ever-pretorian. Third party payors retain the right to review and propose adjustments to amounts requested and recorded by the Medical Center. As a result, there is at least a reasonable possibility that recorded estimates will change by a material amount in the near future. As of December 31, 2016, all cost reports through 2013 have been filed and Medicare cost reports through 2013 have been final settled. In accordance with FASB ASC Topic 954 any amounts recognized as net debt reduce net patient service revenue in the period in which the liability is recognized.

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies, Continued

(a) Net Patient Service Revenue and Patient Accounts Receivable, Continued

For the years ended December 31, 2016 and 2015, revenue from the Medicare and Medicaid programs accounted for approximately 6.1% and 6.2%, respectively, of the Medical Center's net patient service revenue. Patient service revenue, net of contractual allowances and discounts (but before the provision for bad debts) from these major payer sources, was as follows for the years ended December 31:

	2016			Total
	Government payers	Commercial insurance and others	Self-pay	
Patient service revenue (net of contractual allowances and discounts)	\$ <u>133,051,718</u>	<u>78,850,529</u>	<u>1,165,222</u>	<u>213,067,469</u>
		2015		
	Government payers	Commercial insurance and others	Self-pay	Total
Patient service revenue (net of contractual allowances and discounts)	\$ <u>123,793,101</u>	<u>79,166,600</u>	<u>6,522,384</u>	<u>209,482,085</u>

Additions to the allowance for doubtful accounts are made by means of the provision for bad debts. Accounts written off as uncollectible are deducted from the allowance and subsequent recoveries are added. The amount of the provision for doubtful accounts is based upon management's assessment of historical expected net collections, business and economic conditions, trends in federal and state governmental health care coverage and other collection indicators. Services rendered to individuals when payment is expected and ultimately not received are written off in the allowance for doubtful accounts.

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(1) Description of Organization and Summary of Significant Accounting Policies, Continued

(n) Net Patient Service Revenue and Patient Accounts Receivable, Continued

The Medical Center grants unsecured credit to its patients, most of whom are local residents and are insured under third party payer agreements. The mix of gross receivables from patients and third party payors at December 31 was as follows:

	2016	2015
Medicare	19%	19%
Medicaid	14%	16%
Self pay	12%	13%
Insurance and all others	55%	52%
	<u>100%</u>	<u>100%</u>

The Medical Center's reserve for doubtful accounts was approximately 0.5% of self pay accounts receivable at December 31, 2016 and 2015. The Medical Center has not changed its charity care policy during 2016 or 2015. The Medical Center does maintain and allowance for doubtful accounts of approximately 5% at December 31, 2016 and 2015 from third-party payors.

(o) Charity Care

The Medical Center provides care to patients who meet certain criteria under its charity care policy without charge or at amounts less than its established rates. The Medical Center's policy is not to pursue collection of amounts determined to qualify as charity care; therefore, these amounts are not reported in net patient service revenue. During 2016 and 2015, costs incurred by the Medical Center in the provision of charity care were based on the ratio of the Medical Center's costs to gross charges and approximated \$340,000 and \$225,000 for the years ended December 31, 2016 and 2015, respectively.

(p) Contributions

Unconditional promises to give cash and other assets are reported at fair value at the date the promise is received, which then are revalued as cost. Conditional promises to give and indications of intentions to give are reported at fair value at the date the gift is received. Contributions are reported as either temporarily or permanently restricted support if they are received with donor stipulations that limit the use of the donated assets. When a donor restriction expires, that is, when a stipulated time restriction ends or purpose restriction is accomplished, temporarily restricted net assets are reclassified as unrestricted net assets and reported in the consolidated statements of operations and changes in net assets as net assets released from restrictions.

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(f) Description of Organization and Summary of Significant Accounting Policies - Continued

(g) Medicare and Medicaid Electronic Health Record Incentive Program

The American Recovery and Reinvestment Act of 2009 included provisions for implementing health information technology under the Health Information Technology for Economic and Clinical Health Act (HITECH). The provisions were designed to increase the use of electronic health record (EHR) technology and to establish the requirements for a Medicare and Medicaid incentive payment program beginning in 2011 for eligible providers that adopt and meaningfully use certified EHR technology. Eligibility for annual Medicare incentive payments is dependent on providers demonstrating meaningful use of EHR technology in each period over a four-year period. Initial Medicaid payments are available to providers that adopt, implement or upgrade certified EHR technology. Providers must demonstrate meaningful use of such technology in subsequent years to qualify for additional Medicaid incentive payments.

The Medical Center uses a grant accounting model to recognize revenue for the Medicare and Medicaid EHR incentive payments. EHR incentive payments are recognized as revenue when it is reasonably assured that the meaningful use criteria for the required period of time have been achieved and the revenue will be received. The Medical Center recognized Medicare incentive payments totaling approximately \$1,131,000 for the year ended December 31, 2013 as other operating revenue in the accompanying consolidated statements of operations and changes in net assets. The Medical Center did not recognize any incentive payments in 2016. Income from Medicare incentive payments will be subject to retrospective adjustment upon final settlement of the applicable cost report from which payments are calculated. Additionally, the Medical Center's compliance with the meaningful use criteria is subject to audit by the federal and New York State governments.

(h) Excess (Deficiency) of Revenues Over Expenses

The consolidated statements of operations and changes in net assets include excess (deficiency) of revenues over expenses. Changes in unrestricted net assets which are excluded from excess (deficiency) of revenues over expenses, consistent with industry practice, include unrealized gains and losses on investments other than trading securities, permanent transfers of assets to and from affiliates for other than goods and services, contributions of long-lived assets (including assets acquired using contributions which by donor restriction were to be used for the purposes of acquiring such assets), and pension liability adjustments in accordance with FASB ASC Subtopic 710-30 Compensation-Retirement Benefits, Defined Benefit Plans - Pension.

ST. ELIZABETH MEDICAL CENTER
AND AFFILIATES

Notes to Consolidated Financial Statements

(C) Description of Organization and Summary of Significant Accounting Policies, Continued

(9) Income Taxes

The Medical Center and the Foundation have been recognized as tax-exempt pursuant to Section 501(c)(3) of the Internal Revenue Code. As of December 31, 2016 and 2015, the Medical Center and the Foundation did not have any unrecognized tax benefits or any related accrued interest or penalties. The tax years open to examination by federal and state taxing authorities are 2014 through 2016. The Medical Center does not anticipate that the unrecognized tax benefits will change in the next twelve months.

(10) Concentration of Credit Risk

The Medical Center invests cash and cash equivalents with financial institutions, and has determined that the amount of credit exposure to any one financial institution is immaterial to the Medical Center's financial position.

(11) Reclassifications

Certain 2015 amounts have been reclassified to conform to the 2016 consolidated financial statement presentation.

(12) Subsequent Events

Subsequent events have been evaluated through May 22, 2017, which is the date consolidated financial statements were available to be issued.

In April 2017, MCHS was notified by the New York State Department of Health of an award of \$400 million granted under the Statewide Health Care Facility Transformation Program. This program provides funds to health care providers for the purpose of strengthening and protecting continued access to health care services in communities throughout New York State which are associated with a merger, consolidation or significant corporate restructuring activity that is part of an overall transformation plan intended to create a financially sustainable system of care. This award will be used by MCHS to consolidate inpatient care from Healthcare and the Medical Center into one new integrated health campus. The cost projection for the new campus is estimated to be \$400 million for a 750,000 square-foot facility. The remaining \$300 million will come from MCHS capital, bonds and fundraising. The planning and construction for this project is expected to take approximately 5 years.

**St. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(2) Assets Limited to Use and Investments, Continued

Investment income, excluding temporarily restricted, is as follows for the years ended December 31:

	<u>2016</u>	<u>2015</u>
Investment income:		
Interest and dividends, net of fees	\$ 526,893	345,020
Realized gain (loss) on sale of investments	<u>28,664</u>	<u>(3,337)</u>
	\$555,557	341,683
Change in net unrealized gains and losses and investments	<u>205,981</u>	<u>(367,537)</u>
	\$ <u>\$761,538</u>	<u>\$94,146</u>

The Medical Center continually reviews investments for other-than-temporary impairment whenever the fair value of an investment is less than amortized cost and evidence indicates that an investment's carrying amount is not recoverable within a reasonable period of time. In the evaluation of whether an impairment is other-than-temporary, the Medical Center considers the reasons for the impairment, its ability and intent to hold the investment until the market price recovers or the investment matures, compliance with its investment policy, the severity and duration of the impairment, and expected future performance.

The Medical Center's investments in common stocks, mutual funds, debt securities and corporate bonds consist of investments diversified in several different industries. The Medical Center evaluated the near term prospects of the issuer in relation to the severity and duration of impairment. Based upon the evaluation and the Medical Center's ability and intent to hold the securities for a reasonable period of time sufficient for a forecasted recovery of fair value, the Medical Center does not consider the securities in an unrealized loss position to be other-than-temporarily impaired at December 31, 2016 or 2015.

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(3) Property and Equipment

Property and equipment at December 31 are as follows:

	<u>2016</u>	<u>2015</u>
Land	\$ 768,605	768,605
Land improvements	6,014,339	3,564,923
Buildings	75,731,912	74,610,510
Fixed equipment	35,732,449	33,513,219
Leasehold improvement	65,948,782	63,151,979
Property and equipment under capitalized leases	<u>3,717,904</u>	<u>3,717,904</u>
	207,914,091	209,747,140
Less accumulated depreciation and amortization	<u>144,344,469</u>	<u>133,840,376</u>
	63,569,622	69,891,764
Construction-in-progress	938,408	<u>920,361</u>
Property and equipment, net	\$ 64,508,030	<u>\$ 69,812,125</u>

Depreciation and amortization expense for 2016 and 2015 was approximately \$10,455,000 and \$11,616,300, respectively.

Construction-in-progress at December 31, 2016 consists of various infrastructure and information technology projects at the Medical Center.

(4) Short-Term Borrowings

The Medical Center maintains a line of credit with a lender which provides for borrowings up to \$6,000,000 at December 31, 2016 secured by the Medical Center's College of Nursing building and up to \$7,000,000 of eligible accounts receivable, as defined. Borrowings against this line of credit are payable on demand and bear interest at the lender's prime rate. There were no borrowings on the line as of December 31, 2016 and 2015.

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(c) Long-Term Debt and Lease Obligations

Long-term debt at December 31 is as follows:

(a) In April 1999, the Medical Center obtained financing of \$15,000,000 through the placement of Oneida County Industrial Development Agency Certificate Facility Revenue Bonds, Series 1999-A (the Series 1999-A Bonds). The Series 1999-A Bonds mature as follows, \$1,960,000 through December 2019 with interest payable semiannually at an annual rate of 5.750%; and an additional \$9,575,000 through December 2029 with interest payable semiannually at an annual rate of 5.875%. The Medical Center is required to make annual sinking fund payments to be used for mandatory redemption of the Series 1999-A Bonds ranging from \$620,000 to \$1,770,000 through December 2029. The Medical Center is also required to maintain certain covenants under the Bond agreement including minimum debt service coverage. The Medical Center is in compliance with its covenants at December 31, 2016 and 2015.

Notes to Consolidated Financial Statements

(5) Long-Term Debt and Lease Obligations, Continued

- (b) In June 1998, the Medical Center obtained additional financing of \$15,000,000 through the placement of Cicada County Industrial Development Agency Civic Facility Revenue Bonds, Series 1998-B (the Series 1998-B Bonds). The Series 1998-B Bonds mature as follows: \$465,000 through December 2019 with interest payable semiannually at an annual rate of 6.00% and an optional \$5,235,000 through December 2020 with interest payable semiannually at an annual rate of 6.00%. The Medical Center is required to make annual sinking fund payments to be used for mandatory redemption of the Series 1998-B Bonds ranging from \$150,000 to \$770,000 through December 2020. The Medical Center is also required to maintain certain covenants under the Bond agreement including minimum debt service coverage. The Medical Center is in compliance with its covenants at December 31, 2016 and 2015.
- (c) In June 2006, the Medical Center obtained additional financing of \$14,000,000 through the placement of Cicada County Industrial Development Agency Multi-Mode Variable Rate Civic Facility Revenue Bonds Series 2006-A (the Series 2006-A Bonds). The Series 2006-A Bonds were issued on a parity basis with the 1999-A and 1999-B Bonds. The Series 2006-A Bonds mature in June 2026. Interest is paid monthly based on the Securities Industry and Financial Markets Association Municipal Swap Index. The average rate was 0.77% and 0.09% in December 31, 2016 and 2015, respectively. The Medical Center is required to make sinking fund payments to provide for the redemption of the Series 2006-A Bonds ranging from \$70,000 to \$1,020,000 through 2026. Using both philanthropic funds raised through the Foundation and proceeds from the sale of a building, the Medical Center has made early sinking fund payments. As further security for the Bonds, the Medical Center has entered into a Reimbursement Agreement with USBC Bank USA, pursuant to which the Bank has issued an irrevocable direct pay letter of credit aggregating the principal amount. The letter of credit will expire on June 21, 2018. The Medical Center is also required to maintain certain covenants under the Bond agreement including minimum debt service coverage and minimum day's cash on hand. The Medical Center is in compliance with its covenants at December 31, 2016 and 2015.
- (d) In September 2014, the Medical Center obtained financing through a term note, for equipment, with a bank in the amount of \$1,100,000. The note is collateralized by the related equipment. The term note is payable in monthly installments including interest fixed at 3.95%. The term note matures in September 2019. The Medical Center is also required to maintain certain covenants including minimum debt service coverage. The Medical Center is in compliance with its covenants at December 31, 2016 and 2015.

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(5) Long-Term Debt and Lease Obligations, Continued

- (c) The Medical Center has loans outstanding with the Sisters of St. Francis of the Neumann Communities. All loans are interest free through 2022. Expected principal payments are approximately \$297,000 for 2017, \$390,000 for 2018 and \$183,000 for 2019 through terms or agreements. In the event that timely principal payments are not made, the Medical Center will be charged a penalty at 5%.

Under the Indenture of Trust for the Series 1999-A, Series 1999-B, and Series 2006-A Bonds, the Medical Center is required to maintain certain levels of reserve accounts with the trustee. Amounts under this agreement have been classified as either current or noncurrent based upon the anticipated release date of such funds or contractual obligation. The Series 1999-A Bonds, Series 1999-B Bonds, and Series 2006-A Bonds, described in (a), (b) and (c), respectively, are secured by a mortgage lien on the property and equipment of the Medical Center, as a security interest in assets limited to its use.

Future annual principal payments on long-term debt are summarized as follows:

2017	\$ 1,619,248
2018	2,165,591
2019	2,197,360
2020	2,129,616
2021	2,429,616
Thereafter	16,966,050
	<u>\$ 37,743,281</u>

The Medical Center leases various buildings and equipment from vendors with renewable lease options. The leases were determined to be capital type leases pursuant to generally accepted accounting principles. The leases have expiration dates from 2017 through 2022 and interest rates ranging from 1.62% - 10.72%.

The net book value of the equipment capitalized under lease agreements at December 31, 2016 and 2015 amounted to approximately \$1,424,000 and \$1,756,000, respectively. Total future principal and interest payments on these obligations amount to approximately \$1,170,000 of which approximately \$240,000 represents interest at December 31, 2016.

Notes to Consolidated Financial Statements

(5) Lease-Term Debt and Lease Obligations, Continued

Future minimum lease principal payments under noncancelable operating leases (with initial or remaining lease terms in excess of one year) and future minimum capital lease payments as of December 31, 2016 are:

	<u>Capital Lease</u>	<u>Operating Lease</u>
2017	\$ 311,325	718,850
2018	96,343	365,994
2019	107,633	275,504
2020	119,619	275,504
2021	102,940	275,504
Thereafter	123,343	<u>660,000</u>
Total minimum lease payments	991,213	\$ <u>2,594,354</u>
Less current portion	<u>341,425</u>	
	<u>\$ 649,788</u>	

Total rental expense for the years ended December 31, 2016 and 2015 for all operating leases was approximately \$988,000 and \$1,067,000, respectively.

(6) Temporarily and Permanently Restricted Net Assets

Temporarily restricted net assets, consisting of cash and cash equivalents and short-term investments at December 31 are available for the following purposes:

	<u>2016</u>	<u>2015</u>
Capital improvements and other	\$ 209,178	257,225
Scholarships	128,751	116,310
Donor-restricted endowments	<u>131,632</u>	<u>74,254</u>
	<u>\$ 469,561</u>	<u>447,789</u>

Permanently restricted net assets, consisting of cash and cash equivalents and long term investments at December 31 are available for the following purposes:

	<u>2016</u>	<u>2015</u>
Endowments for scholarships	\$ 417,442	406,181
Foundation endowment funds	<u>528,864</u>	<u>512,165</u>
	<u>\$ 946,306</u>	<u>918,346</u>

**ST. ELIZABETH MEDICAL CENTER

Notes to Consolidated Financial Statements

(7) Pension Plans

The Medical Center has a non-asset liability defined benefit plan which covers substantially all employees. Benefits are based on compensation and years of service. In 2003, the Medical Center applied for and received a favorable determination that its defined benefit plan is that of a nonexempting church plan under Section 410(d) of the Internal Revenue Code. Under status as a church plan, the Medical Center has elected to reimburse the minimum amounts calculated as if the plan were subject to ERISA funding requirements.

Effective December 31, 2010, the Plan was amended to freeze benefit accruals for non-bargaining unit members. Effective January 1, 2012, the Plan was amended to freeze benefit accruals for the employees of one of the collective bargaining units. Effective April 1, 2013, the Plan was amended to freeze benefit accruals for the final collective bargaining unit.

The following tables present the changes in the Medical Center's benefit obligation and plan assets and funded status as of December 31:

	<u>2014</u>	<u>2013</u>
Change in benefit obligation:		
Benefit obligation at beginning of year	\$ 106,440,336	108,603,253
Interest cost	5,556,747	5,314,593
Actuarial gain	(672,057)	(1,601,055)
Benefits paid	<u>(3,184,420)</u>	<u>(2,872,415)</u>
Benefit obligation at end of year	\$ 108,140,610	<u>109,444,356</u>
Change in plan assets:		
Fair value of plan assets at beginning of year	55,999,275	58,098,618
Actual return on plan assets, net	5,271,920	(1,912,855)
Employee contributions	3,372,500	2,817,000
Benefits and administrative expenses paid	<u>(3,318,215)</u>	<u>(3,000,408)</u>
Fair value of plan assets at end of year	<u>61,325,295</u>	<u>56,999,275</u>
Funded status and accrued pension liability	\$ <u>(46,815,314)</u>	<u>(50,440,961)</u>

The Medical Center made a contribution to the Plan in the amount of \$257,000, which was in-transit as of December 31, 2013 and has been recorded as a reduction of the accrued pension liability.

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(7) Pension Plans (Continued)

The Medical Center had \$31,546,578 and \$34,336,144 of actuarial net losses in unrestricted net assets as of December 31, 2016 and 2015, respectively, which have not yet been recognized as a component of net periodic pension cost. The estimated net loss expected to be amortized from unrestricted net assets into net periodic pension cost over the next fiscal year is \$1,774,038.

The components of net periodic pension cost for the years ended December 31:

	2016	2015
Administrative costs	\$ 127,000	\$ 0
Interest cost	5,556,747	5,514,587
Expected return on plan assets	(4,921,117)	(4,714,516)
Amortization of unrecognized net loss	1,975,989	3,531,470
Net periodic pension cost	<u>\$ 2,738,619</u>	<u>\$ 4,331,541</u>

The weighted average assumptions used to determine projected benefit obligations at December 31 are as follows:

	2016	2015
Discount rate	5.24%	5.21%
Expected long-term return on plan assets	7.50%	8.00%

The weighted average assumptions used to determine net periodic benefit cost for the years ended December 31 are as follows:

	2016	2015
Discount rate	5.21%	4.95%
Expected long-term return on plan assets	9.00%	8.00%

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(c) Pension Plans, Continued

The Medical Center's defined benefit plan's investment objectives are to emphasize total return specifically through long-term growth of capital while avoiding excessive risk, and to achieve a balanced return of current income and modest growth of principal. In order to achieve these objectives, the Medical Center has established the following asset allocation guidelines:

<u>Asset Class</u>	<u>Minimum</u>	<u>Maximum</u>	<u>Practical</u>
Large cap equity	30%	50%	41%
Small cap equity	-	15%	5%
Mid cap equity	-	15%	6%
International equity	-	15%	16%
Fixed income	20%	80%	39%
Cash and cash equivalents	-	5%	-

The expected long-term rate of return on plan assets is reviewed annually, taking into consideration the asset allocation, historical returns on the types of assets held, and the current economic environment. Based on these factors, it is expected that the pension assets will earn an average of 7.50% per annum.

Following is a description of the valuation methodologies used for assets measured at fair value. There have been no changes in the methodologies used as of December 31, 2016 or 2015.

Money market fund: Valued at amortized cost which approximates fair value.

Common stock: Valued at the closing price reported on the active market on which the individual securities are traded.

Mutual funds: Valued at the daily closing price as reported by the fund. Mutual funds held by the Plan are open-end and closed-end mutual funds that are registered with the U.S. Securities and Exchange Commission. These funds are required to publish their daily net asset value (NAV) and to transact at that price. The mutual funds held by the Plan are deemed to be actively traded.

Common trust: Valued based on the NAV per unit without further adjustment. NAV is based upon the fair value of the underlying investments.

Alternative investments: The investments consist of partnership and hedge funds. These securities are estimated using current information obtained from the general partner or investment manager for the respective funds. Investments in private equity partnerships are generally estimated using partner's capital balances, and their fair value of investments are generally estimated using the NAV.

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(7) Pension Plans (Continued)

The preceding methods described may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, although the plan believes its valuation methods are appropriate and consistent with other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different fair value measurement at the reporting date.

The following table presents, by level, within the fair value hierarchy, the Plan's assets as of December 31.

<u>Assets at fair value as of December 31, 2016</u>				
	<u>Level 1</u>	<u>Level 2</u>	<u>Level 3</u>	<u>Total</u>
Money market fund	\$ -	943,520	-	943,520

Notes to Consolidated Financial Statements

(7) Pension Plans - Continued

The following table sets forth a summary of changes in the fair value of the Plan's level 3 assets for the year ended December 31:

	<u>Amounts, in thousands</u>	
	<u>2018</u>	<u>2017</u>
Fair value at January 1	\$ 4,082,700	4,059,197
Unrealized gain, net	<u>76,633</u>	<u>21,502</u>
Fair value at December 31	\$ <u>4,159,333</u>	<u>4,080,700</u>

The Medical Center expects to contribute \$2,948,000 to its defined benefit plan in 2017.

The following approximate benefit payments, which reflect expected future service, as appropriate, are expected to be paid:

	<u>Benefit payments</u>
2017	\$ 3,048,000
2018	4,275,000
2019	4,603,000
2020	4,800,000
2021	5,237,000
2022 - 2026	30,814,000

ST. ELIZABETH MEDICAL CENTER AND AFFILIATE

Notes to Consolidated Financial Statements

(7) Retiral Plans - Continued

The Medical Center also offers a 401(k) defined contribution retirement plan to substantially all of its non-union employees. Members of UTCW collective bargaining unit received contributions equal to other participants, however their plan assets are administered by representatives selected by UTCW. Effective March 1, 2013, members of the New York State Nurses Association were admitted to the plan in conjunction with the freezing of the defined benefit plan as discussed above. Each year participants may contribute up to 7.5% of eligible pretax compensation, as defined in the Plan, subject to maximum annual additions allowed by law. Employees that are not covered by UTCW collective bargaining unit are eligible to receive a safe harbor contribution equal to 3% of compensation. Further, for 2016 and 2015 non-union employees are eligible for a discretionary match on their contributions based on years of service as detailed below:

<u>Years of service</u>	<u>% of employer contribution (up to 4%)</u>
1 - 9	50% (or 3% in most cases)
10 - 19	75% (or 5% in most cases)
20+	100% (or 4% in most cases)

Contributions to this plan approximated \$4,141,000 and \$4,196,000 for the years ended December 31, 2016 and 2015, respectively.

The Medical Center also has a 457(b) plan covering certain highly compensated employees. Participants may contribute amounts up to statutory limits on an annual basis. Under the plan the Medical Center contributes between 2% and 12% of earnings over the 401(k) annual maximum amount depending on the employee's years of service. The Medical Center's contributions to the plan approximated \$27,000 for the year ended December 31, 2016. There were no contributions made by the Medical Center for the year ended December 31, 2015. An asset and liability representing the total amount invested in the 457(b) plan totalling approximately \$500,000 and \$333,000 has been recorded as an other long term asset and other long-term liability at December 31, 2016 and 2015, respectively.

(8) Contingencies

Professional Liability Insurance

Since 1986, the Medical Center's exposure for medical malpractice risk has been insured under a claims-made policy, which provides for \$1,000,000 coverage per each claim, not to exceed \$3,000,000 in aggregate annual coverage. In addition, the Medical Center has purchased excess omnibus policies. If the claims-made policy is not renewed or replaced with equivalent insurance, claims based on occurrences during the claims-made coverage period but reported subsequent to such a change will be uninsured. The Medical Center has a right under its present policy to acquire extended coverage if it decides to terminate its claims-made coverage, nor does it expect any difficulty in renewing the policies as they become due.

**ST. ELIZABETH MEDICAL CENTER
AND AFFILIATE**

Notes to Consolidated Financial Statements

(8) Contingencies (Continued)

Professional Liability Insurance (Continued)

In the ordinary course of operations, the Medical Center is named as a defendant in various lawsuits, or events occur which could lead to litigation, claims, or assessments. Although the outcome of such matters cannot be predicted with certainty, management believes that exposure to coverage is sufficient to cover payment of potential claims, and that the final outcome of such matters will not have a material adverse effect on the financial position of the Medical Center.

Workers' Compensation Insurance

Prior to January 1, 2012, the Medical Center obtained coverage for workers compensation insurance through the Healthcare Underwriters Mutual Risk Management Group (Group). The Medical Center is one of four members of the Group. The Group is an unincorporated association of healthcare providers in the upstate region of New York State and was organized under a trust agreement for the purpose of establishing a workers' compensation self-insurance group. The Group is governed by a board of trustees consisting of one trustee for each member. Members of the Trust are jointly and severally liable for Group activities and liabilities. The Group is no longer active and has been in the process of settling outstanding claims since December 31, 2011. At December 31, 2016 and 2015, the Medical Center has not been notified of any assessments resulting from participation in the Trust; however, has accrued approximately \$1,085,000 and \$587,000, respectively, in long-term portions of estimated insurance liabilities to cover any future assessments.

Since January 1, 2012, the Medical Center has been self-insured for these liabilities. Liabilities from asserted and unasserted workers compensation claims are accrued based on actuarial estimates that incorporate the Medical Center's prior experience, the nature of each claim or incident, relevant trend factors, and estimated recoveries, if any, on unasserted claims. The Medical Center has accrued approximately \$3,996,000 and \$3,368,000 for the years ended December 31, 2016 and 2015, respectively. These accruals are part of estimated insurance liabilities on the consolidated balance sheet. In conjunction with the self-insurance program, the Medical Center is required to post a letter of credit with the State of New York Workers Compensation Board. This letter of credit totaled \$1,542,512 as of December 31, 2016 and 2015.

Health Insurance

Effective January 1, 2015, the Medical Center is self-insured for medical benefits. Based on claims experience, the Medical Center has accrued approximately \$767,000 and \$400,000, respectively, in current portions of estimated insurance liabilities as December 31, 2016 and 2015, respectively, for non-domestic claims to be paid within a year end.

Notes to Consolidated Financial Statements

(9) Affiliate Entities

Facility- St. Luke's Healthcare

During 2016 and 2015, Healthcare advanced funds to the Medical Center to pay down the outstanding balance on their short term borrowing arrangement. As of December 31, 2015, there was \$3,750,000 outstanding on this advance which is included within our exporation of due to affiliates. There were no advances outstanding at December 31, 2016. Total interest charged in 2016 and 2015 amounted to approximately \$24,000 and \$15,000, respectively.

The Medical Center and Healthcare have contracted with each other to provide certain operational services, including shared employment, provider coverage, patient care, rental of office space, and other shared services. In 2016 and 2015, the Medical Center purchased services totaling approximately \$1,508,000 and \$3,115,000, respectively, from Healthcare and sold services totaling approximately \$5,600,000 and \$1,470,000, respectively.

During 2015, Healthcare began a \$0.5M, 000 liability payable from the Medical Center which related to a joint venture prior to their utilization. This was recorded as a contribution from affiliate for the year ended December 31, 2015.

Net receivables (payables) at December 31 from (to) affiliates for services performed and billing of other pass through expenses to and from the Medical Center are as follows:

	<u>2016</u>	<u>2015</u>

Notes to Consolidated Financial Statements

(12) Fair Value of Financial Instruments

The Fair Value Measurement Topic of the FASB Accounting Standards Codification requires disclosures that categorize assets and liabilities measured at fair value based on a fair value hierarchy. The hierarchy prioritizes the inputs into three levels based on the extent to which inputs used in measuring fair value are observable in the market. Each fair value measurement is reported in one or the three levels which is determined by the lowest level input that is significant to the fair value measurement in its entirety.

The following methods and assumptions were used by the Medical Center in estimating the fair value of its financial instruments:

Cash and cash equivalents – consists of money market funds that are valued at the net asset value (NAV) reported by the financial institution.

Certificates of deposit – consists of fixed-maturity certificates of deposit that are valued based on discounted future cash flows using the rates currently offered for deposits of similar remaining maturities.

Exchange traded equity securities and mutual funds – consists of actively traded equity securities and the Medical Center's investment in publicly traded mutual funds. Actively traded equity securities are valued on a continuous basis and mutual funds are valued at the closing price reported on an active market on which the individual securities are traded.

U.S. Government and agency debt securities, structured corporate funds and municipal bonds – consists of the Medical Center's directly owned securities and the Medical Center's investment in securities that are issued by the U.S. government or publicly owned government-sponsored enterprises. Securities owned directly by the Medical Center and securities issued by the U.S. government or publicly owned government-sponsored enterprises are valued based on quoted market prices or dealer quotes where available (Level 1 measurements). If quoted market prices are not available, fair values are based on quoted market prices of comparable instruments or, if necessary, matrix pricing from a third party pricing vendor to determine fair value (Level 2 measurements). Matrix prices are based on quoted prices for securities with similar coupons, ratings, and maturities rather than on specific bids and offers for the designated security.

Notes to Consolidated Financial Statements

(12) Fair Value of Financial Instruments, Continued

The following tables present information about assets and liabilities that are measured at fair value on a recurring basis as of December 31 and indicate the fair value hierarchy of the valuation techniques utilized to determine such fair value. In general, fair values determined by Level 1 inputs utilize quoted prices in active markets for identical assets or liabilities. The Medical Center considers a security that trades at least weekly to have an active market. Fair values determined by Level 2 inputs utilize data points that are observable, such as quoted prices, interest rates and yield curves. Investments valued using NAV as a practical expedient are classified as Level 2 if the investment is redeemable at NAV (as adjusted for subsequent gains or losses through the effective date of redemptions) in the near-term (generally within a 90-day period) without significant restrictions or redemption. Fair values determined by Level 3 inputs are non-observable data points for the asset or liability, and include situations where there is little, if any, market activity for the asset or liability. Investments valued using NAV as a practical expedient are classified as Level 3 if the investment is not redeemable in the near-term or has significant restrictions.

The Medical Center's financial assets recognized at fair value in the consolidated financial statements on a recurring basis consist of investments and assets limited as to use. The Medical Center's consolidated financial statements do not contain financial liabilities or nonfinancial assets and liabilities that are recognized at fair value on a recurring basis. In general, and where applicable, management used quoted prices in active markets for identical assets to determine fair value.

Notes to Consolidated Financial Statements

(12) Fair Value of Financial Instruments (Cont'd)

Various assets and liabilities are not required to be measured at fair value on a recurring basis. The fair value of the Medical Center's long-term debt approximates carrying value at December 31, 2016 and 2015. These fair values are estimated using discounted cash flow analysis, based on the Medical Center's current incremental borrowing rate for similar types of borrowing arrangements. The carrying value of all remaining financial assets and liabilities not required to be measured at fair value on a recurring basis approximate fair value at December 31, 2016 and 2015.

104 FINAL & REGULAR MAIL

Ms. Sharon Palmer
Assistant Vice President
Mohawk Valley Health System
P.O. Box 4938
Utica, NY 13504

Re: RFA# 1505060266, Health Care Facility Transformation Program (HCFTP): Oneida County

Dear Ms. Palmer:

We are pleased to inform you that, based on the application Mohawk Valley Health System submitted under the above referenced RFA that was released in November 2016, you have been awarded a grant amount up to \$390,000,000.

Please note that this letter is not a final commitment to provide funds, but rather is evidence of the intention on the part of the Department of Health (DOH) to enter into a Master Grant Contract (MGC) with Mohawk Valley Health System subject to compliance with the conditions set forth in the RFA and the attached Addendum. The final amount to be awarded is subject to compliance with these conditions, and may be less than the grant amount set forth above. Master Grant Contracts are also contingent upon approval of the Attorney General and the Office of the State Comptroller.

Conditions to the award are listed in the Addendum and must be completed prior to the execution of your MGC with DOH and distribution of grant proceeds.

Should you have any questions concerning HCFTP, Oneida County or the Award Letter, please address your inquiry to oneidacounty@health.ny.gov. In order to properly address your questions, please also include a contact person, contact e-mail, and contact phone number in the body of your e-mail.

Sincerely,

Howard A. Zucker, M.D., J.D.
Commissioner
New York State Department of Health

Gernard P. Bushnett
President
Dominion Authority of the State of New York

Addendum

The following conditions must be satisfied before the Award Grant Contract is finalized and executed:

- The sole source of funds for the HCFTP Oneida County capital grant program will be bond proceeds, which by law may only be used for certain eligible capital works or purposes. Therefore, tax and bond counsel to the Donority Authority of the State of New York (DASNY) must confirm that the grant expenditures identified in your application are capital costs that are eligible to be funded from proceeds of State-supported bonds as described in the Request for Applications Section III. C. This award is subject to review of detailed project budgets to ascertain that bond proceeds will only be used for capital costs for federal income tax purposes and that comprise capital works or purposes under the State Finance Law. In addition, it is subject to review of the use of matching funds proposed by NYMS to determine whether all non-qualifying costs can be paid with the match. If the Project includes IT or other technology equipment, the estimate, quote or bid must clearly distinguish among the hardware, software, licenses, training, intellectual property and other Project components. All components should be clearly identified and described. In addition, the amount of grant funds to be spent on each component must be stated.

If the above condition is not satisfied within 60 days of this notification, this award letter will expire. Upon written request from the applicant and an explanation acceptable to the Department of Health (DOH) as to why the required information cannot be provided to allow DASNY tax and bond counsel to conclude its review within 60 days, the DOH may, in its sole discretion, grant an extension to allow more time to provide the information necessary to make a final determination of the grant award.

- DOH shall have determined that the applicant and/or the Project have obtained, or are eligible to obtain, all necessary regulatory approvals and/or waivers such as DOH Certificate of Need (CON) approval if required. In order to expedite the CON process, CONDOH requirements should be considered as soon as possible.
- Professional estimates, quotes, bids, or other include from a design professional or equipment vendor setting forth the total Project cost. If the Project includes IT or other technology equipment, the estimate, quote or bid must clearly distinguish among the hardware, software, licenses, training, intellectual property, and other Project components. All components should be clearly identified and described. In addition, the amount of grant funds to be spent on each component must be stated.
- Evidence of the completion of a review pursuant to the State Environmental Quality Review Act (SEQRA). A DASNY representative will contact you in order to determine the appropriate level of review to be conducted.
- If the Project is comprised of multiple and/or phased components, DOH may, after consultation with DASNY, enter into a MOU for those components of a Project that are Type II and may be properly segmented, including but not limited to planning, design or engineering costs, or for which a SEQRA review has been completed, so long as all other conditions of the Award Letter have been satisfied.

- If the Project consists of the purchase of real property, an appraisal meeting the Uniform Standards of Professional Appraisal Practice (USPAP) standards for the real property to be acquired with grant funds must be provided, along with a completed Real Property and Fixed Asset Certification from the applicant in the form attached hereto.
- Financial Commitments in an amount sufficient to finance the full project cost less HCFTP: Orange County grant proceeds must be provided. Examples of acceptable commitments include:
 - Bank account and investment account statements;
 - Contractual agreements for the provision of such funds;
 - Board Resolution authorizing Institutional Funds to be utilized for purposes of the project;
 - Signed, notarized letter from a Senior Authorized Officer of the organization authorizing Institutional Funds to be utilized for purposes of the project;
 - Donor pledges, agreements and receipts;
 - Grant award letters, agreements and contracts;
 - Updated Letter of Interest including terms and conditions from a recognized lending institution, consistent with what was provided in your RFA submission;
 - Bond documents; or
 - Other documentation demonstrating that sufficient funds for project completion have been secured.

Please note that pledges, award letters with unsatisfied contingencies, grant applications, pending loan applications, and other non-final commitments do not constitute secured sources of funding. You may utilize this Award Letter to assist you in obtaining other sources of financing for the project value less the final grant award.

- The Project shall have been approved by the Public Authorities Control Board.
- Pursuant to the Request for Applications Section IV, G., the New York State Department of Health established a Minority and Woman Owned Business participation goal of 30% on any subcontracted labor or services, equipment, materials, or any combined purchase of the foregoing greater than \$25,000 under a contract awarded from this solicitation. All contractors must submit an acceptable M/WBE Utilization plan reflective of this goal. In addition, successful awardees are required to certify they have an acceptable Equal Employment Opportunity policy statement.
- Master Grant Contracts are also contingent upon approval of the Attorney General and the Office of the State Comptroller.

APPLICANT LETTERHEAD

REAL PROPERTY AND FIXED ASSET CERTIFICATION OF MONHAYK VALLEY HEALTH SYSTEM

In connection with the receipt by Mohawk Valley Health System (the "Grantee") of a Health Care Facility Transformation Program (HCFTF) Oneida County grant in the amount of \$200,000.000 (the "Grant") to fund Mohawk Valley Health System Oneida County (the "Project"), which includes the acquisition of real property located at [] the "Property"), the undersigned, an authorized officer of the Grantee, does hereby certify under penalty of perjury, that the following statements are true and correct:

1. Grantee has engaged an independent third party appraiser to conduct an appraisal of the Property to be acquired with the proceeds of the Grant (the "Appraisal"). The Appraisal was prepared in accordance with the Uniform Standards of Professional Appraisal Practice ("USPAP"). A copy of the Appraisal is attached hereto.
2. The Grantee's acquisition of the Property and the sale of the Property constitutes an arms-length transaction. The Grantee covenants that it will not utilize Grant proceeds to pay more than the appraised value of the Property as set forth in the Appraisal.
3. The Grantee and its officers, and the seller of the Property and its officers, have no relationship to each other and have acted independently of the other in connection with the Grantee's acquisition of the Property. During the negotiation for the acquisition of the Property by the Grantee, neither the Grantee nor the seller was subject to any pressure or duress from the other party, nor from any third party.
4. Proceeds of the Grant will not be used to make payments to any firm, company, association, corporation or organization owning the Property, any member of the Grantee's Board of Directors or other governing body, or any officer or employee of the Grantee, or a member of the immediate family of any member of the Grantee's Board of Directors or other governing body, officer, or employee of the Grantee has any ownership, control or financial interest in the Property, including but not limited to an officer or employee directly or indirectly responsible for the preparation or the determination of the terms of the purchase and sale contract between the Grantee and the seller or other arrangement pursuant to which the Property is to be acquired. For purposes of this paragraph, "ownership" means ownership, directly or indirectly, of more than five percent (5%) of the assets, stock, bond or other dividend or interest bearing securities; and "control" means acting as a member of the board of directors or other governing body or as an officer in any of the above.

Re: Memorandum of Agreement between
Mohawk Valley Health System,
City of Utica and County of Onondaga

Dear Mr. Ferris:

Enclosed for your records is one fully executed copy of the Memorandum of Agreement relative to parking for the consolidated hospital campus facility.

Sincerely,

Linda E. Clive
Executive Secretary to the County Attorney
Onondaga County Department of Law
300 Park Avenue
Utica, New York 13501

MEMORANDUM OF AGREEMENT

This Memorandum of Agreement (hereafter "MOA") is signed this 22 day of ~~August~~ August, 2017 by and between Mohawk Valley Health System (hereafter "MVHS") a New York Not For Profit Corporation with offices at 1656 Champlin Avenue, New Hartford, New York 13502, the City of Ulster, New York, (hereafter "City") a municipal corporation under the laws of the State of New York with offices at 1 Kennedy Plaza Ulster, New York 13502, and the County of Oneida, (hereafter "County") a municipal corporation under the laws of the State of New York with offices at 800 Park Avenue, Ulster, New York 13501.

RECITALS

1. **Purpose:** MVHS is a not for profit corporation and legal affiliation of Faxon St. Luke Healthcare and St. Elizabeth Medical Center engaged in providing hospital and related medical services to residents in both Oneida County and throughout the general region. MVHS presently operates and provides medical services at St. Elizabeth Medical Center located in the City of Ulster, and Faxon St. Luke's Healthcare comprised of the former Faxon Hospital campus in Ulster, New York and the St. Luke's Hospital Campus in New Hartford, New York. The 2016-2017 New York State Budget has made available to MVHS funding in the amount of three hundred million dollars (\$300,000,000) for the purpose of developing and constructing a consolidated, up to date hospital facility in downtown Ulster to replace existing structures which have become outmoded. (the new hospital project). The estimated cost for the project is two hundred twenty three million five hundred seventeen thousand eight hundred seventy five and no/100ths dollars (\$235,517,875), which includes the refurbishment of Kennedy Garage and the development of the proposed parking facility discussed herein, with funding above and in addition to the state grant to be from additional public and private funding to be secured by MVHS with the assistance of City, County, and Mohawk Valley HDGF.

The development of such a consolidated hospital campus will achieve operational efficiencies and create opportunities for greater development of clinical research and medical education programs. Further, it has been determined that locating the new, consolidated hospital campus in downtown Ulster would present opportunities for enhanced medical care for the community as well as economic revitalization of the downtown area. The proposed hospital site has generally been identified as the area bounded by Oriskany, Columbia and State Streets, and Crossway. The signatories to this MOA seek to identify and commit to ways in which they can cooperate to fulfill these purposes.

2. Intent of this MOA: This MOA is to be signed by Scott H. Perra in his capacity as Chief Executive Officer of MVHS, Robert M. Palmeri in his capacity as Mayor of the City of Utica and Anthony J. Picante, Jr. in his capacity as County Executive of Oneida County. It is the intent of the MOA to identify, delineate, and agree to a plan for cooperation by and among MVHS, City, and County to further the purpose of a consolidated and new hospital campus in downtown Utica. To work cooperatively toward that purpose, and to contribute financially, through in kind and monetary contributions, and otherwise toward that purpose. All of the signatories to this MOA acknowledge and agree that the primary purpose of this MOA is to specify, give definition, and agree to ways and means by which the parties may cooperate and contribute to achieve the purpose of a new hospital campus. It is understood and agreed that at this time various elements of funding the proposed parking garage hereafter mentioned are dependent upon completion of a process of application, award, and release of funding. Once this information becomes known, the parties will enter into an agreement or agreements (the "Definitive Agreement(s)") more specifically identifying funding sources and amounts, together with further schedules and details with regard to mutual obligations of the parties with regard to contributions towards, and payment of, debt service.

3. Cooperative Parking Agreement:

General Description: The parties to this MOA recognize that the effective and convenient utilization of a downtown Utica site for the new hospital project will require additional parking. Further, the parties recognize and acknowledge that in addition to the needs of hospital staff, related medical personnel that locate within the medical office facility, patients, visitors, and others conducting business within the hospital, that additional parking in downtown Utica would confer significant public benefits upon City and County to meet the needs of the general public awaiting themselves of professional, commercial, entertainment, recreational and government services concentrated in the downtown Utica area. Accordingly, the parties recognize that the new hospital project together with existing and projected increased parking needs for the general public would create a need for a municipal parking facility providing approximately 1550 new parking stalls, which would be approximately apportioned between 1150 parking stalls for hospital use and public use for other outpatient services that would be part of the MVHS project, and 400 parking stalls for general public use including persons visiting or doing business with physicians in the facility used for private medical practices.

This is in addition to another 2,000 + surface parking spaces that will be incorporated into the overall site plan for the MVHS downtown campus and the refurbishment of Kennedy Garage that would support supplemental parking needs for one or more Medical Office Buildings that would be developed by MVHS or by private developers, working collaboratively with MVHS and provide additional parking that is proximal to the new MVHS healthcare facility.

The location for the proposed parking facility will be determined by mutual agreement of MVHS, City and County with the primary objective being to situate the parking facility so that it optimizes. In order of priority, the parking needs for MVHS and then the

downtown Uliza general public. The location for the parking facility will be incorporated into the Definitive Agreement(s).

4. **Estimated Cost:** The parties understand and agree that the current estimated cost of such a parking facility is forty million five hundred and seventeen thousand eight hundred seventy five dollars (\$40,517,875.00). Additionally, the parties also agree to work cooperatively to repair and restore the Kennedy Parking Garage at an estimated cost of three million dollars (\$3,000,000.00).

5. **Sources of Funding:**

(a.) The parties agree that there will be a debt financing component estimated at thirty seven million five hundred seventeen thousand eight hundred seventy five dollars (\$37,517,875.00) consisting of twenty seven million four hundred five thousand eight hundred fifty three dollars (\$27,405,853.00) in general obligation bonds to be issued by County and ten million one hundred twelve thousand twenty two dollars (\$10,112,022.00) in funding generated from the allocation of New Market Tax Credits (NMTC) or other funds obtained for the project.

County and City will in the Definitive Agreement apportion the annual debt service on the project between them with County paying sixty (60%) per cent and City (40%) forty per cent. The Definitive Agreement(s) shall set forth the time and manner of City's payments to County.

(b.) City shall reprogram an existing one million five hundred thousand dollars (\$1,500,000.00) grant through Empire State Development Program to City to be used for the parking facility project. Additionally, a New York State Assembly sponsored one million dollar (\$1,000,000.00) grant from the State Assistance Municipal Program (SAM) and five hundred thousand dollars (\$500,000.00) from an expected Upstate Revitalization Incentive Grant (URIG) shall be used for the parking facility project.

(c.) An additional three million dollars (\$3,000,000.00) will be allocated from the expected URIG grant for repair and restoration of Kennedy Parking Garage.

6. **Cooperative Municipal Parking Program:** The parties to this agreement agree to support a cooperative parking program, the designated roles of each party being contemplated as follows.

(a.) County will act as the primary developer to arrange necessary financing for the parking facility and to oversee its construction. County will hold the fee title to the parking facility. Under a lease agreement with County or other suitable arrangement, M/VHS will operate the parking facility for its needs and the needs of members of the general public conducting business, recreational or personal pursuits in the downtown Uliza area. The facility will be open and available for use on a 365 day per year/twenty four hour per day basis.

(c.) MVHS shall, in consultation with County and City establish a general municipal parking agreement and plan which may include a parking lot structure. MVHS shall receive all revenue generated by the operation of the garage and be responsible for the costs for maintenance and operation of the garage as well as establishing a reasonable repair and capital reserve fund.

(c.) MVHS, City, and County agree to negotiate in good faith a plan for the disposition and sharing between City and County of any parking facility generated revenues over and above costs of operation, maintenance and reasonable contributions to a capital reserve fund ("the excess revenues."). Such excess revenues shall be allocated in the same proportion as City and County's respective contributions to debt service for the parking facility (20/40 as discussed in section 5a. above). The parties agree that the method of calculating such revenue and its allocation, the method and frequency of payment, the term of the agreement and any renewal and/or extension provisions and remedies of the parties in the event of any breach of the agreement to share the excess revenues shall be incorporated in the Definitive Agreement(s).

(d.) City is the owner of Kennedy Garage and will act as the developer and oversee the improvements to Kennedy Garage. The parties hereto agree to work together to include Kennedy Garage in the general municipal parking plan mentioned above.

(d.) It is understood that the utilization of New Market Tax Credits and other funding mechanisms may require the establishment of one or more Community Development Corporations or the creation of collaborations between new and existing Community Development Corporations. The parties to this MOA agree to work cooperatively to establish this framework.

7. Dedication of Existing City-Owned Properties: City is the owner of certain properties which have been acquired by the foreclosure of tax liens and by other means which are within the potential footprint of the proposed new hospital project. In recognition of the general public benefit which will be conferred by the establishment of the new facility, City agrees to transfer all of its right title and interest in such properties to MVHS or any designated appropriate entity to be used for the sole purpose of establishing the new hospital facility and auxiliary improvements related thereto. A list of these properties is attached hereto as Exhibit A. It is understood and agreed that this list (Exhibit A) may need to be modified according to the needs of the new hospital project and the parties agree to negotiate in good faith toward such end.

8. Cooperation With Regard to Additional Funding: The parties agree to work cooperatively to identify other public and/or private sources of funding which are or may become available for the new hospital facility project and related auxiliary improvements. When such a funding source is or may be identified, the parties to this agreement, to the extent one or more of them may be a qualified applicant, shall agree to serve as such applicant and the parties shall cooperatively work to complete the appropriate application process.

9. Additional Items of Assistance to be Provided by County: In addition to the other items set forth more specifically above, County shall provide the following assistance to the new hospital project at County's expense:

(a.) Provide a Planner in the Onondaga County Planning Department assigned to the new hospital project and tasked with coordinating planning activities among City, County, the State of New York and other government entities; co-approve and work with City on Planning of area Master Planning.

(b.) Coordinate and work with New York State Department of Transportation to provide full access at the intersection of Oriskany and Cornelia Streets.

(c.) Waive all applicable County fees or charges associated with construction and installation of improvements including but not limited to plan review, permits, impact fees, mitigation charges and the like.

10. Additional Items of Assistance to be Provided by City: In addition to the items set forth more specifically above, City shall provide the following assistance to the new hospital project at City's expense:

(a.) Contribute City-owned land within the boundaries of the new hospital campus as set forth above.

(b.) Provide appraisals for all City-owned land within the new hospital campus boundaries.

(c.) Relocate current parking west of Pine Street which is utilized for police parking and relocate to land to be contributed by MVHS (current Grandco's Property 50+/- spaces and remainder in the new parking garage facility (57+/- parking stalls).

(d.) Discontinue portions of Lafayette, Lee and Cornelia Streets within the new hospital boundaries and transfer to MVHS.

(e.) Enter into discussions to include in the Definitive Agreement plans to remove existing City-owned utilities within the new hospital project boundaries, remove utilities and terminate use of existing easements and rights of way.

(f.) Consider in the development of the parking plan mentioned above, the dedication of at least 200 of the 460 parking stalls in Kennedy Parking Garage for Hospital use.

(g.) Assist displaced and affected businesses in relocating to other suitable locations within the City of Utica.

(h) In view of the requirement of the New York State Department of Health and the Dormitory Authority of the State of New York to provide building and construction inspection, review and permitting, waive all fees for any building or zoning permits or any other such fee, at least to the extent such fees do not reflect actual costs necessarily incurred by City.

(i) To the extent necessary, cooperate to secure necessary approvals for rezoning of MVHS property acquired for the new hospital project and adjacent strategic parcels to a PD E classification which will meet the needs for current and future development.

(j) Enter into discussions to provide in the Definitive Agreement(s) necessary improvements to Broadway, State Street and Columbia Street such as new pavement, curbs, sidewalks, lighting and utilities.

(k) Engage in conducting Strategic Master Planning study of downtown area adjacent to and surrounding the MVHS site in cooperation and coordination with the assigned County Planner.

(l) Provide a Planner assigned to the new hospital project and coordinate activities with County, State of New York and other governmental entities.

11. **Definitive Agreement(s):** The terms and provisions of this MOA are for the purpose of demonstrating the commitment and agreement of the parties with regard to supporting the proposed hospital project, and most particularly, the financing of the parking garage and the development and implementation of the general municipal parking plan. As available funding, costs, location of the proposed parking facility, and other factors related to the hospital project and the overall parking plan clarify and become known, the parties will enter into one or more Definitive Agreements setting forth these specifics.

12. **Publication and Publicity:** Releases to the news and media and any publicity or other communications shall be coordinated through MVHS and mutually agreed upon.

13. **Confidentiality:** The parties acknowledge and agree that City and County are public entities subject to the New York State Freedom of Information Law (FOIL). The parties agree to work cooperatively to keep as confidential information which may be subject to exceptions under FOIL, including but not limited to proprietary information belonging to MVHS, discussions or negotiations concerning the value and acquisition of real property for the new hospital project and the like. The parties each agree to give each other prompt notice of any request for information related to the subject matters contained in this MOA or subsequent definitive agreements and to give all other parties a reasonable opportunity to make any objection which they may have to disclosure of such information.

14. **Governing Law:** This MOA shall be governed and interpreted under the laws of the State of New York.

15. **Notices and Communications:** All communications, notices and disclosures under this MOA shall be mailed or hand delivered as follows:

To MVHS:

Scott H. Pera
President and CEO
Mohawk Valley Health System
1856 Champlin Avenue
New Hartford, New York 13554

With a copy (not constituting notice) to: General Counsel

To County of Oneida:

Anthony J. Piserle, Jr.
County Executive
County of Oneida
800 Park Avenue
Utica, New York 13501

With a copy (not constituting notice) to: Office of the County Attorney
To City of Utica:

Roger M. Palmieri
Mayor
City of Utica
One Kennedy Plaza
Utica, New York 13502

With a copy (not constituting notice), Office of the Corporation Counsel.

Re: Mortgage Financing - Hospital Replacement Project

Dear Mr. Aiello:

By this letter, Gavin and Lavigne, Inc. expresses its interest in arranging an FHA-insured mortgage for the proposed replacement hospital project for Mohawk Valley Health System.

We understand you need a mortgage loan in the approximate amount of \$150 million or such other amount as may be approved by the Department of Health and BOD. If placed today, interest on that loan, would approximate 4.25% during the construction term and 4.25% during the amortization period, with a twenty-five-year amortization commencing after the construction term. However, to protect against market fluctuations, we recommend that you include 5.00% in your Certificate of Need Application.

In today's market, we would use flexible GPMMA accounts for the loan's placement. It is possible the changes in market conditions could make non-comparable financing a more cost-effective means of loan placement. We will evaluate both methods of placement as the deal progresses and select the option that provides the greatest benefit to the Hospital.

Very truly yours,

Mary C. Gavin
President

New York State Department of Health Certificate of Need Application

Schedule 13A

Schedule 13 A. Assurances From Article 28 Applicants:

Article 28 applicants seeking combined establishment and construction or construction approval only must complete this schedule.

The undersigned, as a duly authorized representative of the applicant, hereby gives the following assurance(s):

- a) The applicant has or will have a fee simple or such other estate or interest in the site, including necessary easements and rights-of-way, sufficient to grant use and possession for the purpose of the construction and operation of the facility.
- b) The applicant will obtain the approval of the Commissioner of Health of all required variances, which shall conform to the standards of construction and equipment in Subchapter C of Title 10 (Validity of the Official Compilation of Codes, Rules and Regulations of the State of New York (Title 10)).
- c) The applicant will submit to the Commissioner of Health final working drawings and specifications, which shall conform to the standards of construction and equipment of Subchapter C of Title 10, prior to contracting for construction, unless otherwise provided for in Title 10.
- d) The applicant will cause the project to be completed in accordance with the application and approved plans and specifications.
- e) The applicant will provide and maintain competent and adequate architectural and/or engineering inspection of the construction site to ensure that the completed work conforms to the approved plans and specifications.
- f) If the project is an addition to a facility already in existence, upon completion of construction all patients shall be removed from areas of the facility that are not in compliance with patient provisions of Title 10, unless a waiver is granted by the Commissioner of Health, under Title 10.
- g) The facility will be operated and maintained in accordance with the standards prescribed by law.
- h) The applicant will comply with the provisions of the Public Health Law and the applicable provisions of Title 10 with respect to the operation of all health care, existing medical facilities in which the applicant has a controlling interest.
- i) The applicant understands and recognizes that any approval of this application is not to be construed as an approval of, nor does it provide assurance of, reimbursement for any costs identified in the application. Reimbursement for all cost shall be in accordance with and subject to the provisions of Part 28 of Title 10.

* Last complete year and to which filing applies

** Number for B-C* and D and "Other" requests

Describe how the number and role of staff were determined:

The number and role of staff were based on long-term staffing, given comparable facilities with similar volume for FTEs that would be expected to be needed to provide the services physically committed.

Certificate of Need Application**

Schedule 13B

1.) All diagnostic and treatment centers should complete the following section: **N/A**

Name of medical director:	
License number of the Medical Director	

	Not Applicable:	Title of Attachment	Filename of attachment
Attach a copy of the medical director's curriculum vitae.			

Acute care facility with which an affiliation agreement is being negotiated:	
In the space below, indicate the status of those negotiations:	

Distance in miles from the proposed facility to the acute care affiliate	
Distance in minutes of travel time from the proposed facility to the acute care affiliate.	
Name of the acute care facility, nearest the proposed facility:	
Distance in miles from the proposed facility to the nearest acute care facility:	
Distance in minutes of travel time from the proposed facility to the nearest acute care facility	

	Not Applicable:	Title of Attachment	Filename of attachment
Attach a copy of a letter of intent or the affiliation agreement, if appropriate.	<input type="checkbox"/>

Schedule 13C Annual Operating Costs

See Schedules Required for each type of CON in determine when this form is required.

Use this schedule to summarize the first full year incremental cost for the categories, which are affected by this project. The first full year is defined as the first 12 months of full operation after project completion. Project the first available full year total incremental costs in current year dollars. Current year costs added to first year incremental cost impact should equal total first year budget. Current year costs added to third year incremental budget should equal total third year budget. Show cost reductions in parentheses.

Total Project
 Subtotal Number

Amortization Table

The table below shows the details of the amortized cost of the loan. The amount of interest is shown as ending balance.

and cumulative interest. The amount of the loan is shown as the ending balance.

To use the table, change the values in the table Data section of the worksheet.

The amount of the loan is shown as the ending balance. The amount of the loan is shown as the ending balance.

The amount of the loan is shown as the ending balance. The amount of the loan is shown as the ending balance.

The amount of the loan is shown as the ending balance. The amount of the loan is shown as the ending balance.

The amount of the loan is shown as the ending balance. The amount of the loan is shown as the ending balance.

The amount of the loan is shown as the ending balance. The amount of the loan is shown as the ending balance.

The amount of the loan is shown as the ending balance. The amount of the loan is shown as the ending balance.

Initial Data

LOAN DATA		TABLE DATA	
Loan amount	3150,000.00	Initial value of table	100000
Annual interest rate	5.2500%	or payment number	1
Term in years	61		
Payments per year	12		
Full payment date	7/6/2022		

PERIODIC PAYMENT

Payment amount	\$61.10	The table shows the amount of the payment and the amount of the payment.
Outstanding payment	\$61.10	which you would use to calculate the payment.

CALCULATIONS

Loan amount at	1000,000.00	Beginning balance in payment	3150,000.00
at payment number	1	Remaining balance in payment	58.93

New York State Department of Health Certificate of Need Application

Schedule 16A

Schedule 16 A. Hospital Program Information

See "Schedule Required for Each Type of CON" to determine when this form is required.

Instructions: Briefly indicate how the facility intends to comply with state and federal regulations specific to the services requested, such as cardiac surgery, bone marrow transplants. For clinic services, please include the hours of service for each day of operation, name of the facility providing these services (including the travel time and distance from the clinic) and how the facility intends to provide quality oversight including scheduling, utilization and quality assurance monitoring.

The proposed project will be designed and operated in compliance with Federal and State regulations.

All administrative aspects of the services included as part of this project will continue to be directed by an individual who is qualified for such duties by education and experience. The Quality Assurance (QA) Program for these services will be administered by the Chief Quality Officer, and it will be consistent with, and an integral part of, Mohawk Valley Health System's (MVHS's) existing QA Program.

To ensure that care and services are appropriate to an individual's needs, MVHS will continue to use a comprehensive utilization review and monitoring program for services included as part of this project. The appropriate utilization of services will continue to be monitored through the QA Program, under the supervision of the Medical Director.

MVHS will utilize the same credentialing process for the services included as part of this project that is currently in place at its constituent hospitals. Only those physicians who are qualified by virtue of their training and experience will be considered for staff privileges, and only those who demonstrate a high level of competence will be appointed to the staff of MVHS. A similar process will be followed for nursing, technical and support staff members who seek employment at MVHS.

In accordance with current policy at MVHS, the ability to pay will not be a factor in the process of accepting patients. Every effort will be made to ensure that appropriate payment is made, but in no circumstance will a patient be refused treatment based on ability to pay. MVHS currently has a sliding fee scale for its patients. All services will continue to be offered to those in need of care who satisfy admission requirements regardless of age, sex, sexual orientation, race, creed, religion, disability, source of payment or any other personal characteristics.

PLEASE REFER TO THE SCHEDULE 1 ATTACHMENT FOR THE PROJECT NARRATIVE.

Number of Procedure Rooms:	N/A	4 IR rooms 2 EP, 2 Cath 1 Advanced GI 4 Endo rooms 1 Cath/TE/Endo room

New York State Department of Health Certificate of Need Application

Schedule 16B

Schedule 16 B. Community Need

See 'Schedules Required for Each Type of CON' to determine when this form is required

Public Need Summary:

Briefly summarize on this schedule why the project is needed. Use additional paper, as necessary. If the following items have been addressed in the project narrative, please file the relevant section and pages.

1. Identify the relevant service area (e.g. Minor Civil Division(s), Census Tract(s), street boundaries, Zip Code(s), Health Professional Shortage Area (HPSA) etc.)

The primary service area (PSA) for this project is comprised of Oneida County. This county contains the two (2) main hospitals (St. Elizabeth's and St. Luke's), as well as many of their extension clinics. Please refer to the Project Narrative (under the Schedule I Attachment) for additional information.

2. Provide a quantitative and qualitative description of the population to be served. Data may include median income, ethnicity, payer mix, etc.

Oneida County is located in Central New York and had a population of 231,190 in 2016. The two (2) largest cities in Oneida County are Utica (with a 2015 population of 61,628 (most recent data available)) and Rome (with a 2015 population of about 37,916 (most recent data available)). NYVHS's patients generally come from 45 towns and villages covering 1,257 square miles surrounding the facilities. Approximately two-thirds (67%) of the County's population resides in suburban/urban areas, while the remaining one-third (33%) resides in rural areas. Please refer to the Project Narrative under the Schedule I Attachment) for additional information.

3. Document the current and projected demand for the proposed service in the population you plan to serve. If the proposed service is covered by a DOH need methodology, demonstrate how the proposed service is consistent with it

The services included as part of this project are not covered by a DOH need methodology. Through New York Public Health Law Section 2825-b, New York State created the "Oneida County Health Care Transformation Program" that set aside up to \$100 million in capital grant funding for the sole purpose of consolidating multiple licensed healthcare facilities into an integrated system of care, within the largest population center in Oneida County (i.e., Utica). Through a response to a Request for Applications (RFA #1509461525) from the New York State Department of Health (NYSDOH) and Dormitory Authority of the State of New York (DASNY), NYVHS was awarded \$300 million in grant funding for the project proposed in this CON Application, which will result in the transformation of healthcare services in the region through the consolidation of services from NYVHS's two (2) hospital campuses to a new hospital site in Utica, New York. Please refer to the Project Narrative (under the Schedule I Attachment) for additional information.

New York State Department of Health

Certificate of Need Application

Schedule 16B

4. (a) Describe how this project responds to and reflects the needs of the residents in the community you propose to serve:

The new hospital campus will consolidate the (2) existing acute care hospitals into one (1) integrated location, will provide greater access in residents of the City of Utica, Oneida County and the region, and it will improve operational efficiency, patient satisfaction and safety for both patients and caregivers. In particular, this project will create a structured delivery system, end the current service fragmentation, increase service integration and coordinate the work of the hospitals and other community-based organizations. Furthermore, the implementation of this project will reduce gaps/inefficiencies in care coordination, align with payment reform and rebalance healthcare delivery through the reduction in the number of hospital beds as care is shifted from an inpatient care model to an outpatient care model focused on population health. Please refer to the Project Narrative (under the Schedule I Attachment) for additional information.

- (b) Describe how this project is consistent with your facility's Community Service Implementation Plan (voluntary not-for-profit hospitals) or strategic plan (other providers):

This project is consistent with the Community Service Implementation Plan of Mohawk Valley Health System (MVHS). First, MVHS is dedicated to ensuring access to high-quality healthcare to the region's residents; this project will promote access to services to all patients in need of such services by making a number of its services more efficient and generally consolidated at a single site. Second, this project will help to improve public health outcomes for residents of the region through proper access to needed services. Please refer to the Project Narrative (under the Schedule I Attachment) for additional information.

- (c) Will the proposed project serve all patients needing care regardless of their ability to pay or the source of payment? If so, please provide such a statement:

This project will serve all patients needing care, regardless of their ability to pay or source of payment. Please refer to the Project Narrative (under the Schedule I Attachment) for additional information.

5. Describe where and how the population to be served currently receives the proposed services:

The individuals are currently being served at either the Fulton St. Luke's Healthcare St. Luke's Division (St. Luke's) or St. Elizabeth Medical Center (St. Elizabeth). This project consolidates and integrates a number of services into a single location in order to better serve the patient base. Please refer to the Project Narrative (under the Schedule I Attachment) for additional information.

6. Describe how the proposed services will be address specific health problems prevalent in the service area including any special experience, programs or methods that will be implemented to address these health issues:

Both campuses of MVHS are major care centers for residents of the region. This project seeks approval for the construction of a new hospital campus in Utica, New York, consistent with New York Public Health Law Section 2815-b. In terms of specific health issues, residents of Oneida County also experience poor health outcomes for a number of conditions, including cardiovascular disease, diseases of the heart, coronary heart disease, acute myocardial infarction (heart attack), congestive heart failure,

New York State Department of Health
Certificate of Need Application

Schedule 16B

cardiovascular disease (stroke), hypertension, chronic kidney disease, diabetes, chronic lower respiratory disease, asthma and cancer. Please refer to the Project Narrative (under the Schedule 1 Attachment) for additional information.

**New York State Department of Health
Certificate of Need Application**

Schedule 16B

ONLY For Applicants Seeking Permanent Life

Not Applicable

Diagnostic and Treatment Centers seeking approval for indefinite Life MUST provide the following information:

Instructions: In the space below, please provide detailed information on the most recent CON application that was approved for the limited life.

- i. CON number
- ii. Date of approval
- iii. Number of years of limited life approved for
- iv. OpCart number and dates
- v. Please provide a table with information on projections by payor for year 1 and year 3 as reported on the approved CON. (Please identify the projections in terms of visits or procedures)
- vi. Please provide a table with information on actual utilization by payor for each year since the implementation of the approved CON.

Note: Please use the same category of payors for actual utilization as those used for projections in item 'v' above. Also use the same category (i.e., visits or procedures) for actual utilization as those used for projections in item 'v' above

- vi. Did you achieve those projections reported in item 'v' above? If not, please give reasons for not meeting those projections.

**New York State Department of Health
Certificate of Need Application**

Schedule 16C

Impact of CON Application on Hospital Operating Certificate

Name of Active Parent (if applicable): N/A
 Name of Facility: Mohawk Valley Health System Integrated Hospital Campus
 Address of Facility: Address To Be Determined (See Note Below)
Utica (Oneida County), New York 13503

NOTE: THIS OPERATING CERTIFICATE REFLECTS THE BEDS AND SERVICES OF THE NEW HOSPITAL CAMPUS. PLEASE REFER TO THE PROJECT NARRATIVE (UNDER THE SCHEDULE 1 ATTACHMENT) AND ITS APPENDICES FOR ADDITIONAL INFORMATION.

Note: If the application includes an extension clinic, indicate which services should be added or removed from the certificate of the extension clinic alone, rather than for the hospital system as a whole. If multiple sites are involved, complete a separate 16C for each site.

END STAGE RENAL DISEASE (ESRD)

N/A - Replacement Hospital Project

<u>TABLE 16C-3(a) CAPACITY</u>	—	—	—	—	Existing	Add	Remove	Planned
<u>CHRONIC DIALYSIS</u>	—	—	—	—	—	—	—	—

If application involves dialysis services with existing capacity, complete the following table:

<u>TABLE 16C-3(b) TREATMENTS</u>	—	Last 2 years	2 years or more	3 years or more
<u>CHRONIC DIALYSIS</u>	—	—	—	—

All Chronic Dialysis applicants must provide the following information in compliance with 10 NYCRR 670.8.

1. Provide a five-year analysis of projected costs and revenues that demonstrates that the proposed dialysis services will be utilized efficiently to be financially feasible.

N/A

2. Provide evidence that the proposed dialysis services will enhance access to dialysis by patients, including members of medically underserved groups who have historically experienced difficulties obtaining access to health care, such as; racial and ethnic minorities, women, disabled persons, and residents of remote rural areas.

N/A

3. Provide evidence that the hours of operation and admission policy of the facility will promote the availability of dialysis at times preferred by the patients, particularly to enable patients to continue employment.

N/A

4. Provide evidence that the facility is willing to and capable of safely serving patients

N/A

5. Provide evidence that the proposed facility will not jeopardize the quality of care or the financial viability of existing dialysis facilities. This evidence should be derived from analysis of factors including, but not necessarily limited to, current and projected referral and use patterns of both the proposed facility and existing facilities. A finding that the proposed facility will jeopardize the financial viability of one or more existing facilities will not of itself require a recommendation to disapprove.

N/A

A. Attach a copy of your discharge planning policy and procedures.

B. Is your facility a recipient of federal assistance under Title VI or XIX of the Public Health Service Act (Hill-Burton)?

Yes No

If yes, answer the following questions and attach the most recent report on Hill-Burton compliance from the Federal Department of Health and Human Services.

New York State Department of Health Certificate of Need Application

Schedule 16F

N/A

1. Is your facility currently obligated to provide uncompensated services under the Public Health Service Act?

Yes No

If yes, provide details on how your facility has met such requirement for the last three fiscal years, including notification of the requirement in a newspaper of general circulation. Also list any restricted trusts and endowments that were used to provide free, below cost or charity care services to persons unable to pay.

_____	_____	_____	_____	_____
-------	-------	-------	-------	-------

2. With respect to all or any portion of the facility which has been qualified, upgraded or converted with Hill-Burton assistance, are the services provided therein available to all persons residing in your facility's service area without discrimination on the basis of race, color, national origin, creed, or any basis unrelated to an individual's need for the service or the availability of the needed service in the facility?

Yes No

If no, provide an explanation.

_____	_____	_____	_____	_____	_____	_____	_____
-------	-------	-------	-------	-------	-------	-------	-------

3. Does the facility have a policy or practice of admitting only those patients who are referred by physicians with staff privileges at the facility?

Yes No

4. Do Medicaid beneficiaries have full access to all of your facility's health services?

Yes No

If no, provide a list of services where access by Medicaid beneficiaries is denied or limited.

-------	-------	-------	-------	-------	-------	-------	-------

New York State Department of Health Certificate of Need Application

Schedule 20A

Office of Mental Health Program

This annex is required of Article 28 hospitals and diagnostic and treatment centers for projects that include mental health programs subject to an operating certificate or a license approved by the Office of Mental Health under Article 91 of the Mental Hygiene Law (MHL). These projects include a new mental health program or a new site or modification to an existing program. Per MHL Article 91, prior consultation with the Local Government Unit and local Office of Mental Health Field Office is required before a preparation of the Article 28 application.

Section A - Attachments for New Program or New Satellite Location

N/A – No New Program or New Satellite Location

1. Program and Service Area

- Identify the type of mental health program to be provided.
- Define the geographic or political boundaries of the area to be served by the proposed program.
- Describe how the proposed program will function within the mental health system in the area to be served.

N/A

2. Problems and Needs

- Describe the target population for the program qualitatively and quantitatively. Describe problems of the target population and their families, and describe how the proposed program will address these problems.
- Describe how your organization currently serves the target population (if applicable).
- Provide any other information supporting need for the proposed program.

N/A

3. Access

- Describe how the program will serve the poor and the medically indigent.
- Describe the mechanisms by which the program will address the cultural and ethnic backgrounds of the treatment of the population in the service area.
- Describe the mechanisms for participation of consumer representation within the governing body (if applicable).
- Describe plans to enable persons with physical disabilities to access services, consistent with the characteristics of the population to be served.
- Indicate the transportation arrangements through which individuals will access the program.

N/A

4. Continuity of Care

- Describe a plan to ensure continuity of care within the mental health system and with other service systems. Identify specific providers to ensure linkages among programs.
- For outpatient programs, describe a plan by which patients in the program will be assisted during hours when the program is not in operation.

N/A

New York State Department of Health Certificate of Need Application

Schedule 20A

5. **Implementation**
Describe start-up or phase-in activities necessary to implement the program. Include timelines in your description.

N/A

6. **Functional Program**

- a. **Mission** - Provide an overview of the proposed program and describe the treatment philosophy.
- b. **Organization** - Describe the lines of authority from the governing body to the proposed program. Indicate the relationship of the program to other programs operated by your agency.
- c. **Goals and Objectives** - Describe the goals, objectives, and expected outcomes of the program. Include average length of stay.
- d. **Admission** - Describe admission criteria, policies, and procedures. Include involuntary and exclusionary criteria, process, timeframe, record keeping, and procedures for notifying families and programs in which recipients are currently admitted.
- e. **Discharge** - Describe discharge criteria, policies, and procedures. Include process, timeframe, record keeping, and procedures for notifying families and programs to which recipients will be referred for further services.
- f. **Services** - Provide a detailed description of all services available to recipients admitted to the program. Specify how these services will be provided and the staff position responsible for providing the service. Identify the provider of any services to be delivered by other than the proposed program. For programs serving children, describe plans to cooperate with the family and the school.
- g. **Staffing** - Provide a staffing plan for the program. Include descriptions of the qualifications and duties for each staff position.
- h. **Quality Assurance/Management** - Describe your plans for quality review, incident management and internal monitoring.
- i. **Facilities** - Provide a description of the premises to be used by the program. Include appropriately labeled sketch drawings showing use and dimensions of rooms.
- j. **Utilities** - Identify any water requests and provide justification for the request. Indicate the effect on your proposed program if the request is denied.

N/A

7. **Fiscal**

- a. Unless provided elsewhere in this application, submit a proposed budget for the first and second year of full operation of the mental health program.
- b. If Medicaid revenue is included, indicate the source and availability of the state share of Medicaid for projects other than Article 31 Clinics.

N/A

New York State Department of Health Certificate of Need Application

Schedule 20A

Section B - Attachments for Program Expansion of Existing Program or Site

N/A - No Program Expansion

1. Identify the program.

N/A

2. Provide justification and data supporting the need for the expansion.

N/A

3. Describe the impact of the expansion on services, staffing, caseload and space.

N/A

4. Provide a detailed description of services available to recipients as a result of the proposed expansion. Specify how these services will be provided and the staff positions responsible for providing the service. Identify the provider of any services to be delivered by other than the provider of the licensed program. For programs expanding to serve children, describe plans to coordinate with the family and the school.

N/A

5. Indicate the fiscal impact of the expansion. Provide the incremental increases in expenses and revenues. If additional fiscal data is prepared to support the expansion, for projects other than Article 81 clinics, indicate the source and availability of the state share of Medicaid.

N/A

New York State Department of Health Certificate of Need Application

Schedule 20A

Section C - Attachments for Other Projects Requiring Prior Approval of OMH
In all projects, identify the program affected.

1. Reduce Existing Program

- a. Indicate proposed effective date for reduction.
- b. Describe the reasons for the reduction and the impact (if any) on individuals currently receiving services.

Mohawk Valley Health System (MVHS) is currently certified to operate 24 adult psychiatric beds at St. Elizabeth Medical Center (St. Elizabeth) and 28 adult psychiatric beds at Faxon-St. Luke's Hospital (St. Luke's), for a total of 50 adult psychiatric beds. Through its overall transformation project, MVHS will relocate the inpatient psychiatric beds at St. Elizabeth and St. Luke's to the new hospital campus, and it will decrease the (8) of the adult psychiatric beds, resulting in the operation of 44 adult psychiatric beds on the new campus.

- a. The effective date of the reduction of the adult inpatient psychiatric beds is January 1, 2022, which represents the beginning to Year 1 of operations for this project.
- b. When the inpatient utilization of both St. Elizabeth's and St. Luke's is combined, in 2016, the facilities have an overall occupancy rate of 71.5%, given the 60 certified inpatient psychiatric beds at the combined facilities. Given the same utilization statistics and the proposed number of psychiatric beds (44), the combined facilities have an estimated 81.3% occupancy. Please refer to these statistics in the following table:

	Occupancy Rate	
	Current Beds (50)	Proposed Beds (44)
Psychiatric	71.5%	81.3%

Through the overall project, MVHS will decrease six (6) inpatient psychiatric beds (i.e., from 50 to 44 beds). Not only is this declassification supported by the facilities' occupancy rates for inpatient psychiatric beds noted in the table above, it is also supported by the following statistics:

- > Although the number of patient days for inpatient psychiatric patients at the two (2) combined MVHS facilities increased from 2012 to its peak in 2015, it has decreased considerably since 2015. Based upon 2017 data through September 30, 2017, the occupancy rate of the 60 inpatient psychiatric beds was 58.8% (down from the peak occupancy rate of 81.8% in 2015), meaning that about 15 beds remained unused, on average, during this time in 2017.
- > A large and growing percentage of inpatient psychiatric cases are originating from outside of Oneida and Herkimer Counties, which means that residents are likely bypassing other inpatient psychiatric units that are closer to home for many residents. These statistics are as follows:

Number and Percentage of MVHS Inpatient Psychiatric Discharges from Oneida/Herkimer Counties vs. All Other Counties, 2012-YTD 2017

	2012	2013	2014	2015	2016	YTD 2017*
Oneida/Herkimer Counties	1,812	1,707	1,728	1,803	1,766	1,172
All Other Counties	381	490	648	611	640	621
TOTAL	2,208	2,157	2,276	2,414	2,396	1,693

New York State Department of Health Certificate of Need Application

Schedule 20A

Onondaga/Herkimer Counties	82.0%	79.1%	75.9%	74.7%	78.8%	89.2%
All Other Counties	18.0%	20.9%	24.1%	25.3%	21.2%	10.8%
TOTAL	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%

Source: Mental Health Work System

In 2012, only 18.0% of the inpatient psychiatric cases at MVHS were from patients residing outside of Onondaga and Herkimer Counties. By 2017 (using data through September 30, 2017), 21.8% of the inpatient psychiatric cases at MVHS were from patients residing outside of Onondaga and Herkimer Counties. Based upon a review of inpatient psychiatric bed projects within the "Central New York" and the "Northwest" areas of New York State on NYSE-COM which includes Onondaga and Herkimer Counties, as well as the surrounding region, since 2012, the only inpatient psychiatric project that was implemented was the addition of one (1) psychiatric bed at Rome Memorial Hospital (Onondaga County), which went from 41 beds to 42 beds through Project No. 132140. The fact that no psychiatric beds were decertified means that many of the patients who travel from outside of Onondaga or Herkimer Counties to receive inpatient psychiatric care at MVHS can likely be served on inpatient psychiatric units located closer to their homes. Nevertheless, it is clear that they are attracted to MVHS facilities for various reasons (one of which is likely the high quality of care provided at its facilities).

- MVHS expects to continue to experience a decrease in its inpatient psychiatric utilization, largely due to the transition of care from the inpatient realm to the outpatient realm, and from the expanded use of front-line outpatient behavioral health services. To this end, MVHS and its two (2) hospital facilities operate numerous extension clinics throughout Ulster and the surrounding region that provide outpatient behavioral health services. MVHS is continuing to work with its partners through the QSRIP program to integrate behavioral health services into the primary care setting.

Please also refer to the Project Narrative (under the Schedule 4 Attachment) for additional information.

2. Closure of Program or Site

- a. Indicate proposed effective date of closure.
 - b. Describe the reasons for closing the program or site.
 - c. Submit a transition plan showing that recipients will be linked to appropriate alternative programs, the alternative programs have agreed to accept the referrals, wrap-up responsibilities will be addressed, and follow-up will occur to confirm recipient linkage to programs.
 - d. The rationale for closure includes fiscal justification, provide documentation to substantiate the lack of fiscal viability in the long-term.
 - e. Submit a plan for safeguarding recipient records and financial accounts.
 - f. Describe the process and timeline for evaluation and placement of recipients and completion of other activities to conclude the affairs of the program.
- a. The effective date of the "closure" of the adult inpatient psychiatric beds at St. Elizabeth and St. Luke's is January 1, 2022, which represents the beginning of Year 1 of operations for this project. As noted above, the inpatient psychiatric units at St. Elizabeth and St. Luke's will not be "closed". Instead, they will be relocated to the new hospital campus.
 - b. As noted above, the inpatient psychiatric units at St. Elizabeth and St. Luke's will not be "closed". Instead, they will be relocated to the new hospital campus.
 - c. All inpatient psychiatric patients will be relocated to the new hospital campus, upon its opening.

New York State Department of Health Certificate of Need Application

Schedule 20A

These patients will be given a choice to continue to be served by MVHS at its new hospital campus, or to be transferred to another inpatient psychiatric unit such as the 12-bed unit of Rome Memorial Hospital in Rome (Oneida County), New York. Please refer to the Schedule 20 Attachment for two (2) Transition Plans - one for St. Elizabeth and one for St. Luke's - associated with this project.

- d. NOA -- The applicant believes that the proposed 44 inpatient psychiatric beds at its new hospital campus are sufficient to accommodate the needs of the behavioral health population. Utilization concerns are the primary rationale to reduce the inpatient psychiatric beds from 50 to 44.
- e. Hard-copies of all resident records and financial accounts will be relocated to the new hospital campus. All electronic resident records and financial accounts will be maintained by MVHS. Please refer to the Schedule 20 Attachment for the two (2) Transition Plans that include information pertinent to the safeguarding of resident records and financial accounts.
- f. The inpatient psychiatric program of MVHS will not be closed. The inpatient beds of both St. Elizabeth and St. Luke's will be relocated from their current locations to the new hospital campus in Utica.

3. Change in Location

- a. Indicate proposed effective date of relocation.
 - b. Identify the new location.
 - c. Describe the reasons for the relocation.
 - d. Describe how access and transportation needs will be addressed.
 - e. Provide a description of the premises to be used. Include appropriately labeled sketch drawings showing size and dimensions of rooms.
 - f. Provide a Certificate of Occupancy or equivalent from the local building jurisdiction prior to occupancy.
 - g. If program relocates to new county or borough, complete Section 4 (1 - 7).
- a. The effective date of relocation is January 1, 2022, which represents the beginning of Year 1 of operations for this project (i.e., it represents the date that the new hospital campus, including the 44 inpatient psychiatric beds, will be opened).
 - b. MVHS is currently certified to operate 24 adult psychiatric beds at St. Elizabeth Medical Center (St. Elizabeth) and 26 adult psychiatric beds at Frazier-St. Luke's Hospital (St. Luke's), for a total of 50 adult psychiatric beds. Through this project, MVHS will relocate the inpatient psychiatric beds at St. Elizabeth and St. Luke's to the new hospital campus, and it will describe six (6) of the adult psychiatric beds, resulting in the operation of 44 adult psychiatric beds on the new campus. The new, consolidated hospital campus will be located on a 25-acre parcel of land bordered by the following streets in Utica (Oneida County), New York 13501: State Street, Broadway, Quikway Street West, and Columbia Street.
 - c. Through New York Public Health Law Section 2821-b, New York State created the "Oneida County Health Care Transformation Program" that set aside up to \$300 million in capital grant funding for the sole purpose of consolidating multiple licensed healthcare facilities into an integrated system of care within the largest population center in Oneida County (i.e., Utica). Through a response to a Request for Applications (RFA #1805060226) from the New York State Department of Health (NYSDOH) and Comptroller Authority of the State of New York (CASNY), MVHS was awarded \$200 million in grant funding for the project proposed in this C.N. Application (i.e., the creation of a new hospital campus), which will result in the transformation of healthcare services in the region.

New York State Department of Health Certificate of Need Application

Schedule 20A

- d. The proposed new hospital campus will be located close to major roads, including Route 50 (New York State Thruway), Route 790, Route 12 and Route 9A (Oriskany Street), and it will be highly accessible to a number of routes in the Central New York Regional Transportation Authority (CNYRTA) bus system in Utica.
- e. Please refer to the Schedule A Attachment for architectural documents, including an architectural narrative, functional space program, schematic drawings and other architectural items associated with this project.
- f. MVHS will provide a Certificate of Occupancy to the NYSOMH/NYSDOH prior to occupancy of the new hospital campus.
- g. N/A – The new hospital campus will be located within the same county (Onondaga County) as both St. Elizabeth Medical Center and Faxon-St. Luke's Hospital.

4. Change of Sponsor

- Identify new sponsor and current sponsor.
- Describe the reasons for changing sponsorship of the program(s).
- Include written concurrence from the current sponsor for transfer of the program(s). If current sponsor is a corporation include resolution from the Board of Directors.
- Describe any changes to be made in operation of the program(s).
- Describe the qualifications of the new sponsor for the operation of mental health programs.
- Indicate any financial considerations involved in the change of sponsor.
- Submit a transition plan, including timelines for the change of sponsor.

N/A – No Change of Sponsor

5. Capital Project

- Describe the reasons for the project.

Not only is this deconcentration supported by the historical occupancy rates for inpatient psychiatric beds noted in the response to Question 1(b) above, it is also supported by the following statistics:

- > Although the number of patient days for inpatient psychiatric patients at the two (2) combined MVHS facilities increased from 2012 to its peak in 2015, it has decreased considerably since 2015. Based upon 2017 data through September 30, 2017, the occupancy rate of the 59 inpatient psychiatric beds was 89.8% (down from the peak occupancy rate of 91.8% in 2015), meaning that about 16 beds remained unused, on average, during this time in 2017.
- > A large and growing percentage of inpatient psychiatric cases are originating from outside of Onondaga and Herkimer Counties, which means that residents are likely bypassing other inpatient psychiatric units that are closer to home for many residents. These statistics now as follows:

Number and Percentage of MVHS Inpatient Psychiatric Discharges from Onondaga/Herkimer Counties vs. All Other Counties, 2012-YTD 2017

	2012	2013	2014	2015	2016	YTD 2017*
Onondaga/Herkimer Counties	1,812	1,707	1,728	1,803	1,786	1,172
All Other Counties	397	450	548	811	640	621

New York State Department of Health Certificate of Need Application

Schedule 20A

TOTAL	2,269	2,157	2,278	2,414	2,308	4,693
Oneida/Herkimer Counties	62.0%	79.1%	76.8%	74.7%	75.6%	68.2%
All Other Counties	38.0%	20.9%	23.1%	25.3%	24.4%	31.8%
TOTAL	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%

Source: Mohawk Valley Health System

In 2012, only 18.0% of the inpatient psychiatric cases at MVHS were from patients residing outside of Oneida and Herkimer Counties. By 2017 (using data through September 30, 2017), 31.8% of the inpatient psychiatric cases at MVHS were from patients residing outside of Oneida and Herkimer Counties. Based upon a review of inpatient psychiatric bed projects within the "Central New York" and the "Northeast" areas of New York State on NYSE-CON (which includes Oneida and Herkimer Counties, as well as the surrounding region), since 2012, the only inpatient psychiatric project that was implemented was the addition of one (1) psychiatric bed at Rome Memorial Hospital (Oneida County), which went from 11 beds to 12 beds through Project No. 152140. The fact that no psychiatric beds were demolished means that many of the patients who travel from outside of Oneida or Herkimer Counties to receive inpatient psychiatric care at MVHS can likely be served on inpatient psychiatric units located closer to their homes. Nevertheless, it is clear that they are attracted to MVHS facilities for various reasons (one of which is likely the high quality of care provided at its facilities).

- MVHS expects to continue to experience a decrease in its inpatient psychiatric utilization, largely due to the transition of care from the inpatient realm to the outpatient realm, and from the expanded use of front-line substance behavioral health services. To this end, MVHS and its two (2) hospital facilities operate numerous extension clinics throughout Oneida and the surrounding region that provide outpatient behavioral health services. MVHS is continuing to work with its partners through the ORIP program to integrate behavioral health services into the primary care setting.

Please also refer to the Project Narrative (under the Schedule 1 Attachment) for additional information. Please also refer to the C.O.N. Schedule 2B for capital cost information associated with the new hospital campus project.

- b. **Changes in Population Served**
- a. Describe the population currently served in the program. Provide quantitative and qualitative data.
 - b. Describe the population being served by or deleted from the program. Include quantitative and qualitative data.
 - c. Explain the reasons for the change in population:
 - i. Existing population (provide justification and data to support the need to serve this population)
 - ii. Describe the impact of the addition or deletion on the existing program in terms of services, staffing, staff expertise, program space, capacity or space and care fees (including the impact on the state share of Medicaid, for projects other than A12% B1-2 lines)

N/A – No Change in Population Served

- c. **Other Projects**
- i. Describe the project and the reasons for requesting approval. If a real emergency situation, fully describe the nature of the emergency and the reasons for approval.
 - ii. If a management contract or clinical services contract, provide:
 - I. Reasons for entering into the proposed contract
 - II. Copy of the proposed contract
 - III. Background on the principals, officers, and directors of the organization.
 - IV. Information in sufficient detail to enable review of the project pursuant to Part

Schedule 20B

Office of Alcoholism and Substance Abuse Services Program

NOT APPLICABLE

This information is required of Article 28 hospitals and diagnostic and treatment centers for projects that include Chemical Dependency (CD) programs subject to an operating void, use or prior approval by the Office of Alcoholism and Substance Abuse Services (OASAS) under Article 32 of the Mental Hygiene Law (MHL). These projects include a new Chemical Dependency (CD) program at a new site or a modification to an existing program. Per MHL Article 32, prior consultation with the Local Governmental Unit (LGU) and local OASAS Field Office is required before submission of the Article 28 application.

Section A – Attachments for New Service, New Additional Location or Capacity Increase of beds

1. Program and Service Area

- Identify the type CD treatment service to be provided.
- Provide a description of the area where the applicant plans to provide CD services.
- Describe how the proposed program will function within the network of CD provider in this area.

N/A

2. Need

- Provide an assessment of the need for the services requested.
- Describe how your organization currently serves the target population (if applicable).
- Provide any other information supporting need for the proposed program.

N/A

3. Functional Program

- Mission - Describe the applicant's approach/philosophy regarding the treatment of chemical dependencies; include use of self-help services, medication, individual/group counseling and other treatment techniques.
- Organization - Describe the lines of authority from the governing body to the approved program. Indicate the relationship of the program to other programs operated by your agency.
- Goals and Objectives - Provide a detailed list including, but not limited to: expected outcomes for patients; planned numbers and frequency of service delivery; planned length of stay and other proposed measures of success.
- Policies and Procedures - Submit detailed CD operational policies and procedures in accord with the proposed services to be provided. (not required when adding an additional location or a capacity increase of beds)
- Additional Locations - Indicate current annual number units of services at main location and projected annual number units of services at the additional location.
- Services - Describe the proposed operating schedule including days and hours.
- Staffing - Provide a staffing plan for the program. Include descriptions of qualifications and duties for each staff person.
- Premises - Provide a description of the premises to be used by the program. Include floor plan sketches drawn to scale.
- Provide a Certificate of Occupancy or equivalent from the local building jurisdiction.

N/A

New York State Department of Health Certificate of Need Application

Schedule 20B

4. Fig 2A

- a) Submit a proposed budget for pre-operational expenses and first year of full operation

N/A

5. Implementation

Describe start-up or phase-in activities necessary to implement the program. Include timetables in your description.

N/A

Section B – Relocation an existing service.

1. Change in Location

- Indicate the proposed effective date of relocation.
- Identify the new location.
- Describe the reasons for the relocation.
- Describe how access and transportation needs will be addressed.
- Provide a description of the premises to be used by the program. Include floor plan sketches drawn to scale.
- Provide a Certificate of Occupancy or equivalent from the local building jurisdiction.
- If the program relocates to a new county or borough, Complete Section A 11.

N/A

Section C – Change of Sponsor

1. Change in Sponsor

- Identify the new sponsor and the current sponsor.
- Describe the reasons for changing sponsorship of the program(s).
- Include written concurrence from the current sponsor (or transfer of the program(s) if current sponsor is a corporation, include a resolution from the Board of Directors).
- Describe any changes to be made in the operation of the program(s).
- Describe the qualifications of the new sponsor for the operation of CD programs.
- Indicate any financial considerations involved in the change of sponsor.
- Submit a transition plan, including timetables, for the change of sponsor.

N/A

SCHEDULE 20 ATTACHMENT

MOTIAWK VALLEY HEALTH SYSTEM

TRANSITION PLANS (INPATIENT PSYCHIATRIC UNITS)

1. St. Elizabeth Medical Center
2. Easton-St. John's Hospital

TRANSITION PLAN

St. Elizabeth Medical Center

24-BED INPATIENT PSYCHIATRIC UNIT

Purpose:

To ensure the smooth transition of inpatient psychiatric treatment as the 24-bed inpatient psychiatric unit is relocated from its current location at 2209 Geneva Street, Utica (Otsego County), New York 13501 to a new hospital campus on a 25-acre parcel of land generally bordered by the following streets in Utica (Otsego County), New York 13501: State Street, Broadway, Oriskany Street West, and Countails Street. St. Elizabeth's Medical Center (SEMC) / Mohawk Valley Health System (MVHS), the New York State Department of Health (NYSDOH) and the New York State Office of Mental Health (NYSOMH) will work collaboratively during the transition process.

Anticipated Date of Transition

The date of transition to the new hospital campus is anticipated to be on or about January 1, 2022 and is dependent on Mohawk Valley Health System receiving all necessary approvals from NYSDOH and NYSOMH for it to construct a new hospital campus in Utica, New York. Furthermore, this date is based upon the timing of the actual construction of the new hospital campus.

Proposed Schedule for Phasing of Transition

Based on the construction timing for the project SEMC/MVHS will work to identify patients who can appropriately be discharged to community care from the inpatient unit on the existing SEMC campus, to lessen the number of patients who need to be transferred to the new hospital campus on the actual date of transition.

Notification

Once the C.O.A. Application to convert the new hospital campus is approved by the NYSOMH and the construction of the new facility is nearing its end, SEMC/MVHS will begin to provide notice to all constituent populations, including staff, providers, patients and elected officials, that the transition of the inpatient services to the new hospital campus will be occurring with an anticipated date on or about January 1, 2022. Signage will also be placed in prominent locations at SEMC, notifying people of the pending transition and providing them with a contact number.

Maintenance, Storage and Retrieval of Records, including Medical Records

There will be no change to the maintenance of records, including medical records, of patients. All records will continue to be maintained by Mohawk Valley Health System, in compliance with State and Federal statutes. Patients will be advised on how to obtain copies of their medical record from the Health Information Management Department at SEMC/MVHS.

Proper Disposal of Medications, Biologicals, Chemicals and Medical Supplies

Used medical supplies will be brought to the new hospital campus.

Disposition of Equipment

Equipment from the inpatient psychiatric unit at the existing SEMC campus will be used, as appropriate, within either inpatient unit at the new hospital campus. Equipment that is beyond its useful life will be disposed of according to policy.

Link to Alternative Programs

The inpatient unit at SEMC is part of the larger behavioral health service delivery system in and around Oneida County, which includes other providers and community-based organizations that provide behavioral health services to the residents of the service area. Hospital staff, which is knowledgeable of these resources, programs and how to access them, will refer to and provide linkages to such programs/providers as:

- New Hospital Campus of NYHS
- Mohawk Valley Psychiatric Center
- Rome Memorial Hospital
- Cath Char RC Dio/Syr, NY, Inc-Oneida/Madison
- Center for Family Life and Recovery, Inc.
- Central New York Psychiatric Center
- Central New York Services, Inc.
- House of the Good Shepherd
- Human Technologies Corporation
- NYS ARC Oneida-Lewis County Chapter
- Oneida County Department of Mental Health
- Rescue Mission of Utica, Inc.
- Resource Center for Independent Living
- The Neighborhood Center, Inc.
- Upstate Cerebral Palsy, Inc.

As it has done successfully in the past, SEMC/NYHS will continue to work with these entities in order to ensure that patients receive needed behavioral health services. This includes making sure that alternative programs have agreed to accept the referral, that the patient has appropriate transportation, and that follow-up occurs to continue reciprocal linkage to the programs.

TRANSITION PLAN

DIXTON-ST. LUKE'S HEALTHCARE ST. LUKE'S DIVISION

24-BED INPATIENT PSYCHIATRIC UNIT

Purpose

To ensure the smooth transition of inpatient psychiatric treatment as the 26-bed inpatient psychiatric unit is relocated from its current location at 1656 Champlain Avenue, Ulster (Columbia County), New York 12502 to a new hospital campus on a 23-acre parcel of land generally bounded by the following streets in Ulster (Columbia County), New York 12501: State Street, Broadway, Driskany Street West, and Columbia Street. Dixton-St. Luke's Hospital (DSLH) / Mohawk Valley Health System (MVHS), the New York State Department of Health (NYSDOH) and the New York State Office of Mental Health (NYSDOMH) will work collaboratively during the transition process.

Anticipated Date of Transition

The date of transition to the new hospital campus is anticipated to be on or about January 1, 2022 and is dependent on Mohawk Valley Health System receiving all necessary approvals from NYSDOH and NYSDOMH for it to construct a new hospital campus in Ulster, New York. Furthermore, this date is based upon the timing of the actual negotiation of the new hospital campus.

Proposed Schedule for Planning of Transition

Based on the construction timing for the project, P&I /MVHS will work to identify patients who can appropriately be discharged to community care from the inpatient unit on the existing DSLH campus, to lessen the number of patients who need to be transferred to the new hospital campus on the actual date of transition.

Notification

Once the C.O.N. Application to construct the new hospital campus is approved by the NYSDOH and the construction of the new facility is nearing its end, P&I /MVHS will begin to provide notice to all constituent populations, including staff, providers, patients and elected officials, that the transition of the inpatient service to the new hospital campus will be occurring with an anticipated date on or near January 1, 2022. Signage will also be placed in prominent locations at DSLH, notifying people of the pending transition and providing them with a contact number.

Maintenance, Storage and Retrieval of Records, including Medical Records

There will be no change to the maintenance of records, including medical records, of patients. All records will continue to be maintained by Mohawk Valley Health System in compliance with State and Federal statutes. Patients will be advised on how to obtain copies of their medical record from the Health Information Management Department at DSLH/MVHS.

Proposed Disposal of Medications, Biologics, Chemicals and Medical Supplies

Unused medical supplies will be brought to the new hospital campus.

Disposition of Equipment

Equipment from the inpatient psychiatric unit at the existing FSLHC campus will be used, as appropriate, within other inpatient unit at the new hospital campus. Equipment that is beyond its useful life will be disposed of according to policy.

Link to Alternative Programs

The inpatient unit at FSLHC is part of the larger behavioral health service delivery system in and around Oneida County, which includes other providers and community-based organizations that provide behavioral health services to the residents of the service area. Hospital staff, which is knowledgeable of these resources, programs and how to access them, will refer to and provide linkages to such programs/providers as:

- New Hospital Campus of NYHS
- Mohawk Valley Psychiatric Center
- Saint Memorial Hospital
- Cash Char RC Dist/Svc. NY, Inc. Oneida/Madison
- Center for Family Life and Recovery, Inc.
- Central New York Psychiatric Center
- Central New York Services, Inc.
- House of the Good Shepherd
- Human Technologies Corporation
- NYS ARC Oneida-Lewis County Chapter
- Oneida County Department of Mental Health
- Rescue Mission of Utica, Inc.
- Resource Center for Independent Living
- The Neighborhood Center, Inc.
- Upstate cerebral Palsy, Inc.

As it has done successfully in the past FSLHC/NYHS will continue to work with these entities in order to ensure that patients receive needed behavioral health services. This includes making sure that alternative programs have agreed to accept the referral, that the patient has appropriate transportation, and that follow-up occurs to confirm recipient message to the programs.

Helicopter Operations

Helicopter Operations - MVHS, MV-03-022

PURPOSE

Mohawk Valley Health Systems (MVHS) maintains and makes available two helistops to authorized medical helicopter services, to be used to send or receive patients to/from other healthcare facilities, when transportation by helicopter is required due to medical necessity or other reasons.

SCOPE

Faxton St. Lukes Healthcare and St. Elizabeth Medical Center Campuses.

REFERENCES

US DOT Federal Aviation Administration Advisory Circular No: 150/53902C, Chp 4 Hospital Heliports
 2010 Fire Code of NYS, Chp 11 Aviation Facilities
 ECP016, *Helicopter Safety – Construction Equipment (SEMC)*
 SEP007, *Helicopter Security (SEMC)*

DEFINITIONS / ABBREVIATIONS

AOC	Administrator on Call
ETA	Estimated time of arrival
Heliport	An area of land or water or a structural surface that is used, or intended for use, for the landing and taking off of helicopters, and any appurtenant areas which are used, or intended for use, for heliport buildings and other heliport facilities.
Helistop	The same as "Heliport," except that no fueling, defueling, maintenance, repairs or storage of helicopters is permitted.
Rotor wash	Wind turbulence created by the main rotor at landing and take-off
Tail rotor	Small blades at the tail end of the helicopter

PROCEDURE / DIRECTIVE

1. Restrictions:

1. The helistop is for emergency medical transport only.
2. Helicopters using the helistop must weigh less than 12, 500 pounds (SEMC Campus Only).
3. No helicopters shall be based at either campus.
4. No helicopter fueling shall occur at either campus.

2. Safety Guidelines

1. Helistop Structure

1. The helistop and adjacent area shall be kept free of debris to prevent dangerous flying objects from the high winds generated by the helicopter blades (rotor wash).
2. In winter months, the helistop shall be kept free of snow and ice. Rock salt shall not be used on the helistop since it may become a projectile from the helicopter rotor wash and its corrosiveness may cause damage to the aircraft. Only appropriate non-corrosive de-icing materials shall be used on the helistop.
3. No vehicle parking shall be allowed on or immediately adjacent to the helistop. Signs shall be posted to this effect.
4. A portable fire extinguisher with a minimum rating of 80-B shall be in place within 75' adjacent to the helistop.
5. The helistop shall be adequately lighted to allow landings at times when there is no or inadequate sunlight. Lights shall be pointed down toward the pad so as not to interfere with the pilot's vision. A windsock that is in good condition (not ripped or overly faded) shall be in place in the vicinity of the helistop.
6. A rotating red beacon light shall be in place and turned on in advance of a helicopter's arrival.
7. Security staff shall carry cell phones for communication while monitoring the helistop.
8. If any temporary structures are brought to the hospitals that extend more than 200 feet in the air (e.g. crane), notification to the FAA and the helicopter services shall be provided as per policy ECP016, *Helicopter Safety – Construction Equipment*. The top of the structure must be marked with flags during daylight hours and illuminated at night.
9. If the helistop needs to be temporarily closed for any reason, a large yellow "X" must be temporarily marked over the entire landing area to signal to pilots that the helistop is closed.

2. Personnel Safety

1. Access to the helistop during use shall be restricted to only staff trained in helicopter equipment hazards.
2. A running helicopter shall not be approached unless the helicopter crew instructs and leads MVHS staff to the aircraft.
3. Avoid the tail rotor area and helicopter blade area. Always approach the helicopter from the front in the full view of the pilot and only when the pilot indicates that it is safe. Secure all loose clothing and items in the vicinity of a running helicopter. Staff shall keep their heads down and not raise their hands or allow anything above head-level (e.g. IV stands) when in the vicinity of a helicopter with a spinning rotor. MVHS staff shall not open or secure helicopter doors or handle any equipment related to the aircraft.
4. Staff on the helistop, when the helicopter is landing or departing, shall wear eye and hearing

protection.

5. Security officers WILL NOT transport equipment and/or patients to or from the helicopter unless specifically ordered to do so by the Hospital Supervisor or the Administrator on Call (AOC) and instructed by Helicopter crew.
6. All security officers will be oriented to helicopter safety procedures at hire to the organization and periodically as required.

3. Responsibilities

Who Responsible	Action to be Taken
Safety Officer	Responsible for the Airport Security Plan and Triennial Airport Registration
Facilities Management	Responsible for the maintenance of the helistop including the landing area (structural integrity, drainage, snow/ice removal, painting, etc.), lighting, phone, windsock, signs, and any other relevant physical features needed for safe use. Place a yellow "X" on the landing pad when temporarily closed. Also refer to SEMC Departmental Procedure ECP016, Helicopter Safety – Construction Equipment (SEMC Only).
Sending/ Receiving Unit	Contact Hospital Supervisor. Prepare to send or receive patient.
Hospital Supervisor	Notify Security of ETA and Switchboard (FSLH Only) of ETA
FSLH Switchboard Only	Notify Resource Officer in the ED. Notify New Hartford Police Department; NHPD (Regular transport is at discretion of NHPD to provide assistance, unless Hospital Supervisor requests).
Security	Routinely inspect the helistop for any maintenance issues, communicate any problems to Facilities Management.
FSLH	When notified of ETA for incoming/outgoing patient: Bring a stretcher to the helistop. Prepare helistop by turning on helistop lights and beacon. Secure a portable fire extinguisher with a minimum rating of 80-B. Secure the landing pad to prohibit any unauthorized personnel, vehicles, or equipment to interfere with the helicopter during landing. Maintain visual contact with the helicopter at all times while it is approaching, landing and departing. Upon helicopter departure: turn off helistop lights and beacon, return fire extinguisher to its' storage hanger and safety equipment to its' storage.
SEMC	When notified of ETA for incoming/outgoing patient: Notify Utica Fire Department (Who are then on stand-by) Bring stretcher to helistop. Prepare helistop by turning on helistop lights and beacon and inspecting helistop surface. Secure a portable fire extinguisher with a minimum rating of 80-B. Secure the landing pad to prohibit any unauthorized personnel, vehicles, or equipment to interfere with the helicopter by placing safety cones on either side of helistop and placing an officer in between levels 2 and 3 of the parking garage blocking traffic. Escort patient to and from unit

Who Responsible	Action to be Taken
	Upon helicopter departure: turn off helistop lights and beacon, return fire extinguisher, safety equipment, and safety cones to roof cabinet. Contact Utica Fire Department and notify them of helicopter departure.
	Also refer to SEMC Departmental Procedures SEP007, Helicopter Security.

APPLICATION FOR FINANCIAL ASSISTANCE

Oneida County Industrial Development Agency

584 Phoenix Drive
Rome, New York 13441-1405
(315) 338-0393 telephone
(315) 338-5694 fax

Shawna M. Papale, Executive Director

A non-refundable application fee of \$500.00 must be submitted at the time of application along with a \$1,000 commitment fee; the \$1,000 commitment fee will be applied to closing fees.

*Please submit the original and two (2) copies of the **signed and notarized** application, and **signed** SEQR form with the above fees. Cost benefit will be completed based on information from this application.*

Please also deliver an electronic copy of all.

All applications must be submitted at least 10 days prior to meeting.

MVHS Integrated Health Campus

Project Name

Number (to be provided by the agency)

Date of Submission *January 16, 2018*

Note to Applicant:

The information requested by this application is necessary to determine the eligibility of your project for Agency benefits. Please answer **all** questions, inserting “none” or “not applicable” where appropriate. If you are providing an estimate, please indicate by inserting “est” after the figure. Attach additional sheets if more space is needed for a response than is provided.

Return the original **signed and notarized** application and two copies with a check in the amount of \$1500.00 made payable to: **Oneida County Industrial Development Agency (OCIDA)**, 584 Phoenix Drive, Rome, New York 13441-1405, Attn.: Shawna M. Papale, Executive Director. \$1000 will be applied at closing against the IDA legal fees. In addition, an electronic version of the application (signed), **and**SEQR form (signed), to spapale@mvedge.org.

Upon the submission of this application to OCIDA, this applicant becomes a public document. Be advised that any action brought before the OCIDA is public information. All agendas for OCIDA are issued prior to full agency meetings and posted in public domain. If there is information that the applicant feels is proprietary please identify as such and that information will be treated confidentially to the extent permitted by law.

By signing and submitting this Application, the Applicant acknowledges that it received a copy of the Uniform Tax Exemption Policy and the Oneida County IDA Penalty for Failure to Meet Employment Levels as adopted by the Agency and Agency Memorandums pertaining to the benefits of projects financed through the Agency.

A project financed through the Agency involves the preparation and execution of significant legal documents. Please consult with an attorney before signing any documents in connection with the proposed project. You will receive an engagement letter from the OCIDA legal counsel. You will be asked to sign the engagement letter acknowledging you will be responsible for all legal fees of OCIDA legal counsel and that you understand the process. Should you not close and legal services have been rendered by the OCIDA legal counsel, your company will be responsible for those costs.

If your project requires a public hearing, a representative of the applicant is required to be present. A date will be coordinated by the OCIDA legal counsel.

If you have questions how to calculate your company’s IDA application fee please consult with the Memorandum to Companies Sale – Leaseback Transactions or please contact the IDA Executive Director.

Part I: Applicant Information

Note: In responding to the following questions, please keep in mind that the Applicant will be party to all of the documents and is the individual or if entity **will be formed** which will receive the actual financial assistance from the Agency.

Applicant

- 1(a) Applicant's Legal Name: Mohawk Valley Health System
- 1(b) Principal Address: 2209 Genesee Street
Utica, NY 13501
- 1(c) Telephone/Facsimile Numbers: 315-801-4978 (phone)
315-801-8598 (fax)

Business Description

4(a) Describe the nature of your business and principal products and/or services. Attach additional sheets if necessary.

In 2014, Faxon St. Luke's Healthcare and St. Elizabeth Medical Center affiliated as Mohawk Valley Health System ("MVHS"). MVHS provides medical/healthcare services for residents of the Mohawk Valley, which includes the geographic area of Oneida, Herkimer, and Madison Counties. MVHS's mission is to provide excellence in healthcare for its communities. MVHS is an integrated healthcare delivery system with 4,200 full time equivalent employees and a combined operating budget of \$566 million. MVHS is the active parent and co-operator of St Elizabeth Medical Center ("SEMC") and Faxon St. Luke's Healthcare Division ("FSLH"). The MVHS Medical Group has 19 primary care locations, a Children's Health Center, a Women's Health Center, general, orthopedic and neurological surgeons, a Breast Care Center and two Urgent Cares to serve the community's healthcare needs. See Exhibit B.

Part II: Project Information

5(a) Explain your project in detail. This description should include explanation of all activities which will occur due to this project. Attach additional sheets if necessary.

The MVHS Integrated Health Campus will encompass approximately 25-acres and will include the following elements: Hospital Building; Central Utility Plant; Parking facilities (including one parking garage); Potential future Medical Office Building (by private developer); Campus grounds; Helistop. (site layout and elevations attached as Ex. C and Fact Sheet attached as Ex D.)

HOSPITAL BUILDING. *The proposed ±670,000 square foot (sf) hospital building will be constructed on parcels located west of Broadway and will extend through Cornelia Street onto parcels located east of State Street. The hospital building consists of a 2-story podium and a 7-story bed tower. The main entrance to the hospital will be located south of Lafayette Street, proximal to Cornelia Street. In addition to the main entrance, Emergency Department (ED) walk-in and ED ambulance entrances will be located on the western portion of the hospital. Vehicular and pedestrian entries will be marked by canopy systems that provide adequate coverage for public drop off, ED walk-in and loading activities. Ambulance traffic will be provided with a sally port adjoined to the podium. A service entrance will be located on the eastern portion of the hospital building, which will be accessible via Columbia Street. Most services currently provided at the FSLH and SEMC will be transitioned to the Integrated Health Campus including ±373 inpatient beds.*

CENTRAL UTILITY PLANT. *A three-story Central Utility Plant (CUP) will service the hospital. The CUP will adjoin the eastern portion of the podium of the hospital building. The CUP will house three centrifugal chillers, a heat recovery chiller and four steam and eight hot water heating condensing boilers, each which will be fueled by both natural gas and No. 2 Fuel oil. A 50,000-gallon underground storage tank (UST) used to store the No. 2 fuel oil will be installed south of the CUP in the service yard. A 30,000-gallon aboveground storage tank (AST) used to store emergency water for fire protection will also be located in the service yard.*

PARKING FACILITIES. *Parking facilities will consist of a three-story parking garage and multiple parking lots. The parking garage will provide approximately 1500 parking spaces and the parking lots will allow for an additional ± 1300 parking spaces. These parking facilities will be available for use by patients, visitors, staff, and volunteers, as well as the community for non-hospital related events.*

POTENTIAL FUTURE MEDICAL OFFICE BUILDING. *A future medical office building is proposed. It is anticipated that the medical office building would be owned and operated by a private developer. The proposed location of the medical office building is south of Columbia Street and east of Cornelia Street.*

CAMPUS GROUNDS. *The campus will be designed as an urban park with enhanced lighting, trees, pedestrian walkways and seating areas. A pedestrian walkway will replace a portion of Lafayette Street. This walkway will extend from the main entrance to the west, terminating just adjacent to the North-South Arterial Highway. An additional segment of the walkway will provide access to the ED entrance. Outdoor areas will include gardens and other design considerations to create a healing environment. It should also be noted that modifications to existing utility infrastructure will be necessary to accommodate the proposed MVHS Integrated Health Campus.*

Reasons for Project

6(a) Please explain in detail why you want to undertake this project.

Substantial effort has been focused on consolidating existing resources, eliminating redundancies, expanding the depth and breadth of services, improving access and elevating the quality of healthcare services in the region. MVHS has been successful in its efforts thus far, but has been constrained by the age and physical limitations of the existing facilities. Through New York Public Health Law Section 2825-b, New York State created the "Oneida County Health Care Transformation Program" that set aside up to \$300 million in capital grant funding for the sole purpose of consolidating multiple licensed healthcare facilities into an integrated system of care, within the largest population center in Oneida County (i.e., Utica). Through a response to a Request for Applications (RFA #1505060325) from the New York State Department of Health (NYSDOH) and Dormitory Authority of the State of New York (DASNY), MVHS was awarded \$300 million in grant funding for the creation of a new hospital campus that will result in the transformation of healthcare services in the region. The new MVHS integrated health campus and state-of-art hospital will combine services and replace SEMC and FSLH, will reduce the number of beds in the community, and consolidate patient services to one campus all to deliver higher quality, more effective care with better community outcomes and at a lower cost.

The integrated campus serves the public need by (1) creating a facility with the newest technology, services and advancements in patient safety and quality so that our community can receive the most up-to-date healthcare services that rivals those found in large cities; (2) serving the growing demand for healthcare due to the rapidly increasing and aging population in this region; and (3) improving accessibility to and availability of services by attracting specialists and providing services that otherwise would not be available to the community. In addition, the opportunity to gain greater operational efficiencies through the elimination of duplicative and redundant functions will help to reduce the rate of increase in healthcare spending and to achieve improved financial stability. It will benefit Medicaid enrollees and uninsured individuals in the City and serve the largest and most diverse population in Oneida County. The Project will also help support the ongoing efforts to revitalize downtown Utica by bringing more than 3,500 MVHS employees and medical staff to the new campus, which will spur additional economic development. Downtown housing, commercial, food, retail, education and entertainment venues are positioned to greatly benefit from the influx of employees and visitors. The project will also create future healthcare and development opportunities to anticipate needs in education, research and applied sciences. See Exhibits E, F, & G.

6(b) Why are you requesting the involvement of the Agency in your project?

MVHS is already exempt from property and sales taxes. However, MVHS would be required to pay a significant mortgage tax in connection with additional financing needed for the project. Receiving an exemption from the mortgage tax would make those funds available to other aspects of the project. For example, additional amounts could be used to provide relocation benefits to property owners or to address any environmental issues related to property acquisition. MVHS also anticipates that Agency assistance will be required to acquire some of the property necessary for the project, through eminent domain.

6(c) Please confirm by checking the box, below, if there is likelihood that the Project would not be undertaken but for the Financial Assistance provided by the Agency?

Yes or No

If the Project could be undertaken without Financial Assistance provided by the Agency, then provide a statement in the space provided below indicating why the Project should be undertaken by the Agency:

Through New York Public Health Law Section 2825-b, New York State created the "Oneida County Health Care Transformation Program" that set aside up to \$300 million in capital grant funding for the sole purpose of consolidating multiple licensed healthcare facilities into an integrated system of care, within the largest population center in Oneida County (i.e., Utica). Through a response to a Request for Applications from the NYSDOH and DASNY, MVHS was awarded \$300 million in grant funding for the project. However, MVHS and the public would benefit from financial assistance in the form of a mortgage tax exemption because it would make those funds available to other aspects of the project. For example, additional amounts could be used to provide relocation benefits to property owners or to address any environmental issues related to property acquisition. MVHS also anticipates that Agency assistance will be required to acquire some of the property necessary for the project.

How will the Applicant's plans be affected or scaled back if Agency approval is not granted?

MVHS has commenced negotiations with many of the property owners located within the project footprint. Many of these entities have expressed an interest in relocating their business to other facilities within the City of Utica. However, many of these entities have indicated that the cost of relocation is a significant concern and have requested funding to assist with such efforts. If Agency approval is not granted, there will be limited funds available for relocation benefits. In addition, in the absence of agency approval, MVHS will need to find another partner with authority to acquire needed properties for the Project.

6(d) Is the proposed project reasonably necessary to discourage the Applicant from removing such other plant or facility to a location outside the State of New York?

Yes No **If yes, please explain briefly.**

MVHS is a not-for-profit healthcare organization formed for the specific purpose of providing health services to the people of Oneida County and the Mohawk Valley. It is not authorized to provide its services outside of the Mohawk Valley or outside of New York State.

6(e) Will financing by the Agency result in the removal or abandonment of a plant or other facility of the applicant or any related entity presently located in another area of New York State?

Yes No Please see explanation below.

If yes, is the proposed project reasonably necessary to preserve the competitive position of the Applicant in its respective industry? Yes No

The project is necessary to strengthen MVHS operations in an increasingly competitive healthcare environment. The project will result in significant annual savings and will improve ability to attract new physicians. See Exhibit G.

If yes, please provide a statement and evidence supporting the same. Include the name of all taxing jurisdictions in which the abandoned facility or plant lies, and whether Applicant has had any discussions with said taxing jurisdictions regarding the abandonment. Please provide as much detail as possible.

With the exception of certain ancillary facilities, MVHS's objective is to facilitate redevelopment of the existing FSLH and SEMC campuses consistent with the Town of New Hartford's and the City of Utica's long term development plans and capable of making an economically positive contribution to each community. In support of this objective, MVHS will be conducting an evaluation of the properties and potential redevelopment opportunities concurrent with planning for the proposed hospital. In addition to the disposition and redevelopment of the primary facilities, existing ancillary facilities will also be reused. At FSLH, most of the inpatient and outpatient services performed at the existing site will be transitioned to the MVHS Integrated Health Campus; however, it is anticipated that ±24 physical medical and rehabilitation beds will remain and some outpatient services may be performed at this site. The SEMC site will be converted into an outpatient extension clinic. Services provided at the clinic will include sleep center services, cardiac and thoracic surgery-related offices, primary care services and a laboratory patient service center. See Exhibits F and H.

- 6(f) Has the Applicant or any related entity previously secured financial assistance in Oneida County (whether through the Agency, the Empire State Development Corporation, or any other entity) ? Yes No

If yes, please explain (indicate date of benefit, location of facility and outstanding balance).

See listing of bonds issued by Oneida County IDA to all of our related entities in Exhibit I. Outstanding represents current as of 12/31/17. In addition it should be noted that we have received various grants through NYS (mainly NYDOH) for both Hospitals as well as MVHS, including the "Oneida County Health Care Transformation Program" that set aside up to \$300 million in capital grant funding for the sole purpose of consolidating multiple licensed healthcare facilities into an integrated system of care, within the largest population center in Oneida County (i.e., Utica).

- 6(g) Has the Applicant or any related entity secured financial assistance anywhere within the United States within the last 90 days or does the Applicant or any related entity anticipate receiving financial assistance within the next 90 days? Yes No
If yes, please explain.

Through New York Public Health Law Section 2825-b, New York State created the "Oneida County Health Care Transformation Program" that set aside up to \$300 million in capital grant funding for the sole purpose of consolidating multiple licensed healthcare facilities into an integrated system of care, within the largest population center in Oneida County (i.e., Utica). Through a response to a Request for Applications (RFA #1505060325) from the New York State Department of Health (NYSDOH) and Dormitory Authority of the State of New York (DASNY), MVHS was awarded \$300 million in grant funding for the creation of a new hospital campus that will result in the transformation of healthcare services in the region. See Exhibit H.

- 6(h) Check all categories best describing the **type of project for all end users at project site (you may check more than one; if checking more than one indicate percentage of square footage the use represents):**

- | | | | |
|-------------------------------------|---|---|--|
| <input type="checkbox"/> | Manufacturing | Percentage of sq. footage of each use (if more than one category): | |
| <input type="checkbox"/> | Industrial Assembly or Service | | |
| <input type="checkbox"/> | Back office operations | | |
| <input checked="" type="checkbox"/> | Research and Development | | <i>2,502 square feet will be leased to Masonic Medical Research Lab.</i> |
| <input type="checkbox"/> | Technology/Cybersecurity | | |
| <input type="checkbox"/> | Warehousing | | |
| <input type="checkbox"/> | Commercial or Recreational | | |
| <input checked="" type="checkbox"/> | Retail | | <i>MVHS provides medical services.</i> |
| <input type="checkbox"/> | Residential housing (specify) _____ | | |
| <input type="checkbox"/> | Pollution Control (specify) _____ | | |
| <input type="checkbox"/> | Environmental (e.g., Brownfield) (specify) _____ | | |
| <input checked="" type="checkbox"/> | Other (specify) <u>Hospital/Medical and associated parking and medical office building.</u> | | |

6(i) Check all categories best describing the **scope of the project**:

- Acquisition of land
- Acquisition of existing building
- Renovations to existing building
- Construction of addition to existing building
- Demolition of existing building or _____ part of building
- Construction of a new building
- Acquisition of machinery and/or equipment
- Installation of machinery and/or equipment
- Other (specify) _____

6(j) Please indicate the financial assistance you are requesting of the Agency, and provide the estimated value of said assistance. Attach a sheet labeled Annual PILOT that shows the annual utilization of the Real Property Tax Abatement by year and by taxing jurisdiction.

Assistance	Estimated Value
<input type="checkbox"/> Real Property Tax Abatement	\$ _____
<input checked="" type="checkbox"/> Mortgage Tax Exemption (.75%)*	\$ <u>1,125,000</u>
Amount of mortgage: \$ <u>150,000,000</u>	
<input type="checkbox"/> Sales and Use Tax Exemption ** (8.75%)	\$ _____
Value of goods/services to be exempted from sales tax: \$ _____	
<input type="checkbox"/> Issuance by the Agency of Tax Exempt Bonds	\$ _____
<input checked="" type="checkbox"/> Condemnation/Acquisition of Property	

Is the financial assistance requested by the Applicant consistent with the IDA's Uniform Tax Exemption Policy? Yes No

If no, please provide a written statement describing the financial assistance being requested and detailing the reasons the IDA should consider deviating from its Policy.

**MVHS may or may not need to obtain a mortgage for this Project.*

**** Note that the estimate provided above will be provided to the New York State Department of Taxation and Finance. The Applicant acknowledges that the transaction documents will include a covenant by the Applicant that the estimate, above, represents the maximum amount of sales and use tax benefit currently authorized by the Agency with respect to this Application. The Agency may utilize the estimate, above, as well as the proposed total Project Costs as contained within this Application, to determine the Financial Assistance that will be offered. It is the responsibility of the applicant to inform the IDA within 10 days if the project amount changes.**

Part III: Facility Information (if project that you are applying for is a housing project please also complete questions 7(m) through 7(q))

Facility (Physical Information) If multiple locations please provide information on all.

7(a) Street Address of Facility:

Area of Downtown Utica generally bounded by Oriskany Blvd. on the North Broadway on the East, State St. on the West and Columbia Street on the South.

7(b) City, Town and/or Village (list ALL incorporated municipalities):

Utica

7(c) School District:

Utica

7(d) Tax Map Number(s): *See spreadsheet attached as Exhibit J.*

Attach copies of the most recent real property tax bills. Include copies for all taxing jurisdictions for the site/ facility that IDA assistance is being sought.

7(e) For what purpose was the facility site most recently used (i.e., light manufacturing, heavy manufacturing, assembly, etc.)?

Light manufacturing, retail, residential, non-profit

7(f) Zoning Classification of location of the project:

Central Business District

7(g) Please describe in detail the facility to be acquired, constructed or renovated (including number of buildings, square footage, number of floors, type of construction,) and attach plot plans, photos or renderings, if available. If there are infrastructure improvements (water, sewer, gas, electrical, etc.) please provide details along with who will carry out those improvements and who will fund them. **Please be as specific as possible.**

The MVHS Integrated Health Campus will encompass approximately 25-acres and will include the following elements: Hospital Building; Central Utility Plant; Parking facilities (including one parking garage); Potential future Medical Office Building (by private developer); Campus grounds; Helistop.(Site layout and elevations attached as Ex. C and Fact Sheet as Ex. D.)

HOSPITAL BUILDING. *The proposed ±670,000 square foot (sf) hospital building will be constructed on parcels located west of Broadway and will extend through Cornelia Street onto parcels located east of State Street. The hospital building consists of a 2-story podium and a 7-story bed tower.*

CENTRAL UTILITY PLANT. *A three-story Central Utility Plant (CUP) will service the hospital. The CUP will adjoin the eastern portion of the podium of the hospital building. The CUP will house three centrifugal chillers, a heat recovery chiller and four steam and eight hot water heating condensing boilers, each which will be fueled by both natural gas and No. 2 Fuel oil. A 50,000-gallon underground storage tank (UST) used to store the No. 2 fuel oil will be installed south of the CUP in the service yard. A 30,000-gallon aboveground storage tank (AST) used to store emergency water for fire protection will also be located in the service yard.*

PARKING FACILITIES. *Parking facilities will consist of a three-story parking garage and multiple parking lots to be constructed pursuant to a memorandum of understanding between MVHS, the City of Utica and the County of Oneida. The parking garage will provide approximately 1500 parking spaces and the parking lots will allow for an additional ± 1300 parking spaces. These parking facilities will be available for use by patients, visitors, staff, and volunteers, as well as the community for non-hospital related events.*

POTENTIAL FUTURE MEDICAL OFFICE BUILDING. *A future medical office building is proposed. It is anticipated that the medical office building would be owned and operated by a private developer. The proposed location of the medical office building is south of Columbia Street and east of Cornelia Street.*

CAMPUS GROUNDS. *The campus will be designed as an urban park with enhanced lighting, trees, pedestrian walkways and seating areas. A pedestrian walkway will replace a portion of Lafayette Street. This walkway will extend from the main entrance to the west, terminating just adjacent to the North-South Arterial Highway. An additional segment of the walkway will provide access to the ED entrance. Outdoor areas will include gardens and other design considerations to create a healing environment. It should also be noted that modifications to existing utility infrastructure will be necessary to accommodate the proposed MVHS Integrated Health Campus.*

7(h) Has construction or renovation commenced? Yes No

If yes, please describe the work in detail that has been undertaken to date, including the date of commencement.

If no, indicate the estimated dates of commencement and completion:

Construction commencement: 2019

Construction completion: 2022

7(i) Will the construction or operation of the facility or any activity which will occur at the site require any local ordinance or variance to be obtained or require a permit or prior approval of any state or federal agency or body (other than normal occupancy and/or construction permits)?

Yes No

If yes, please describe.

Approvals will be required from a number of local and state agencies as identified in Exhibit K.

Has the Project received site plan approval from the planning department?

Yes No N/A

If Yes, please provide the Agency with a copy of the planning department approval along with the related **State Environmental Quality Review (SEQR)** determination. If no, please provide the status of approval:

This is the initial application and will require referral to all involved agencies for lead agency designation. See EAF attached as Exhibit K.

7(j) Will the project have a significant effect on the environment? Yes No

Important: please attach and sign Part 1 of either the the long or short Environmental Assessment Form to this Application.

7(k) What is the useful life of the facility? 60+ years

7(l) Is the site in a former Empire Zone? Yes No

If yes, which Empire Zone: City of Utica Empire Zone (see Exhibit L).

Is project located in a Federal HUB Zone or distressed area: Yes No

Provide detail.

The project is located in a historically underutilized business zone. In addition the City of Utica has a poverty rate of 30.1% and a significant refugee population. The area also is designated as a potential environmental justice area by NYSDEC. See Exhibits M and N.

Part IV: Housing Project Questionnaire *N/A*

Complete the following questions only if your project is a Housing Project. Please reference the Oneida County Industrial Development Agency Uniform Tax Exemption and Agency Benefits Policy Market Rate Rental Housing Development Initiatives. (Add additional pages as needed).

7(m) Describe the housing project to be constructed or renovated in detail (type of housing, number of units, etc.):

7 (n) Describe how you will change the current use of the facility or property being utilized for the project. To assist the IDA in their determination of an eligible vacant urban infill site project please provide an extensive explanation as well as photos of what is being removed or replaced with the new construction.

7 (o) Will the project have any impact on the existing infrastructure or upgrades to the current infrastructure (water, sewer, electrical, gas, etc.)? If yes please provide detail and who you are working with at the applicable organization.

7 (p) If your project is a multi-use facility please provide details of the project, project square footage breakdown of non-housing to housing usage, detail the job creation and retention associated with the non-housing component.

7 (q) Does the project provide a community benefit? If yes provide detail substantiating (reference the IDA policy).

Part V: Retail Project Questionnaire

To ensure compliance with Section 862 of the New York General Municipal Law, the Agency requires additional information if the proposed Project is one where customers personally visit the Project site to undertake either a retail sale transaction or to purchase services.

- A. Will any portion of the project (including that portion of the cost to be financed from equity or other sources) consist of facilities or property that are or will be primarily used in making sales of goods or services to customers who personally visit the project site?

Yes or No. If the answer is yes, please continue. If no, proceed to next section.

For purposes of Question A, the term “retail sales” means (i) sales by a registered vendor under Article 28 of the Tax Law of the State of New York (the “Tax Law”) primarily engaged in the retail sale of tangible personal property (as defined in Section 1101(b)(4)(i) of the Tax Law), or (ii) sales of a service to customers who personally visit the Project.

- B. What percentage of the cost of the Project will be expended on such facilities or property primarily used in making sales of goods or services to customers who personally visit the project? 100%. **If the answer is less than 33% do not complete the remainder of the retail determination and proceed to next section.**

If the answer to A is Yes AND the answer to Question B is greater than 33.33%, indicate which of the following questions below apply to the project:

1. Will the project be operated by a not-for-profit corporation Yes or No.

2. Is the Project location or facility likely to attract a significant number of visitors from outside Oneida County? Yes or No
- The primary service area (PSA) for this project is comprised of Oneida County. Oneida County is located in Central New York and had a population of 231,190 in 2016. The two (2) largest cities in Oneida County are Utica (with a 2015 population of 61,628 (most recent data available)) and Rome (with a 2015 population of about 32,916 (most recent data available)). MVHS' s patients generally come from 45 towns and villages covering 1,257 square miles surrounding the facilities. Approximately two-thirds (67%) of the County's population resides in urban/suburban areas, while the remaining one-third (33%) resides in rural areas*

If yes, please provide a third party market analysis or other documentation supporting your response.

3. Is the predominant purpose of the project to make available goods or services which would not, but for the project, be reasonably accessible to the residents of the municipality within which the proposed project would be located because of a lack of reasonably accessible retail trade facilities offering such goods or services?

Yes or No

If yes, please provide a third party market analysis that demonstrates that a majority of the project's customers are expected to come from outside of Oneida County and the project will not directly compete with existing businesses located in Oneida County.

This project will promote access to services to all patients in need of such services by making a number of its services more efficient and generally consolidated at a single site. Second, this project will help to improve public health outcomes for residents of the region through proper access to needed services. The project also assists with physician and medical professional recruitment and will provide opportunities for new medical services, medical education, and medical R&D in downtown Utica. See attached Exhibits E and G.

All applicants answer the following questions.

4. Will the project preserve permanent, private sector jobs or increase the overall number of permanent, private sector jobs in the State of New York?

Yes or No.

If yes, explain Project will preserve approximately 3,500 jobs and assist with recruitment of new physicians and medical professionals to the area. Project will also increase jobs in the area by providing opportunities for new medical services, medical education, and medical R&D in downtown Utica, as well as providing enhanced opportunities for retail, hotel, and other commercial development opportunities. See Exhibit J.

5. Is the project located in a Highly Distressed Area? Yes or No

Part VI: Facility (Legal Information)

8(a) With respect to the **present owner** of the facility, please give the following information **and provide a brief statement regarding the status of the acquisition.**:

(Note: the present owner is not necessarily the user of the facility, but that party which holds legal title to the facility.)

Legal Name: Please see spreadsheet attached as Exhibit J.

Address: _____

Telephone: _____

Balance of Mortgage: Unknown

Holder of Mortgage: Unknown

If the Applicant is not the present owner of the facility, please attach any written agreements and contracts concerning the acquisition of the real property and/or equipment. Applicant is working to obtain option agreement to acquire the properties, but at present, there are no agreements in place.

8(b) Is there a legal relationship, directly or indirectly, by virtue of common control or through related persons, between the Applicant and the present owner of the facility?
 Yes No. If yes, please explain.

8(c) Will a related real estate holding company, partnership or other entity, be involved in the ownership structure of the transaction?
 Yes No. If yes, please explain.

8(d) Will the title owner of the facility/property also be the user of the facility?
 Yes* No If no, please explain.

**MVHS will own the land and the hospital building. MVHS will acquire the land for the parking garage and the physician's office building, which are both essential for the success of the project. It is likely that MVHS will retain ownership of the land and ground lease a portion of the site to the City/County for the parking garage and another portion of the site to a currently undetermined private developer for the physician's office building.*

8(e) Is the Applicant currently a tenant in the facility? Yes No

8(f) Are you planning to use the entire proposed facility?

Yes No

If no, please give the following information with respect to tenant(s) which will remain in the facility after the completion of the project, including the square footage the Applicant will occupy:

<u>Name of Tenant</u>	<u>Floors Occupied</u>	<u>Square Feet Occupied</u>	<u>Nature of Business</u>
<i>Masonic Medical Research Lab</i>	<i>Partial</i>	<i>2,502 square feet</i>	<i>Medical Research</i>

8(g) Are any of the tenants related to the owner of the facility?

Yes No

If yes, please explain.

8(h) Will there be any other users utilizing the facility?

Yes No

If yes, please explain. Provide detail of the contractual arrangement including any financial exchange for the use of the site or property.

MVHS will enter into an agreement with a private developer for the development and operation of a physicians' office building. MVHS has also entered into a memorandum of agreement with the City and County for funding, construction and operation of a public parking garage.

Part VII: Equipment

9(a) List the principal items or categories of equipment to be acquired as part of the project. If you are requesting sales tax exemption it is important to be as detailed as possible. (If a complete list is not available at time of application, as soon as one is available but prior to final authorizing resolution, please submit a detailed inventory of said equipment to be covered.) Attach a sheet if needed.

Construction materials, state of the art medical equipment.

9(b) Please provide a brief description of any equipment which has already been purchased or ordered, attach all invoices and purchase orders, list amounts paid and dates of expected delivery. Attach a sheet if needed.

None.

9(c) What is the useful life of the equipment? N/A years

Part VIII: Employment Information

10(a) Estimate how many construction jobs will be created or retained as a result of this project.

Construction Jobs:

There will be approximately 1,070 construction jobs generated over the three year construction period. See attached Exhibits E and P.

10(b) Job Information related to project ***

Estimate below how many jobs will be created and retained as a result of this project, if OCIDA assistance is granted - **chart will auto-sum each category**

Number of Jobs BEFORE Project	Location 1 SEMC	Location 2 St Lukes	Location 3 Other	Location 4 New Hospita	Location 5	Total
Address in NYS	2209 Genesee Utica NY	1656 Champlin Utica, NY	Faxton & other offsite campuses	Downtown		
Full-Time Company	1,218	1,412	1,151	—		3,844
Full-Time Independent Contractors						
Full-Time Leased	4	7	—	—		11
Total Full-Time BEFORE	1,285	1,419	1,151			3,855
Part-Time Company						
Part-Time Independent Contractors						
Part-Time Leased						
Total Part-Time BEFORE						

*Continued on next page

- chart will auto-sum each category

Number of Jobs AFTER Project (within 3 years of project completion)	Location 1 SEMC	Location 2 St Luke's	Location 3 Other	Location 4 New Hospita	Location 5	Total
Full-time Company			1,151	2,520		3,671
Full-Time Independent Contractors						
Full-Time Leased						
Total Full-Time AFTER			1,151	2,520		3,671*
Part-Time Independent Company						
Part-Time Independent Contractors						
Part-Time Leased						
Total Part-Time AFTER						

**The reduction results from operating efficiencies gained by no longer having two separate facilities. MVHS anticipates the addition of physicians and support staff, but has not calculated those numbers at this time. In the absence of the project, staff reductions will be necessary to address the financial hardship of operating two campuses. See Exhibit G.*

Estimate the number of residents from the Labor Market Area** in which the Project is located that will fill the jobs created within three years of project completion	Location 1	Location 2	Location 3	Location 4	Location 5	Total
Full-Time						
Part-Time						
Total AFTER						

*Continued on next page

- chart will auto-sum each category

SALARY AND BENEFITS	Retained Jobs		Created Jobs	
	Average Annual Salary	Average Fringe Benefits (as a percentage of wages)	Average Annual Salary	Average Fringe Benefits (as a percentage of wages)
Management	\$ 83,000	% 24	\$	%
Administrative	\$ 31,000	% 24	\$	%
Production	\$ 59,000	% 24	\$	%
Independent Contractor	\$	%	\$	%
Other	\$ 145,000	% 0	\$	%
Overall Weighted Average	\$ 55,000	% 24	\$	%

** Labor Market Area includes Oneida, Lewis, Herkimer, and Madison Counties

*** By statute, Agency staff must project the number of Full-Time Jobs that would be retained and created if the request for Financial Assistance is granted. A Full-Time Job works 35 hours or more per week. Agency staff converts Part-Time Jobs into Full-Time Equivalent (FTE) by dividing the number of Part-Time Jobs by two(2). Agency staff will project such jobs over the THREE (3)-year time period FOLLOWING Project Completion.

10(c) Please list NIC codes for the jobs affiliated with this project:

62 - Health Care and Social Assistance

Part IX: Estimated Project Cost and Financing - form will auto sum

11(a) List the costs necessary for the construction, acquisition or renovation of the facility.

Acquisition of Land (if vacant)	<u>\$13,700,000 total for land and buildings</u>	
Acquisition of Existing Building(s)	_____	
Renovation Costs of Existing Building(s)	_____	
New Construction of Buildings	<u>\$376,053,935</u>	
Machinery and Equipment (other than furniture costs)	<u>\$46,000,000</u>	
Fixtures	_____	
Installation Costs	_____	
Fees & Permits (other than your own broker and legal fees)	_____	
Legal Fees (IDA legal fees, Applicant legal fees)	_____	\$7,657,500
Architectural/Engineering Interest on	_____	
Financing Charges	<u>\$14,000,000</u>	
Other (specify) Scoping and Design	<u>\$22,588,565</u>	
Subtotal	<u>\$480,000,000</u>	
Application Fee and Agency Fee¹	<u>\$ 6,500*</u>	
Total Project Cost	_____	

¹See Attached Fee Schedule (Page 19) for Agency Fee amount to be placed on this line

**MVHS, a not for profit hospital organization, requests a waiver of the Agency Fee for this project as it will reduce money that could otherwise be available for property acquisition and relocation costs and/or potential renovation and/or reuse of existing historic structures currently located in the project footprint.*

11(b) **Sources of Funds for Project Costs (will auto sum):**

Bank Financing: \$ _____

Equity (excluding equity that is attributed to grants/tax credits) \$ 150,000,000

Tax Exempt Bond Issuance (if applicable) \$ 30,000,000

Taxable Bond Issuance (if applicable) \$ _____

Public Sources (Include sum total of all state and federal grants and tax credits) \$ 300,000,000

Identify each state and federal grant/credit:

_____ \$ _____

_____ \$ _____

_____ \$ _____

_____ \$ _____

Total Sources of Funds for Project Costs: \$ 480,000,000

Real Estate Taxes

12(a) For each tax parcel which comprises the facility, please provide the following information, using figures from the most recent tax year.

See spreadsheet attached as Exhibit J.

Tax Map #	Current Assessed Value (Land)	Current Assessed Value (Building)	Real Estate Taxes

12(b) Address of Receiver of Town and/or Village Taxes:

City of Utica Comptroller

1 Kennedy Plaza

Utica, NY

12(c) Address of Receiver of School Taxes:

City of Utica Comptroller

1 Kennedy Plaza

Utica, NY

12(d) Will the completion of the proposed project result in the increase of the assessment of any of the parcels named above? Yes No

If yes, please indicate which tax account numbers will be affected.

Unknown at this time. Tax parcels will be combined and then parcel may be subdivided or suffixed for the parking garage and the physicians office building.

Financial Information

13(a) Has the Applicant contacted any bank, financial/lending institution or private investor with respect to the financing of the proposed project?

Yes No *But presently in discussions.*

If **yes**, please provide details.

13(b) Has the Applicant received a commitment letter for said financing?

Yes No

If **yes**, please submit a copy of said commitment letter along with this Application.

13(c) Please complete the Cost/Benefit Analysis form and attach to this Application. As you begin completing the form and have questions, please call the IDA office.

REPRESENTATIONS AND CERTIFICATION BY APPLICANT

The undersigned requests that this Application be submitted for review to the Oneida County Industrial Development Agency (the "Agency") and its Board of Directors.

Approval of the Application can be granted solely by this Agency's Board of Directors. The undersigned acknowledges that Applicant shall be responsible for all costs incurred by the Agency and its counsel in connection with the attendant negotiations whether or not the transaction is carried to a successful conclusion.

The Applicant further understands and agrees with the Agency as follows:

- 1. Annual Sales Tax Filings.** In accordance with Section 858-b(2) of the New York General Municipal Law, the Applicant understands and agrees that, if the Project receives any sales tax exemptions as part of the Financial Assistance from the Agency, in accordance with Section 874(8) of the General Municipal Law, the Applicant agrees to file, or cause to be filed, with the New York State Department of Taxation and Finance, the annual form prescribed by the Department of Taxation and Finance, describing the value of all sales tax exemptions claimed by the Applicant and all consultants or subcontractors retained by the Applicant.
- 2. Annual Employment, Tax Exemption & Bond Status Reports.** The Applicant understands and agrees that, if the Project receives any Financial Assistance from the Agency, the Applicant agrees to file, or cause to be filed, with the Agency, on an annual basis, reports regarding the number of people employed at the project site as well as tax exemption benefits received with the action of the Agency. For Applicants not responding to the Agency's request for reports by the stated due date, a \$500 late fee will be charged to the Applicant for each 30-day period the report is late beyond the due date, up until the time the report is submitted. Failure to provide such reports as provided in the transaction documents will be an Event of Default under the Lease (or Leaseback) Agreement between the Agency and Applicant. In addition, a Notice of Failure to provide the Agency with an Annual Employment, Tax Exemption & Bond Status Report may be reported to Agency board members, said report being an agenda item subject to the Open Meetings Law.
- 3. Absence of Conflict of Interest.** The Applicant has consulted the Agency website of the list of the Agency members, officers and employees of the Agency. No member, officer, or employee of the Agency has an interest, whether direct or indirect, in any transaction contemplated by this Application, except as herein after described (if none, state "none"):
- 4. Hold Harmless.** Applicant hereby releases the Agency and its members, officers, servants, agents and employees from, agrees that the Agency shall not be liable for and agrees to indemnify, defend and hold the Agency harmless from and against any and all liability arising from or expense incurred by (A) the Agency's examination and processing of, and action pursuant to or upon, the attached Application, regardless of whether or not the Application or the Project described therein or the tax exemptions and other assistance requested therein are favorably acted upon by the Agency, (B) the Agency's acquisition, construction and/or installation of the Project described therein and (C) any further action taken by the Agency with respect to the Project; including without limiting the generality of the foregoing, all causes of action and attorneys' fees and any other expenses incurred in defending any suits or actions which may arise as a result of any of the foregoing. If, for any reason, the Applicant fails to conclude or consummate necessary negotiations, or fails, within a reasonable or specified period of time, to take reasonable, proper or requested action, or withdraws, abandons, cancels or neglects the Application, or if the Agency or the Applicant are unable to reach final

agreement with respect to the Project, then, and in the event, upon presentation of an invoice itemizing the same, the Applicant shall pay to the Agency, its agents or assigns, all costs incurred by the Agency in the processing of the Application, including attorneys' fees, if any.

5. The Applicant acknowledges that the Agency has disclosed that the actions and activities of the Agency are subject to the Public Authorities Accountability Act signed into law January 13, 2006 as Chapter 766 of the 2005 Laws of the State of New York.
6. The Applicant acknowledges that the Agency is subject to New York State's Freedom of Information Law (FOIL). **Applicant understands that all Project information and records related to this application are potentially subject to disclosure under FOIL subject to limited statutory exclusions.**
7. The Applicant acknowledges that it has been provided with a copy of the Agency's recapture policy (the "Recapture Policy"). The Applicant covenants and agrees that it fully understands that the Recapture Policy is applicable to the Project that is the subject of this Application, and that the Agency will implement the Recapture Policy if and when it is so required to do so. The Applicant further covenants and agrees that its Project is potentially subject to termination of Agency financial assistance and/or recapture of Agency financial assistance so provided and/or previously granted.
8. The Applicant understands and agrees that the provisions of Section 862(1) of the New York General Municipal Law, as provided below, will not be violated if Financial Assistance is provided for the proposed Project:

§ 862. Restrictions on funds of the agency. (1) No funds of the agency shall be used in respect of any project if the completion thereof would result in the removal of an industrial or manufacturing plant of the project occupant from one area of the state to another area of the state or in the abandonment of one or more plants or facilities of the project occupant located within the state, provided, however, that neither restriction shall apply if the agency shall determine on the basis of the application before it that the project is reasonably necessary to discourage the project occupant from removing such other plant or facility to a location outside the state or is reasonably necessary to preserve the competitive position of the project occupant in its respective industry.

9. The Applicant confirms and acknowledges that the owner, occupant, or operator receiving Financial Assistance for the proposed Project is in substantial compliance with applicable local, state and federal tax, worker protection and environmental laws, rules and regulations.
10. The Applicant confirms and acknowledges that the submission of any knowingly false or knowingly misleading information may lead to the immediate termination of any Financial Assistance and the reimbursement of an amount equal to all or part of any tax exemption claimed by reason of the Agency's involvement the Project.
11. The Applicant confirms and hereby acknowledges that as of the date of this Application, the Applicant is in substantial compliance with all provisions of Article 18-A of the New York General Municipal Law, including, but not limited to, the provision of Section 859-a and Section 862(1) of the New York General Municipal Law.
12. The Applicant and the individual executing this Application on behalf of the Applicant acknowledge that the Agency will rely on the representations made herein when acting on this Application and hereby represent that the statements made herein do not contain any untrue statement of a material

fact; and do not omit to state a material fact necessary to make the statements contained herein not misleading.

STATE OF NEW YORK ;
COUNTY OF ONEIDA ; ss:

Robert C. Schuchmacker , being first duly sworn, deposes and says:

1. That, on the 26th day of January, 2013, I, Robert C. Schuchmacker (Corporate Officer) of Midwest Valley Health Systems (Applicant) and that I am duly authorized on behalf of the Applicant to bind the Applicant;
2. That I have read the attached Application, I know the contents thereof, and that to the best of my knowledge and belief, the Application and the contents of the Application are true, accurate and complete.

Robert C. Schuchmacker

Title: Member/Advisor

Date: January 16, 2013

Return the original signed and notarized application and two copies with a check in the amount of \$100.00 made payable to Oneida County Industrial Development Agency (OCIDA), 524 Phoenix Drive, Rome, New York 13441-1405, Attn: Sharon M. Tapscott, Executive Director. \$100 will be applied at closing against the IDA closing fee. In addition, please send an electronic version of the application (signed), and SLL-3 form (signed), to spallone@mcceppc.org.

Exhibit A

Governance Structure

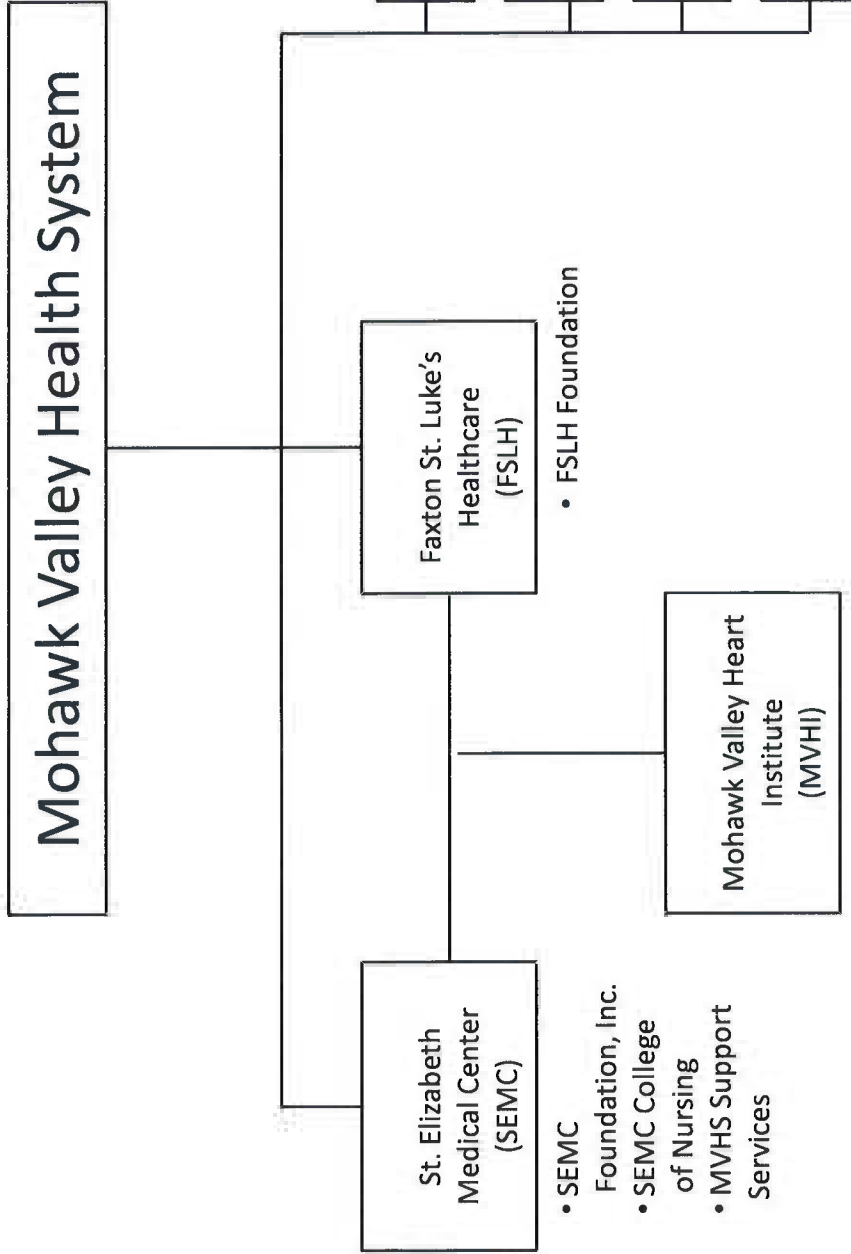

Exhibit B

About the Mohawk Valley Health System

Faxton St. Luke's Healthcare (FSLH) and St. Elizabeth Medical Center (SEMC) affiliated as the Mohawk Valley Health System (MVHS) in March 2014. MVHS is governed by a single, 18-member board of directors, with nine members from FSLH's board and nine from SEMC's board. The system is operated by a single management team.

MVHS serves the geographic area of Oneida, Herkimer and Madison counties and is an integrated delivery system with 4,200 full-time equivalent employees and a combined operating budget of \$566 million.

The MVHS Medical Group has 19 primary care locations, a Children's Health Center, a Women's Health Center, general, orthopedic and neurological surgeons, a Breast Care Center and two Urgent Cares to serve our community's healthcare needs.

Both hospitals accept all major insurances and have designated charity care programs to help provide for individuals without insurance.

The affiliation helps to enhance services for the residents of the Mohawk Valley through greater collaboration and improved clinical quality for patient and resident care. As a large system, MVHS has much to offer when recruiting new physicians.

Faxton St. Luke's Healthcare

FSLH includes two campuses with 370 acute care beds and 202 long-term care beds:

St. Luke's Campus – 1656 Champlain Avenue, Utica, NY (Main Campus)

Faxon Campus – 1676 Sackett Avenue, Utica, NY

A not-for-profit healthcare organization, FVHHS includes St. Luke's Home, Senior Network Health, Mohawk Valley Home Care and Visiting Nurse Association of Utica and Oneida County.

Center for Rehabilitation and Continuing Care Services

- Acute Inpatient Rehabilitation Unit
- Adult Day Health Care Services
- Outpatient Dialysis Center
- St. Luke's Home
- Senior Network Health
- Visiting Nurse Association of Utica and Oneida County

Faxon Campus

- Anterior Cross-Linking Center
- Cancer Center
- Dialysis Center
- Outpatient Rehabilitation Center
- Urgent Care

St. Luke's Campus

- Bariatric Surgery Program
- Maternal Child Services
- Mohawk Valley Heart Institute
- Mohawk Valley Vascular Center
- Stroke Center
- Surgical and Ambulatory Services
- Total Joint Orthopedic Program

St. Elizabeth Medical Center

SFMC includes two campuses with 201 acute care beds:

2209 Genesee Street, Tonawanda, NY (Main Campus)

St. Elizabeth Medical Arts – 4401 Middle Settlement Road, New Hartford, NY

SEMC also includes the Sister Rose Vincent Elizabeth Family Medicine Center which provides patient care services for the whole family and is also a teaching facility for new physicians. St. Elizabeth Home Care serves patients in their homes and St. Elizabeth Home Support Services offers help with activities of daily living, medical equipment to patients in their homes.

SEMC Main Campus:

- Ambulatory Surgical Center
- Arteriovenous Center
- Fellowship in Geriatric Endocrinology
- Fellowship in Hospital Medicine
- Women Medical Professional Building
- Mohawk Valley Heart Institute
- Blood Disorders Center
- St. Elizabeth College of Nursing
- St. Elizabeth Family Medicine Residency Program

Medical Arts Campus:

- Advanced Wound Care
- Imaging at St. Elizabeth Medical Arts
- SEMC Medical Group New Hartford Medical Office
- Surgical Laboratory One Site
- Surgical Rehabilitation Services

SEMC is a Catholic hospital and is affiliated with the Sisters of St. Francis of the Neumann Communities and the Syracuse Diocese.

2017 System Highlights

- The Mohawk Valley Health System (MVHS) has opened a new service that provides advanced NeuroEndovascular care that treats complex vascular conditions of the brain including stroke, carotid stenosis, aneurysms, brain aneurysm, coarctation of the aorta, aortic dissection and more.
- Further expansion linked St. Elizabeth College of Nursing (SECON) on to form the nursing campus campus from schools. SECON was ranked 11th of the 12's 30 schools began a period of steady post-graduate rankings along with the school's affordability and quality.
- MVHS acquired the da Vinci Surgical System. Surgeons at MVHS are currently using the system for minimally-invasive with da Vinci

- expanding include surgeries in the areas of gynecology, thoracic, cardiac and general surgery in the future
- WCHS received the National Spinal Cord Injury Quality Achievement Award for implementing specific quality management measures outlined by the American Heart Association for the Treatment of Stroke – a staffed acute heart attack
- St. Lawrence Medical Center (SLMC) Trauma Center received a Level II Trauma Center by the Verification Review Committee and received a Bronze of the Commission on Trauma of the American College of Surgeons. This achievement recognizes the Trauma Center's dedication to providing optimal care for injured patients
- Commencing his renovation project, Fashion Urgent Care recently added transplant music to its acoustic lounge to help ease child and greatly bring back Daniel Army. Daniel designed the 100-ft-long murals with whimsical characters to please children and provide a pleasant distraction from their injury or illness.
- Fashion Urgent Care (FUC) an affiliate of WCHS, received the American Heart Association's American Stroke Association's 2014 "With The Guide Lines Stroke Gold Plus Quality Achievement Award with a Gold Stroke Plus Plus Plus Plus Plus. The award recognizes FUC's commitment and success ensuring that stroke patients receive the most appropriate treatment
- The WCHS Sleep Disorders Center received its five-year renewal from the American Academy of Sleep Medicine (AASM). It was the first sleep center in the Greater Mohawk Valley area to earn this distinction dating back to 1997
- The WCHS Preventive Distal Prevention program part of the Central New York Prostate Education Program (CNY-Prevent), was awarded full recognition from the Center for Disease Control and Prevention's (CDC) Distal Prevention Program (DPP) in 2010 for the second year in a row. The program became the first in Oneida County to receive full recognition in November 2010
- Elizabeth Kozakowski, BS, CCS, CTR, CDM, AHIMA Certified CD-ITD former manager of Health Information Management for WCHS, received an award for Clinical Research of the Year from the New York State Health Information Management Association (NYHIMA) from one of 11 award recipients from across New York State.
- In April 2017, it was announced that WCHS has been awarded the \$100 million Health Care Facility Transformation grant to create an integrated, multi-specialty facility in Oneida County. In November 2017, WCHS revealed the site plan and outline of its new regional healthcare campus in mid-November. The rest of the month is

planning and work is an integrated healthcare campus with a 3.1-million, 672,000-square-foot facility and 1,552-car parking structure on 25 acres in downtown Utica. In collaboration with the MVHS outreach team, architects have advanced the site plan and design and engaged more than 2,000 individuals throughout the community to receive feedback and guidance regarding the design of the new hospital and its integration with the current healthcare facilities. A public hearing will discuss the site plan at a community forum on December 11 at the Radisson Hotel Utica Centre.

TOGETHER WE MAKE A DIFFERENCE.

Mohawk Valley Health System

A GUIDE TO BUILDING
THE MVHS BRAND

OUR MVHS BRAND

This booklet is designed to help you become a champion for Mohawk Valley Health System (MVHS). It's not a set of rules; it's a guide to help you in your daily communications about MVHS. It provides the language you may need to express the caring spirit of our organization. Whether talking with a patient, resident or a member of your own family, you can tell the story about what we do for our community and the families we serve.

OUR PROMISE & BUILDING A NEW CULTURE

Together we make a *difference*.

Mohawk Valley Health System

MVHS is rich with history and tradition. We have been caring for our communities since 1830 and there is no greater joy than seeing the impact our actions have.

Our interactions should always leave a lasting, positive impression because we understand that each one of us plays a crucial role in the overall patient and resident experience. We know we have made a difference when our customers - the patient, the resident and their families - reach out to us and share a moment during their care that has made a difference for them.

We are the community's trusted healthcare system of choice, sharing our energies and efforts to inspire those around us. The kind and appreciative words of our patients, residents, coworkers, medical staff and volunteers guide us.

THE POWER of a Story

At MVHS, we have stories of caregivers, protectors, companions and champions. The stories speak of challenges and triumphs, connections and discoveries, shared experiences and life-changing journeys that reflect the history of Faxton St. Luke's Healthcare (FSLH) and St. Elizabeth Medical Center (SEMC) and how we make a difference. These moments and gestures are shared, honored and remembered. Working together, we will continue to create even more everlasting memories for our patients and residents.

What stories can you tell?

A wife sits at her late husband's bedside mourning his loss. As she waits for loved ones to arrive, a nurse sits quietly with her and holds her hand, knowing that kindness and sympathy require no words.

When a patient being discharged needed help and a different place to live, employees volunteered on their day off to move the patient, unpack her belongings, donate household items and even bought groceries so she'd have food to eat.

When an employee's small child needed major surgery that would require weeks of recovery, fellow coworkers came together to support the entire family through bake sales, donations, raffles, home cooked meals, donating their paid time off and well-wishes.

WHAT IS MVHS?

If you only had an elevator ride to explain to someone what MVHS is, what would you say?

MVHS is a system that provides healthcare services for the residents of the Mohawk Valley. We are known for our clinical quality and collaboration. We are the organization people choose when caring for their loved one.

Why Do People Choose MVHS?

"After my stroke, I chose to receive my rehabilitation treatment at Mohawk Valley Health System. It was so nice to be close to home so my family and friends could visit me and offer encouragement. The doctors, therapists, nurses and aides that treated me made me feel comfortable and most importantly, made me feel like a person not just a patient. I formed a close bond with them and I hope they realize the difference they made in my life - for both me and my family."

—**Gary Philipson, owner of "Herb" Philipson's**

Why Work for MVHS?

"I wanted to be a doctor ever since I could walk. I am blessed and fortunate to do what I do every day and I have a lot of pride in the work that we do at Mohawk Valley Health System. There is a culture of caring in this community that you don't find in larger places. The affiliation allows us to work as a team and provide patients with access to the very best quality care right here in Central New York."

—**Dr. Kevin McCormick, Primary Care Physician**

MVHS LOGO

As FSLH and SEMC work together under MVHS, our dedication to excellence in patient care and promoting wellness in our community has not changed. The MVHS mark and colors are designed to show the unity of our system and to promote recognition within our community, the Mo hawk Valley.

The sweeping shape of the valley and the stripes representing the familiar image of a plowed field reflect our commitment to promoting wellness in our local communities. The soft, warm green and deep blue colors were carefully selected because they represent our local, natural environment and best portray our values as an organization. The color green represents well-being, health and purity; the blue inspires trust as well as stability.

OUR MISSION

To provide the highest quality healthcare for our communities.

OUR VISION

To be the trusted healthcare system of choice through clinical quality, excellence in service and education, compassionate care, promotion of wellness and operational efficiency.

Our Values

HONESTY

We believe in the highest level of personal and professional ethics and standards. Our relationships with patients, residents, physicians, volunteers, families, vendors and each other will be open, honest and fair.

EXCELLENCE

We strive to exceed the expectations of our patients, residents, employees, peers and medical staff so that we can achieve superior outcomes.

TRANSPARENCY

We are open and inclusive in all that we do. Our patients and residents will receive timely and accurate information about their care. We will share with our staff, physicians, volunteers and community our goals, plans and progress.

INNOVATION

As an organization, we use proven technology and techniques to engage in and create best practices in all aspects of our operations.

QUALITY

We believe in providing superior quality care and service excellence to our patients, residents, their families, visitors, physicians, volunteers and coworkers in a compassionate, safe and caring manner.

CONTINUOUS LEARNING

We promote an environment of continuous, life-long learning among our patients, residents, employees, physicians, volunteers and the public in order to create a healthier, vibrant organization and community.

RESPECT

We recognize the honor and dignity of every person and value each staff member's contributions toward achieving our mission.

TEAMWORK

Working together, we promote the sharing of ideas, talents and skills to encourage the personal growth and advancement of each staff member and to provide the highest level of service and quality for our patients and residents.

SAFETY

We embrace a culture where employees are provided with the tools and training necessary to accurately administer appropriate and timely care to patients and residents.

COLLABORATION

We work closely with each other, our medical staff and local businesses and agencies to make our community's health a top priority.

**IN EVERY MOMENT,
EVERY INTERACTION,
EVERY DAY... MAKE IT
HAPPEN, MAKE IT
MATTER, MAKE
A DIFFERENCE,
MAKE IT MOHAWK
VALLEY HEALTH SYSTEM!**

MAKE IT HAPPEN

Some people want it to happen; some wish it to happen and others make it happen. MVHS is committed to being a responsive partner in the patient experience. Whether it's accepting a patient or resident into our care, supporting a colleague or addressing a request from a patient's family member, do all you can to make it happen!

MAKE IT MATTER

MVHS provides a service - care for our customers. Although the care we provide may have many tasks associated with it, we should always focus our energies and efforts on the why behind that care, always striving to do our best. By working together, we will make each moment matter!

MAKE A DIFFERENCE

Just as the small boy who returned washed up starfish to the ocean one by one believed in the difference he was making for each individual starfish, we know that making a difference is defined by the quality, not the quantity, of our actions. Making a difference is about going above and beyond to support the care our patients, residents and families receive, and committing ourselves to positively impacting the lives of others.

Together we make a *difference.*

NOVEMBER 2017

NEW HEALTHCARE CAMPUS

FACT SHEET

Location:

- Downtown Utica

Hospital Size:

- 672,000 square feet (The St. Luke's Campus is 461,000 square feet which includes the professional office building.)

Height:

- Nine stories

Inpatient Unit:

- Total of 373 beds
- Open-core nursing unit allows for close patient/staff adjacency, good staff visualization/connection to the patients on the floor and includes easy access to frequently used support functions.
- Each inpatient unit has 30 private rooms (current estimate).
- Two rooms on each unit can be converted to semi-private as census levels increase.
- Same-handed rooms and standardized unit organization from nursing unit to nursing unit, which supports patient safety, reduces the risk of errors, provides greater efficiency and promotes same access points for staff when working in different areas.
- Dialysis support in each patient room for all Critical Care beds and isolation room beds. Reduces patient movement.
- Inpatient Dialysis Unit conveniently located on high-use, Intermediate Care floor and adjacent to patient elevators.
- Critical Care beds co-located on one floor to optimize use and flexibility with quick connections to and from the Emergency Department and Interventional areas such as Imaging.

Inpatient Views:

- Unobstructed north- and south-facing views for patients on inpatient floors.

Emergency Department (ED):

- Designed with 47 ED treatment spaces (ED exam, quick turn, trauma), six Behavioral Health ED treatment rooms and 10 Observation beds.
- Modular organization allowing efficient flexing to respond to changing volume needs over a typical day.
- Dedicated access to the Medical Imaging room and CAT Scan with direct and easy access to other imaging modalities.
- Sited and organized to allow for easy expansion opportunity to the west of the site.
- The new design will support the care of 90,000 visits annually. Combined, St. Elizabeth and St. Luke's campuses now have more than 80,000 ED visits a year.

Imaging/Cardiology:

- Centrally located with easy inpatient and outpatient access allows for efficient patient movement, staff support and connection to ED.
- Appropriate internal flows, adjacencies and segregations to provide for optimal use and safety.

Interventional Platform:

- Fully integrated Surgical Services, Interventional Services and Endoscopy Platform.
- Flexible perioperative area allowing easy changes to dynamically respond to case mix and pre/post procedure needs.
- Standardized modular design to allow for flexible use.
- Provision of "soft" spaces provided to allow for incremental expansion.
- Siting of perioperative and procedure space to allow for easy, long-term expansion to the west on the site.

Birthing Center:

- Quick-access elevator connection from Emergency Department which allows rapid movement for presenting mothers.
- Continuous flow from early labor/triage to Labor, Delivery and Recovery (LDR) or cesarean section (c-section) surgical suite.
- Direction connection from LDR to c-section suite.
- Easy flow from c-section suite to Special Care Nursery.
- Co-located Special Care Nursery and Nursery with direct access to Postpartum suite.
- Distinct Postpartum suite from delivery area provides a more relaxed environment for recovering mothers and family.

**Building Circulation:**

- One primary entrance into facility with easy drop-off, garage parking and building entry connections.
- Separate emergency walk-in, ambulance and decontamination entrances.
- On-stage/off-stage building organization aiding in wayfinding, security controls and supporting patient dignity.
- Separate patient, service and visitor elevator cores providing for safe, efficient movements that help ease patient, staff and family stress.
- Dedicated, rapid-access elevator pulled from general use for quick movement of patients from ED to Intervention, ED to Birthing Center, ED to Behavioral Health, inpatient connection to intervention. Elevator sized to accommodate patient plus team and necessary patient transit equipment.

- Dedicated medication and food elevators; these will be used for all deliveries and will be separate from patient and visitor elevators.
- Service flows separated on lower, heavy-use floors considering dirty/clean flows.

Conference/Meeting Spaces:

- Located on edges of departments to allow for shared use.
- Main education/auditorium rooms located near building entry and Nutrition to allow for multiple meeting formats, easy staff access and convenient community use for wellness and other programs.

Nutrition:

- Room service model to be incorporated with quick turn-around times enhanced by adjacency to dedicated food/medication elevator.
- Easy cafeteria access for visitors and staff with location off of main lobby by visitor elevators.
- Adjacency to Education Center allows for efficient support of meetings and functions.
- Easy access to loading dock area for deliveries of hospital supplies.

Parking Garage:

- Three- and one-half stories high with covered walkway to and from the hospital.
- Access to parking garage at multiple points to make it convenient for patients, families and visitors.
- Parking for hospital patients and visitors, staff, volunteers as well as the community for non-hospital related events.

Campus:

- Pedestrian-oriented.
- Designed as an urban park with enhanced lighting, trees, flowers, walkways and seating areas.

Helistop:

- Conveniently located at ED ambulance entrance.

Exhibit E

A NEW BEGINNING

Mohawk Valley Health System

New Integrated Healthcare Campus Update

Utica, New York

September 2017

SEPTEMBER 2017

A NEW BEGINNING FOR HEALTHCARE IN THE MOHAWK VALLEY

To realize the Mohawk Valley Health System's (MVHS) vision of achieving excellence in healthcare for our communities, MVHS is consolidating existing resources, eliminating redundancies, expanding the depth and breadth of services, improving access and elevating the quality of healthcare services in the region.

A new, integrated health campus will help this vision become a reality.

A New Health Campus

- A new health campus brings together emergency, acute care, specialty outpatient services now at separate locations:
 - Emergency Trauma and Cardiac Services, St. Elizabeth Campus
 - Stroke and Maternity Services, St. Luke's Campus
- Aids in physician coverage for emergencies since there will no longer be a need to cover two campuses. This is important for specialty services such as neurosurgery where currently

there is only one physician for the system.

• New facility goals:

- All inpatient rooms will be private to promote healing, protect patients at high risk of infections, help keep infections from spreading, promote confidentiality/care provider discussions, reduce the need to transfer patients; patient rooms will accommodate family members, visitors, and include Wi-Fi, TV.
- Patients control room temperature and lighting.
- Room design improves efficiency and safety by standardizing care room-to-room.
- Hospital-wide communication systems create a quieter, calming environment (i.e. minimal overhead paging, using phones instead).
- The facility will also include a sound-minimizing design and materials to reduce noise and improve the patient experience.
- Critical supplies next to patient rooms minimize time and travel distances.
- Strategically located depart-

ments maximize patient transport efficiency, privacy.

- Convenient multiple health-care provider availability in single location will also enhance medical team collaboration.
- Ample, convenient parking to serve patients, visitors, employees, medical staff, volunteers, vendors, emergency vehicles, others.
- The new downtown hospital supports economic development and attracts an active presence of community members and visitors. Downtown housing, businesses, food, retail, education and entertainment venues are positioned to greatly benefit from the influx of more than 3,500 MVHS employees, as well as medical staff and volunteers at the new integrated health campus.
- A public-private project of this size and complexity involves many process steps. MVHS has established a steering committee to ensure all project requirements are met.

SEPTEMBER 2017

DOWNTOWN

SUPPORTING A REVITALIZATION

Nothing enlivens a city more than the presence of its community members and visitors. Downtown housing, commercial, food, retail, education and entertainment venues are positioned to greatly benefit from the influx of more than 3,500 MVHS employees and medical staff at the new integrated health campus.

- The MVHS Board of Directors, with Hammes Company, a healthcare consulting firm, and Mohawk Valley EDGE's engineering and planning professionals, engaged in a thorough process before selecting the site. Criteria used to evaluate 12 potential sites included infrastructure (water, sewer, power), access,

transportation network, capacity to accommodate hospital operations and parking, and no adverse impact on existing hospital operations, etc.

- The MVHS Board unanimously selected the downtown site based on the site-selection criteria (above), as well as central location, urban revitalization opportunities, and alignment with NYS legislation that allocated \$300 million for projects located in Oneida County's largest population center.
- Other factors that support the downtown location include: regional accessibility with proximity to major highways, public transit systems, and the support of the regional community and government stakeholders.

SEPTEMBER 2017

BENEFITS AND COSTS FOR THE NEW HOSPITAL

Benefits

- MVHS projects \$15 million in additional annual savings in operating efficiencies by combining its two campuses, which means more money for direct healthcare instead of maintaining existing facilities
- MVHS has committed to use local labor, materials, equipment vendors and businesses throughout the project when possible. Supporting the community is critical for MVHS, and other community partners
- For the Mohawk Valley region, local construction industry impact will be \$155 million+ and will require nearly 2 million man-hours of construction labor over the life of the construction phase, with a peak employment of nearly 500 construction workers¹.
- Project will generate \$15-17 million estimated state and local sales tax over the 36-month construction phase, of which \$675,000 to \$765,000 in sales tax dollars will go to Oneida County and the City of Utica².

- Estimates indicate that the City of Utica will see a net gain of revenues and avoided costs that exceeds the loss of property tax dollars from properties that are to be assembled for the project and the City's share of the debt service on the County-City-MVHS parking facility. Estimates show that the City may realize \$237,000 in revenues and other economic benefits after offsetting the loss of current property taxes and the City's share of annual debt service on the new parking garage³.

Costs

- Project cost estimated at \$480 million for an approximately 670,000 sq.-ft.-facility; projected completion date: 2022.
- Funding:
 - \$300 million – Health Care Facility Transformation Grant through NYSDOH
 - \$150 million – MVHS Financing
 - \$30 million – MVHS Funds, other grants, philanthropy.

- County, City and MVHS are collaborating on a new 1,550 car parking structure estimated to cost \$40.5 million; an additional \$3 million in other non-city funding is reserved to refurbish Kennedy Garage to support hospital and downtown parking needs (over and above \$480 million for construction of downtown hospital campus). The new parking structure will be:
 - Built and owned by Oneida County with County and City sharing debt service 60-40 percent.
 - MVHS parking agreement allots 1,150 spaces for hospital needs; MVHS responsible for operation, maintenance costs estimated at \$1 million/year.
 - 400 of 1,550 spaces reserved for public use with additional space available for nighttime non-hospital events at the Utica Auditorium and surrounding areas.

¹Estimate provided by Turner Construction, the firm selected by MVHS as its project construction manager.

²Based on estimated retail purchases by construction workers (e.g., hotels/lodging, gasoline, meals, and other discretionary purchases). Does not include State share of sales tax revenues during construction which could add \$637,500 to \$722,500 in sales tax dollars from construction worker spending.

³Estimate provided by Mohawk Valley EDGE

Phase 3 (July 2018 - March 2020)

- Review of final up to date proposals for the 717 between and within the wards and General wards (most of 717 between and within the wards) are now completed in the 18 months following completion of the CSM 2017 by June and the inter-ward review (IGWR) process has been completed for all wards until 2022.
- The planning and development work has progressed to ensure a wide range of community based groups and services are being planned for the ward in the future.

Next steps

- Review the progress of the ward in the next phase of the project with the community development team (CDT). This phase includes development of:
 - Policies needed, including the impact health strategy on health and legal
 - Financial plan including details of funding, income items and capital. This phase may include local authorities and other key organisations and companies with a potential to support the health and care needs of the ward.
 - Health delivery model including a health strategy and a range of potential services to be delivered in the ward.
 - Financial plan including details of funding, income items and capital.
 - Health delivery model including a health strategy and a range of potential services to be delivered in the ward.

management, advice, and more. This is one of the future objectives of the development.

- The completion of the CSM 2017 will allow the project to progress to the next phase of the project, which is the development of the ward. This phase includes the development of a range of services and facilities to meet the needs of the population of the ward. This phase will be completed by the end of 2020. The completion of the CSM 2017 will also allow the project to progress to the next phase of the project, which is the development of the ward. This phase includes the development of a range of services and facilities to meet the needs of the population of the ward. This phase will be completed by the end of 2020.

and will benefit 2,000 people over the next 10 years. Community development projects will aim to improve the health and well-being of the population, reduce health inequalities, and improve the quality of life for the community.

- The development of the ward will be completed by the end of 2020. This phase includes the development of a range of services and facilities to meet the needs of the population of the ward. This phase will be completed by the end of 2020.
- A required Social Environmental Quality Review will be conducted on the ward. This will be completed by the end of 2020. This phase includes the development of a range of services and facilities to meet the needs of the population of the ward. This phase will be completed by the end of 2020.
- The ward health improvement plan will be completed by the end of 2020. This phase includes the development of a range of services and facilities to meet the needs of the population of the ward. This phase will be completed by the end of 2020.

working with the community development team to ensure that the project is successful. The following are the next steps in the project:

A NEW BEGINNING FOR HEALTHCARE IN THE MOHAWK VALLEY

THE ST. LUKE'S AND ST. ELIZABETH CAMPUSES WERE BUILT 60 AND 100 YEARS AGO RESPECTIVELY. AT THAT TIME, HEALTHCARE WAS QUITE DIFFERENT THAN IT IS TODAY OR WILL BE IN THE FUTURE.

In order to realize the Mohawk Valley Health System's (MVHS) vision of achieving excellence in healthcare for our communities, MVHS is consolidating existing resources, eliminating redundancies, expanding the depth and breadth of services, improving access and elevating the quality of healthcare services in the region. A new,

integrated health campus will help this vision become a reality.

Integrated Health Campus - Features and Benefits

A new health campus will bring together multiple levels of care - from specialty outpatient services to emergency and acute care services - at one site.

This new facility is being designed with the following goals in mind:

- All inpatient rooms will be private to ensure patient privacy, eliminate transfers, promote healing and provide space for families. Private patient rooms also provide greater protection to patients who are highly -susceptible to infections and help prevent infections from spreading.
- Patient rooms will be equipped with accommodations for family members and visitors including seating, Wi-Fi access and a television.
- Patients will have personal control of their room temperature, lighting and window blinds.

- Room design will enable standardization of care and improved efficiency and safety.
- Hospital-wide communication systems will allow for a quieter, more calming environment.
- Critical supplies will be located adjacent to patient rooms to minimize time and travel distances when caring for patients.
- Department locations will be strategically planned for maximum efficiency in patient transport and privacy.
- Access to multiple healthcare providers will be available in one location for convenience and enhanced medical team collaboration.
- Ample and convenient parking will be constructed to serve various populations, such as patients, visitors, employees, medical staff, vendors and emergency vehicles.

SUPPORTING A DOWNTOWN REVITALIZATION

NOTHING ENLIVENS A CITY MORE THAN THE PRESENCE OF ITS COMMUNITY MEMBERS AND VISITORS. DOWNTOWN HOUSING, COMMERCIAL, FOOD, RETAIL, EDUCATION AND ENTERTAINMENT VENUES ARE POSITIONED TO GREATLY BENEFIT FROM THE INFLUX OF MORE THAN 3,500 MVHS EMPLOYEES AND MEDICAL STAFF AT THE NEW INTEGRATED HEALTH CAMPUS.

In addition, the development of the new health campus will have a number of positive impacts on the surrounding area, including:

- Existing infrastructure upgrades (water, sewer, gas and electric) that will provide for future development.
- Linking existing and planned bike and pedestrian routes throughout downtown and the Harbor Point District via the health campus.
- Future healthcare and development opportunities to anticipate needs in education, research and applied sciences.
- An improved transportation network, including easy access from multiple directions.
- Parking co-utilization for the health campus, the Utica Memorial Auditorium, central business district and adjacent businesses based on the time of day. Hospitals may have a high demand for parking during the weekday but lower demand in evenings and weekends when public events are most often held.

A downtown hospital helps support the ongoing efforts to revitalize downtown Utica, and support the exciting energy at Baggs Square, Harbor Point and Varick Street. The downtown location also aligns with state

initiatives and goals, such as the New York State Empire Development Corporation. It is a unique opportunity to provide access to a state of the art healthcare facility, while also spurring economic development and playing a pivotal role in enhancing the downtown revitalization efforts.

SELECTING THE SITE FOR THE NEW HOSPITAL

SELECTING THE IDEAL LOCATION FOR THE NEW, INTEGRATED HEALTH CAMPUS WAS AN IMPORTANT AND THOROUGH PROCESS.

The MVHS Board of Directors worked with Hammes Consulting and Mohawk Valley EDGE engineering and planning professionals to examine 12 potential sites within a 5- to 10-mile radius from the center of the City of Utica. A master list of criteria was used to evaluate these potential sites, including, but not limited to, infrastructure (water,

sewer and power), access and a good transportation network. The site also had to have the capacity to fit the hospital operations and associated parking requirements.

Of the 12 sites reviewed, only three met the needed criteria. Further analysis led the MVHS Board to unanimously select the downtown site based on its location and its alignment with legislation that allocates \$300 million in New York State funding.

Challenges to Expansion at Existing Facilities

The St. Luke's Campus was identified as a second option

for the new hospital. However, the downtown site was unanimously agreed upon due to its regional accessibility, proximity to major highways and public transit systems.

While the St. Luke's Campus does include 64 acres of land, the presence of wetlands and existing buildings severely limit the available footprint.

Additionally, complex logistical factors create significant challenges in the construction of a new hospital complex in the midst of an active facility - a critical detail that factored into the location decision.

FREQUENTLY ASKED QUESTIONS

Q: Has the downtown location only been selected because of its role in supporting urban renewal efforts?

A: It is true – a downtown hospital can help support the ongoing efforts to revitalize downtown Utica and support the exciting energy at Baggs Square, Harbor Point and Varick Street. However, that is more of an added bonus. The first priority is to realize MVHS's mission of achieving excellence in healthcare for our communities. The consolidation of existing resources, elimination of redundancies, expansion of the depth and breadth of services, improvement of access and elevation of the quality of healthcare services in the region is vital. The downtown site was unanimously agreed upon due to its regional accessibility, proximity to major highways and the ability to utilize the public transit systems.

In addition, the language of the New York State bill that would provide \$300 million toward the construction of the new health campus very specifically indicates that the "funding will be awarded in the discretion of the commissioner of health in support of projects located in the largest population center in Oneida County...", which is Utica.

Q: The infrastructure (water, sewer, gas, electric and roadways) in the selected hospital location is old. How can these out-of-date services support a state of the art facility?

A: Extensive upgrades will be completed to existing infrastructure to not only enable the development of a new, integrated health campus, but also provide for future development.

Q: Won't a downtown hospital be further away from some surrounding villages and towns and be harder to access?

A: The proposed site will provide easy access to those within the City and beyond via existing street arteries and the newly constructed highway 12/8/5. Healthcare officials have been and will continue to remain in close communication with the New York State Department of Transportation regarding considerations for and implications of a downtown hospital.

Q: Has the footprint of the new integrated health campus changed?

A: No. In October 2016, MVHS announced a reduction in planned square footage of the facility. However, the total footprint of the campus remains unchanged.

Q: What is wrong with the existing hospitals? In some cases, there have been recent modernization attempts and upgrades.

A: The St. Luke's and St. Elizabeth

Campuses were built 60 and 100 years ago respectively. At that time, healthcare was quite different than it is today or will be in the future. The hospital layouts are inefficient for today's use (see the Features and Benefits handout). While each hospital has been updated over the years, the cost to continue these investments outweighs the benefits.

Q: Won't the area become congested when there are events at the Utica Memorial Auditorium?

A: MVHS is excited to be neighbors with the Utica Memorial Auditorium. Officials do not anticipate an increase in congestion because hospital operations are busier during the regular workday (Monday through Friday) and events at the Aud typically occur at nights or on weekends. Additionally, the Aud and other local visitors

will benefit from the safe, well-lit and close parking available on the health campus. For planning purposes, MVHS has provided expected traffic volume into and out of the campus to the Department of Transportation.

A PATH TO ENHANCED REGIONAL HEALTHCARE

PLANNING A PROJECT OF THIS MAGNITUDE OCCURS IN SEVERAL STAGES OVER THE COURSE OF SEVERAL YEARS. THROUGHOUT THIS PROCESS, THERE WILL BE OPPORTUNITIES FOR PUBLIC INPUT. THE FOLLOWING MILESTONES SERVE AS A DEMONSTRATION OF THE DEVELOPMENT PROCESS, INCLUDING ESTIMATED COMPLETION DATES:

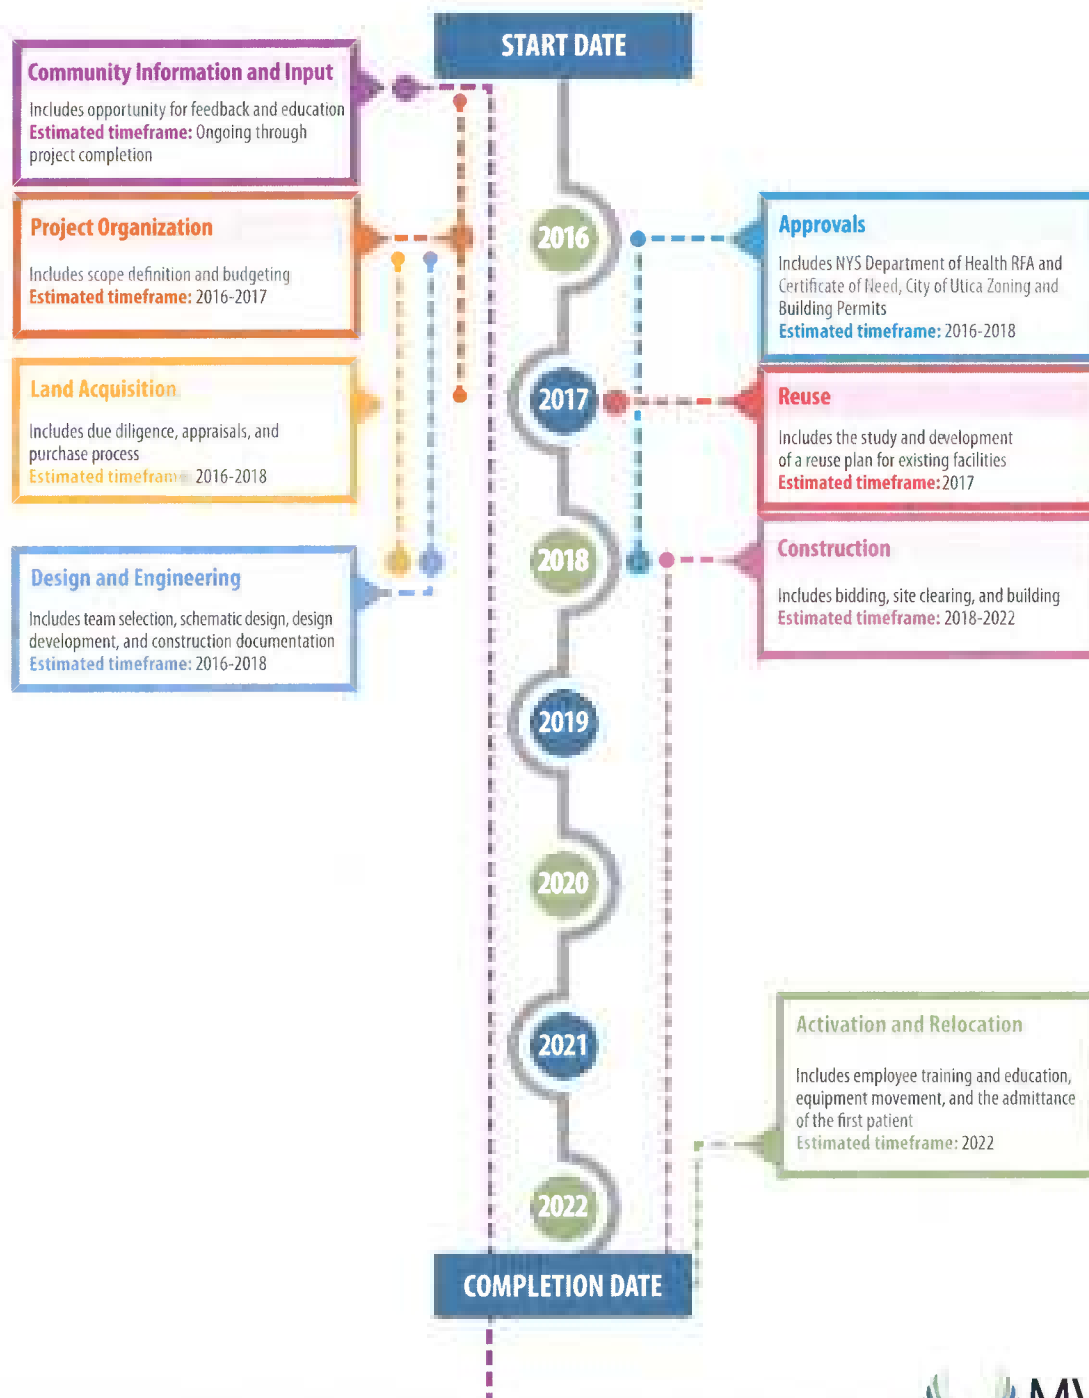

Exhibit F

Executive Summary from NYSDOH
Certificate of Need Application

Executive Summary:

Mohawk Valley Health System (MVHS) is submitting this Full Review Certificate of Need (C.O.N.) Application that seeks approval for the construction of a new hospital campus. MVHS is the active parent and co-owner of St. Elizabeth Medical Center (St. Elizabeth) and Eastern St. Luke's Healthcare St. Luke's Division (St. Luke's). St. Luke's (Operating Certificate #320200311, PFI #0599) is currently located at 1606 Champlin Avenue, Utica (Oneida County), New York 13502. St. Elizabeth Medical Center (Operating Certificate #320200281, PFI #0598) is currently located at 2209 Genesee Street, Utica (Oneida County), New York 13501. Cardiac PCI and cardiac surgery services currently offered through the Mohawk Valley Heart Institute (Operating Certificate #320200411, PFI #7528) are also provided on the campus of St. Elizabeth at 2209 Genesee Street, Utica (Oneida County), New York 13501. This C.O.N. Application will be funded, in part, through the Health Care Facility Transformation Program, Oneida County grant awarded to MVHS specifically for this purpose. This project is one (1) of at least two (2) Applications being submitted to the New York State Department of Health (NYSDOH) for the transformation of services within the Oneida County region, as detailed in detail below:

Through New York Public Health Law Section 2825-b, New York State created the "Oneida County Health Care Transformation Program" that set aside up to \$300 million in capital grant funding for the sole purpose of consolidating multiple licensed healthcare facilities into an integrated system of care, within the largest population center of Oneida County (i.e., Utica). Through a response to a Request for Application (RFA # 505060025) from the New York State Department of Health (NYSDOH) and Dormitory Authority of the State of New York (DASNY), MVHS was awarded \$300 million in grant funding for the project proposed in this C.O.N. Application (i.e., the creation of a new hospital campus), which will result in the transformation of healthcare services in the region.

This C.O.N. Application is the first in a series of at least two (2) Applications that Mohawk Valley Health System and its two (2) related facilities (St. Elizabeth and St. Luke's) will be submitting that will lead to the merger of St. Elizabeth and St. Luke's, and the relocation and consolidation of the majority of services comprising St. Elizabeth and St. Luke's to the new hospital campus in Utica, New York.

The new, general dated hospital campus will be located on a 25-acre parcel of land generally bordered by the following streets in Utica (Oneida County), New York 13501: State Street, Broadway, Utica, by Street West, and Columbia Street. An address has not yet been assigned to the site. The new hospital campus will have the following inpatient bed complement: coronary care (eight (8) beds); intensive care (41 beds); maternity (23 beds); medical/surgical (232 beds); neonatal intermediate care (eight (8) beds); pediatric (16 beds); and psychiatric (44 beds). In addition, the St. Luke's campus will retain 24 physical medicine and rehabilitation beds. In total, MVHS (inclusive of its two (2) campuses) will reduce its overall inpatient bed complement by 194 beds, from 571 beds to 377 beds (including 373 beds at the new hospital campus and 24 PM&R beds at its St. Luke's campus).

Through this C.O.N. Application, all inpatient and most outpatient services from the current St. Elizabeth campus will be relocated to the new hospital campus, which will be known as the "Mohawk Valley Health System Campus". The current St. Elizabeth site will become a division of

the Mohawk Valley Health System under this Application and will relocate all inpatient and outpatient services from the St. Luke's site to the new hospital campus (with the exception of 34 ED&R beds and some other outpatient services).

The St. Elizabeth's site will be converted into an outpatient extension clinic to be known as "St. Elizabeth's Campus". As a new extension of this site, it is expected to maintain its existing PFI number. In particular, sleep center services (Mohawk Valley Sleep Disorders Center), cardiac and thoracic surgery-related services (all of which are medical-only services; no surgical services will be provided at this site), primary care services and a laboratory patient service center (PSC) will continue to be provided at this site.

The Total Project Cost for this project is estimated to be \$451,391,583, which is broken down into the following two (2) sub-projects:

Sub-Project No. 1 – Article 28 New Hospital Campus (\$430,000,000, including CCB Application and Processing Fees). This amount will be funded through the Ontario County Health Care Financing Program grant funds that MCHS was awarded (in the amount of \$300,000,000), as well as financing (in the amount of \$150,000,000) and existing cash equity (in the amount of \$80,000,000).

Sub-Project No. 2 – Non-Article 28 Masonic Medical Research Lab (\$21,391,583). This amount will be funded through existing cash equity of MCHS. The Masonic Medical Research Lab will lease certain space on the new hospital campus, within the new hospital building, structure, from MCHS.

PROJECTIVE APPROVAL

INTRODUCTION

- The purpose of this report is to provide a detailed project brief for the development of a new product line for James Martin Patisserie.
- The project objectives are to develop a new product line that is profitable, marketable, and consistent with the brand identity.
- The project goals are to launch the product line by the end of the year and to achieve a target sales volume of £100,000.
- The project risks are to ensure that the product line is developed on time and within budget.

Day 6 Project

Research a state or national energy conservation program. Write a 100- to 150-word paragraph describing the program. Use the following questions to guide your writing.

How does the program work? What are the goals and objectives of the program? How do you know it is working? How do you know it is successful? How do you know it is cost-effective?

Write a 100- to 150-word paragraph describing a Green Energy program. Use the following questions to guide your writing.

What is the program? How does it work? What are the goals and objectives of the program? How do you know it is working? How do you know it is successful? How do you know it is cost-effective?

Write a 100- to 150-word paragraph describing a Green Energy program. Use the following questions to guide your writing.

The NYS Department of Environmental Conservation (DEC) is responsible for the regulation of the state's water resources. The DEC is also responsible for the regulation of the state's air resources. The DEC is also responsible for the regulation of the state's land resources. The DEC is also responsible for the regulation of the state's marine resources.

The DEC is also responsible for the regulation of the state's water resources. The DEC is also responsible for the regulation of the state's air resources. The DEC is also responsible for the regulation of the state's land resources. The DEC is also responsible for the regulation of the state's marine resources.

The DEC is also responsible for the regulation of the state's water resources. The DEC is also responsible for the regulation of the state's air resources. The DEC is also responsible for the regulation of the state's land resources. The DEC is also responsible for the regulation of the state's marine resources.

20. The following is a list of major infectious diseases, both in mortality, morbidity, and economic impact. Discuss each one in the context of the epidemiological transition and the burden of disease.

Malaria remains a significant cause of morbidity and mortality, especially in tropical and subtropical regions. It is caused by a protozoan parasite, Plasmodium, which is transmitted by female Anopheles mosquitoes. Malaria is a leading cause of death in children in sub-Saharan Africa. In the context of the epidemiological transition, malaria is a classic example of a disease that is prevalent in the early stages of development. It is caused by a protozoan parasite, Plasmodium, which is transmitted by female Anopheles mosquitoes. Malaria is a leading cause of death in children in sub-Saharan Africa. In the context of the epidemiological transition, malaria is a classic example of a disease that is prevalent in the early stages of development.

21. The following is a list of major infectious diseases, both in mortality, morbidity, and economic impact.

The following is a list of major infectious diseases, both in mortality, morbidity, and economic impact. Discuss each one in the context of the epidemiological transition and the burden of disease. The epidemiological transition theory suggests that as a country develops, it undergoes a series of changes in its disease profile. In the early stages of development, infectious diseases are the leading cause of death and morbidity. As a country develops, the burden of disease shifts towards non-communicable diseases (NCDs). The following is a list of major infectious diseases, both in mortality, morbidity, and economic impact.

22. The following is a list of major infectious diseases, both in mortality, morbidity, and economic impact. Discuss each one in the context of the epidemiological transition and the burden of disease.

WORK PLAN OVERVIEW FORM

Introduction

The purpose of this work plan is to provide a clear and concise overview of the project's goals, objectives, and key milestones. It is intended to serve as a communication tool for all stakeholders involved in the project.

1. Project Summary
2. Objectives and Goals
3. Key Milestones and Deliverables

The project will be managed using a combination of agile and waterfall methodologies. The agile methodology will be used for the development and testing phases, while the waterfall methodology will be used for the planning and deployment phases.

Work Plan Details

Objectives

The primary objective of this project is to develop a new software application that will streamline the workflow of our organization. The secondary objectives are to improve the efficiency of our operations, reduce the risk of errors, and increase the overall productivity of our team. The project will be managed using a combination of agile and waterfall methodologies. The agile methodology will be used for the development and testing phases, while the waterfall methodology will be used for the planning and deployment phases.

Key Milestones and Deliverables

Project Start

Monday - 10/1/2024

Project End

Friday - 10/31/2024

Key Milestones and Deliverables

1. Project Start - 10/1/2024

The project will be managed using a combination of agile and waterfall methodologies. The agile methodology will be used for the development and testing phases, while the waterfall methodology will be used for the planning and deployment phases.

The project will be managed using a combination of agile and waterfall methodologies. The agile methodology will be used for the development and testing phases, while the waterfall methodology will be used for the planning and deployment phases. The project will be managed using a combination of agile and waterfall methodologies. The agile methodology will be used for the development and testing phases, while the waterfall methodology will be used for the planning and deployment phases.

The 2017-2018 year will be the first time that the number of students taking AP Calculus BC will exceed the number of students taking AP Calculus AB. This is a significant milestone for the AP Calculus BC program, which has been growing steadily since its inception in 1991. The number of students taking AP Calculus BC has increased from approximately 10,000 in 2010 to over 20,000 in 2017.

The success of the AP Calculus BC program is a result of the continued support of the AP Calculus BC community, including the AP Calculus BC Central Office, the AP Calculus BC Exam Development Committee, and the AP Calculus BC Exam Administration Committee. The success of the AP Calculus BC program is also a result of the dedication of the AP Calculus BC teachers and students who have made the program a success.

The AP Calculus BC program is a rigorous and challenging program that prepares students for the rigors of college-level mathematics. The program is designed to be equivalent to a full year of college-level calculus. The AP Calculus BC exam is a comprehensive exam that tests students' knowledge of calculus concepts and their ability to apply these concepts to solve problems.

The AP Calculus BC program is a valuable program that provides students with the skills and knowledge they need to succeed in college. The program is a challenging and rewarding experience that prepares students for the rigors of college-level mathematics. The AP Calculus BC program is a program that is designed to be equivalent to a full year of college-level calculus.

The AP Calculus BC program is a rigorous and challenging program that prepares students for the rigors of college-level mathematics. The program is designed to be equivalent to a full year of college-level calculus. The AP Calculus BC exam is a comprehensive exam that tests students' knowledge of calculus concepts and their ability to apply these concepts to solve problems.

The AP Calculus BC exam is a comprehensive exam that tests students' knowledge of calculus concepts and their ability to apply these concepts to solve problems.

OBJECTIVES

INTRODUCTION

1. Analyze the function $f(x) = \sin(x)$.
2. Determine the domain of $f(x)$.
3. Find the derivative of $f(x)$ using the definition of the derivative.
4. Evaluate the derivative of $f(x)$ at $x = \pi/2$.
5. Graph the function $f(x)$ and its derivative.

OBJECTIVE

1. Analyze the function $f(x) = \sin(x)$.

2. Determine the domain of $f(x)$.

3. Find the derivative of $f(x)$ using the definition of the derivative.

4. Evaluate the derivative of $f(x)$ at $x = \pi/2$.

5. Graph the function $f(x)$ and its derivative.

OBJECTIVES

INTRODUCTION

1. Analyze the function $f(x) = \sin(x)$.
2. Determine the domain of $f(x)$.
3. Find the derivative of $f(x)$ using the definition of the derivative.
4. Evaluate the derivative of $f(x)$ at $x = \pi/2$.
5. Graph the function $f(x)$ and its derivative.

TASKS

Instructions

1. Add the value that is provided below.
2. Click on the Add button.
3. To add a new task, click on the Add button on the right side of the task.
4. To delete a task, click on the Delete button on the right side of the task.

Objective 1: Add a new task to the task list.

Task Name

1. **Task Name:** Add a new task to the task list.

Task Description

1. Add a new task to the task list.

2. Add a new task to the task list.

3. Add a new task to the task list.

TASKS

Task Name

1. Add a new task to the task list.
2. Click on the Add button.
3. To add a new task, click on the Add button on the right side of the task.
4. To delete a task, click on the Delete button on the right side of the task.
5. Add a new task to the task list.

Objective 2: Add a new task to the task list.

Task Name

1. **Task Name:** Add a new task to the task list.

Task Description

1. Add a new task to the task list.

2. Add a new task to the task list.

3. Add a new task to the task list.

TASKS

Task Name

1. Add a new task to the task list.
2. Click on the Add button.
3. To add a new task, click on the Add button on the right side of the task.
4. To delete a task, click on the Delete button on the right side of the task.
5. Add a new task to the task list.

Objective 3: Add a new task to the task list.

Task Name

1. **Task Name:** Add a new task to the task list.

Task Description

1. Add a new task to the task list.

2. Add a new task to the task list.

3. Add a new task to the task list.

TASKS

Task Name

1. Add a new task to the task list.
2. Click on the Add button.
3. To add a new task, click on the Add button on the right side of the task.
4. To delete a task, click on the Delete button on the right side of the task.
5. Add a new task to the task list.

Objective 4: Add a new task to the task list.

Task Name

1. **Task Name:** Add a new task to the task list.

Task Description

1. Add a new task to the task list.

2. Add a new task to the task list.

Exhibit H

Looking Ahead

Reuse Study for the St. Elizabeth and St. Luke's Campuses

- MWH will develop reuse scenarios for the St. Elizabeth and St. Luke's campuses. Formal reuse study of St. Elizabeth and St. Luke's campuses are expected to be completed following completion of the Life Cycle of Need and environmental review (SEQR) process, as both campuses will be occupied until 2022.
- The planning and feasibility process will engage community stakeholders and provide an assessment options that to identify community needs.

Next Steps

- MWH has begun the site analysis and design phase of the project with the internationally recognized architectural firm HOK. This phase includes development of:
 - Campus footprint, including the hospital footprint's physical footprint re-strategy
 - Schematic design, including a series of floor plans, elevations, a site plan, landscape meetings with hospital employees and utility, employee/medical staff guidance is critical to design and implementation.
 - Facility design, to include aesthetic exterior and interior design will consider HOK's unique architectural character, surrounding neighborhoods and urban development initiatives, and more. This is one of the final components of the design process.
- Supporting the design process for the property owners in the general project footprint. MWH remains in contact with them during periodic updates and answers their questions by phone and email. The complexity and size of the project and the need to consult with

- Multiple design and purchase has resulted in delays which have unfortunately been an additional burden to property owners seeking to make plans. MVHS will continue to work with the City and County to support and assist so they can decide to affected property owners. Review of reports approach is ongoing by the Emergency Authority of the State of New York (EASENY), part of the contract approval process for State funding and should be completed by November, allowing MVHS to move forward with property construction.
- MVHS always with employee and community input and has received considerable feedback over the past year and a half from local healthcare providers, neighborhood and civic groups, patient organizations, and others. MVHS has met with nearly 2,000 people since the start of the project. Community and employee input will ensure integration with the neighborhood that will meet the hospital's needs and the community's.
- The Environmental Impact Statement will be submitted to the NYS Department of Health and 80 percent of hospital design is complete expected to occur by November 2016. MVHS is working through that process with assistance from NYSDEC.
- A required State Environmental Quality Review will entail a review of all the project potential impacts. MVHS is working with the State Comptroller on the SEQE timeline, and preliminary work has begun.
- The Ulster Police Department Maintenance Facility will be acquired as part of the project. Timing of its relocation has not been determined. MVHS will work with the City and police department as the project moves forward. The Fire Station and the Ulster City Court Complex will remain, they are not within the project footprint.

Civil Environmental Assessment Form Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses to some parts of the application for approval or funding, are subject to public review and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current life station. Indicate where you are using information that is not well documented, especially pertinent to the structure, and, where possible, generally clear before or unlike which would be necessary to create or fill the gaps in the information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, if an item contains an initial question that must be answered with "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F covers the project sponsor's identity and submit any additional information. Section G requires the name and signature of the project sponsor to verify that the information contained in Part 1 is accurate and complete.

A. Project and Sponsor Information

Name of Applicant/Project: Delaware Valley Health System 751 E. King and Health Campus		
Project Location (street name, and street address, location map): City of Dover, DE (see figure 1)		
Use of Data Table 2? Proposed Action (provide purpose or need): See Attachments 1 and 2 for a description of the Proposed Action and Site Layout (see attached)		
Name of Applicant/Sponsor: MM 51416 DE Robert C. Scoville Rd, MS, Laurel, DE 19048 (see map of location)		Telephone: 410-326-4474
Address: 2000 N. Green Street		E-Mail: robert@delvalhealth.com
City/State:	State: DE	Zip Code: 19048
Project Contact (if not same as sponsor, provide name and address):		Telephone:
Address:		E-Mail:
City/State:	State:	Zip Code:
Property Owner (if not same as sponsor):		Telephone:
Full property owner name/Address (if not same as sponsor, provide name and address):		E-Mail:
Address:		
City/State:	State:	Zip Code:

B. Government Approvals and Approvals: See Attachment A for a listing of laws to review.

B. Government Approvals, Funding, or Sponsorship: ("Funding" includes grants, loans, in-kind, and any other forms of financial assistance.)

Government Entity	If Yes, Identify Agency and Approval/Requirement	Application Date (Actual or proposed)
a. City Council, Town Board, or Village Board of Trustees <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		
b. City, Town or Village Planning Board or Commission <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		
c. State Council, Division or Village Zoning Board of Appeals <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		
d. Other local agencies <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		
e. County agencies <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		
f. Regional agencies <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		
g. State agencies <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		
h. Federal agencies <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		
i. Coastal Resources: <ul style="list-style-type: none"> 1. Is the project site within a Coastal Area, or the waterfront area of a Designated Island Waterway? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No 2. Is the project site located in a community with an approved Local Waterfront Revitalization Program? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No 3. Is the project site within a Coastal Erosion Hazard Area? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No 		

C. Planning and Zoning

C.1. Planning and zoning actions

Will administrative or legislative adoption or promulgation of a plan, local law, ordinance, rule or regulation be necessary approval(s) which must be granted or denied for proposed action to proceed? Yes No

If Yes, complete sections C.1.1 and C.1.2. If No, proceed to question C.2 and complete all remaining sections and questions in Part I.

C.2. Adopted land use plans

a. Do any municipally adopted zoning, subdivision or other comprehensive land use plan(s) include the site where the proposed action would be located? Yes No

If Yes, does the comprehensive plan include specific site requirements for the site where the proposed action would be located? Yes No

b. Is the site of the proposed action within any state or regional special-use district (for example, a scenic or historic district) (applicable in Illinois); designated state or federal heritage area; watershed management plan; or other? Yes No

If Yes, identify the district: _____
 Name, type, state, agency, address, contact person, phone, website, address, hours of operation

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal emergency or an adopted municipal flood and protection plan? Yes No

If Yes, identify the district: _____

C.3. Zoning

- a. Do the uses of the proposed action located on the site comply with an ordinance zoning law or ordinance? Yes No
 If Yes, what is the zoning classification, including any applicable overlay district?
Local Resource Overlay District
- b. Is the use permitted or allowed by a special or conditional use permit? Yes No
- c. Is a zoning change requested as part of the proposed action?
 If Yes, Yes No
 i. What is the proposed use zoning for the site? _____

C.4. Existing community structures

- a. Have any school districts in the project site located? Quincy School District
- b. When police or other public personnel have served the project site?
Area Police Department
- c. Which fire protection and emergency medical services serve the project site?
Area Fire Department
- d. What persons own the project site?
The City of Quincy owns and operates parks within the site and a private land developer has been proposed to

D. Project Details

D.1. Proposed and Potential Development

- a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, institutional, etc.)? Include all components of the action.

- b. a. Total acreage of the site of the proposed action? 25 acres
 b. Total acreage to be physically disturbed? 25 acres
 c. Total acreage proposed and may comprise portions owned or controlled by the applicant or project sponsor? None (Other's land) The applicant is negotiating with current owner (Other's land)
- c. Is the proposed action an expansion of an existing project or use?
 Yes No
 If Yes, what is the approximate percentage of the proposed expansion and identify the utility (e.g., streets, utility, existing sewer, storm, etc.)? None (Type: _____)
- d. Is the proposed action a subdivision or does it involve a subdivision?
 Yes No
 If Yes,
 a. Purpose or type of subdivision? (e.g., residential, industrial, commercial, mixed, specific type)
Residential to convert some parcels into single units and up
 b. Is a site plan or subdivision layout proposed? Yes No
 i. Number of lots proposed? 2
 ii. Minimum and maximum proposed lot size? Minimum _____ Maximum _____
- e. Will proposed action be constructed in multiple phases?
 Yes No
 i. If No, proposed period of construction: _____ month _____ year
 ii. If Yes,
 • Total number of phases anticipated _____
 • Anticipated commencement date of phase I (including demolition) _____ month _____ year
 • Anticipated completion date of final phase _____ month _____ year
 • Generally describe any interrelationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases.

1. Does the project include new residential use? Yes No

If Yes, show number of units proposed

	One family	Two-family	Multiple family (apartment)
Total Floor	_____	_____	_____
As complete	_____	_____	_____
in all phases	_____	_____	_____

2. Does the proposed action include new non-residential construction (including expansion)? Yes No

If Yes,

- Total number of units is _____
- Dimensions (in feet) of largest proposed structure: length _____ width _____ height _____
- Approximate volume of building space to be created or added: _____ (e.g., length x width x height)

3. Does the proposed action include construction for other purposes that will result in the importation of any liquid, such as seawater, water, or other liquid, or other substance? Yes No

If Yes,

- Purpose of the importation: _____
- To what impoundment the principal source of the water: Ground water Surface water streams Other specify _____
- Characterize water, identify the type of impounded or natural liquid and their source: _____
- Approximate size of the proposed impoundment: Volume _____ million gallons surface area _____ acres
- Dimensions of the proposed dam or impounding structure: length _____ height _____
- Construction materials/materials for the proposed dam or impounding structure (e.g., earth fill, rock, concrete): _____

D.3. Project Operations

4. Does the project action include any excavation, mining, or deepening, during construction, operations, or both? Yes No

If Yes, including general site preparation, grading or installation of utilities or other structures, what soil resources materials will remain on site?

If Yes,

- What is the purpose of the excavation or deepening? Excavation and removal of impeding water utilities at the land bank site
- How much material (including rock, earth, concrete, etc.) is proposed to be removed from the site?
 - a. Volume (specify ton or cubic yards): 1.2 million cubic yards (including the removal of existing structures)
 - b. Give what is used of it: 22,000 tons
- How is material and characteristics of material to be excavated or deepened, and plans to use, manage or dispose of them? Excavation will be used for the new utility structure and will be placed in a stockpile on site for use in the construction of the new utility structure and for site grading.
- Will there be import, export, or processing of excavated materials? Yes No

If yes, describe: Temporary stockpiles of excavated materials, excavated materials will be used for site grading and for construction of the new utility structure.
- What is the total area to be excavated or excavated? _____ Total volume of water _____
- What is the maximum depth to be worked or any other m? _____ + 25' above
- What would be the maximum depth of excavation or deepening? _____ + 15' total
- Will the excavation require shoring? Yes No
- Shoring type (e.g., trench shields and piles): _____

Excavation of the field for and replacement by better use grounds will be completed on the completed site.

5. Would the proposed action cause or result in alteration of, increase or decrease in, or loss of, or disturbance to, any sensitive wetland, waterbody, stream, beach or riparian area? Yes No

If Yes,

- Identify the wetland or waterbody which would be affected (by name, with a site number, with a map number, or geographic description): _____

a. How do you think the proposed action could affect the water body concerned, e.g. excavation, filling, treatment of effluents, or discharge of chemicals, tanks, etc. (specify the nature, location, extent of activities, alterations and additions in some detail or plan).

b. Will the proposed action cause or result in disturbance to human activities? Yes No
 If Yes, describe: _____

c. Will proposed action cause or result in the destruction or removal of aquatic vegetation? Yes No
 If Yes:

- types or genera of vegetation proposed to be removed: _____
- expected % range of aquatic vegetation remaining after project completion: _____
- nature of proposed removal (e.g. beach clearing, excavation, aquatic control, flood control): _____
- proposed method or plan manual: _____
- if chemical herbicides or insecticides are to be used, specify products: _____

d. How do you estimate potential sedimentation following disturbance? _____

e. Will the proposed action cause or create a new demand for water? Yes No
 If Yes:

- Total on-plot water requirement per day: _____ (e.g. 100,000 gallons/day)

f. Will the proposed action obtain water from an existing public water supply? Yes No
 If Yes:

- Name of district or service area: Canada
- Does the existing public water supply have capacity to serve the project? Yes No
- Is the project site in the existing service area? Yes No
- Is expansion of the district needed? Yes No
- Is existing lines to the project site? Yes No

g. Will one connection within an existing district be necessary to supply the project? Yes No
 If Yes:

- Describe extension of capacity required and proposed to serve this project.
One new water line will be installed to connect the site to existing district.
- Are there any supply for the district into the Valley Water Authority? _____

h. Is a new water supply district or service area proposed or intended to serve the project site? Yes No
 If Yes:

- Applicant's policy for new district: _____
- Date application submitted or will be: _____
- Process underway to supply the new district: _____

i. In which way water supply will not be used, including plans to provide water supply for the project. _____

a. If water supply will be from wells, indicate present maximum pumping capacity: _____ gpd (or more)

d. Will the proposed action generate liquid wastes? Yes No
 If Yes:

- Total on-plot liquid waste generation per day: _____ (e.g. 100,000 gallons/day)

e. Nature of liquid wastes to be generated (e.g. sanitary wastewater, industrial). If sanitary, list, describe all components and approximate volume or composition of each: _____
 (Sanitary wastewater has been allowed to be 150,000 gpd maximum)

f. Will the proposed action require existing public wastewater treatment facilities? Yes No
 If Yes:

- Name of wastewater treatment plant to be used: Canada County Sewer Plant
- Name of district: Canada County Sewer District
- Does the existing wastewater treatment plant have capacity to receive the project? Yes No
- Is the project site in the existing service area? Yes No
- Is expansion of the district needed? Yes No

Yes No
 Yes No

Will the existing utility lines be disturbed or necessary to alter the project?
 If Yes:

- Does the existing or capacity expansion proposed to serve this project _____
 (Specify how and how it is included in proposed Test Attachments for additional details)

Will the new wastewater (wastewater treatment) require the firm to source the project site? Yes No
 If Yes:

- Are plans prepared for new service _____
- Have applications submitted or anticipated _____
- What is the recovery water for the treatment discharge? _____

If the facility will not be used, describe plans to avoid wastewater treatment for the project including specifying proposed recovery water (to be used only for other than process discharge) and/or to be released if special plans: _____

Describe any plans to segregate capture, recycle or reuse liquid waste: _____

Will the proposed activities disturb, maintain, use, store and create new impervious ground, require new parking spaces (e.g. parking, pavers, curbs, ramps, gutters) or other concentrated flows of stormwater or wastewater sources or runoff during construction or post construction? Yes No
 If Yes:

- How much impervious area is associated with the proposed activities in relation to total size of project parcel?
 Square feet or _____ acres (maximum 500,000)
 Square feet or _____ acres (project ground area)
- How do types of new impervious surfaces, their quantity and proposed water control measures, proposed construction best management practices, proposed erosion control measures, proposed water management, facility, construction adjacent properties, groundwater, surface water and off-site surface waters?
See Appendix 2 for a list of best management practices (BMPs) for stormwater management. Appendix 3 provides a list of best management practices (BMPs) for erosion control.
- Will stormwater runoff be directed to or infiltrate stormwater management facility, ground area adjacent properties, groundwater, surface water and off-site surface waters?
 Stormwater will be conveyed to the City stormwater management system _____
- Will stormwater runoff flow to adjacent properties? Stormwater will be conveyed to _____ Yes No

Will proposed plan minimize impervious surfaces, use permeable materials or collect and reuse stormwater? Yes No

Does the proposed activities include or will it use on site one of the following air pollution control measures, including but not limited to, waste incineration or other processes are performed? Yes No
 If Yes identify:

- Air emissions during project operations (e.g. heavy equipment, fuel or delivery vehicles)
 Stack emissions (e.g. oil, diesel, etc.) (If possible, list permit type or air permit during construction phase)
- Air emissions during construction (e.g. dust, sediment, stack dust, heating, oil or fuel, engines)
 Air emissions are low during construction and minimal.
- Air emissions sources during operations (e.g. process emissions, large boilers, electric generation)
 Emissions are low during operations and include boiler, emergency generators and maintenance as well as other emissions.

Willing to air permit on site (e.g. permit a CA State Air Regulation, Air Facility Permit, Air Control Unit, Title V or Title V Permit)? Yes No
 If Yes:

- Is the project site located in an Air quality non-attainment area (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year)? Yes No
- In addition to emissions as calculated by the applicant, for major well permit:
 - _____ > 10,000 Tons/year (short tons) of Sulfur Dioxide (SO₂)
 - _____ > 1 Tons/year (short tons) of Nitrous Oxide (NO_x)
 - _____ > 0 Tons/year (short tons) of Particulate Matter (PM₁₀)
 - _____ > 0 Tons/year (short tons) of Sulfur Hexafluoride (SF₆)
 - _____ > 0 Tons/year (short tons) of Carbon Dioxide equivalent of Hydrofluorocarbon (HFCs)
 - _____ > 1 Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

*This table is not intended to be used as a checklist. See Facility Air Permit Application Online with a list of air quality standards. More information is available at: [http://www.cagov.ca.gov](#)

i. Will the proposed action generate or contribute to odours (including but not limited to sewage treatment plants, landfills, composting facilities)? Yes No
 If Yes:
 i. Facility name(s) generating odours in analysis (use of) a 13 analysis: _____
 ii. Describe any mitigation options (primary or alternative measures included in annual design proposal) available to generate least odour intensity through: landfills, composting, sewage treatment plants, etc.

j. Will the proposed action result in the release of air pollutants from operations or processes such as quarry or landfill operations? Yes No
 If Yes: Describe operations and nature of emissions (e.g. diesel exhaust, rock pile dust, etc.):
Annual design proposal only: dust and emissions from quarry, etc. (see page 12) and quarry operations (see page 13) and annual design proposal only: dust and emissions from quarry, etc. (see page 12) and quarry operations (see page 13)

k. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? Yes No
 (A Traffic Impact Study will be conducted)
 If Yes: -
 i. When is the peak time of expected truck traffic (see app. 1): Morning Evening Weekends
 Randomly between hours of _____ to _____
 ii. For commercial activities only, projected number of semi-trailer truck arrivals:
 a) Parking space existing: _____ Proposed: _____ (No Increase) Increase: _____
 b) Describe proposed action include any shared use parking? No Yes
 c. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe: Access to road of Highway and Canada Street will be used for access to site.

l. Are public transit transportation services (i.e. bus lines) available within 500 m of the proposed site? Yes No
 m. Will the proposed action require access to public transportation or accommodations for use of hybrid, electric, or other alternative fueled vehicles? Yes No
 n. Will the proposed action include plans to provide an on-site bicycle rack or more for commuters or visitors, or other on-site bicycle rack? Yes No

o. Will the proposed action (for commercial or industrial purposes) generate new or additional demand for energy? Yes No
 If Yes:
 i. Estimate annual electricity demand during operation of the proposed action: _____
The peak electrical demand for the project is 42 kW.
 ii. Anticipated sources/supplies of electricity for the project (e.g. on-site combustion, on-site renewable, via grid, local utility, etc.):
 Answer: Grid
 p. Will the proposed action require use of a permit for an existing substance? Yes No

1. Name of operation. Answer all items which apply.

a. During Construction		ii. During Operations:	
• Monday - Friday	10:00 a.m. to 5:00 p.m.	• Monday - Friday	24 hours
• Saturday	10:00 a.m. to 5:00 p.m.	• Saturday	24 hours
• Sunday	If necessary.	• Sunday	24 hours
• Holidays	_____	• Holidays	24 hours

d. Will the proposed action produce noise that will exceed existing ambient noise levels during construction operation, or both? Yes No
 If yes:
 i. Provide details including sources, time of day and location.
 The noise levels are within the limits of the noise control regulations. The proposed action will not exceed the noise levels during construction operation.

e. Will proposed action remove existing natural features that are in or adjacent to the project area? Yes No
 Describe the features that will be removed, including their location, size, and any other relevant information.

f. Will the proposed action have a glare or lighting? Yes No
 If yes:
 i. Describe sources, location, height of fixtures, direction of light, and proximity to nearby occupied structures.
 The proposed lighting will be in compliance with the relevant codes and standards. The lighting will be designed to minimize glare and light pollution.

g. Will proposed action remove existing natural features that are in or adjacent to the project area? Yes No
 Describe:

h. Does the proposed action have the potential to produce odors for more than one month during? Yes No
 If Yes, describe odor type, sources, potential frequency and duration of odor emission, and proximity to nearby occupied structures.

i. Will the proposed action include any bulk storage of petroleum products (capacity of over 1,000 gallons) or chemical products (MSDS available) having their storage or any amount in underground storage? Yes No
 If Yes:
 i. Provide details required by 23 USC 104.

ii. Volume(s) - per year, unit, etc., month, year, etc.

iii. Generally describe proposed storage facilities.
 The proposed storage facilities will be designed to comply with all applicable codes and standards.

j. Will the proposed action (commercial, institutional, or residential) be used exclusively for activities (i.e., landfill, etc.) that are not intended for residential or commercial use? Yes No
 If yes:
 i. Describe proposed treatment.
 The proposed treatment will be designed to comply with all applicable codes and standards.

k. Will the proposed action use integrated Pest Management practices? Yes No

l. Will the proposed action (commercial or institutional project only) involve or require the management or disposal of solid waste (excluding hazardous materials)? Yes No
 If yes:
 i. Describe any solid waste(s) to be generated during construction or operation of the facility.
 ii. Describe any proposed for on-site management, recycling or reuse of materials to avoid disposal as solid waste.
 iii. Proposed disposal method(s) for any solid waste generated onsite.

3. Does the proposed action include construction, demonstration of a solid waste management facility? Yes No

If Yes:

- Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill), or other proposed activities: _____
- Anticipated rate of disposal/processing:
 - _____ Tons annually, if transfer or other such collection/treatment treatment or
 - _____ Tons/year if combustion or thermal treatment
- iii. Landfill anticipated site life: _____ years

4. Will proposed action at the site involve the activities of generation, treatment, storage, or disposal of hazardous waste? Yes No

If Yes:

- Name(s) of all hazardous waste(s) to be generated, handled or managed at facility:
 Anticipated quantity, frequency of being stored, volume of containers, waste code: _____
- Generally describe processes or activities involving hazardous waste or constituents:
 Primary use of these activities: _____
- Specify amount to be stored or generated _____ treatment. If an amount of hazardous waste is to be stored on site, describe any proposed in- or on-site management, recycling, or reuse of hazardous waste(s) _____

5. Will any hazardous wastes be disposed at an existing or site hazardous waste facility? Yes No

If Yes, provide name and location of the site: _____
 Name of the existing or site hazardous waste management, storage and disposal facility: _____ (State applicable law name, address, website)

If No, describe proposed management of any 100% or 99% wastes which will not be sent to a hazardous waste facility: _____

K. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses:

- Check all uses that currently apply to your site (see the instructions):
 - Urban Industrial Commercial Residential (detached) Rural (open land)
 - Forest Agriculture Aquatic Other (specify: _____, _____, _____)
- If more than one, generally describe: _____

b. Land uses and characteristics on the project site:

Land use or Characteristic	Current Acreage	Average After Project Completion	Change (Acres +/-)
• Pavement, building, and other sealed or impervious surfaces	_____	_____	_____
• Forested	_____	_____	_____
• Pasture, meadow, or cropland (non-irrigated), including abandoned agriculture	_____	_____	_____
• Agricultural (includes active and fallow fields, greenhouses, etc.)	_____	_____	_____
• Surface water features (rivers, ponds, streams, creeks, etc.)	_____	_____	_____
• Wetlands (freshwater or tidal)	_____	_____	_____
• Non-vegetated (bare rock, earth, etc.)	_____	_____	_____
• Other	_____	_____	_____
Excavated Area (land resulting from excavation) over area	1.25	1.25	0.00

1. Is the project site generally used by members of the community for public recreation? Yes No
 If Yes, explain: _____

2. Are there any facilities serving children, the elderly, people with disabilities (e.g., outdoor play area), school children, or groups (e.g., within 1500 feet of the project site)? Yes No
 If Yes,
 a. Identify: _____
 b. Approximate # of annual day use persons: _____
 c. Source: _____

3. Does the project site contain an existing dam? Yes No
 If Yes,
 a. Does it consist of the dam and impoundment:
 • Dam height: _____ feet
 • Dam length: _____ feet
 • Surface area: _____ acres
 • Volume impounded: _____ gal. (million gallons)
 b. Dam's existing hazard classification: _____
 c. Provide description and structural details of last inspection: _____

4. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or as the project site or open parcels within 1/2 mile, or was a structure, building or solid waste management facility? Yes No
 If Yes,
 a. Has the facility been fully dismantled? Yes No
 • If Yes, describe dismantling: _____
 b. Have the boundaries of the area used to delineate the boundaries of the solid waste management facility? _____
 c. Does the site development conditions justify for other solid waste activities? _____

5. Have hazardous waste been generated, treated, stored, disposed of or incinerated, or have the project site or open parcels which is less than 1/2 mile from the site used to commercially store, store and/or dispose of hazardous waste? Yes No
 If Yes,
 a. Describe activity, treated and waste management activities, including approximate time when activities occurred.
 b. Describe waste how long generated at the site or open parcels, type of waste, and amount of waste generated. No large quantity generated or treated and treatment storage and disposal unit (TSU) or other unit used to dispose of the proposed project site.

6. Potential contamination (1990's). Has there been a report filed to the previous project site or have any record of release been submitted or reported to the proposed site? Yes No
 If Yes:
 a. Is any portion of the site listed on the NYS State Spills Incident Database or Environmental Site Identification Database? (Check all that apply) Yes No
 Yes - Spills Incident Database Provide DEC ID number(s) _____
 Yes - Environmental Site Identification Database Provide DEC ID number(s) _____
 Neither Database
 b. If site has been submitted RCRB corrective actions, describe corrective measures: _____

7. Is the project within 1/2 mile of any site in the NYSDEC Environmental Site Remediation Database? Yes No
 If yes, provide DEC ID number(s): _____
 a. Type to be removed, describe current status of site(s)
 b. Exemption status of the location, including the assessment and/or remediation completed by the applicant, owner or previous owner, under the SWS 3000's, and the current status (within 1500 feet) of the project site and open parcels (within 1/2 mile) of the proposed project site. Groundwater level (SWS 3000's) is not required.

• Is the project site subject to an additional control limiting property use? Yes No

- Does the DEC site ID number: _____
- Does the type of final land use (e.g., residential, commercial, etc.) _____
- Does the use not function as: _____
- Does the use constitute: _____

• Will the project's best management practices be in place? Yes No

• Is open _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bed rock on the project site? _____ ft

b. Are there buried or underground pipes on the project site? Yes No
 If Yes, what program or programs are comprised of buried underground pipes? _____

c. If a program is not yet installed, please list the program and _____

_____	100%
_____	%
_____	%

d. What is the average depth to the water table on the project site? Average _____ ft

e. Drainage system of project site is as: Well Drained, _____ ft of rise
 Moderately Well Drained, _____ ft of rise
 Poorly Drained, _____ ft of rise

f. Approximate percentage of impervious area on site with slopes: 0-15% _____ % of site
 16-30% _____ % of site
 31% or greater, _____ % of site

g. Are there any unique geologic features on the project site? Yes No
 If Yes, describe: _____

h. Surface Water Features

i. Does any surface of the project site contain wastewater or other waterbodies (industrial, sanitary, storm, ponds or ditches)? Yes No

j. Do any wetlands or other water bodies adjoin the project site? Yes No

If Yes, see the permit conditions. If No, skip to E.3.

k. Are any of the surface water bodies within or adjoining the project site regulated by any federal, state or local agency? Yes No

l. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name _____ Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DNR) _____

m. Are any of the above water bodies regulated in the most recent determination of NPS water quality-related waterbodies? Yes No

If you have any impaired waterbodies studies and basis for listing as impaired _____

n. Is the project site in a designated floodway? Yes No

o. Is the project site in the 100 year Floodplain? Yes No

p. Is the project site in the 500 year Floodplain? Yes No

q. Is the project marked as a use immediately adjoining a public water supply or sewer system? Yes No

If Yes:
 1. Name of supplier: Primaal Aqua _____

m. Identify the environmental world (s) under the category of use the project site
 Owner subject to: _____

n. Does the project site contain a designated sign flow natural community? Yes No
 If Yes:
 1. Describe the both subcommunity (name, size, location, and uses for designation): _____
 2. Size (total of description in brackets): _____
 3. Detail of community habitat:
 a. Forests: _____ none
 b. Following completion of the table provided: _____ none
 c. Other (list (name) (size): _____ none

o. Does project site contain any species of plant or animal that is listed by the Federal government or NYS as endangered or threatened, or does it contain any special habitat as defined for an endangered or threatened species?
Species of this category are listed and identified in the State Conservation Law (SCL) and the State Conservation Regulations (SCR). However, species of this type are not listed in the State Conservation Law (SCL) and the State Conservation Regulations (SCR).
For more information on this section, please refer to the section for Planning and Design (P&D) regarding the criteria for proposing the project to the relevant community group. However, please refer to the SCL and SCR for more information on this section.

p. Does the project site contain any species or plant or animal that is listed by NYS as rare, or as a species of special concern? Yes No

q. Is the project site or adjacent area currently used for hunting, trapping, fishing or shell fishing? Yes No
 If Yes, give a brief description of use for proposal submission effort (date): _____

K3. Designated Public Resources On or Near Project Site

a. Water (surface, ground water or other listed in designated agricultural district) contained pursuant to Agriculture and Markets Law Article 24-A, Section 103 and 124? Yes No
 If Yes, provide county purchase number: _____

b. Agricultural lands consisting of highly productive soils areas?
 1. If Yes, acreage for project site? _____
 2. Size total of soil (acre(s)): _____

c. Does the project site contain all or part of, or is it substantially influenced by, a regulated National Wetland District?
 If Yes:
 1. Nature of the wetland (check) Biological Community Geological Feature
 2. Provide brief description of landmark including various related designations and appropriate associated: _____

d. Is the project site located in or adjacent to a designated Critical Environmental Area? Yes No
 If Yes:
 1. CEA name: _____
 2. Uses for designation: _____
 3. Designing agency and date: _____

1. Does the project site contain, or is it substantially contiguous to, a building, archeological site, or district which is listed on, or eligible for listing on, the National Register of Historic Places or the State or National Register of Historic Places? Yes No
 If Yes:
 a. Nature of building, archeological resources: Archeological Site Historic Building or District
 b. Name: _____
 c. Brief description of all buildings which listing is based on: _____

2. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archeological work in the NY State - terms: the sensitive areas (SHPCA) or archeological site inventories? Yes No

3. Have additional archeological or historical sites or resources been identified on the project site?
 If Yes:
 a. Describe available resources: _____
 b. Impact (if any): _____

4. Is the project area within five miles of any officially designated wetlands, public access to rivers, ponds, or wetlands adjacent to a stream? Yes No
 If Yes:
 a. Identify resources: City of Ulster Parks and Historic District, Elk Camp, and NYC designated NYNH Map 2011-2022
 b. Name of, or basis for, designation (e.g., designated highway, road, river, park, state historic trail, or public library, etc.): _____
 c. Distance between project and resource: _____ miles.

5. Is the project site located within a designated riparian corridor under the Wild, Scenic and Recreational Rivers Program of NYCRR 6007? Yes No
 If Yes:
 a. Identify the riparian corridor and its designation: _____
 b. Is the activity consistent with development limitations contained in NYCRR Part 6007? Yes No

E. Additional Information
 Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts and any measures which you propose to avoid or minimize them.

G. Verification
 I certify that the information provided above is to the best of my knowledge.
 Applicant/Species Name: Robert C. Seldner Field Date: 11/11/20
 Signature: [Signature] Title: EMP/CEO

EAF Mapper Summary Report

Wednesday, November 29, 2017 11:00 AM

B.i.i [Coastal or Waterfront Area]	No
B.i.ii [Local Waterfront Revitalization Area]	No
C.2.b. [Special Planning District]	Yes - Digital mapping data are not available for all Special Planning Districts. Refer to EAF Workbook.
C.2.b. [Special Planning District - Name]	NYS Heritage Areas: Mohawk Valley Heritage Corridor
E.1.h [DEC Spills or Remediation Site - Potential Contamination History]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Listed]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Environmental Site Remediation Database]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.iii [Within 2,000' of DEC Remediation Site]	Yes
E.1.h.iii [Within 2,000' of DEC Remediation Site - DEC ID]	B00061 , E633070, B00063 , 633021
E.2.g [Unique Geologic Features]	No
E.2.h.i [Surface Water Features]	No
E.2.h.ii [Surface Water Features]	No
E.2.h.iii [Surface Water Features]	No

Purpose and Project Description

MVHS INTEGRATED HEALTH CAMPUS | PURPOSE AND PROJECT DESCRIPTION

PURPOSE

Faxton St. Luke's Healthcare (FSLH) and St. Elizabeth Medical Center (SEMC) affiliated in 2014 to become the Mohawk Valley Health System (MVHS). MVHS's mission is to provide excellence in healthcare for its communities. Substantial effort has been focused on consolidating existing resources, eliminating redundancies, expanding the depth and breadth of services, improving access and elevating the quality of healthcare services in the region. MVHS has been successful in its efforts thus far, but has been constrained by the age and physical limitations of the existing facilities.

To support goals to deliver higher quality, more effective care with better community outcomes and at a lower cost, the proposed MVHS Integrated Health Campus, will combine services from both existing campuses. The new MVHS integrated health campus and state-of-art hospital will replace SEMC and FSLH, reduce the number of beds in the community, and consolidate patient services to one campus.

The decision to consolidate the two inpatient campuses to a single facility was spurred by several key factors:

- The desire and need to build a facility with the newest technology, services and advancements in patient safety and quality so that our community can receive the most up-to-date healthcare services that rivals those found in large cities.
- The growing demand for healthcare due to the rapidly increasing and aging population in this region.
- The increasing need to improve accessibility and availability by attracting specialists and providing services that otherwise would not be available to our community.

The opportunity to gain greater operational efficiencies through the elimination of duplicative and redundant functions will help to reduce the rate of increase in healthcare spending and to achieve improved financial stability.

PROJECT DESCRIPTION

As depicted on Figure 1 (Site Location Map), the MVHS Integrated Health Campus will generally be bounded by Oriskany Boulevard (NYS Route 69) to the north, Broadway on the east, Columbia Street, and NYS Route 8 to the west and City Hall and Kennedy Apartments to the south. The MVHS Integrated Health Campus will encompass approximately 25-acres and will include the following elements:

- Hospital Building
- Central Utility Plant
- Parking facilities (including one parking garage)
- Potential future Medical Office Building (by private developer)
- Campus grounds
- Helistop

It should also be noted that modifications to existing utility infrastructure will be necessary to accommodate the proposed MVHS Integrated Health Campus. A description of the project elements noted above, as well as utility modifications, is provided below. This description represents the project as currently envisioned.

HOSPITAL BUILDING

The proposed ±670,000 square foot (sf) hospital building will be constructed on parcels located west of Broadway and will extend through Cornelia Street onto parcels located east of State Street. The hospital building consists of a 2-story podium and a 7-story bed tower.

MVHS INTEGRATED HEALTH CAMPUS | PURPOSE AND PROJECT DESCRIPTION

The main entrance to the hospital will be located south of Lafayette Street, proximal to Cornelia Street. In addition to the main entrance, Emergency Department (ED) walk-in and ED ambulance entrances will be located on the western portion of the hospital. Vehicular and pedestrian entries will be marked by canopy systems that provide adequate coverage for public drop off, ED walk-in and loading activities. Ambulance traffic will be provided with a sally port adjoined to the podium.

A service entrance will be located on the eastern portion of the hospital building, which will be accessible via Columbia Street.

Most services currently provided at the FSLH and SEMC will be transitioned to the MVHS Integrated Health Campus including ±373 inpatient beds.

CENTRAL UTILITY PLANT

A three-story Central Utility Plant (CUP) will service the hospital. The CUP will adjoin the eastern portion of the podium of the hospital building.

The CUP will house three centrifugal chillers, a heat recovery chiller and four steam and eight hot water heating condensing boilers, each which will be fueled by both natural gas and No. 2 Fuel oil. A 50,000-gallon underground storage tank (UST) used to store the No. 2 fuel oil will be installed south of the CUP in the service yard. A 30,000-gallon aboveground storage tank (AST) used to store emergency water for fire protection will also be located in the service yard.

PARKING FACILITIES

Parking facilities will consist of a three-story parking garage and multiple parking lots. The parking garage will provide approximately 1500 parking spaces and the parking lots will allow for an additional ± 1300 parking spaces. These parking facilities will be available for use by patients, visitors, staff, and volunteers, as well as the community for non-hospital related events.

POTENTIAL FUTURE MEDICAL OFFICE BUILDING

A future medical office building is proposed. It is anticipated that the medical office building would be owned and operated by a private developer. The proposed location of the medical office building is south of Columbia Street and east of Cornelia Street.

CAMPUS GROUNDS

The campus will be designed as an urban park with enhanced lighting, trees, pedestrian walkways and seating areas. A pedestrian walkway will replace a portion of Lafayette Street. This walkway will extend from the main entrance to the west, terminating just adjacent to the North-South Arterial Highway. An additional segment of the walkway will provide access to the ED entrance. Outdoor areas will include gardens and other design considerations to create a healing environment.

HELISTOP

A helistop (*i.e.*, a minimally developed helicopter facility for boarding and discharging passengers or cargo, without the support facilities found at a heliport) will be situated to the west of the hospital building, adjacent to the ED ambulance entrance and north of Columbia Street.

UTILITY INFRASTRUCTURE

Based on a preliminary review of existing utilities, modifications to the existing infrastructure in the project area are anticipated. A summary of the anticipated modifications is provided below.

Sanitary Sewers

It is expected that the existing sanitary sewer line in Cornelia Street between Columbia and Lafayette Streets, in Lafayette Street between Cornelia and State Streets will be abandoned/removed. A new sewer line on Columbia

MVHS INTEGRATED HEALTH CAMPUS | PURPOSE AND PROJECT DESCRIPTION

Street will be constructed from Cornelia Street to the 48" trunk sewer on State Street. A new sewer line would be constructed to divert upstream flow from the south on Cornelia Street to the sewer on Broadway. Other potential new sewers lines may be needed in Lafayette Street on the north side of the hospital. The location and size of sanitary laterals and connections will depend on the plumbing/mechanical design of the new hospital buildings. It is assumed each new structure will have its own service lateral(s) connecting to the City mains.

Storm Sewers

The buildings and paved impervious surface areas of the MVHS Integrated Health Campus may be minimized or reduced using "Green Infrastructure" design features such as pervious pavement/pavers, planting beds, and subsurface rainwater detention.

It is expected that the existing storm sewer lines in Cornelia Street between Columbia and Lafayette Streets will be abandoned/removed. Removal of portions of storm sewer lines may also be required on Street and Lafayette Street between Cornelia and State Streets. New storm sewer piping will be installed on State Street and connect to the existing NYSDOT storm sewer line on the north side of Oriskany Street West/Route 5S west of the Aud. New branch lines will tie-in catch basins on the west end of Columbia Street. Flow from the east side of the campus and upstream flow from Broadway will be conveyed through existing storm sewers in Cornelia Street north of Lafayette, Lafayette Street east of Cornelia, and Broadway.

Water Mains

Water mains located on portions of Lafayette Street may need to be removed/abandoned, as would other smaller mains within the new building footprint. Where new supply mains are required, the older mains would be replaced. Fire hydrants will be located along the public streets with no private hydrants required. Each building will be provided with its own backflow prevention device depending on the requirements.

Water mains to be replaced or installed include: 1) a 6" main on State Street that will be replaced with a larger diameter pipe; 2) a 6" and 8" main on Broadway that will be replaced with a larger diameter pipe connecting large mains on Columbia to Whitesboro Street; and 3) 1030 LF of piping along Oriskany Street East.

DISPOSITION AND REDEVELOPMENT OF EXISTING HOSPITAL CAMPUSES

With the exception of certain ancillary facilities, MVHS's objective is to facilitate redevelopment of the existing FSLH and SEMC campuses consistent with the Town of New Hartford's and the City of Utica's long term development plans and capable of making an economically positive contribution to each community. In support of this objective, MVHS will be conducting an evaluation of the properties and potential redevelopment opportunities concurrent with planning for the proposed hospital. In addition to the disposition and redevelopment of the primary facilities, existing ancillary facilities will also be reused. A description of the anticipated continued use of portions of the existing campuses is provided below.

FSLH

Most of the inpatient and outpatient services performed at the existing FSLH site will be transitioned to the MVHS Integrated Health Campus; however, it is anticipated that ±24 physical medical and rehabilitation beds will remain and some outpatient services may be performed at this site. Unused medical supplies and certain medical equipment will be brought to the MVHS Integrated Health Campus. Medical equipment that is beyond its useful life will be disposed of in accordance with applicable federal and state regulations.

SEMC

The SEMC site will be converted into an outpatient extension clinic. Services provided at the clinic will include sleep center services, cardiac and thoracic surgery-related offices, primary care services and a laboratory patient service center. Unused medical supplies and certain medical equipment will be brought to the MVHS Integrated Health Campus. Medical equipment that is beyond its useful life will be disposed of in accordance with applicable federal and state regulations.

Economically Distressed Areas

Certain geographic areas (i.e. cities or counties) within New York State that have significant deficient economic conditions relative to unemployment or personal income are designated as Economically Distressed Areas (EDA). Under the American Recovery and Reinvestment Act (ARRA) of 2009 the Federal Government's guidance on project selection included the mandate that one of the priorities to be considered for project selection for ARRA funds was whether the project was in an Economically Distressed Area. The map below illustrates the areas determined as economically distressed.

The criterion that designates an area as economically distressed is one of the following conditions:

1. The unemployment rate average over the 24 month period is 1% or more above the national average or;
2. The per capita or personal income is 80% or less than the national average.

Performance Metrics

For all New York State Department of Transportation authorized Recovery Act projects
June 18, 2010

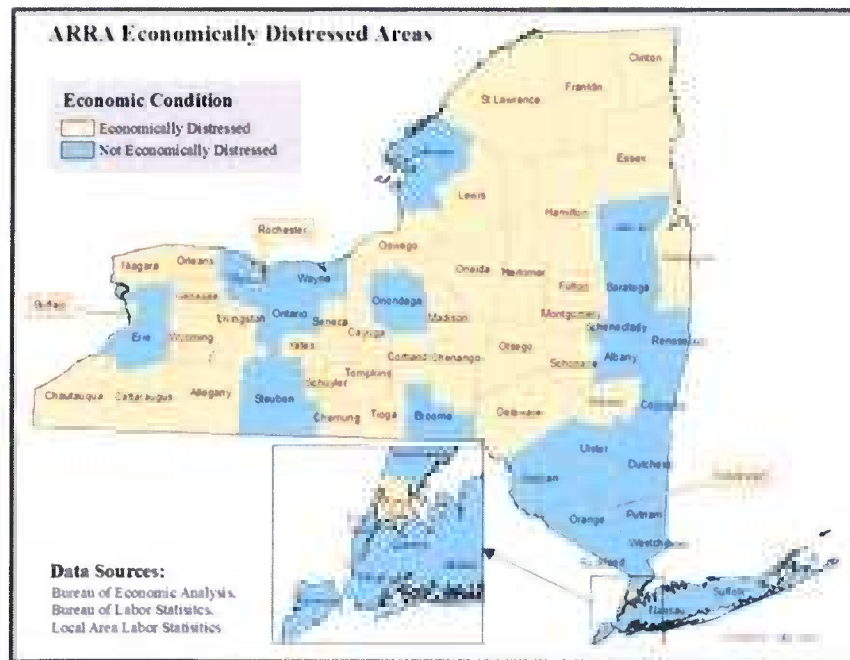

Recovery Act Dollars Spent per Individual Living in an Economically Distressed Area	
Value	
\$65	

Recovery Act Dollars Spent per Individual Living in a Non-Economically Distressed Area

Hospitals Play a Key Role in Building Pathways Out of Poverty

BY ALAN MOUNTJOY | OP-ED | FEBRUARY 23, 2017

The Brigham and Women's Hospital Shapiro Center in Boston (©Anton Grassl/Esto)

As jobs in many low-income neighborhoods have migrated to suburbs (or overseas), so have retailers and newer housing for those well-off enough to pull up roots. Not so for the large hospitals that have substantial capital investments in existing buildings. Public hospitals in particular tend to find themselves embedded in some of the most distressed communities in America.

As a planner working with many stressed cities in the “Rust Belt,” I frequently find local hospitals are the last and most committed economic anchors, but also the ones most impacted by economic decline in urban cores. City governments are searching for ways to leverage the economic benefits of these anchor institutions for the benefit of the larger community. And some forward-thinking governments, along with aligned organizations and foundations, are now advancing policies and programs to do so.

For example, in Cleveland, the nonprofit development organization University Circle, Inc. has been cooperating with the city's many world-renowned hospitals to enhance the surrounding neighborhoods. One such initiative, Greater Circle Living, is an employer-assisted housing program

created to encourage eligible employees to live closer to their jobs, thus strengthening the local economy, making and receiving traffic a mitigation on regional roadways.

So how can regional healthcare institutions that are struggling to provide quality care and attract new insured patients benefit from these types of efforts and develop their own?

Think Local

Under new accountable healthcare mandates, hospitals are being less heavily fined for serving under-healthy populations as they may once have. Many local hospitals want to improve their positioning, marketing and general appearance for insured patients, but they also need to address the general health of the local population, which makes them the highest-probably disease area. Urban hospitals across the country are addressing in communities where obesity and the population is either uninsured or on Medicare. Treating population health issues and their causes is now more important than ever to reduce healthcare costs.

In the past, responses to poor local conditions may have led hospitals to erect a flight in their vicinity, or to turn their backs on negative conditions in an effort to soften the problems and present a brighter face to their regional customers. Security forces rarely took the form of a siege mentality, featuring large parking lots that separated troubled neighborhoods from secure zones within the campus. This approach did not do much to reverse neighborhood decline or negative impacts on the anchor institution, nor did it improve health outcomes of local residents.

Practice what you Preach

As a Cleveland, the Atrium Health Foundation (an integrated health system with two hospitals, a health plan and a college) in Canton, Ohio, is demonstrative of a more comprehensive approach. Atrium remains within the city limits, serving the city's higher urban population of 50,000 as well as the growing metropolitan area population of 400,000. While the neighborhood is equally disadvantaged than the surroundings of other famous urban hospitals, the contrast is striking for patients and employees, and local conditions do not appear healthy. Changes for nearby residents.

The health district could eventually involve the entire neighborhood of 40 square blocks where, for example, existing residents would have access to a much-needed wellness center, outpatient clinic, quality daycare and healthcare education. Local residents will share these resources with hospital staff nursing students, patients and patients' families. Nursing students, medical residents and staff will conduct care in the immediate neighborhood in various facilities in new apartments. Redesigned sidewalks will reduce accidents and provide safer pedestrian crossings for kids and the elderly. Parks and tree-lined streets will encourage residents and patients to get outside in a safer neighborhood.

Be the Convener

As one might expect, some healthcare institutions are cautious about exercising skill sets beyond providing healthcare. They were rarely organized or willing to take on community health or mixed-use development projects. But they are great at team-building. And this "Health district strategy" takes many players — healthcare institutions, government, foundations, private enterprises, even architects and planners — to succeed.

Autman Health Foundation, by working with the City of Canton and their counterparts, we plan to begin to develop a comprehensive strategy for neighborhood transformation that involves an expanded group of stakeholders. At this point, Autman has engaged city government, the Ohio Department of Transportation, the Center Community Development Corporation, a local foundation, and a private real estate developer to create a blueprint for a health district. From fixing blighted houses to rebuilding roadways and adding needed retail and services, each of these players are addressing specific uncoordinated initiatives that are essential for success.

Autman Health Foundation and Cleveland provide examples for other progressive healthcare institutions to follow. Anchor institutions can take a look at their surrounding communities to find win-win opportunities. One needn't be a top-class center of medicine like the Cleveland Clinic to make a difference in one's own community. Rather than a rat fight with other anchor institutions and communities, all actively engage to coordinate their care around the hospitals with the goods, services and housing that will heal both.

Don Johnson is a Boston based urban developer and author of the book, "The Next American Home: How to Build a Better City". He is a regular columnist at the New York Times and author of the book "The Next American Home: How to Build a Better City". He is also a frequent speaker at conferences and events.

Dave,

In case we do not connect today, I offer the following:

Estimated number of work force months: **8,024mm**

Estimated number of work force hours: 8,024 x 176 hrs/month = **1,408,000 wfh**

Work force jobs: 8,024 / 7.5 (avg. length of worker on site) = **1,070 jobs**

Peak month of work in place: **\$14,123,000**

Average amount of work in place per worker per month: **\$47,000**

Total MM * 60% travelers* monthly per diam = local spend in local restaurant / hotel: 8,024* .6*\$3,200 = **\$15,406,080**

Wage info (prevailing wage based on 2017 data) :

	Base	Benefits	Total
Carpenter	\$ 25.56	\$ 17.64	\$ 43.20

Benefits and Costs for the New Hospital

MOHAWK VALLEY HEALTH SYSTEM
 1000 N. STATE ST. SUITE 100
 ALBANY, NY 12207
 518.486.2000
 www.mohawkvalleyhealthsystem.org

FIGURE 1. THE NEW HOSPITAL

Benefits

- MVHS projects \$15 million in additional annual savings in operating efficiencies by consolidating its two campuses, which means many primary financial health care instead of maintaining existing facilities.
- MVHS has committed to use local labor, materials, equipment, vendors and businesses throughout the project when available. Supporting the community is critical for MVHS and other community partners.
- For the Mohawk Valley region, construction is valued and expected to be \$155 million and will require nearly 2 million man-hours of construction labor over the life of the construction phase, with a peak employment of nearly 500 workers at one point.¹
- Project will generate \$15.7 million in new state and local sales tax over the 36-month construction phase, of which \$177,000 to \$765,000 in sales tax dollars will go to Oneida County and the City of Utica.²
- Estimated indirect state that the City of Utica will see a net gain of revenues and avoided costs that exceeds the loss of property tax dollars from properties that are to be demolished for the purposes of the City's share of the call service on the County-3 by MVHS parking facility. Estimates show that the City may realize \$297,500 in revenues and other economic benefits after offsetting the loss of some property taxes and the City's share of annual debt service on the new parking garage.³

Costs

- Project cost estimated at \$487 million for an approximately 670,000 sq. ft. facility, projected completion date: 2023
- Includes:
 - \$370 million - Legacy Care Facility Transformation Grant through KYSDGH
 - \$110 million - MCHS financing
 - \$80 million - MCHS F. reqs. other grants, philanthropy
- County, City and MCHS are collaborating on a new 1,550 car parking structure estimated to cost \$90.5 million (excluding \$10 million in other available funding is reserved to refurbish Kennedy Garage to support hospital and downtown parking needs (over and above \$450 million allocated to care of other local hospital campus). The new parking structure will be:
 - Built and owned by Onida County with County and City sharing debt service 80/20 percent.
 - MCHS parking agreement allows 1,150 spaces for hospital needs, MCHS responsible for operation, maintenance costs estimated at \$1 million/year.
 - 400 of 1,550 spaces reserved for public use with additional spaces available for nighttime non-hospital events at the Utica Amphitheater and surrounding areas.

Estimate provided by Turner Construction, the firm selected by MCHS as its project construction manager

2 Based on estimated retail purchases by construction workers (e.g., food, lodging, gasoline, meals, and other discretionary purchases). Does not include State share of sales tax revenues during construction which could add \$637,500 to \$722,500 in sales tax dollars from construction worker spending.

3 Estimate provided by Mohawk Valley EDSE.

RESOLUTION OF THE CATHIA COUNTY LOCAL DEVELOPMENT CORPORATION CLASSIFYING AS A TYPE II ACTION UNDER THE NEW ENVIRONMENTAL QUALITY REVIEW ACT THE APPLICATION OF VALHALL VALLEY HEALTH SYSTEM FOR FINANCIAL ASSISTANCE RELATED TO A PROJECT TO CONSTRUCT A HOSPITAL, EIT FIVE PARKING GARAGE AND MEDICAL BUILDING IN JERICHO, NEW YORK AND DECLARING ITS DISTRICT FOR THE CITY OF LICA # ANNEAS ROAD TO SERVE AS LEAD AGENCY FOR A COORDINATED REVIEW.

WHEREAS, pursuant to the purposes and powers contained in the Section 411-a of the Constitution of the State of New York (the "State") as amended (hereinafter collectively called the "Act") and pursuant to the authorization hereinafter provided on July 7, 2010, the Cathia County Local Development Corporation (the "Agency") was established as a not-for-profit local development corporation of the State to plan, develop, finance, construct, manage, operate, maintain, and otherwise implement, promote and provide for technical and maximum employment, ordering and health impacts, opportunities, insurance or training individuals to improve or develop their capabilities to reach jobs earning an adequate income for the purpose of aiding the County of Orleans (the "County") by attracting new industries to the County, by encouraging the development of, or retention of, an industry in the community as a whole and lessening the burden of unemployment and crime in the public interest; and

WHEREAS, Valhalla Valley Health System ("MVHS") has presented to the Agency (the "Application") as the issuer, a copy of which was placed on file, containing and copies of which are on file in the office of the Agency, documenting that the "Order contract" issuing US Treasury Bonds in the aggregate principal amount not to exceed \$17,000,000 (the "Bonds") to finance a project (hereinafter called the "Project") for the benefit of MVHS, and that the Bonds enjoy an exemption from mortgage recording tax that may be imposed on mortgages securing the Bonds reflectively with the proposed issuance of the Bonds, the "Official Assistance"; and

WHEREAS, the Project consists of the construction of a 457,000 square foot hospital building together with related parking facilities and physician's office building and all infrastructure to support the above real property, the "Improvements" situated on a 25-acre parcel of land located in the City of Lica, Orleans County, New York (the "Land") and acquisition and installation of equipment in the Improvements (the "Equipment"), all for the purpose of creating an advanced and integrated health care delivery system that will benefit residents in the Valhalla Valley (the "Land, the Improvements and the Equipment are hereinafter collectively as the "Facility"); and

WHEREAS, before considering MVHS request for Financial Assistance for the Project, the Bonds to issue to comply with the requirements of the State Environmental Quality Review Act ("SEQRA") and in implementing regulations promulgated by NYSUR Part 617 (the "Regulations") in response to the Agency; and

WHEREAS, MVHS has submitted in the Tender Part 1 of a P&I Review and Assessment Plan ("TRAT") for the Project pursuant to SECQA and

WHEREAS, the Board has examined Part 1 of the TRAT for the Project and finds it compliant for purposes of further SECQA review and;

WHEREAS, the Board has approved the scope and nature of the Project in light of the portions included in the Type 1 item under Section 617 of the Regulations and in light of the sections included in the Type 3 item in Section 613 of the Regulations and;

WHEREAS, the Board intends (1) to allow for the review of certain for which the Project qualifies under SECQA (2) to determine the agency that is best suited to carry out such review for purposes of a coordinated review of the Project (3) to request information from agencies that are required to provide Part 1 of the TRAT to the other involved agencies for their review and comment;

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF DIRECTORS OF THE CHATHAM COUNTY GOVERNMENT CORPORATION AS FOLLOWS:

Section 1. The Board hereby allows for the Project as a Type 1 Action under SECQA.

Section 2. SECQA is an acronym used to refer to the various offices and agencies for Type 1 actions. The TRAT identified several potentially involved agencies in connection with the Project. Based upon the scope and nature of the Project as well as the nature of the information and knowledge available and to complete a coordinated SECQA review, the Board believes that its jurisdiction with respect to the Project is not as broad as that of the City of Chatham County Board of Commissioners which in the opinion of the Board is principally responsible for approving the Project in conjunction with the site plan review that will be undertaken by the Planning Board. In view of the above, the Board hereby resolves to assign to the Chatham County Board the duty as lead agency for purposes of overseeing a coordinated review of the Project under SECQA.

Section 3. The Board hereby directs the Executive Director to send Part 1 of the TRAT for the Project, together with MVHS' application, to the other involved agencies for selection of a lead agency and to request their comments on the Project.

Section 4. The Board hereby authorizes the Executive Director to file such other steps as may be necessary to better coordinate this SECQA review.

Section 5. This resolution shall take effect immediately.

Re: *SBORA Local Agency Coordination*

Dear Mr. Deaco:

The Oneida County Local Development Corporation ("LDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance including, but not limited to, tax exempt bonds and an exemption from mortgages recording tax that may be imposed on mortgages securing the Bonds in connection with MVHS's project to construct a new hospital in the City of Utica, the "Project". Specifically, the Project consists of the construction of a 502,000 square foot hospital building, together with related parking facilities and physicians' office building and all infrastructure to support the same situated on 250 acres of land located in the City of Utica, Oneida County, New York, all for the purpose of providing an advanced and integrated healthcare delivery system that will benefit all residents in the Mohawk Valley.

MVHS prepared Part I of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part I of the full EAF, together with the LDC application and all exhibits thereto, is enclosed for review. The LDC identifies the Project and Project as a Type I action under SEQRA. SEQRA requires a coordinated review with all involved agencies for Type I actions. The state lead agency must be equal to or

Your agency has been identified as a potential involved agency in the SEQRA process due to your potential approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to complete a coordinated SEQRA review for the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Oneida Planning Board. Accordingly, the LDC will act as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential involved agency, within 30-days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Mr. Sharon Fayola, 581 Phoenix Drive, Rome, NY 13441, by the end of Business on March 1, 2018. A failure

In respect of the date that the contract is a condition of the agency does not desire to become the
and agency.

Thank you

Sincerely,

Re: ALPRA Local Agency Coordination

Dear Mr. Drabicki:

The Ontario County Local Development Corporation ("LDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance including the issuance of tax exempt bonds and an exemption from mortgage recording tax that may be imposed on mortgages securing the Bonds in connection with MVHS' project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a 1,632,000-square foot hospital building together with related parking facilities and physician's office building and all infrastructure to support the same situated on 254 acres of land located in the City of Utica, Ontario County, New York and for the purpose of providing an advanced and integrated health care delivery system that will benefit all residents of the Mohawk Valley.

MVHS prepared Part I of the Initial Environmental Assessment Form ("IAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part I of the full IAF, together with the LDC application and all related documents, is enclosed for review. The LDC has identified the proposed Project as a Type I action under SEQRA. SEQRA requires a coordination review with all involved agencies for Type I actions. This coordination review must be agreed upon.

Your agency has been identified as a potential involved agency in the SEQRA process due to your possible potential responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to complete a meaningful SEQRA review of the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the LDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential involved Agency, within 75 days of the date of this letter, we respectfully request your agency's position with respect to the Project, any design issues and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Mr.

Sharon Pinski, 234 Phoenix Drive, Rome, NY 13441, by the close of business on March 5, 2018. A failure to respond by that date shall be construed as an indication that your agency does not desire to lead and the lead agency.

Thank you.

Re: *State Environmental Quality Coordination*

Dear Mr. Hochmann:

The Oneida County Local Development Corporation ("LDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance including the issuance of tax-exempt bonds and an exemption from mortgage recording tax that may be imposed on mortgages securing the Bonds in connection with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project entails construction of a 1,020,000 square foot hospital building, together with related parking facilities and physicians' office building and all infrastructure to support the same, situated on 254 acres of land located in the City of Utica, Oneida County, New York all for the purpose of creating an advanced and integrated health care delivery system that will benefit all residents in the Mohawk Valley.

MVHS prepared Part 1 of the Full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part 1 of the full EAF, together with the LDC application and all exhibits thereto, is enclosed for review. The LDC has identified the proposed Project as a Type I action under SEQRA. SEQRA requires a coordinated review with all involved agencies for Type I actions. Therefore, a lead agency must be assigned open.

Your agency has been identified as a potential involved agency in the SEQRA process due to your possible approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the siting requirements and knowledge not required to complete a coordinated SEQRA review for the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies such as the City of Utica Planning Board. Accordingly, the LDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential Lead Agency, within 30 days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned with the attention of Ms. Sherron Popple, 331 Phoenix Drive, Rome, NY 13441, by the close of business on March 7, 2018. A failure

Re: *SEQR/EA Lead Agency Determination*

Dear Mr. Danazide:

The Oneida County Local Development Corporation ("LDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance including the issuance of tax-exempt bonds and nonexemption from mortgage recording tax that may be imposed on mortgage securing the Bonds in connection with MVHS's plans to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a ~572,000 square foot hospital building, together with related parking facilities and physician's office building and all infrastructure to support the same situated on 25+ acres of land located in the City of Utica, Oneida County, New York, all for the purpose of creating an advanced and integrated health care delivery system that will benefit all residents in the Mohawk Valley.

MVHS prepared Part I of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part I of the full EAF together with the LDC application and all exhibits thereto is enclosed for review. The LDC has identified the proposed Project as a Type I action under SEQRA. SEQRA requires a coordinated review with all involved agencies for Type I actions. Therefore, a lead agency must be agreed upon.

Your agency has been identified as a potential lead agency in the SEQRA process due to your possible approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to complete a coordinated SEQRA review for the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the LDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential lead agency, within 30 days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any other agency comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Ms.

Shawna Pappe, 284 Algonk Lane, Rome, NY 13441, by the close of business on March 3, 2018. A failure to respond by that date shall be construed as an indication that your agency does not desire to become the lead agency.

Re: SEQRA Designation / Construction

To: Mr. Pirarella

The Oswego County Local Development Corporation ("LDC") has received an application from Mahaw Valley Health System ("MVHS") requesting certain financial assistance including the issuance of tax-exempt bonds and an exemption from state sales and excise tax that may be imposed on mortgages securing the Bonds in connection with MVHS's project to construct a new hospital in the City of Otesa (the "Project") specified by the Project, consists of the construction of a 102,000 square foot hospital building, together with related parking facilities and physical facilities building and all infrastructure to support the same situated on 25 acres of land located in the City of Otesa, Oswego County, New York all for the purpose of ensuring an advanced and integrated health care delivery system that will benefit all residents in the Mahaw Valley.

MVHS prepared Part 1 of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part 1 of the full EAF, together with the LDC application and all exhibits thereto, is enclosed for review. The LDC has identified the proposed Project as a Type I action under SEQRA. SEQRA requires a coordinated review with all involved agencies for Type I actions. Therefore, a lead agency must be agreed upon.

Your agency has been identified as a potential involved agency in the SEQRA process due to your possible approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to comply with coordinated SEQRA review for the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Otesa Planning Board. Accordingly, the LDC will not request the lead agency for the Project and instead expresses its desire for the City of Otesa Planning Board to assume the role of the lead agency.

As a potential involved Agency, within 30 days of the date of this letter, we respectfully request your agency's decision with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Ms. Shawna Papale, 587 Threecks Drive, Rome, NY 13441, by the close of business on March 2, 2018. A full copy

to respond by that date if the registered as a condition that your agency does not desire to initiate the lead agency.

Re: **SEQR/SHQR Application 1604000236**

Dear Mr. Osalka:

The Oswego County Local Development Corporation ("LDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain Financial Assistance including the issuance of tax-exempt bonds and an exemption from mortgage recording tax that may be imposed on mortgages securing the Bonds in connection with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a 1,672,700 square foot hospital building, together with related parking facilities and physician's office building and all infrastructure to support the same situated on 250 acres of land located in the City of Utica, Oswego County, New York all for the purpose of creating an advanced and integrated health care delivery system that will benefit all residents in the Mohawk Valley.

MVHS proposed Part I of its full Environmental Assessment Form ("EAF") for the Project, pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part I of the full EAF, together with the LDC application and all exhibits thereto, is enclosed for review. The LDC has identified the proposed Project as a Type I action under SEQRA. SEQRA requires a coordinated review with all involved agencies for Type I actions. Therefore, a lead agency must be agreed upon.

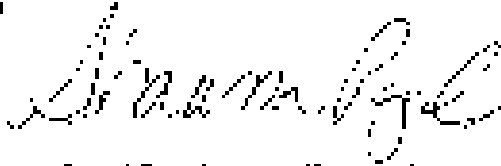

Your agency has been identified as a potential involved agency in the SEQRA process due to your possible approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to complete a coordinated SEQRA review for the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the LDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential involved Agency, within 30 days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Ms. Shawna Papale, 580 Mountain Drive, Rome, NY 13441, by the close of business on March 2, 2018. A failure

in response by that date shall be construed as an indication that your agency does not desire to become the lead agency.

Thank you

Sincerely,

Re: SEQRA Lead Agency Determination

Dear Mr. Merrill:

The Oneida County Local Development Corporation ("LDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance including the issuance of tax-exempt bonds to reimburse for mortgage recording tax that may be imposed on mortgages securing the Bonds in connection with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a 672,000 square foot hospital building, together with related parking facilities and physical facilities for piping and all infrastructure to support the same situated on 25+ acres of land located in the City of Utica, Oneida County, New York ("l") for the purpose of creating an advanced and integrated health care delivery system that will benefit residents in the Mohawk Valley.

MVHS prepared Part I of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part I of the full EAF, together with the LDC application and all exhibits thereto, is enclosed for review. The LDC has identified the proposed Project as a Type I action under SEQRA. SEQRA requires a coordinated review with all involved agencies for Type I actions. Therefore, a lead agency must be designated.

Your agency has been identified as a potential involved agency in the SEQRA process due to your possible approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to complete a coordinated SEQRA review for the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the LDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential involved Agency, within 30 days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Ms. Shawna Pagala, 204 Phoenix Drive, Oneida, NY 13624, by the close of business on March 2, 2018. A timeline

to respond by that date shall be considered as an indication that your agency does not intend to become the lead agency.

Re: *Onondaga Local Agency Coordination*

Dear Mr. Thomas:

The Onondaga County Local Development Corporation ("OCLDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance including the issuance of tax-exempt bonds and an exemption from mortgage recording tax that may be imposed on mortgages securing 2e Bonds in connection with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a 2,672,000 square foot hospital building, together with related parking facilities and physician's office building and all infrastructure to support the same situated on 25+ acres of land located in the City of Utica, Onondaga County, New York, all for the purpose of creating an advanced and integrated health care delivery system that will benefit all residents of the Mohawk Valley.

MVHS prepared Part 1 of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part 1 of the full EAF, together with the OCLDC application and all exhibits thereto, is enclosed for review. The OCLDC has identified the proposed Project as a Type I action under SEQRA. SEQRA requires a coordinated review with all involved agencies for Type I actions. Therefore, a lead agency must be agreed upon.

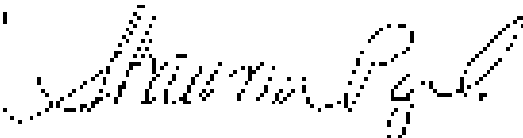

Your agency has been identified as a potential involved agency in the SEQRA process due to your potential approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to complete a coordinated SEQRA review for the Project, the OCLDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the OCLDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential involved Agency, within 30-days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Ms. Stewna Popkin, 254 Plunkin Drive, Room 674, Utica, NY 13501, by electronic means on March 1, 2018. A failure

in response to this date shall be construed as an indication that your agency does not desire to become the lead agency.

Utica, New York 13502

Re: SEQR/Lead Agency Coordination

Dear Mayor Palmieri:

The Onondaga County Local Development Corporation ("LDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance including the issuance of tax-exempt bonds and an exemption from mortgage recording as they may be imposed on mortgages securing the bonds in connection with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a 487,200 square foot hospital building, together with related parking facilities and physician's office building and utility infrastructure to support the same situated on 23 acres of land located in the City of Utica, Onondaga County, New York all for the purpose of creating an advanced and integrated health care delivery system that will benefit all residents in the Mohawk Valley.

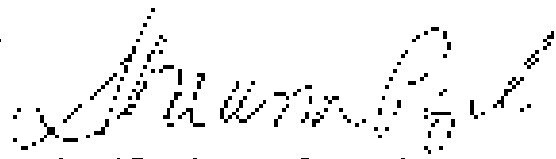

MVHS proposes Part 1 of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part 1 of the full EAF, together with the LDC application and all exhibits thereto, is enclosed for review. The LDC has identified the proposed Project as a Type I action under SEQRA. SEQRA requires coordinated review with all involved agencies for Type I actions. Thus, any lead agency must be agreed upon.

Your agency has been identified as a potential involved agency in the SEQRA process due to your potential approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to complete a coordinated SEQRA review for the Project, the LDC believes that its coordination with respect to the Project is not as broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the LDC will not assess the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential Involved Agency, within 30 days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Mr. Sherrin Popok, 544 Plover Drive, Rome, NY 13441, by the close of business on March 1, 2018. A failure to respond by that date shall be construed as an indication that your agency does not desire to become the lead agency.

Thank you.

Re: NYSDOT Local Agency Coordination

Dear Honorable Gonyea:

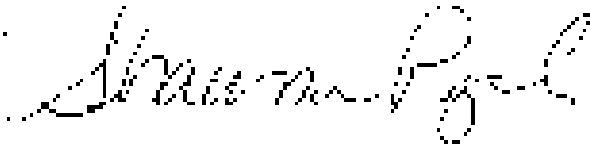

The Oriskany County Local Development Corporation ("OCLDC") has received an application from Mahaw Valley Health System ("MVHS") requesting certain financial assistance including the issuance of non-exempt bonds and an exempt on-farm mortgage, as well as that may be imposed on mortgages securing the bonds in connection with MVHS's project to construct a new hospital in the City of Ulster (the "Project"). Specifically, the Project consists of the construction of approximately 2,000 square feet of building together with related parking facilities and physicians' office building and all infrastructure to support the same situated on the parcel of land located in the City of Ulster, Oriskany County, New York all for the purpose of creating an advanced and integrated health care delivery system that will benefit all residents in the Mahaw Valley.

MVHS prepared Part 1 of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part 1 of the EAF, together with the OCLDC application and all exhibits thereto, is enclosed for review. The OCLDC has identified the proposed Project as a Type I action under SEQRA. SEQRA requires a coordinated review with all involved agencies for Type I actions. Participating and ongoing must be agreed upon.

Your agency has been identified as a potential involved agency in the SEQRA process due to your possible approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing, requirements and knowledge base required to complete a coordinated SEQRA review for the Project, the OCLDC believes that your jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Ulster Planning Board. Accordingly, the OCLDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Ulster Planning Board to assume the role of the lead agency.

As a potential involved Agency, within 30 days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Ms. Shweta Purohit, 201 Phoenix Drive, Rome, NY 13441, by the enclosed business on March 7, 2018. A failure to respond by this date shall be construed as an indication that your agency does not desire to become the lead agency.

Thank you.

Re: *SEQR* Lead Agency Coordination

Dear Mr. Madrosky,

The Oneida County Local Development Corporation ("LDC") has received an application from Westcott Valley Health System ("MVHS") requesting certain financial assistance including the issuance of low-interest bonds and an exemption from mortgage recording tax that may be imposed on mortgages securing the bonds in connection with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a 602,000 square foot hospital building together with related parking facilities and physician's office building and all infrastructure to support the same situated on 250 acres of land located in the City of Utica, Oneida County, New York all for the purpose of creating an advanced and integrated health care delivery system that will benefit all residents in the Westcott Valley.

MVHS prepared Part I of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part I of the full EAF, together with the LDC application and all exhibits thereto, is enclosed for review. The LDC has identified the proposed Project as a Type I action under SEQRA. SEQRA requires a coordinated review with all involved agencies for Type I actions. Therefore, a lead agency must be designated.

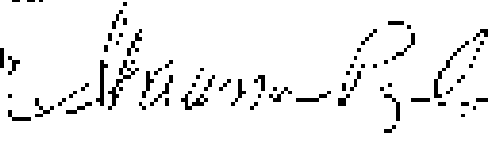

Your agency has been identified as a potential involved agency in the SEQRA process due to your potential approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to complete a coordinated SEQRA review for the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the LDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential involved Agency, within 10 days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Ms. Shawna Caputo, 284 Pleasant Street, Rome, NY 13441, by the close of business on March 3, 2015. A failure to respond by that date shall be construed as an indication that your agency does not desire to become the lead agency.

Re: 55024 Local Agency Coordination

Dear Mr. Gouletty:

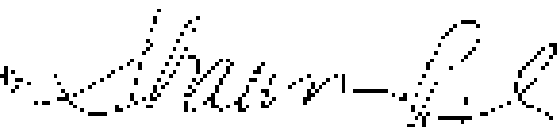

The Orleans County Local Development Corporation (OCLDC) has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance including the issuance of tax-exempt bonds and assumption from mortgage recording tax that may be imposed on mortgages securing the bonds in connection with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of a new construction of a 677,000 square foot hospital building, together with related parking facilities and physician's office building, and all other structures support the same situated on 251 acres of land located in the City of Utica, Orleans County, New York all for the purpose of creating an advanced and integrated health care delivery system that will benefit all residents in the Mohawk Valley.

MVHS prepared Part I of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part I of the full EAF, together with the LDC application and all exhibits thereto, is enclosed for review. The LDC hereby classifies the proposed Project as a Type I action under SEQRA. SEQRA requires a coordinated review with all involved agencies for type I actions. Therefore, a lead agency must be agreed upon.

Your agency has been identified as a potential involved agency in the SEQRA process due to your possible approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to complete a coordinated SEQRA review for the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the LDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential Involved Agency, within 30 days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Ms. Shyvana Papale, 544 Phoenix Drive, Rome, NY 13441, by the close of Business on March 3, 2018. A failure to respond by that date shall be construed as an indication that your agency does not desire to become the lead agency.

Re: *SEQR/Lead Agency Coordination*

Dear Dr. Gilmore:

The Onondaga County Local Development Corporation ("LDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance including the issuance of tax exempt bonds and an exemption from mortgage recording tax that may be imposed on mortgages securing the Bonds in connection with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a 167,200 square foot hospital building, together with related parking facilities and physician's Ten building and all infrastructure to support the same situated on 250 acres of land located in the City of Utica, Onondaga County, New York all for the purpose of creating an advanced and integrated health care delivery system that will benefit all residents in the Mohawk Valley.

MVHS prepared Part 1 of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part 1 of the EAF, together with the LDC application and all other attachments, is enclosed for review. The LDC has identified the proposed Project as a Type I action under SEQRA. SEQRA requires such a project to be reviewed with all involved agencies for Type I actions. Therefore, a lead agency must be agreed upon.

Your agency has been identified as a potential involved agency in the SEQRA process due to your possible approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to complete a coordinated SEQRA review for the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the LDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential involved agency, within 30-days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Mr. Shawn Pappalardo, 544 Phoenix Drive, Rome, NY 13441 by the close of business on March 2, 2018. A Gilmore

to respond by that date. This is intended as an indication that your agency does not desire to become the Lead agency.

Re: *SEQR and Agency Coordination*

Dear Mr. Devora:

The Otsego County Local Development Corporation ("OCLDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance including the issuance of tax-exempt bonds and an exemption from mortgage recording tax that may be imposed on mortgages securing the Bonds in connection with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a 407,000 square foot hospital building, together with related parking facilities and physician's office building and a 100,000 square foot support building situated on 250 acres of land located in the City of Utica, Otsego County, New York all for the purpose of creating an advanced and integrated health care delivery system that will benefit all residents in the Mohawk Valley.

MVHS prepared Part I of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part I of the full EAF, together with the OCLDC application and all exhibits thereto, is enclosed for review. The OCLDC has certified the proposed Project as a Type I action under SEQRA. SEQRA requires a coordination process with all involved agencies for Type I actions. Thus, a lead agency must be agreed upon.

Your agency has been identified as a potential involved agency in the SEQRA review due to your possible approval responsibilities in connection with the Project. Based on the proposed nature of the Project, as well as the staffing requirements and knowledge base required to complete a coordinated SEQRA review for the Project, the OCLDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the OCLDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential Involved Agency, within 30 days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments you, as agency, may have in connection with the Project. Your response and input should be returned to the attention of Ms. Shirleen Pappalardo, 184 Pleasant Drive, Rome, NY 13441, by the close of business on March 3, 2014. A failure to respond by that date shall be construed as an indication that your agency does not desire to become the lead agency.

Thank you

Sincerely,

Re: Section 804 Land Use Change Application

Dear Mr. Oskar:

The Oriskany County Local Development Corporation ("LDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance including the issuance of tax-exempt bonds and an exemption from mortgage recording tax that may be imposed on mortgages securing the Bonds in connection with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a 467,000 square foot hospital building, together with related parking facilities and physician's office building and all infrastructure to support the same situated on 276 acres of land located in the City of Utica, Oriskany County, New York all for the purpose of creating an advanced and integrated health care delivery system that will benefit all residents in the Mohawk Valley.

MVHS prepared Part I of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part I of the EAF, together with the LDC application and all exhibits thereto, is enclosed for review. The LDC finds that the proposed Project is a Type I action under SEQRA. SEQRA requires a coordinated review with all involved agencies for Type I actions. That same lead agency must be agreed upon.

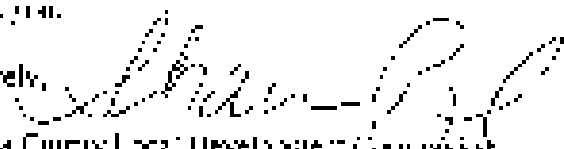

Your agency has been identified as a potential involved agency in the SEQRA process due to your possible approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to complete a coordinated SEQRA review for the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other potential agencies such as the City of Utica Planning Board. Accordingly, the LDC will first serve as the lead agency for the Project and intend to express its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential involved agency, within 10-days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Ms. Susan M. Aquino, 584 Plankin Drive, Rome, NY 13151, by the close of business on March 2, 2018. A failure

to respond by not attaching his name as an indication that he is going to not desire to become the lead agency

Thank you.

Re: NYSD&S Lead Agency - Circulation

Dear Mayor Palmieri:

The Oswego County Local Development Corporation ("LDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance including the issuance of tax-exempt bonds and an exempt certificate mortgage resulting tax that may be imposed on mortgages securing the bonds in conjunction with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a 602,000 square foot hospital building together with related parking facilities and physician's offices, including all infrastructure to support the same situated on 250 acres of land located in the City of Utica, Oswego County, New York all for the purpose of creating an advanced and integrated health care delivery system that will benefit all people in the Mohawk Valley.

MVHS prepared Part 1 of the DE Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part 1 of the full EAF, together with the LDC application and all exhibits thereto, is enclosed for review. The LDC has identified the proposed Project as a Type I action under SEQRA. SEQRA requires a coordinated review with all involved agencies for Type I actions; therefore, a lead agency must be designated.

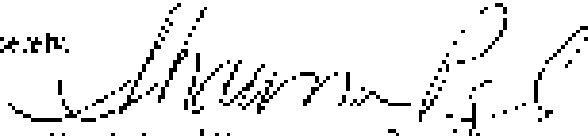

Your agency has been identified as a potential involved agency in the SEQRA process due to its possible approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to complete a coordinated SEQRA review on the Project, the LDC believes that its involvement with respect to the Project is more broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the LDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential involved Agency, within 30 days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary assistance your agency may have in connection with the Project. Your response and input should be provided to the attention of Ms. Shawna Papale, 385 Phoenix Drive, Rome, NY 13441, by the close of business on March 2, 2018. A letter

in response to the work will be construed as an indication that you may have not decided to become the lead agency.

Thank you.

Sincerely,

Amanda B. G.

Re: NSDRA Local Agency Coordination

Dear Mr. Armon:

The Ontario County Local Development Corporation ("LDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance, including the issuance of tax-exempt bonds and to waive loan from mortgage recording fee that may be imposed on mortgage securing the Bonds in connection with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a 1,652,000 square foot hospital building, together with related parking facilities and physicians' office building and all infrastructure to support the same situated on 25+ acres of land located in the City of Utica, Oneida County, New York and for the purpose of creating a regional and integrated health care delivery system that will benefit all residents in the Mohawk Valley.

MVHS prepared Part 1 of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part 1 of the EAF, together with the LDC application and other correspondence, is enclosed for review. The LDC has examined the proposed Project and Type of Action under SEQRA. SEQRA requires a coordinated review with all involved agencies, the Type of Action. Therefore, a lead agency must be agreed upon.

Your agency has been identified as a potential involved agency in the SEQRA process due to your possible approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the statutory requirements and knowledge base required to complete a meaningful SEQRA review for the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the LDC will act as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential Involved Agency, within 30 days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Ms.

Shoreline Capital, 584 Plummer Drive, Durham, NC 27441 by the close of business on Monday, 12/20/18. A failure to respond by that date shall be construed as an indication that your agency does not desire to become the lead agency.

Thank you.

Re: SSS/SLC Coord Agency Coordination

Dear Mr. McCarthy:

The Owens County Local Development Corporation ("LDC") has received an application from Mohawk Valley Health System ("MVHS") requesting certain financial assistance including the issuance of assessment bonds and an exemption from mortgage recording tax that may be imposed on mortgages securing the Bonds in connection with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a 675,000 square foot hospital building, together with related parking facilities and physicians' office building and all infrastructure to support the same situated on 25+ acres of land located in the City of Utica, Seneca County, New York, all for the purpose of creating an advanced and integrated health care delivery system that will benefit all residents in the Mohawk Valley.

MVHS prepared Part I of the full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part I of the full EAF, together with the LDC application and a letter to MVHS, is enclosed for review. The LDC has identified the proposed Project as a Type I action under SEQRA. SEQRA requires a coordinated review with all involved agencies for Type I actions. Therefore, a lead agency must be signed upon.

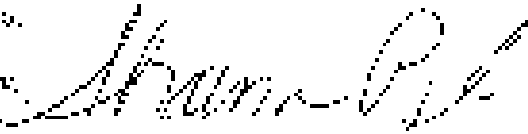

Your agency has been identified as a potential involved agency in the SEQRA process due to your possible approval responsibilities in connection with the Project. Based on the scope and nature of the Project, as well as the staffing resources and knowledge base required to complete a coordinated SEQRA review for the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the LDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of the lead agency.

As a potential Involved Agency, within 30 days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your response and input should be returned to the attention of Mr.

Shirani Pappu, 284 Picoent Drive, Rome, NY 13441, by the close of business on March 5, 2016. A failure to respond by that date shall be construed as an indication that your agency does not desire to become the lead agency.

Thank you.

 Re: Onondaga County Local Agency Coordination

Dear Mr. Crow:

The Onondaga County Local Development Corporation ("LDC") has received an application from Melrose Valley Health System ("MVHS") regarding certain financial assistance, including the issuance of tax-exempt bonds and an estimated, but non-binding, bonding tax credit, to help support an emergency response center bonds authorized to be issued in connection with MVHS's project to construct a new hospital in the City of Utica (the "Project"). Specifically, the Project consists of the construction of a 22,000 square foot hospital building, together with related parking facilities and physicians' office building and all infrastructure to support the same located on 21 acres of land located in the City of Utica, Onondaga County, New York, all for the purpose of creating an advanced and integrated health care delivery system that will benefit all residents in the Melrose Valley.

MVHS prepared Part I of a Full Environmental Assessment Form ("EAF") for the Project pursuant to regulations implementing the State Environmental Quality Review Act ("SEQRA"). A copy of Part I of the full EAF, together with the LDC application and all exhibits thereto, are enclosed for review. The LDC has preliminarily identified the proposed Project as a Type I action under SEQRA. SEQRA requires a preliminary review with all involved agencies for Type I actions. The efforts of each agency must be agreed upon.

Your agency has been identified as a potential involved agency in the SEQRA process, as this term is defined in the SEQRA regulations, because we expect MVHS to file a request to your agency for an approval needed for the Project. Based on the scope and nature of the Project, as well as the staffing requirements and knowledge base required to complete a complete SEQRA review for the Project, the LDC believes that its jurisdiction with respect to the Project is not as broad as that of other involved agencies, such as the City of Utica Planning Board. Accordingly, the LDC will not serve as the lead agency for the Project and instead expresses its desire for the City of Utica Planning Board to assume the role of lead agency.

As a potential involved agency, within 30 days of the date of this letter, we respectfully request your agency's position with respect to lead agency designation and any preliminary comments your agency may have in connection with the Project. Your comments and input should be returned to the attention of Mr. Shantia Ingala by the close of business on March 1, 2018. A failure to respond by this date shall be construed as an indication that your agency does not wish to become the lead agency and further does not object to the City of Utica Planning Board designation as lead agency for the Project.

Thank you.

Sincerely,

David C. Crow, Chairman

RE: State Environmental Quality Review (SEQR) - Mohawk Valley Health System, Utica

Dear Mr. Lawrence,

In regards to the above noted submission dated February 2, 2018, the Mohawk Valley Water Authority supports the GCLOC as Lead Agency for this project.

The following requirements need to be received to receive water for this project:

- 1) All existing water service will be required to be terminated - the water main prior to demolition of the properties as required by New York State Building Code and MVWA Regulations.
- 2) The existing system can support the 187,000 GPD demand. The flow information will be required before MVWA can determine if it can provide the required fire demands. There are large water mains at various points at this development that can support 10,000 gpm or more.
- 3) A backflow preventer will be required prior to allowing any new connections to the water main(s).
- 4) I will be the point of contact for any reviews or application submissions for this project.

Should you need anything further please contact me at (518) 792-0325 or rlawrence@mvwa.org

Sincerely,

Richard Goodney
Senior Engineer

Dear Ms. Papale:

This is in response to your letter dated February 2, 2018, relative to your inquiry regarding lead agency status for the application from Monawk Valley Health System (MVHS) to construct a new general hospital in the City of Ulster. While the proposed hospital is to include a psychiatric inpatient unit, which will be licensed by the NYS Office of Mental Health (OMH), the scope and nature of the project far exceeds inpatient psychiatric care alone. Since this proposal involves establishing a new general hospital that will provide the full range of health care services authorized under P.L. Article 28, licensed by the NYS Department of Health (DOH), I do not believe OMH will be the lead agency for this project. Therefore, I will need to refer you to DOH on this matter.

Should you have any additional questions, please do not hesitate to contact me at (516) 474-8873. Thank you.

Sincerely,

Keith J. McCarthy

Re: SQR/CA Local Agency Coordination

Dear Mr. Papale:

The New York State Department of Health (NYS DOH) has jurisdiction over the authorization and approval of local construction.

The Oneida County Health Department (OCHD) is the local health department and we have had the role of regulatory for SQR/CA.

SQR/CA Response:

- The Oneida County Health Department endorses the City of Oneida Planning Board serving as the Lead Agency with the three referenced SQR/CA.
- OCHD will review and approve any water main expansion or other projects near to the public water distribution system resulting from this project.
- The Mohawk Valley Water Authority (MVWA) has been authorized by NYS DOH and OCHD to review and approve wastewater treatment discharges separate from cross connection control program.
- OCHD requires the following activities and should be notified if this project expands to include any of these prior to construction:
 - Public health service
 - Public swimming pool
 - Training facility
 - Mobile home park
 - Temporary residences
- OCHD is the enforcement agency for the Clean Indoor Air Act (CIAA) and provides guidance and information to employers on compliance with the CIAA requirements.

This is the extent of OCHD's involvement in this case.

If you wish further assistance in this matter, please contact our office.

Sincerely Yours,

David W. Gilmore, P.D., MPH
Environmental Health Director

Re: SEQR/EA Lead Agency Coordination - *Adelphi Valley Health Center*

Dear Mr. Papala:

The City of Utica Planning Board has received a letter from the Oneida County Local Development Corporation (OCLDC) dated February 1, 2018. The letter stated that OCLDC had received an application from Adelphi Valley Health Systems (AVHS) requesting certain financial exemptions including the issuance of tax exempt bonds and an exemption from the mortgage recording tax that may be imposed on mortgages securing the Bonds in connection with AVHS's proposed to construct a new hospital in DeWittville, Utica ("project").

The letter went on to state that AVHS has previously submitted Part 1 of the Final Environmental Assessment Report (EAR) for the proposed project with an application for financial assistance, both of which were submitted to the local lead, OCLDC. Additionally, the letter stated that the OCLDC Board identified the project as a Type 1 action under the State Environmental Quality Review Act (SEQRA), thereby requiring a coordinated review and agreement on a Lead Agency. According to the letter, the OCLDC Board declined to act as Lead Agency and instead expressed its desire for the City of Utica Planning Board to act as Lead Agency for the purposes of SEQRA.

At its meeting on Thursday, February 15, 2018, the City of Utica Planning Board received the aforementioned letter from OCLDC. Based on the availability of professional planning staff, its expertise with the SEQRA process and the fact that the Planning Board has final Site Plan authority over the project, the City of Utica Planning Board opted to designate itself as Lead Agency for the purposes of SEQRA, while additionally assuming no other potential involved Agency or various interests as Lead Agency by March 28. The City of Utica Planning Board is prepared to commence the review process.

RE: SEQR – Mohawk Valley Health System
City of Utica

Dear Ms. Papale:

As requested, the New York State Department of Transportation (NYSDOT) has reviewed the request for the City of Utica Planning Board to serve as Lead Agency for purposes of the State Environmental Quality Review Act (SEQR); in relation to the proposed hospital in downtown Utica.

Upon review of the information provided, the NYSDOT concurs with this request. It is our understanding that environmental evaluations are currently ongoing. In particular, NYSDOT will be interested in reviewing traffic impacts to the highway network. Please note that a NYSDOT Highway Work Permit will be required for any work performed within the highway or right-of-way.

We look forward to working with you as the project progresses. Thank you for the opportunity to comment.

Sincerely,

Deborah S. Wendecker

239 Review Project

Mohawk Valley Health System Integrated Health Campus
City of Onida, Onida County

Dear Ms. Papale:

The Department of Environmental Conservation (DEC) has received the above referenced submittal dated February 2, 2018, and received February 9, 2018. The DEC believes that our jurisdiction will likely be limited for this project. Therefore, we would not seek Lead Agency status. The DEC has no objection to the City of Onida Planning Board seeking Lead Agency for this project.

The applicant will need to submit the following in order to expedite any outstanding permit application or technical review. The DEC offers the following checklist of items to be considered when evaluating the need for additional permits:

SPDES General Permit for Construction Activity (GP-0-15-002)

- Submit Notice of Intent to Discharge (GP-0-15-002)
- Stormwater Pollution Prevention Plan is required.
- If you anticipate discharging five or more acres of soil you will need written authorization from the Regional Water Engineer.

Petroleum/Chemical Bulk Storage (If applicable):

- A PBE Registration will be required. The applicant is not required to obtain registration prior to construction. However, the registrant must be in place prior to placement of product in tank. Any tanks installed must meet all applicable safety standards.

NYC Department of Environmental Protection
 615 WEST 135th STREET
 NEW YORK, NY 10027
 (212) 312-1515

Air Emissions (if applicable):

NOTE: All Air permits, including Title V, Air State Facility Permit (ASFP) and Air Facility Registration (AFR) must be issued prior to construction (ground) breaking.

- 14. To determine if an Air Permit/Registration is required, a description of all combustion (heat) sources including size in MMBTU/hr., the fuel used and if they will be used for general heat, process heat, or both must be provided.
- 15. Description of all process sources that have any air emission from the process, particularly, if there is a stack that exits the building. This includes sources that would possibly be constructed exempt from permitting under 6 NYCRR Part 201-3. Please note:
 - Generators used for construction which are liquid or gaseous fuel powered with a rating and mechanical power rating of less than 100 brake horsepower or are gasoline powered and have a maximum mechanical power rating of less than 50 brake horsepower are exempt from permitting. This exemption may not apply when multiple generators are employed and the combined sources may exceed a major emission threshold.
 - If the generators used for construction are a Temporary Emission Source that is operated in remote areas and will only be operated at a facility for a single period of less than 30 consecutive days (commencing from the first day of operation), they are classified as exempt from permitting.
 - Generators used for emergency backup may only operate less than 500 hours per year to remain exempt from permitting.
 - All engines that operate generators must meet the EPA requirement of 40 CFR 63 Subpart 7777.

Environmental Justice:

- 16. We strongly encourage the Lead Agency to consider Environmental Justice issues in their review of the physical conditions that will be affected by the proposed action per Part 617.2(f).

Archaeological and Cultural Impacts:

- 17. The Office of Parks, Recreation and Historical Preservation Cultural Resources (OPRH-IP) maps should be reviewed for any project that will be classified as Major under Uniform Procedure Regulations 6 NYCRR Part 67.1. Before any project within a mapped archeological or historic site may be called complete, consultation with OPRH-IP must take place.

NY Natural Heritage Program:

- 18. The project location falls within an area of concern for endangered birds, specifically the occurrence of Peregrine Falcon (*Falco peregrinus*). The presence of the telecommunication site is not within the project footprint; however, this species will likely use the air space over the project area. There is no foreseeable issue with the project negatively impacting the Peregrine Falcons.

NYSDOT Regional Office Form 13
Rev. 01/2014 Page 3 of 3

CHECKLIST

Additional Comments:

Solid Waste:

No permit is required to treat medical waste generated at the facility. If any medical waste is accepted from any other outside facility, a permit would be required. This review was conducted assuming that no outside medical waste was to be brought to this facility. For any questions regarding medical waste permitting contact Sarah Harrison at (516) 783-2148.

Any changes made to the plans submitted could have an impact on this determination.

Sincerely,

Terry Tyce

PLANNING BOARD AGENDA Common Council Chambers February 15th 2018 – 4:30pm

PB Case No.: 01-18

Address: 1600 Burrstone Road

Applicant: BBL Construction Services, LLC.

Owner: Utica College

Zone: Single Family Medium Density

Site Plan Review

Pursuant to Section 2-29-542 of the City of Utica Zoning Code, the applicant is seeking site plan approval for a project to be located at the aforementioned addresses.

The project includes the construction of three (3) student housing buildings with a total of 144 beds (totaling approximately 56,460 square feet), a community space building, with a residence director apartment (totaling approximately 3,060 square feet) and a maintenance building (totaling approximately 770 square feet). These buildings as well as an access road to already existing campus ingress/egress points and 183 parking spaces will be constructed on the 6.3 acre site owned by Utica College.

Where site development will occur adjacent to the Nye Avenue neighborhood and homes, additional landscaping will be planted and a fence installed on Utica College property to provide an aesthetically pleasing and deliberate border between the campus property and the adjacent neighborhood. The new buildings constructed will be of residential type architecture with shingled gabled roofs, and clapboard siding with stone accents. The proposed use of the 6.3 acre site is consistent with the use of the overall 128 acre college campus. Development will neither impact, nor cause injury to the neighboring properties.

PB Case No.: 02-18

Address: 230 N. Genesee Street

Applicant: Ray Trotta

Owner: Morgan Management LLC

Zone: Community Commercial

Site Plan Review

Pursuant to Section 2-29-542 of the City of Utica Zoning Code, the applicant is seeking site plan approval for a project to be located at the aforementioned address.

The applicant is proposing to demolish the existing building and construct a new 3,500 square foot commercial building in its place. The new building will be occupied by a 5 Star Urgent Care practice. The developer also looks to improve the subject parcel by updating the utilities servicing the new building, revamp the parking areas surrounding the building, enhance the landscaping along North Genesee Street and develop the overall aesthetic appeal of the property. In addition to these improvements, vehicular circulation will be advanced by closing down one of the two driveways servicing the property. These driveways will be consolidated into one driveway that will allow for ingress/egress to North Genesee Street.

PB Case No.: 03-18

Zone: Planned Development Extraordinary

Address: 126 Business Park Drive

Applicant: Phil Sbarra/Bonacci Architects

Sign Review

Owner: Ronald Cuccaro

Pursuant to Section 2-29-274 of the City of Utica Zoning Code, the applicant is seeking site plan approval for a project to be located at the aforementioned address.

The applicant has proposed to modify the existing signage. The existing 6'-0" long x 5'-10" high x 2'-0" wide red brick base will remain and be added onto. The existing base will be extended 3' toward the building to 9'-0" long. The existing galvanized metal coping will be removed and replaced with a single sloped galvanized metal cap that matches the roof design of the existing building.

The peak of the cap will extend up to 9'-10" high with the low end of the cap at 6'-10" high. The existing applied metal letters will be removed and replaced with a new (approximately) 4 foot x 7 foot LED screen to display signage for current building occupants, providing the owner with signage flexibility for any future building tenants.

PB Case No.: 04-18

Zone: Planned Development Extraordinary

Address: 1445 Kemble Street

Applicant: Camryn Collins

Sign Review

Owner: Rodney Santiago

Pursuant to Section 2-29-274 of the City of Utica Zoning Code, the applicant is seeking site plan approval for a project to be located at the aforementioned address.

The applicant has proposed to remove the existing signage to make way for the branding of a new tenant in the building.

PB Case No.: 05-18

Zone: Central Business District

Address: Proposed Hospital Footprint

Applicant: MVHS

Owner:

As part of its efforts to construct a state-of-the-art, integrated health delivery system for the Mohawk Valley, the Mohawk Valley Health Systems (MVHS) has begun the process of designing and engineering a roughly \$500 million hospital in downtown Utica. As the project moves closer to construction, MVHS will be approaching various agencies and governmental bodies for funding and/or approval of various elements of the project, many of which will require that the State Environmental Quality Review Act (SEQRA) be complete. By way of example, MVHS recently sought financing assistance for the project from the Oneida County Local Development Corporation (OCLDC).

At their meeting on Friday, February 2nd, the OCLDC declared the project a Type I action under SEQRA but declined to act as Lead Agent for the purposes of SEQRA review. Instead, the OCLDC suggested that the City of Utica Planning Board act as Lead Agent, given the Planning Board's expertise in this matter, the professional staff at their disposal and the fact that authority for Final Site Plan approval for the project rests solely with the Planning Board.

In accordance with SEQRA regulations governing coordinated review of Type I actions, letters have been sent to all potential SEQRA Involved Agencies (including the Planning Board) advising them of the action by OCLDC and their desire for the Planning Board to act as Lead Agent. Within the letter, all potential Involved Agencies were given the required 30 calendar days to respond with respect to lead agency designation. As such, the Planning Board will consider a resolution designating itself as Lead Agent for this project.

Re: SEQRA - Inter Agency Coordination - *Madison Valley Health Systems*

Dear Mr. Collins:

As indicated in a recent correspondence that you clients have received last week, the City of Utica Planning Board designated itself as Lead Agent for the purposes of State Environmental Quality Review Act (SEQRA) for the proposed construction of a new hospital in DeWittville, Utica. This action was taken at the Board's last regular meeting on February 15, 2015. The subsequent letter sent to all potential involved Agencies reiterated the March 2nd deadline established by the Office of General Services, Office of Operations (OGS/OOP) pursuant to 9 NYCRR § 61-0.3(d)(3)(i) by which all potential involved Agencies were to submit comments relative to the Full Environmental Assessment (FEA) that had been submitted to OGS/OOP by the project sponsor, Madison Valley Health Systems, concerning an Lead Agent status.

Given that the OGS/OOP elected to designate itself as Lead Agent for the purposes of SEQRA review and in order to provide sufficient time for potential involved Agencies to provide comment on the FEA as well as the Planning Board's Lead Agent designation, the deadline for all potential involved Agencies to provide comment is being extended to March 24, 2015.

Should you have any questions regarding this deadline extension, please do not hesitate to contact me at 315-792-6115.

Re: SEQRA Lead Agency Coordination – Mohawk Valley Health System

Dear Mr. Amador:

As indicated in a recent communication that you should have received last week, the City of Utica Planning Board designated itself as Lead Agent for the purposes of State Environmental Quality Review Act (SEQRA) for the proposed construction of a new hospital in DeWittville, Utica. This action was taken at the Board's last regular meeting on February 15, 2018. The subsequent letter sent to all potential Involved Agencies referenced the March 2nd deadline established by the Onondaga County Local Development Commission (OCLDC) pursuant to 6 NYCRR § 617.1(b)(3)(ii) by which all potential Involved Agencies were to submit comments relative to the Full Environmental Assessment Form (EAF) that has been submitted to OCLDC by the project sponsor, Mohawk Valley Health System, or to act as Lead Agent, ~~etc.~~

Given that the OCLDC opted not to designate itself as Lead Agent for the purposes of SEQRA review and in order to provide an additional time for potential Involved Agencies to review comments on the EAF as well as the Planning Board's Lead Agent designation, the deadline for all potential Involved Agencies to provide comment is being extended to March 23, 2018.

Should you have any questions regarding the deadline extension, please do not hesitate to contact me at 315-792-5185.

Sincerely,

Brian Thomas, AEP

Re: SEQRA Lead Agency Determination - Mohawk Valley Health Systems

Dear Mr. McCarthy:

As indicated in a recent correspondence that you recently were received last week, the City of Utica Planning Board designated itself as Lead Agency for the purposes of State Environmental Quality Review Act (SEQRA) for the proposed construction of a new hospital in Lewiston, Utica. This action was taken at the Board's last regular meeting on February 15, 2013. The subsequent letter served all potential Involved Agencies concerning the March 29th deadline established by the Onondaga County Local Development Corporation (OCLEDC) pursuant to § 617 of the EPL by which all potential Involved Agencies were to submit comments relative to the Full Environmental Assessment Form (EAF) that had been submitted to OCLEDC by the project sponsor, Mohawk Valley Health Systems, as the action and Lead Agency state.

Given that the OCLEDC opted not to designate itself as Lead Agency for the purposes of SEQRA review and in order to provide sufficient time for potential Involved Agencies to provide comment on the EAF as well as on Planning Board's Lead Agency designation, the deadline for all potential Involved Agencies to provide comments is being extended to March 29, 2013.

Should you have any questions regarding the deadline extension, please do not hesitate to contact me at 315-792-6181.

Re: SEQRA Lead Agency Coordination – Mohawk Valley Health System

Dear Mr. Dennis:

As indicated in several correspondences that you should have received last week, the City of Utica Planning Board designated itself as Lead Agent for the purposes of State Environmental Quality Review Act (SEQRA) for the proposed construction of a new Hospital in Downtown Utica. This action was taken at the Board's last regular meeting on February 15, 2018. The subsequent letter sent to all potential Involved Agencies restated the Master 5th Ordinance established by the Otsego County Local Development Corporation (OCLDC) pursuant to NYCRR § 517.14(b)(2)(i) by which all potential Involved Agencies were to submit comments relative to the Full Environmental Assessment Form (EAF) that had been submitted to OCLDC by the project sponsor, Mohawk Valley Health System, or to act as Lead Agent status.

Given that the OCLDC opted not to designate itself as Lead Agent for the purposes of SEQRA review and in order to provide sufficient time for potential Involved Agencies to provide comment on the EAF as well as the Planning Board's Lead Agent designation, the deadline for all potential Involved Agencies to provide comment is being extended to March 23, 2018.

Dear Ms. Drabicki:

As indicated in a recent correspondence that you directed how to proceed with the City of Utica Planning Board designating itself as Lead Agent for the purposes of State Environmental Quality Review Act (SEQRA) for the proposed construction of a new hospital in Downtown Utica. This action was taken at the Board's last regular meeting on February 15, 2018. The subsequent letter sent to all potential Involved Agencies reiterated the March 7th deadline established by the Utica County Local Development Corporation (UCLDC) pursuant to 6 NYCRR § 617.6(b)(3)(ii) by which all potential Involved Agencies were to submit comments relative to the Full Environmental Assessment Form (EAF) that had been submitted to UCLDC by the project sponsor, Mohawk Valley Health System, or to an Involved Agency.

Given that the UCLDC opted not to designate itself as Lead Agent for the purposes of SEQRA, as well as in order to provide sufficient time for potential Involved Agencies to provide comment on the EAF as well as the Planning Board's Lead Agency designation, the deadline for all potential Involved Agencies to provide comment is being extended to March 23, 2018.

Re: SEQRA Law 63 City of Utica motion - Advanced Traffic Control Systems

Dear Mr. Hoffmann:

As indicated in a recent correspondence that you should have received last week, the City of Utica Planning Board designated itself as Lead Agent for the purposes of State Environmental Quality Review Act (SEQRA) for the proposed construction of a new hospital in Downtown Utica. This action was taken at the Board's last regular meeting on February 15, 2018. The subsequent letter sent to all potential involved Agencies reiterates the March 3rd deadline established by the Oneida County Local Development Corporation (OCTDC) pursuant to 6 NYCRR § 61.7.03(5)(a) by which all potential involved Agencies were to submit comments relative to the Full Environmental Assessment Form (EAF) that had been submitted to OCTDC by the project sponsor, Nicholas Valley Health Systems, et al as on Lead Agent status.

Given that the OCTDC opted not to designate itself as Lead Agent for the purposes of SEQRA review and in order to provide sufficient time for potential involved Agencies to provide comment on the EAF as well as the Planning Board's Lead Agent designation, the deadline for all potential involved Agencies to provide comments is being extended to March 23, 2018.

Re: SEORA and Agency Coordination - Ashford Valley Health Systems

Dear Mr. Kent:

As indicated in a recent correspondence that you should have received last week, the City of Utica Planning Board designated itself as Lead Agent for the purposes of State Environmental Quality Review Act (SEORA) for the proposed construction of a new hospital in Trenton, Utica. This action was taken at the Board's last regular meeting on February 15, 2018. The subsequent letter sent to all potential involved Agencies reiterated the March 2nd deadline established by the Office of the Local Development Corporation (OLDC) pursuant to NYCRR § 617.5(b)(3)(i) by which all potential involved Agencies were to submit comments relative to the full Environmental Assessment Form (EAF) that had been submitted to OLDC by the project sponsor, Ashford Valley Health Systems, or to act as Lead Agent itself.

Given that the OLDC did not want to designate itself as Lead Agent for the purposes of SEORA review and it took to provide sufficient time for potential involved Agencies to provide comment on the EAF as well as the Planning Board's Lead Agent designation, the deadline for all potential involved Agencies to provide comments being extended to March 23, 2018.

Re: SEQRA and Agency Coordination - *Madison Valley Health System*

Dear Mr. Matruff:

As indicated by a calendar experience that you should have received last week, the City of Utica Planning Board designated itself as Lead Agent for the purposes of State Environmental Quality Review Act (SEQRA) for the proposed construction of a new hospital in Dutchess County. This determination was taken at the Board's last regular meeting on February 15, 2018. The subsequent letter sent to all potential involved Agencies reiterated the March 2nd deadline established by the Otsego County Local Development Corporation (OCLDC) pursuant to 6 NYCRR § 612.6(d)(3)(ii) by which all potential interested Agencies were to submit comments relative to the Full Environmental Assessment Form (EAF) that had been submitted to OCLDC by the project sponsor, Madison Valley Health System, on behalf of Lead Agent 18008.

Given that the OCLDC opted not to designate itself as Lead Agent for the purposes of SEQRA review and in order to provide sufficient time for potential involved Agencies to provide comment on the EAF as well as the Planning Board's Lead Agent designation, the deadline for all potential involved Agencies to provide comment is being extended to March 15, 2018.

Should you have any questions regarding the deadline extension, please do not hesitate to contact me at 315-825-6100.

Sincerely,

Brian Thomas, AEP

Re: The City of Utica Planning Board's State Environmental Quality Review, Lead Agency Request Letter for Mohawk Valley Health System's Construction of the Integrated Health Campus, City of Utica, Oneida County, New York

Dear Mr. Thomas:

The New York State Department of Health (Department) is in receipt of the City of Utica Planning Board's *State Environmental Quality Review (SEQR)* lead agency request letter for Mohawk Valley Health System's (MVHS) *Construction of the Integrated Health Campus* funded through a grant from the Oneida County Statewide Health Care Facility Transformation Program (Oneida SHCFTP) administered jointly by the Department and the Dormitory Authority State of New York (DASNY). The Department has no objection to the City of Utica Planning Board assuming lead agency status for purposes of conducting a coordinated SEQR for the above referenced project.

In review of the distributed *Environmental Assessment Form – Part 1 (EAF – Part 1) Purpose and Project Description*, it is noted that Faxon St. Luke's Healthcare (FSLH) and the St. Elizabeth Medical Center (SEMC) would be consolidated and relocated to form the proposed MVHC *Integrated Health Campus*. The Department would note that the proposed environmental review should include an analysis of the future reuse(s) of the FSLH and SEMC campuses, to the extent that they are known, once consolidation of these facilities is accomplished.

The distributed *EAF – Part 1, Attachment 4, Permits and Approvals* schedule correctly lists the Department, along with DASNY, as a joint administrator of the Oneida SHCFTP project funding approved by New York State Legislature. The Department's jurisdiction regarding the proposed action would also include the processing and approval of the Certificate of Need applications (CONs) required to construct the new hospital and effectuate the consolidation of the hospitals. Accordingly the Department asks for *Attachment 4* to be updated to reflect these potential approvals.

Additionally, the Department understands that potential eminent domain proceedings may be required to secure property within the proposed area of the planned MVHS development. The Department would also request that the distributed EAF – Part 1, Attachment 4, Permits and Approvals schedule be updated to identify all potential local agencies with the ability to conduct the condemnation proceedings, should they be required.

Should you have any questions, please contact Mr. Udo Amman, Director Bureau of Architecture and Engineering at (516) 402-0904. Project correspondence or documentation may be submitted to Mr. Amman's attention at Empire State Plaza, Corning Tower 16th floor, Albany, New York 12237.

Respectfully,

Christie P. Abel

Re: The City of Utica Planning Board's *State Environmental Quality Review* Lead Agency
Request Letter for Mohawk Valley Health System's *Construction of the Integrated Health
Campus*, City of Utica, Oneida County, New York

Dear Mr. Thomas:

DASNY ("Dormitory Authority State of New York") is in receipt of the City of Utica Planning Board's *State Environmental Quality Review* ("SEQR") lead agency request letter for Mohawk Valley Health System's ("MVHS") *Construction of the Integrated Health Campus* funded through a grant from the New York State Department of Health's ("NYSDOH's") Statewide Health Care Facility Transformation Program ("SHCFTP") and DASNY. DASNY has no objection to the City of Utica Planning Board assuming lead agency status for purposes of conducting a coordinated SEQR for the above-referenced project.

In review of the distributed *Environmental Assessment Form – Part 1* ("EAF – Part 1") *Purpose and Project Description*, it is noted that Faxton St. Luke's Healthcare ("FSLH") and the St. Elizabeth Medical Center ("SEMC") would be consolidated and relocated to form the proposed MVHC *Integrated Health Campus*. DASNY would note that the proposed environmental review should include an analysis of the future reuse(s) of the FSLH and SEMC campuses, to the extent that they are known, once consolidation of these facilities is accomplished.

The distributed *EAF – Part 1, Attachment 4, Permits and Approvals* schedule correctly lists DASNY, along with NYSDOH, as a joint administrator of project funding approved by New York State Legislature. DASNY's jurisdiction regarding the proposed action would also be that of a potential funding (bonding) agency, and asks for *Attachment 4* to be updated to reflect this potential approval.

Additionally, DASNY understands that potential eminent domain proceedings may be required to secure property within the proposed area of the planned MVHS development. DASNY would also request that the distributed *EAF – Part 1, Attachment 4, Permits and Approvals* schedule be updated to identify all potential local agencies with the ability to conduct the condemnation proceedings, should they be required.

Should you have any questions, please telephone me at **(518) 257-3214**. Project correspondence or documentation may be submitted to me at: **Mr. Robert S. RE: MYHS Lead Agency Determination
Planning Board Case No. 03-18

Dear Mr. Vitulli:

We represent Cutler Trainor & Cutler and Mount Zion Methodist Church Inc., the owners and sponsor of 589 Lafayette Street, one of the proposed bonds areas in the above eminent domain proceeding. It is our understanding that the City Planning Board is considering a Resolution designating itself as Lead Agency for SEQRA purposes at its February 15, 2018 meeting. We understand this consideration to be made a part of the Board's consideration in your proceeding last evening.

We object to the Oneida City Planning Board designating itself the Lead Agency for the entire MYHS Project as two of the three approval actions are beyond the Planning Board's territory authority:

- 1. Action No. 1: Determining the Largest Population Center in Oneida County. SEQRA requires that the Lead Agency be the agency with principal responsibility for carrying out or approving an action (16CPL §-611(6)). The agency with principal responsibility for determining which is the largest population center in Oneida County is the governing body for Oneida County itself. Moreover, the Lead Agency responsible for the determination of Action #1 must consider alternative sites across the region and since the County Planning Agency will be involved pursuant to Code of Municipal Law Section 249-7 and 249-8, the County is the appropriate Lead Agency for the SEQRA determination with regard to Action No. 1.

1. This document is the property of Cutler Trainor & Cutler, LLP. It is intended solely for the use of the individual or entity to whom it is addressed. If you have received this document by mistake, you should not disseminate, distribute or copy this e-mail. Please notify the sender immediately by e-mail if you have received this e-mail by mistake. Cutler Trainor & Cutler, LLP is not responsible for any actions you may take in reliance on the contents of this information.

The Project may be funded by the State of New York or the owner if and to the extent required by location in "the largest population concentration area" (Article 21, Section 21-201). The Commission is where the largest population concentration area (Article 21, Section 21-201) has been made as a result of any administrative proceeding and has not been altered, revised or supported by evidence. It appears that the site for development of Action No. 17 is outside the Planning Board's jurisdiction as it is a pre-proposal to the ultimate Action No. 17. However, the Project is not within the Planning Board's statutory authority.

Section 21-201(2) Condemnation of Properties by Eminent Domain. Another prerequisite to the Planning Board's review is that the property be not acquired by condemnation or by exercise, prior to the Planning Board's review, of Article 21 Review of the property. With respect to 509 Lakeside Avenue, the Planning Board's jurisdiction is limited to the property equal to the portion that has not been acquired by eminent domain prior to the review. It goes without saying that the City Planning Board does not have authority to review the property under the State of New York and the City of Utica does. From conducting public hearings and making their own determination and findings as part of the Eminent Domain process, which is what they were made to do pursuant to Article 21 of the ECL. Since they were the only body of the City of Utica that is specifically authorized and responsible for carrying out the eminent domain of the subject property (ECL 21-201(2)), the City Planning Board is without statutory authority to be the State Agency with respect to this Action No. 2 (Condemnation).

Section 21-201(3) Eminent Domain. Another prerequisite to the review of the Project is that the Project is appropriately determined (Article 21-201) and the procedures are required by eminent domain or otherwise (Article 21-201) then and only then may the City Planning Board have statutory authority to conduct Site Plan Review for the Project. It is clear and only when that is the case, the Planning Board is the Agency with principal responsibility for reviewing and approving the action. Site Plan Review is the first action in the series of actions that will be taken which the Planning Board would properly have authority to review. SEQR is a process that is required to be taken within the statutory authority of the State Planning Board.

Since the City Planning Board is without jurisdiction to either determine the appropriate location for the subject Project or to condemn the properties needed for the construction, it must be an appropriate State Agency in SEQR matters in respect to either of these prerequisites to the Project.

Center, Tishler & Cutler, LLP
2025.1

We therefore request that the City Planning Board not designate the City Land Agency for STORX purposes for all phases of the the above referenced project.

Very truly yours,

CENTER, TISHLER & CUTLER, LLP

Fred Matull, Chairperson
Utica City Hall, 1 Kennedy Plaza
Utica, NY 13502

Dear Mr. Matull

I am pleased to learn that your board will be the lead agency for SFQR review as it pertains to the construction of the new hospital complex currently planned for downtown Utica. I know this process can be exisueing, but I am sure the outcome will be beneficial in all respects.

My brother Robert and I are leaseholders of a certain piece of property known as New Hartford Shopping Center located in the Village of New Hartford. It is my understanding that part of the above referenced review process includes the consideration of alternate sites that if the master plan for the proposed facility. As such, I would like to present our site for consideration and do so for the following reasons:

1. The property consists of approximately 42 acres. There are 32 acres of surface parking available which would eliminate the need for the construction of indoor parking facilities.
2. The site is environmentally clean.
3. The site is located at the intersection of Routes 9, 12, 11 and 141 plus has access from Genesee Street giving it access from every corner of the county.
4. The mandate from New York State is that the hospital must be built in the largest population center in the county. While about City of Utica property which is across Campion Road from our site, but we are arguably centered in and around the largest population in the county.
5. We would be open to maintaining control of the property and working out a lease agreement with MWHS thereby keeping the property on the tax rolls. A pilot program could be worked out that would keep all public entities, town, county, city and school districts from suffering the loss which would result from a not for profit hospital being built on tax exempt land.
6. The tenants currently in the Shopping Center have leases that expire on or before 2023, at which time the center will be vacant. Many leases expire well before then. There is no shortage of vacant retail space in the area into which tenants could be relocated if necessary. The future of retail is in flux at best thus it seems that highest and best use of the nearby property may not be retail.

7. I know there has been a great deal of discussion regarding the St. Lukes campus as an alternate site. Certainly there are alternatives to that end that don't exist for ours. Hospitals could continually operate without being interrupted by construction. There are no walkway issues here. The access here is far superior.

8. Locating the hospital here would allow the development of the Use of Street Bagg Square corridor to continue unimpeded by the uncertainty of the proposed development.

In conclusion, I hope you will seriously consider this property for the hospital. As with any site I am sure there will be questions and concerns. I would welcome the opportunity to discuss them with you and the Board at any time.

Very Truly Yours

PLANNING BOARD RESOLUTION

May 7th 2016

98 Case No.: 05-18

Zone: Central Business District

Address: Proposed Hospital Footprint

Applicant: MVHS

Owner:

WHEREAS, the Mohawk Valley Health System (MVHS) submitted an application to the Oneida County Local Development Corporation (OCLDC) requesting certain financial assistance related to the proposed construction of a state-of-the-art hospital in Oneonta, Oneida County; and

WHEREAS, as part of its consideration of the MVHS application, OCLDC must consider the impact to the environment anticipated to result from the provision of said financial assistance. To that end, the MVHS application included a full Environmental Assessment Form (EAF) pursuant to the State's Environmental Quality Review Act (SEQRA). Based on their review of the EAF, the OCLDC determined the proposed project to be a Type I action under SEQRA, thereby requiring establishment of a Lead Agency that will take responsibility for conducting the coordinated review; and

WHEREAS, the OCLDC felt that they had limited jurisdiction over the proposed project and, on that basis, opted not to act as Lead Agent. Given the professional planning staff at its disposal and the knowledge base required to properly conduct coordinated review for a project of the size and scope as that proposed by MVHS, OCLDC expressed a desire for the City of Utica Planning Board to act as Lead Agent; and

WHEREAS, the full EAF submitted by MVHS to OCLDC identifies the City of Utica Planning Board as a potentially involved Agency and the City of Utica Planning Board was duly notified in writing of the action taken by OCLDC relative to SEQRA, in accordance with SEQRA regulations. Under SEQRA regulations, any potentially involved Agencies can act as Lead Agency; and

WHEREAS, at the February Meeting, the Planning Board voted to declare itself as Lead Agency, a decision to which no objections or alternatives were received; and

WHEREAS, the Planning Board completed Part II of the Full Environmental Assessment Form (EAF) and deemed that a "Moderate to large impact may occur" in the following areas: Land, Surface Water, Ground Water, Air, Historic and Archeological Resources, Transportation, Energy, Noise, Odor, Light, Human Health, Community Plans and Community Character; and

WHEREAS, the Planning Board completed Part III of the Full EAF and based on the potential impacts identified in Part II of the Full EAF, reached the conclusion that this Project may result in one or more significant adverse impacts on the environment, and an environmental impact statement must be prepared to further assess the impacts and possible mitigation and to explore alternatives to avoid or reduce those impacts; and

BE IT RESOLVED THAT on a motion made by Mr. Matrulli, seconded by Mr. Mitchell and unanimously approved (*Mr. Priore and Mr. Colon were absent*), the City of Utica Planning Board declared itself as Lead Agency for the purposes of SEQRA review.

BE IT FURTHER RESOLVED THAT on a motion made by Mr. Matrulli, seconded by Mr. Mitchell and unanimously approved (*Mr. Priore and Mr. Colon were absent*), the City of Utica Planning Board identified this project as a Type 1 Action and issued a Positive Declaration.

Fred Matrulli, Chair

Date

POSITIVE DECLARATION
NOTICE OF INTENT TO PREPARE A DRAFT ENVIRONMENTAL IMPACT STATEMENT
DETERMINATION OF SIGNIFICANCE

Name of Action: Mohawk Valley Health System (MVHS) Integrated Health Campus

Date: May 7, 2018

This notice is issued pursuant to Part 617 of the implementing regulations (6 NYCRR 617) pertaining to Article 8 (State Environmental Quality Review Act, SEQRA) of the Environmental Conservation Law.

The City of Utica Planning Board, as lead agency, has determined that the proposed action described below may have a significant effect on the environment and that a Draft Environmental Impact Statement (DEIS) will be prepared. In addition, it is the intent of the City Planning Board to conduct public scoping including scheduling of a public scoping session. The primary goals of scoping are to focus the DEIS on potentially significant adverse impacts that may be reasonably expected to result from the proposed action and to eliminate consideration of those impacts that are irrelevant or nonsignificant. Details of the scoping process and session will be forthcoming. SEQRA-related project information will be posted on the following website:

<http://cityofutica.com/departments/urban-and-economic-development/planning/mvhs-seqra/index>

Description of Action: A detailed description of the action is provided as Exhibit 1.

Location of Action: The project location is illustrated on Figure 1, which is included within Exhibit 1.

Reasons Supporting this Determination: The proposed project exceeds thresholds defined for Type I projects in the SEQRA implementing regulations. Type I actions carry a presumption that the project is likely to have a significant effect on the environment. A Full Environmental Assessment Form (FEAF, Parts 1 – 3) has been completed for this project and is included in Exhibit 1. Part 2 (Identification of Potential Project Impacts) of the FEAF is designed to help the lead agency inventory potential resources that could be affected by the proposed project and associated actions. As indicated in Part 2 of the FEAF, the project could result in moderate to large impacts on land; surface water; groundwater; air; historic or archaeological resources; transportation; energy; noise, odor, and light; human health; consistency with community plans; and consistency with community character. Consequently, the City Planning Board requires the preparation of a DEIS in accordance with sections 617.9 of the SEQRA implementing regulations, including the consideration of significant adverse environmental impacts, alternatives and mitigation.

Parts 1, 2 and 3**

Full Environmental Assessment Form
Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either “Yes” or “No”. If the answer to the initial question is “Yes”, complete the sub-questions that follow. If the answer to the initial question is “No”, proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the project sponsor to verify that the information contained in Part 1 is accurate and complete.

A. Project and Sponsor Information.

Name of Action or Project: Mohawk Valley Health System (MVHS) Integrated Health Campus		
Project Location (describe, and attach a general location map): City of Utica, NY (see Figure 1)		
Brief Description of Proposed Action (include purpose or need): See Attachments 1 and 2 for a description of the Proposed Action and Site Layout, respectively.		
Name of Applicant/Sponsor: MVHS (Attn: Mr. Robert C. Scholefield, RN, MS; Executive VP, Chief Operating Officer)	Telephone: 1-315-801-4978	E-Mail: bscholefield@mvhealthsystem.org
Address: 2209 Genesee Street		
City/PO: Utica	State: NY	Zip Code: 13501
Project Contact (if not same as sponsor; give name and title/role):	Telephone:	E-Mail:
Address:		
City/PO:	State:	Zip Code:
Property Owner (if not same as sponsor): Multiple property owners (see Attachment 3). These parcels will be acquired by MVHS and/or condemning authority.	Telephone:	E-Mail:
Address:		
City/PO:	State:	Zip Code:

B. Government Approvals See Attachment 4 for a listing of permits and approvals.

i. Coastal Resources. <ul style="list-style-type: none"> i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? <input type="checkbox"/>Yes<input checked="" type="checkbox"/>No ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? <input type="checkbox"/>Yes<input checked="" type="checkbox"/>No iii. Is the project site within a Coastal Erosion Hazard Area? <input type="checkbox"/>Yes<input checked="" type="checkbox"/>No 		

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? YesNo

- **If Yes**, complete sections C, F and G.
- **If No**, proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? YesNo

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? YesNo

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) YesNo

If Yes, identify the plan(s):

NYS Heritage Areas: Mohawk Valley Heritage Corridor _____
 Source: <https://parks.ny.gov/historic-preservation/heritage-areas/documents/MohawkValleyUrbanHeritageArea.pdf> _____

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? YesNo

If Yes, identify the plan(s):

C.3. Zoning

- a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. Yes No
 If Yes, what is the zoning classification(s) including any applicable overlay district?
Central Business District (CBD)
- b. Is the use permitted or allowed by a special or conditional use permit? Yes No
- c. Is a zoning change requested as part of the proposed action? Yes No
 If Yes,
 i. What is the proposed new zoning for the site? _____

C.4. Existing community services.

- a. In what school district is the project site located? Utica City School District
- b. What police or other public protection forces serve the project site?
Utica Police Department
- c. Which fire protection and emergency medical services serve the project site?
Utica Fire Department
- d. What parks serve the project site?
The City of Utica owns and operates parkland within the City limits; no parkland is located within the project limits.

D. Project Details

D.1. Proposed and Potential Development

- a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Healthcare
- b. a. Total acreage of the site of the proposed action? _____ ± 25 acres
 b. Total acreage to be physically disturbed? _____ ± 25 acres
 c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? _____ * acres *The applicant is negotiating with current property owners.
- c. Is the proposed action an expansion of an existing project or use? Yes No
 i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____
- d. Is the proposed action a subdivision, or does it include a subdivision? Yes No
 If Yes,
 i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
Resubdivision to consolidate parcels and subdivision to create lots for parking garage and medical office building, as needed.
 ii. Is a cluster/conservation layout proposed? Yes No
 iii. Number of lots proposed? _____ ± 2
 iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____
- e. Will proposed action be constructed in multiple phases? Yes No
 i. If No, anticipated period of construction: _____ ± 44 months
 ii. If Yes:
 • Total number of phases anticipated _____
 • Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
 • Anticipated completion date of final phase _____ month _____ year
 • Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

f. Does the project include new residential uses? Yes No
 If Yes, show numbers of units proposed.

	<u>One Family</u>	<u>Two Family</u>	<u>Three Family</u>	<u>Multiple Family (four or more)</u>
Initial Phase	_____	_____	_____	_____
At completion	_____	_____	_____	_____
of all phases	_____	_____	_____	_____

g. Does the proposed action include new non-residential construction (including expansions)? Yes No
 If Yes,
 i. Total number of structures 3
 ii. Dimensions (in feet) of largest proposed structure: ± 142 height; ± 240 width; and ± 630 length
 iii. Approximate extent of building space to be heated or cooled: Main Hospital: ± 670,000 square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? Yes No
 If Yes,
 i. Purpose of the impoundment: _____
 ii. If a water impoundment, the principal source of the water: Ground water Surface water streams Other specify: _____
 iii. If other than water, identify the type of impounded/contained liquids and their source. _____
 iv. Approximate size of the proposed impoundment. Volume: _____ million gallons; surface area: _____ acres
 v. Dimensions of the proposed dam or impounding structure: _____ height; _____ length
 vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete): _____

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? Yes No
 (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite)
 If Yes:
 i. What is the purpose of the excavation or dredging? Excavation and removal of impacted and/or unsuitable fill material, if encountered.
 ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?
 • Volume (specify tons or cubic yards): To be determined upon further evaluation of existing conditions
 • Over what duration of time? ±12-18 months
 iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.
Excavated soil/fill material that is unsuitable for re-use on site will be stockpiled, sampled, and disposed of in accordance with applicable federal and state regulations.
 iv. Will there be onsite dewatering or processing of excavated materials? Yes No
 If yes, describe. Temporary dewatering of excavations is anticipated. Encountered groundwater will be characterized and managed in accordance with applicable federal and state regulations.
 v. What is the total area to be dredged or excavated? To be determined acres
 vi. What is the maximum area to be worked at any one time? ± 25 acres
 vii. What would be the maximum depth of excavation or dredging? ± 10 feet
 viii. Will the excavation require blasting? Yes No
 ix. Summarize site reclamation goals and plan: _____
Excavations will be backfilled and hospital, ancillary facilities and grounds will be constructed on the re-graded site.

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? Yes No
 If Yes:
 i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): _____

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

iii. Will proposed action cause or result in disturbance to bottom sediments? Yes No
 If Yes, describe: _____

iv. Will proposed action cause or result in the destruction or removal of aquatic vegetation? Yes No
 If Yes:

- acres of aquatic vegetation proposed to be removed: _____
- expected acreage of aquatic vegetation remaining after project completion: _____
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access): _____
- proposed method of plant removal: _____
- if chemical/herbicide treatment will be used, specify product(s): _____

v. Describe any proposed reclamation/mitigation following disturbance: _____

c. Will the proposed action use, or create a new demand for water? Yes No
 If Yes:

i. Total anticipated water usage/demand per day: _____ ± 187,000 gallons/day

ii. Will the proposed action obtain water from an existing public water supply? Yes No
 If Yes:

- Name of district or service area: City of Utica
- Does the existing public water supply have capacity to serve the proposal? Yes No
- Is the project site in the existing district? Yes No
- Is expansion of the district needed? Yes No
- Do existing lines serve the project site? Yes No

iii. Will line extension within an existing district be necessary to supply the project? Yes No
 If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____
 Water mains will need to be installed or replaced. See Attachment 1 for additional details.
- Source(s) of supply for the district: Mohawk Valley Water Authority

iv. Is a new water supply district or service area proposed to be formed to serve the project site? Yes No
 If, Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- Proposed source(s) of supply for new district: _____

v. If a public water supply will not be used, describe plans to provide water supply for the project: _____

vi. If water supply will be from wells (public or private), maximum pumping capacity: N/A gallons/minute.

d. Will the proposed action generate liquid wastes? Yes No
 If Yes:

i. Total anticipated liquid waste generation per day: _____ ± 187,000 gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each): _____
Sanitary wastewater from hospital operations (± 187,000 gallons/day).

iii. Will the proposed action use any existing public wastewater treatment facilities? Yes No
 If Yes:

- Name of wastewater treatment plant to be used: Oneida County's Water Pollution Control Plant
- Name of district: Oneida County Sewer District
- Does the existing wastewater treatment plant have capacity to serve the project? Yes No
- Is the project site in the existing district? Yes No
- Is expansion of the district needed? Yes No

- Do existing sewer lines serve the project site? Yes No
 - Will line extension within an existing district be necessary to serve the project? Yes No
- If Yes:
- Describe extensions or capacity expansions proposed to serve this project: _____
- Sewer lines will need to be installed or replaced. See Attachment 1 for additional details. _____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? Yes No

- If Yes:
- Applicant/sponsor for new district: _____
 - Date application submitted or anticipated: _____
 - What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge, or describe subsurface disposal plans):

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: _____

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? Yes No

If Yes:

- i. How much impervious surface will the project create in relation to total size of project parcel?
 - _____ Square feet or _____* acres (impervious surface)
 - _____ Square feet or _____ ± 25 acres (parcel size)
- ii. Describe types of new point sources. * The majority of the project site is currently impervious. Proposed conditions will increase pervious green space. _____

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

Site stormwater will be managed in accordance with the New York State Stormwater Management Design Manual, as required by the SPDES General Permit for Stormwater Discharges from Construction Activity (GP 0-15-002). See Attachment 1 for a description of anticipated infrastructure modifications necessary to accommodate the MVHS Integrated Health Campus.

- If to surface waters, identify receiving water bodies or wetlands: _____
Stormwater will be conveyed to the City's stormwater conveyance system. _____

- Will stormwater runoff flow to adjacent properties? Stormwater will be conveyed to the City's stormwater conveyance system. Yes No

iv. Does proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? Yes No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? Yes No

If Yes, identify:

- i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)
Short-term particulate emissions (dust) and portable equipment exhaust emissions during construction activities. _____
- ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)
No stationary sources during construction are anticipated. _____
- iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)
Stationary sources during operations may include boilers, emergency generators and microturbines, as well as other minor sources. _____

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? Yes No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) Yes No

ii. In addition to emissions as calculated in the application, the project will generate: *

- _____ ± 60,000 Tons/year (short tons) of Carbon Dioxide (CO₂)
- _____ < 1 Tons/year (short tons) of Nitrous Oxide (N₂O)
- _____ 0 Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____ 0 Tons/year (short tons) of Sulfur Hexafluoride (SF₆)
- _____ 0 Tons/year (short tons) of Carbon Dioxide equivalent of Hydrofluorocarbons (HFCs)
- _____ < 1 Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

* It is anticipated that MVHS will need to obtain either a State Facility Air Permit or Registration. Emission estimates for criteria pollutants will be included in the applicable application.

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? Yes No

If Yes:

i. Estimate methane generation in tons/year (metric): ± 1.5 tons/year

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): None anticipated. Methane emissions will be from combustion sources which typically are not equipped with methane controls.

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? Yes No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

Short-term particulate emissions (dust) and equipment exhaust emissions during construction activities. During construction, the contractor will be required to implement mitigation measures to minimize air quality impacts including proper maintenance of vehicles and equipment and implementation (as necessary) of dust suppression measures.

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? Yes No

* A Traffic Impact Study will be conducted.

If Yes: *

i. When is the peak traffic expected (Check all that apply): Morning Evening Weekend
 Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of semi-trailer truck trips/day: To be determined.

iii. Parking spaces: Existing ±630 Proposed ± 2,800 Net increase/decrease ±2,170

iv. Does the proposed action include any shared use parking? Yes No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:
Discontinue portions of Lafayette and Cornelia Streets within the new hospital boundaries.

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? Yes No

vii. Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? Yes No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? Yes No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? Yes No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: _____
 The peak electrical demand load for the project is 4.2 mVA.

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):
National Grid

iii. Will the proposed action require a new, or an upgrade to, an existing substation? Yes No

l. Hours of operation. Answer all items which apply.

<p>i. During Construction:</p> <ul style="list-style-type: none"> • Monday - Friday: <u>10 hours (7 am - 5 pm)</u> • Saturday: <u>10 hours (7 am - 5 pm)</u> • Sunday: <u>If necessary.</u> • Holidays: _____ 	<p>ii. During Operations:</p> <ul style="list-style-type: none"> • Monday - Friday: <u>24 hours</u> • Saturday: <u>24 hours</u> • Sunday: <u>24 hours</u> • Holidays: <u>24 hours</u>
---	---

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? Yes No

If yes:

i. Provide details including sources, time of day and duration:
 Noise during construction will be minimized via standard construction practices. New York State Environmental Conservation Law prohibits heavy duty vehicles, including diesel trucks, from idling for more than five minutes at a time. Sporadic noise in excess of existing ambient levels during operation may be generated by incoming ambulances and helicopter flights.

ii. Will proposed action remove existing natural barriers that could act as a noise barrier or screen? Yes No
 Describe: The MVHS Integrated Health Campus will be constructed in an urban setting proximal to existing buildings and other man-made structures.

n.. Will the proposed action have outdoor lighting? Yes No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:
Outdoor lighting will include signage, lamp posts and building-mounted fixtures in exterior parking areas, walkways and entrances to the hospital, as applicable. Outdoor lighting fixtures will be downward facing to minimize glare and night-sky related light pollution.

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? Yes No
 Describe: _____

o. Does the proposed action have the potential to produce odors for more than one hour per day? Yes No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? Yes No

If Yes:

i. Product(s) to be stored No. 2 Fuel Oil, Diesel

ii. Volume(s) * per unit time * (e.g., month, year) * To be determined.

iii. Generally describe proposed storage facilities: 50,000-gallon double-walled underground storage tank and day tanks for boiler operations, as well as diesel tanks for emergency generators.

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? Yes No

If Yes:

i. Describe proposed treatment(s):
Herbicides and pesticides may be used periodically to mitigate against pests and other nuisance vectors. In addition, water treatment chemicals will be utilized for maintenance of the cooling towers.

ii. Will the proposed action use Integrated Pest Management Practices? Yes No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? Yes No

If Yes: Hospital operations generate a variety of regulated wastes, including solid waste, regulated medical waste, etc.

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: To be determined tons per To be determined (unit of time)
- Operation : ± 100 cy/week (solid waste/recyclables), ± 420 tons/year (RMW)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: To be determined by contractors.
- Operation: Work minimization efforts will be consistent with current operations and applicable State and City requirements.

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: To be determined by contractors.
- Operation: Solid waste and recyclables will be managed in accordance with applicable local, state and federal requirements. Regulated medical waste (RMW) will be hauled by a NYSDEC-permitted RMW transporter from the new hospital to the existing state-permitted autoclave and shredder located at Faxton St. Luke's Healthcare facility prior to ultimate management off-site.

s. Does the proposed action include construction or modification of a solid waste management facility? Yes No

If Yes:

- i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____
- ii. Anticipated rate of disposal/processing:
 - _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
 - _____ Tons/hour, if combustion or thermal treatment
- iii. If landfill, anticipated site life: _____ years

t. Will proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? Yes No

If Yes:

- i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____
Acute and non-acute hazardous wastes. The majority of these waste streams will be pharmaceutical-related.
- ii. Generally describe processes or activities involving hazardous wastes or constituents: _____
Pharmaceutical-related activities.
- iii. Specify amount to be handled or generated ____ * tons/month * < 220 lbs/month of hazardous waste; < 2.2 lbs/month of acute hazardous waste.
Quantity based on conditionally-exempt small quantity generator status.
- iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____
- v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? Yes No

If Yes: provide name and location of facility: _____
MVHS will utilize an NYSDEC-permitted treatment, storage and disposal facilities (TSDFs). Specific facilities have not been selected.

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility: _____

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

- Urban Industrial Commercial Residential (suburban) Rural (non-farm)
- Forest Agriculture Aquatic Other (specify): Institutional, Residential (Urban)

ii. If mix of uses, generally describe: _____

b. Land uses and covertypes on the project site.

Land use or Covertypes	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces			
• Forested			
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)			
• Agricultural (includes active orchards, field, greenhouse etc.)			
• Surface water features (lakes, ponds, streams, rivers, etc.)			
• Wetlands (freshwater or tidal)			
• Non-vegetated (bare rock, earth or fill)			
• Other Describe: <u>Urban land including structures and paved and green areas.</u>	± 25	± 25	± 25

c. Is the project site presently used by members of the community for public recreation? Yes No
 i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? Yes No
 If Yes,
 i. Identify Facilities: The Resource Center for Independent Living is located at 409 Columbia Street, within the project's footprint.
 Approximately 3 licensed day care centers are located within 1500 feet of the proposed project site.
 Source: http://ocfs.ny.gov/main/childcare/ccfs_template.asp.

e. Does the project site contain an existing dam? Yes No
 If Yes:
 i. Dimensions of the dam and impoundment:
 • Dam height: _____ feet
 • Dam length: _____ feet
 • Surface area: _____ acres
 • Volume impounded: _____ gallons OR acre-feet
 ii. Dam's existing hazard classification: _____
 iii. Provide date and summarize results of last inspection: _____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? Yes No
 If Yes:
 i. Has the facility been formally closed? Yes No
 • If yes, cite sources/documentation: _____
 ii. Describe the location of the project site relative to the boundaries of the solid waste management facility: _____
 iii. Describe any development constraints due to the prior solid waste activities: _____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? Yes No
 If Yes:
 i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:
 Hazardous wastes have been generated within the proposed project area and wastes were shipped off-site for disposal. No large quantity generators or hazardous waste treatment, storage, and disposal facilities (TSDFs) were identified on or adjacent to the proposed project area.

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? Yes No
 If Yes:
 i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: Yes No
 Yes – Spills Incidents database Provide DEC ID number(s): One Open Spill (93-03962)
 Yes – Environmental Site Remediation database Provide DEC ID number(s): _____
 Neither database
 ii. If site has been subject of RCRA corrective activities, describe control measures: _____
 iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? Yes No
 If yes, provide DEC ID number(s): B00061 , E633070, B00063 , 633021
 iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):
 Remediation of two of the four sites identified has been deemed to be satisfactorily completed by the NYSDEC. A remedial program is currently underway at Site B00063, which is located approximately 1600 feet northeast of the proposed project area. Site 633021 is a State Superfund Site and is located approximately 1500 feet north of the proposed project area. Groundwater flow at these two sites is to the north.

v. Is the project site subject to an institutional control limiting property uses? Yes No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? Yes No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? _____ > 6 feet

b. Are there bedrock outcroppings on the project site? Yes No
 If Yes, what proportion of the site is comprised of bedrock outcroppings? _____ %

c. Predominant soil type(s) present on project site:

Urban Land	_____	100 %
_____	_____	_____ %
_____	_____	_____ %

d. What is the average depth to the water table on the project site? Average: _____ ± 10 feet

e. Drainage status of project site soils:

<input checked="" type="checkbox"/> Well Drained:	_____	100 % of site
<input type="checkbox"/> Moderately Well Drained:	_____	_____ % of site
<input type="checkbox"/> Poorly Drained	_____	_____ % of site

f. Approximate proportion of proposed action site with slopes:

<input checked="" type="checkbox"/> 0-10%:	_____	100 % of site
<input type="checkbox"/> 10-15%:	_____	_____ % of site
<input type="checkbox"/> 15% or greater:	_____	_____ % of site

g. Are there any unique geologic features on the project site? Yes No
 If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? Yes No

ii. Do any wetlands or other waterbodies adjoin the project site? Yes No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? Yes No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name _____ Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? Yes No
 If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? Yes No

j. Is the project site in the 100 year Floodplain? Yes No

k. Is the project site in the 500 year Floodplain? Yes No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? Yes No
 If Yes:
 i. Name of aquifer: Principal Aquifer _____

m. Identify the predominant wildlife species that occupy or use the project site: _____
 Common species (urban) _____

n. Does the project site contain a designated significant natural community? Yes No
 If Yes:
 i. Describe the habitat/community (composition, function, and basis for designation): _____
 ii. Source(s) of description or evaluation: _____
 iii. Extent of community/habitat:
 • Currently: _____ acres
 • Following completion of project as proposed: _____ acres
 • Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? Yes No
 Several NYS endangered and threatened plants and animals have been identified in Oneida County (<http://www.dec.ny.gov/natureexplorer/app/location/county/results.5>). However, given the urban setting, these species are not anticipated to be encountered.
 Review of the United States Fish and Wildlife (USFWS) Information for Planning and Consultation (IPaC) website (<https://ecos.fws.gov/ipac/>), identified the following threatened species: Northern Long-Eared Bat (NLEB). Tree cutting will be restricted to November 1st - March 31st.

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? Yes No

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? Yes No
 If yes, give a brief description of how the proposed action may affect that use: _____

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? Yes No
 If Yes, provide county plus district name/number: _____

b. Are agricultural lands consisting of highly productive soils present? Yes No
 i. If Yes: acreage(s) on project site? _____
 ii. Source(s) of soil rating(s): _____

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? Yes No
 If Yes:
 i. Nature of the natural landmark: Biological Community Geological Feature
 ii. Provide brief description of landmark, including values behind designation and approximate size/extent: _____

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? Yes No
 If Yes:
 i. CEA name: _____
 ii. Basis for designation: _____
 iii. Designating agency and date: _____

6. Does the project site contain any of the following categories, a building, archaeological site, or district which is listed on, or has been nominated by the NYS Board of Historic Preservation, the National Historic Register, Register of Historic Places?

Yes No

If Yes:

a. Nature of Historic/archaeological resource: Archaeological Site Historic Building or District

b. Name: Corinthian

c. Brief description of site/resource which listing is based on: Remnant of a grand neoclassical structure with a unique goal to a specific architectural impact.

7. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive in archaeological sites of the NY State Historic Preservation Office (SHPO) or Archaeological Site Inventory?

Yes No

8. Have additional archaeological artifacts (shells or bones) been identified on the project site?

Yes No

If Yes:

a. Describe possible resources: Shells of a large shell

b. Brief identification: _____

9. Is the project site within three miles of any officially designated and publicly accessible threat, zone, or local sensitive area?

Yes No

If Yes:

a. Identify resource: City of Utica and City of Oneida type 100 year old NY State Historical Site

b. Nature of, or basis for, designation (e.g., established highway, railroad, state or local park, state historic trail or scenic byway, etc.): State of Education of NY Historical Site

c. Distance between project and resource: Two miles.

10. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program of NYCRR 6009?

Yes No

If Yes:

a. Identify the name of the river and its designation: _____

b. Is the activity consistent with development restrictions contained in NYCRR Part 6009? Yes No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any other impacts which could be associated with your proposal, please describe these in your plan and measures which you propose to avoid or minimize them.

G. Verification

Certify that the information provided is true to the best of my knowledge.

EAF Mapper Summary Report

Wednesday, November 29, 2017 11:00 AM

B.i.i [Coastal or Waterfront Area]	No
B.i.ii [Local Waterfront Revitalization Area]	No
C.2.b. [Special Planning District]	Yes - Digital mapping data are not available for all Special Planning Districts. Refer to EAF Workbook.
C.2.b. [Special Planning District - Name]	NYS Heritage Areas: Mohawk Valley Heritage Corridor
E.1.h [DEC Spills or Remediation Site - Potential Contamination History]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Listed]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Environmental Site Remediation Database]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.iii [Within 2,000' of DEC Remediation Site]	Yes
E.1.h.iii [Within 2,000' of DEC Remediation Site - DEC ID]	B00061 , E633070, B00063 , 633021
E.2.g [Unique Geologic Features]	No
E.2.h.i [Surface Water Features]	No
E.2.h.ii [Surface Water Features]	No
E.2.h.iii [Surface Water Features]	No
E.2.h.v [Impaired Water Bodies]	No
E.2.i. [Floodway]	No
E.2.j. [100 Year Floodplain]	No
E.2.k. [500 Year Floodplain]	No
E.2.l. [Aquifers]	Yes
E.2.l. [Aquifer Names]	Principal Aquifer

E.2.n. [Natural Communities]	No
E.2.o. [Endangered or Threatened Species]	Yes
E.2.p. [Rare Plants or Animals]	No
E.3.a. [Agricultural District]	No
E.3.c. [National Natural Landmark]	No
E.3.d [Critical Environmental Area]	No
E.3.e. [National Register of Historic Places]	Yes - Digital mapping data for archaeological site boundaries are not available. Refer to EAF Workbook.
E.3.e.ii [National Register of Historic Places - Name]	Fort Schuyler Club Building, St. Joseph's Church
E.3.f. [Archeological Sites]	Yes
E.3.i. [Designated River Corridor]	No

**Purpose and Project
Description**

MVHS INTEGRATED HEALTH CAMPUS | PURPOSE AND PROJECT DESCRIPTION (REVISED 3/12/18)

PURPOSE

Faxton St. Luke's Healthcare (FSLH) and St. Elizabeth Medical Center (SEMC) affiliated in 2014 to become the Mohawk Valley Health System (MVHS)¹. MVHS's mission is to provide excellence in healthcare for its communities. Substantial effort has been focused on consolidating existing resources, eliminating redundancies, expanding the depth and breadth of services, improving access and elevating the quality of healthcare services in the region. MVHS has been successful in its efforts thus far, but has been constrained by the age and physical limitations of the existing facilities.

To support goals to deliver higher quality, more effective care with better community outcomes and at a lower cost, the proposed MVHS Integrated Health Campus, will combine services from both existing campuses. The new MVHS integrated health campus and state-of-art hospital will replace SEMC and FSLH, reduce the number of beds in the community, and consolidate patient services to one campus.

The decision to consolidate the two inpatient campuses to a single facility was spurred by several key factors:

- The desire and need to build a facility with the newest technology, services and advancements in patient safety and quality so that our community can receive the most up-to-date healthcare services that rivals those found in large cities.
- The growing demand for healthcare due to the rapidly increasing and aging population in this region.
- The increasing need to improve accessibility and availability by attracting specialists and providing services that otherwise would not be available to our community.
- The opportunity to gain greater operational efficiencies through the elimination of duplicative and redundant functions will help to reduce the rate of increase in healthcare spending and to achieve improved financial stability.

PROJECT DESCRIPTION

As depicted on Figure 1 (Site Location Map), the MVHS Integrated Health Campus will generally be bounded by Oriskany Boulevard (NYS Route 69) to the north, Broadway on the east, Columbia Street, and NYS Route 8 to the west and City Hall and Kennedy Apartments to the south. The MVHS Integrated Health Campus will encompass approximately 25-acres and will include the following elements:

- Hospital Building
- Central Utility Plant
- Parking facilities (including one parking garage)
- Potential future Medical Office Building (by private developer)
- Campus grounds
- Helistop

¹ Mohawk Valley Health System is the Sole Corporate Member of Faxton-St. Luke's Healthcare, St. Elizabeth Medical Center, St. Luke's Home Residential Health Care Facility, Senior Network Health, LLC, Visiting Nurse Association of Utica and Oneida County, Inc., and Mohawk Valley Home Care, LLC. Together, the system is governed by one Board of Directors. As referenced in its certificate of need application for construction of the new hospital, MVHS plans to apply for a certificate of need from the Department of Health pursuant to Article 28 of the Public Health Law pursuant to which it also would be the sole operator of the new integrated hospital campus.

MVHS INTEGRATED HEALTH CAMPUS | PURPOSE AND PROJECT DESCRIPTION (REVISED 3/12/18)

In addition, the project includes the acquisition of the 25+/- acres of property in an area of the City that is designated as a Federal “Historically Underutilized Business” (HUB) Zone, a distressed area and a NYSDEC-designated “potential environmental justice area.” While most of the property is likely to be acquired through voluntary negotiation, it is likely that some property may need to be acquired via eminent domain. Many of the existing property owners and business will be forced to relocate to other parts of the City or County. The magnitude of the acquisition of 25+/- acres will be large, but most impacts are expected to be beneficial because it will better position the hospital to serve the largest and most diverse population in Oneida County, as well as creating the potential for secondary economic development opportunities.

It should also be noted that modifications to existing utility infrastructure will be necessary to accommodate the proposed MVHS Integrated Health Campus. A description of the project elements noted above, as well as utility modifications, is provided below. This description represents the project as currently envisioned.

HOSPITAL BUILDING

The proposed ±670,000 square foot (sf) hospital building will be constructed on parcels located west of Broadway and will extend through Cornelia Street onto parcels located east of State Street. The hospital building consists of a 2-story podium and a 7-story bed tower.

The main entrance to the hospital will be located south of Lafayette Street, proximal to Cornelia Street. In addition to the main entrance, Emergency Department (ED) walk-in and ED ambulance entrances will be located on the western portion of the hospital. Vehicular and pedestrian entries will be marked by canopy systems that provide adequate coverage for public drop off, ED walk-in and loading activities. Ambulance traffic will be provided with a sally port adjoined to the podium.

A service entrance will be located on the eastern portion of the hospital building, which will be accessible via Columbia Street.

Most services currently provided at the FSLH and SEMC will be transitioned to the MVHS Integrated Health Campus including ±373 inpatient beds.

CENTRAL UTILITY PLANT

A three-story Central Utility Plant (CUP) will service the hospital. The CUP will adjoin the eastern portion of the podium of the hospital building.

The CUP will house three centrifugal chillers, a heat recovery chiller and four steam and eight hot water heating condensing boilers, each which will be fueled by both natural gas and No. 2 Fuel oil. A 50,000-gallon underground storage tank (UST) used to store the No. 2 fuel oil will be installed south of the CUP in the service yard. A 30,000-gallon aboveground storage tank (AST) used to store emergency water for fire protection will also be located in the service yard.

PARKING FACILITIES

Parking facilities will consist of a three-story parking garage and multiple parking lots. The parking garage will provide approximately 1500 parking spaces and the parking lots will allow for an additional ± 1300 parking spaces. These parking facilities will be available for use by patients, visitors, staff, and volunteers, as well as the community for non-hospital related events.

POTENTIAL FUTURE MEDICAL OFFICE BUILDING

A future medical office building is proposed. It is anticipated that the medical office building would be owned and operated by a private developer. The proposed location of the medical office building is south of Columbia Street and east of Cornelia Street.

MVHS INTEGRATED HEALTH CAMPUS | PURPOSE AND PROJECT DESCRIPTION (REVISED 3/12/18)

CAMPUS GROUNDS

The campus will be designed as an urban park with enhanced lighting, trees, pedestrian walkways and seating areas. A pedestrian walkway will replace a portion of Lafayette Street. This walkway will extend from the main entrance to the west, terminating just adjacent to the North-South Arterial Highway. An additional segment of the walkway will provide access to the ED entrance. Outdoor areas will include gardens and other design considerations to create a healing environment.

HELISTOP

A helistop (*i.e.*, a minimally developed helicopter facility for boarding and discharging passengers or cargo, without the support facilities found at a heliport) will be situated to the west of the hospital building, adjacent to the ED ambulance entrance and north of Columbia Street.

UTILITY INFRASTRUCTURE

Based on a preliminary review of existing utilities, modifications to the existing infrastructure in the project area are anticipated. A summary of the anticipated modifications is provided below.

Sanitary Sewers

It is expected that the existing sanitary sewer line in Cornelia Street between Columbia and Lafayette Streets, in Lafayette Street between Cornelia and State Streets will be abandoned/removed. A new sewer line on Columbia Street will be constructed from Cornelia Street to the 48" trunk sewer on State Street. A new sewer line would be constructed to divert upstream flow from the south on Cornelia Street to the sewer on Broadway. Other potential new sewer lines may be needed in Lafayette Street on the north side of the hospital. The location and size of sanitary laterals and connections will depend on the plumbing/mechanical design of the new hospital buildings. It is assumed each new structure will have its own service lateral(s) connecting to the City mains.

Storm Sewers

The buildings and paved impervious surface areas of the MVHS Integrated Health Campus may be minimized or reduced using "Green Infrastructure" design features such as pervious pavement/pavers, planting beds, and subsurface rainwater detention.

It is expected that the existing storm sewer lines in Cornelia Street between Columbia and Lafayette Streets will be abandoned/removed. Removal of portions of storm sewer lines may also be required on Street and Lafayette Street between Cornelia and State Streets. New storm sewer piping will be installed on State Street and connect to the existing NYSDOT storm sewer line on the north side of Oriskany Street West/Route 5S west of the Aud. New branch lines will tie-in catch basins on the west end of Columbia Street. Flow from the east side of the campus and upstream flow from Broadway will be conveyed through existing storm sewers in Cornelia Street north of Lafayette, Lafayette Street east of Cornelia, and Broadway.

Water Mains

Water mains located on portions of Lafayette Street may need to be removed/abandoned, as would other smaller mains within the new building footprint. Where new supply mains are required, the older mains would be replaced. Fire hydrants will be located along the public streets with no private hydrants required. Each building will be provided with its own backflow prevention device depending on the requirements.

Water mains to be replaced or installed include: 1) a 6" main on State Street that will be replaced with a larger diameter pipe; 2) a 6" and 8" main on Broadway that will be replaced with a larger diameter pipe connecting large mains on Columbia to Whitesboro Street; and 3) 1030 LF of piping along Oriskany Street East.

DISPOSITION AND REDEVELOPMENT OF EXISTING HOSPITAL CAMPUSES

With the exception of certain ancillary facilities, MVHS's objective is to facilitate redevelopment of the existing FSLH and SEMC campuses consistent with the Town of New Hartford's and the City of Utica's long term

MVHS INTEGRATED HEALTH CAMPUS | PURPOSE AND PROJECT DESCRIPTION (REVISED 3/12/18)

development plans and capable of making an economically positive contribution to each community. In support of this objective, MVHS will be conducting an evaluation of the properties and potential redevelopment opportunities concurrent with planning for the proposed hospital. In addition to the disposition and redevelopment of the primary facilities, existing ancillary facilities will also be reused. A description of the anticipated continued use of portions of the existing campuses is provided below.

FSLH

Most of the inpatient and outpatient services performed at the existing FSLH site will be transitioned to the MVHS Integrated Health Campus; however, it is anticipated that ±24 physical medical and rehabilitation beds will remain and some outpatient services may be performed at this site. Unused medical supplies and certain medical equipment will be brought to the MVHS Integrated Health Campus. Medical equipment that is beyond its useful life will be disposed of in accordance with applicable federal and state regulations.

SEMC

The SEMC site will be converted into an outpatient extension clinic. Services provided at the clinic will include sleep center services, cardiac and thoracic surgery-related offices, primary care services and a laboratory patient service center. Unused medical supplies and certain medical equipment will be brought to the MVHS Integrated Health Campus. Medical equipment that is beyond its useful life will be disposed of in accordance with applicable federal and state regulations.

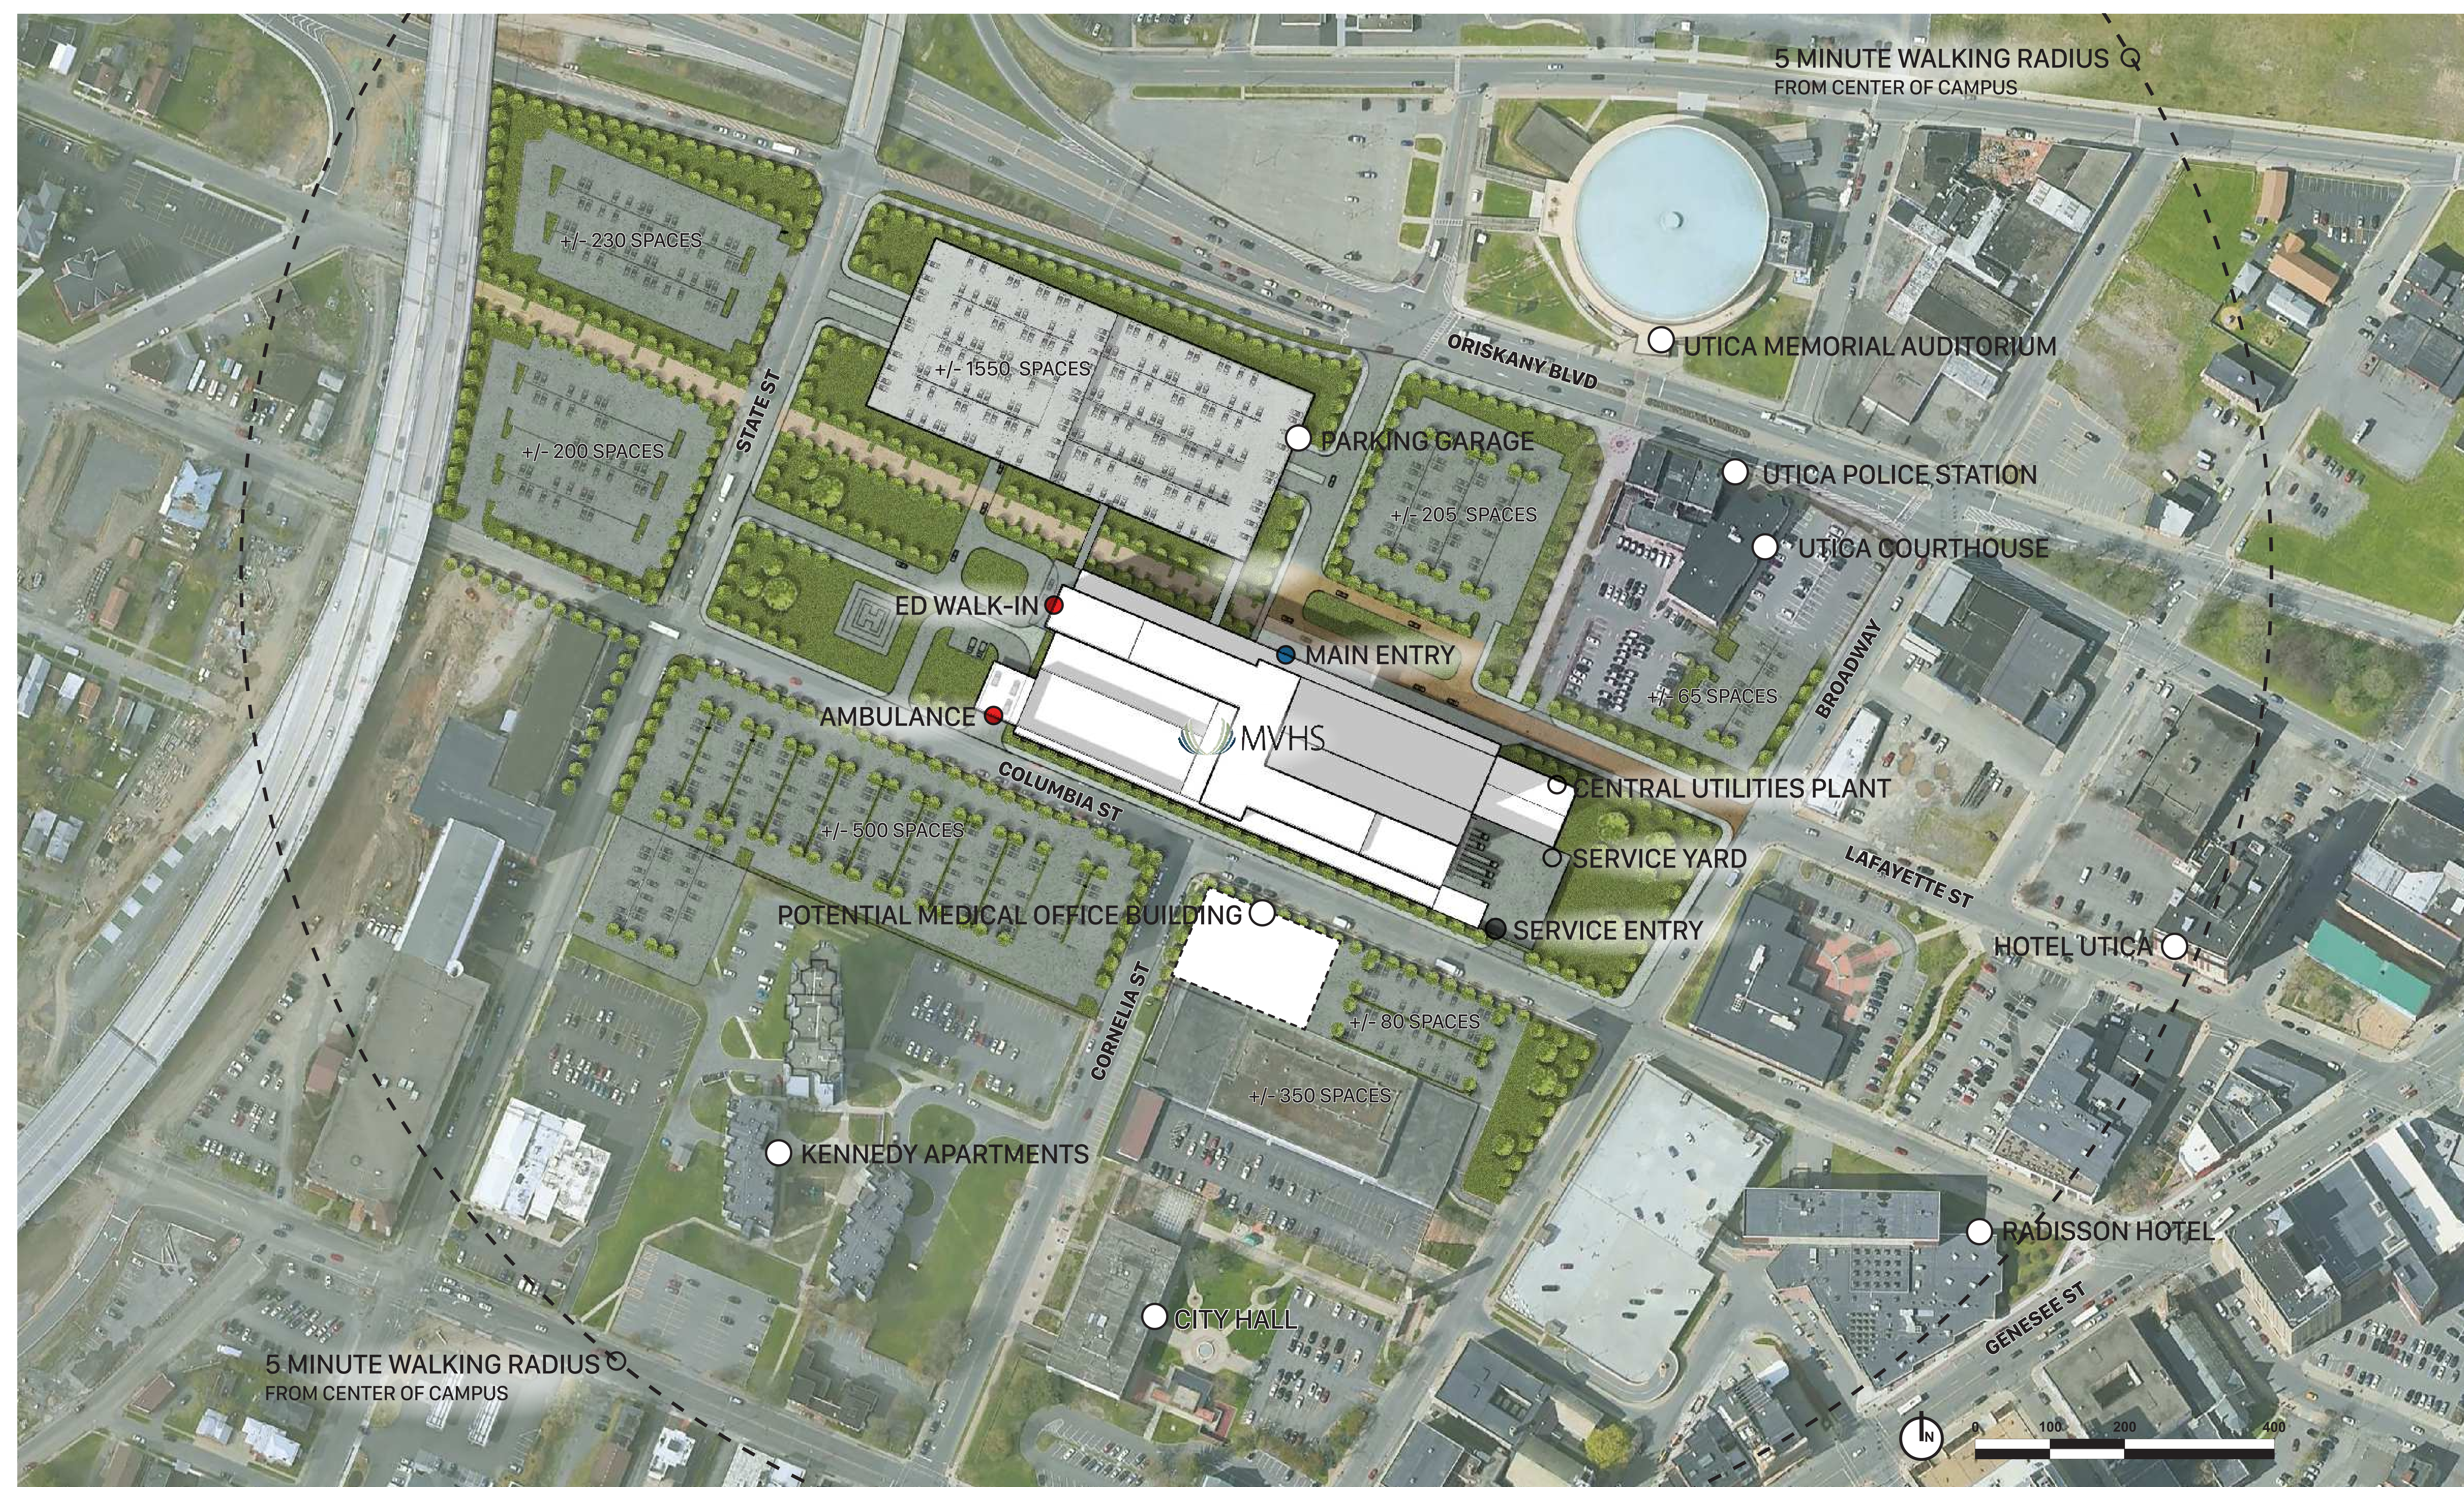

Note: Red font indicates revisions incorporated in April 2018.

Fast Environmental Assessment Form
Part 2 - Identification of Potential Project Impacts

Project No. (Project Ref)	1445
Date	06-07-14

Part 2 is to be completed by the lead agency. Part 2 is designed to assist the lead agency in making an initial assessment of potential impacts that could be affected by a proposed project or action. We expect that the lead agency's assessment will not necessarily be a detailed professional assessment as may be assigned to a specialist through the usual process of procuring a series of specialist services to be used in carrying out the detailed work in Part 3. To further assist the lead agency in completing Part 2, the Form identifies the most relevant questions that will provide the information required to answer the Part 2 questions. When Part 2 is completed, the lead agency will have identified the relevant environmental areas that may be impacted by the proposed activity.

If the lead agency is a state agency and the action is in any of the categories, complete the Form - Assessment Results in a proceeding with the assessment.

Tips for completing Part 2:

- Answer all of the questions provided in Part 2.
- Explain any repetitive impacts by providing details on the initial EA Worksheet.
- Answer each of the 15 questions in Part 2.
- If you answer "Yes" to a numbered question, provide complete answers to the questions that follow in the column.
- If you answer "No" to a numbered question, provide a brief, quantified response.
- Check appropriate comment indicators for the qualitative size of the impact.
- Project proper for visual impacts: if a field is identified in a raster should be used in the reviewing agency assessing the field. Indicate a large impact, if you wish.
- The number of trees expected to be removed in environmental analysis.
- If you are not sure of an individual item, the size of an impact, it may help to review the instructions for the general program or contact the reviewer.
- When answering a question, provide a comparison of the proposed activity with the existing activity.
- Consider the possibility for long-term and cumulative impacts as well as other impacts.
- Answer the questions in a readable manner, considering the user's perspective of the project.

1. Impact on Land		<input type="checkbox"/> NO	<input checked="" type="checkbox"/> YES
Proposed action may include an excavation or physical alteration of the land surface of the proposed site. (See Part 1 D-F)			
Is there a potential for erosion or sedimentation? (See Section 2)			
	Behavior Part I Questions:	Major and/or Impact not sure	Moderate to Large Impact may occur
1. The proposed action may involve excavation or land above depth to water table 2 feet or more.	E3a	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. The proposed action may involve construction of slopes of 15% or greater.	E3b	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3. The proposed action may involve excavation of land above bedrock or exposure of ground within 5 feet of existing ground surface.	E3c	<input checked="" type="checkbox"/>	<input type="checkbox"/>
4. The proposed action may involve the excavation of a wetland area or alteration of natural drainage.	D2a	<input type="checkbox"/>	<input checked="" type="checkbox"/>
5. The proposed action may involve construction that continues for more than one year in a high water year.	D-2	<input type="checkbox"/>	<input checked="" type="checkbox"/>
6. The proposed action may involve construction of a fill or other proposed construction or vegetation removal (including the removal of trees) by the project.	D2A-D2C	<input type="checkbox"/>	<input checked="" type="checkbox"/>
7. The proposed action may involve a building within 50 feet of a coastal area or beyond area.	R1	<input checked="" type="checkbox"/>	<input type="checkbox"/>
8. Other impacts:		<input type="checkbox"/>	<input type="checkbox"/>

2. Impacts on Geological Features

The proposed action may result in the modification or destruction of historic resources, including, but not limited to, historic or prehistoric geologic sites, minerals, fossils, or caves. (See Part 1, Subpart 1 of 19 NYCRR 202.01 and 202.02.)

NO

YES

	Relevant Part I Question(s)	No or small impact may occur	Moderate to large impact may occur
a. Directly or indirectly lead to a substantial	D3g	<input type="checkbox"/>	<input type="checkbox"/>
b. The proposed action may affect or be regulated by geologic features listed as a regional National Natural Landmark or State Historic Site.	D3h	<input type="checkbox"/>	<input type="checkbox"/>
c. Other impacts:		<input type="checkbox"/>	<input type="checkbox"/>

3. Impacts on Surface Water

The proposed action may affect one or more wetlands or other surface water bodies, including streams, rivers, ponds or lakes. (See Part 1, Subpart 1 of 19 NYCRR 202.01 and 202.02.)

NO

YES

	Relevant Part I Question(s)	No or small impact may occur	Moderate to large impact may occur
a. The proposed action may create a new water body.	D3b, D3c	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. The proposed action may result in an increase or decrease of over 100 square feet or 10 cubic feet of water in any surface water body or wetland.	D3b	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. The proposed action may involve dredging more than 100 cubic yards of material from a wetland or water body.	D3c	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. The proposed action may involve any other activity within a wetland or water body.	D3b	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. The proposed action may result in filling an individual, or any other riparian wetland, sufficient to discharging stormwater.	D3d, D3e	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f. The proposed action may include construction of one or more accessways, without wetland or water body, to a wetland.	D3e	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g. The proposed action may include construction of one or more canals or structures of waterways to a water body.	D3f	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h. The proposed action may cause soil erosion or otherwise create a source of stormwater discharge that may lead to siltation or other degradation of receiving water bodies.	D3g	<input type="checkbox"/>	<input checked="" type="checkbox"/>
i. The proposed action may cause the construction of any water bodies within a downstream of the site of the proposed action.	D3f	<input type="checkbox"/>	<input checked="" type="checkbox"/>
j. The proposed action may involve the prohibition of pollutants or herbicides from entering any water body.	D3g, D3h	<input checked="" type="checkbox"/>	<input type="checkbox"/>
k. The proposed action may require the construction or reconstruction of existing waterways, including canals.	D3d, D3e	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Other inputs: _____

4. Impact on groundwater NO YES

The proposed action may result in new or additional use of ground water, or may have the potential to introduce contaminants to a groundwater supply (See Part I, D2a, D2b, D2c, D2d, D2e, D2f, D2g, D2h, D2i.)

If "Yes", answer questions a-f. If "No", answer only Question 5.

	Relevant Part I Questions	No, or small impact may occur	Moderate to large impact may occur
a) The proposed action may require new water supply wells, or modification to existing or supplied from existing water supply wells	D2a	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Water supply demand from the proposed action may exceed safe and sustainable withdrawal capacity rate of an local supply or aquifer (See D2a-f)	D2b	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) The proposed action may otherwise result in physical use of water without demand being satisfied.	D2c, D2d	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) The proposed action may include or require wastewater discharge to groundwater	D2e, D2f	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) The proposed action may result in the construction of water supply wells in locations where groundwater is not a source or is not contaminated	D2g, F1, E2g, E1i	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) The proposed action may require the bulk storage of petroleum or industrial products near a water source or aquifer	D2h, E2	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) The proposed action may involve the accumulation, application or disturbance of fuel oil and petroleum products, or other petroleum products	E2i, E2j, E2k, E2l	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Other inputs: _____		<input type="checkbox"/>	<input type="checkbox"/>

5. Impact on Flooding NO YES

The proposed action may result in development of lands subject to flooding. (See Part I, E2a.)

If "Yes", answer questions a-g. If "No", answer only Question 5.

	Relevant Part I Questions	No, or small impact may occur	Moderate to large impact may occur
a) The proposed action may result in development in a designated flood zone	E2a	<input type="checkbox"/>	<input type="checkbox"/>
b) The proposed action may result in development within a 100-year flood plain	E2b	<input type="checkbox"/>	<input type="checkbox"/>
c) The proposed action may result in development within a 500-year flood plain	E2c	<input type="checkbox"/>	<input type="checkbox"/>
d) The proposed action may result in a decrease, and location, of existing drainage patterns	E2d, E2e	<input type="checkbox"/>	<input type="checkbox"/>
e) The proposed action may change flood water flows that contribute to flooding	E2f, E2g, E2h, E2k	<input type="checkbox"/>	<input type="checkbox"/>
f) Floods may be increased or the risk to the proposed action to be built is made higher or greater	E2i	<input type="checkbox"/>	<input type="checkbox"/>

3. Other impacts: _____	<input type="checkbox"/> NO	<input type="checkbox"/> YES	
4. Impact on Air The proposed action may include a state regulated air emission source (See Part 1, E.2.7, E.2.8, E.2.9, E.2.10)	<input type="checkbox"/> NO	<input checked="" type="checkbox"/> YES	
5. Impact on Air Quality Will the proposed action result in any of the following conditions?	Relevant Part 1 Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action requires federal or state air quality permits, the action may exceed the following ambient air quality standards for the following levels: <ul style="list-style-type: none"> i. More than 105 micrograms of carbon dioxide (CO₂) ii. More than 15 micrograms per cubic meter (µg/m³) iii. More than 100 micrograms per cubic meter of carbon monoxide (CO) iv. More than 242 micrograms of sulfur dioxide (SO₂) v. More than 143 micrograms of ozone or its equivalent (by both methods) or more than 100 micrograms per cubic meter of nitric oxide vi. 48 micrograms per cubic meter of methane 	E1a, E1b, E1c, E1d, E1e, E1f	<input type="checkbox"/> NO <input checked="" type="checkbox"/> YES	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
b. The proposed action requires a 15-year or more of air quality monitoring data to be collected.	E1g	<input checked="" type="checkbox"/> YES	<input type="checkbox"/> NO
c. The proposed action may result in a significant amount of any pollutant or other emissions of air contaminants that may exceed the applicable air quality standard, or may require a permit to discharge any pollutant.	E1a, E1g	<input type="checkbox"/> NO	<input checked="" type="checkbox"/> YES
d. The proposed action may result in a significant amount of any pollutant.	E1b	<input type="checkbox"/> NO	<input checked="" type="checkbox"/> YES
e. The proposed action may result in the combustion of a fossil fuel source of more than 1,000,000 Btu per year.	E1c	<input checked="" type="checkbox"/> YES	<input type="checkbox"/> NO
f. Other reports: _____	<input type="checkbox"/> NO	<input type="checkbox"/> YES	

7. Impact on Plants and Animals The proposed action may result in a loss of Taxon Puma (See Part 1, E.3.1, req.)	<input checked="" type="checkbox"/> NO	<input type="checkbox"/> YES	
8. Impact on Plants and Animals Will the proposed action result in any of the following conditions?	Relevant Part 1 Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may cause a net population decline of individuals of any species listed as endangered species, as listed by New York State or the Federal Government, that may result in a net loss of individuals.	E1a	<input type="checkbox"/> NO	<input type="checkbox"/> YES
b. The proposed action may result in a reduction or degradation of any habitat used by any one of the listed or endangered species, as listed by New York State or the Federal Government.	E2	<input type="checkbox"/> NO	<input type="checkbox"/> YES
c. The proposed action may cause a reduction in population of two or more individuals of any species of special concern as designated by New York State or the Federal Government, that may result in a net loss of individuals.	E1b	<input type="checkbox"/> NO	<input type="checkbox"/> YES
d. The proposed action may result in a reduction or degradation of any habitat used by one species of special concern as designated by New York State or the Federal Government.	E2	<input type="checkbox"/> NO	<input type="checkbox"/> YES

<p>7. The proposed action may result in a loss of capacity of a regulated "Wild and Natural Landmark Resource." The following information was established to protect:</p>	E14	0	0
<p>8. The proposed action may result in a loss of a regulated "Wild and Natural Landmark Resource" of a designated significant natural resource.</p>	E21	0	0
<p>9. The proposed action may substantially interfere with the riparianity, including the wetlands, tributary habitat and riparian habitat, located along, across or near the project site.</p>	E16	0	0
<p>10. The proposed action results in the same or a new form of erosion of forest, grassland or any other regulated or locally significant habitat, biological or non-biological resource.</p>	E18	0	0
<p>11. Population (management), individual, local and projects only consideration of habitat is possible.</p>	E24	0	
<p>12. Other impacts:</p>		0	

<p>5. Impacts on Agricultural Resources The proposed action may impact agricultural resources. (See Part I, 6.1.1.1 and 6.1.1.2 of the "Yes" question answers a - k of Yes, listed as to Section 9.)</p>		<input checked="" type="checkbox"/> NO	<input type="checkbox"/> YES
<p>a. The proposed action may impact on classified wetlands through 4 of the NY State Classification System.</p>	Relevant Part I (Questions)	Yes or small impact may occur	Moderate to large impact may occur
<p>b. The proposed action may result in a loss of a regulated agricultural land (irrigable cropland, meadows, pasture, silvopasture, forestland).</p>	E10, E11	0	0
<p>c. The proposed action may result in a loss of a wetland conversion of forested wetland to agricultural land.</p>	E16	0	0
<p>d. The proposed action may result in a loss of agricultural land to non-agricultural uses, either more than 2.5 acres if located in an Agriculture District, or more than 10 acres if not within an Agriculture District.</p>	E18, E19	0	
<p>e. The proposed action may develop or present the loss of an agricultural and nonagricultural system.</p>	E1, E10	0	0
<p>f. The proposed action may result in a loss of a regulated agricultural land (irrigable cropland, meadows, pasture).</p>	E26, E27, E28, E29	0	0
<p>g. The proposed action is not consistent with the various municipal Farmland Protection Plans.</p>	E25	0	0
<p>h. Other impacts:</p>		0	0

9. Impact on Aesthetic Resources		<input checked="" type="checkbox"/> NO	<input type="checkbox"/> YES	
Will the use of the proposed action are obviously different from those in the surrounding area and that use of such features the proposed development is similar to existing resources. (Part 1, 4, Part 12, 13, 15, 16, 17) * Part 12 - 2006/01/2008 and 2008/07/2007, 2007/02/2008, 2007/02/2008		Relevant Part 1 Question(s)	No, or small impact may occur	Moderate to large impact may occur
a.	The proposed action may be visible from any publicly designated road, street or local water or public utility network.	E18	<input type="checkbox"/>	<input type="checkbox"/>
b.	The proposed action may be visible from a street or other public or private way, or from any other publicly designated water course.	E19, E20	<input type="checkbox"/>	<input type="checkbox"/>
c.	The proposed action may be visible from publicly accessible waterways (canals, rivers, streams, etc.), covered by surface water, but not from any other waterways. i. Yes, water ii. No, water	E21	<input type="checkbox"/>	<input type="checkbox"/>
d.	The studies or actions which should occur are engaged when reviewing the proposed solution: i. Heritage review by residents, including local historical societies ii. Historical or archaeological surveys	E22 E23 E24	<input type="checkbox"/>	<input type="checkbox"/>
e.	The proposed action may cause a diminished level of the public enjoyment and appreciation of the designated scenery resource.	E25	<input type="checkbox"/>	<input type="checkbox"/>
f.	Has a similar proposal been within the following distances of the proposed parcel: 0-25 mtrs 26-50 mtrs 51-100 mtrs 200+ mtrs	E26, E27, E28, E29	<input type="checkbox"/>	<input type="checkbox"/>
g.	Other impacts:		<input type="checkbox"/>	<input type="checkbox"/>

10. Impact on Historic and Archaeological Resources		<input type="checkbox"/> NO	<input checked="" type="checkbox"/> YES	
Will the proposed action have a direct or indirect impact on historic or archaeological resources. (Part 1, 7, 13, 14, 16, 17) * Part 12 - 2006/01/2008 and 2008/07/2007, 2007/02/2008, 2007/02/2008		Relevant Part 1 Question(s)	No, or small impact may occur	Moderate to large impact may occur
a.	The proposed action may occur wholly or partially within, or substantially adjacent to, any buildings or archaeological sites of which a listing or listing has been given by the NYSH Board of Historic Preservation for individual or the State or National Historic Historic Place.	E30	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b.	The proposed action may occur wholly or partially within, or substantially adjacent to, any archaeological sites listed for individual or the NY State Historic Preservation Office (SHPO) archaeological site inventory.	E31	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c.	The proposed action may occur wholly or partially within, or substantially adjacent to, any archaeological sites included on the NY SHPO inventory. Source:	E32	<input checked="" type="checkbox"/>	<input type="checkbox"/>

4. Other impacts

No Yes

If any of the above has been answered 'Yes' or 'May be large impact may occur', please continue with the following questions on the separate sheets as set out in Part 3B

- i. The proposed action may result in the destruction or alteration of all or part of the site's topography.
- ii. The proposed action may result in the destruction of the property's setting or integrity.
- iii. The proposed action may result in the introduction of visual elements which are out of character with the site or the property or its historic setting.

13a, 13b, 13c, 13d	<input type="checkbox"/>	<input checked="" type="checkbox"/>
13a, 13b, 13c, 13d, 13e	<input type="checkbox"/>	<input checked="" type="checkbox"/>
13a, 13b, 13c, 13d, 13e, 13f	<input type="checkbox"/>	<input checked="" type="checkbox"/>

11. Impact on Open Space and Recreation

The proposed action may result in a loss of recreational opportunities or a deterioration of open space or a similar, as defined in the final adopted municipal open space plan.

No Yes

(See Part 3, 3.2.2, Table E.2.3.1)

If 'Yes', answer questions a-e in Part 3B, Section 12

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may result in the impairment of natural functions, such as ecosystem services, provided by natural resources, including, but not limited to, air resource storage, carbon cycling, and fire hazard.	12a, 12b, 12c, 12d, 12e, 12f, 12g, 12h, 12i	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b. The proposed action may result in the loss of natural or cultural historical resources.	12a, 12c, 12d, 12e	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c. The proposed action may eliminate or reduce natural resource availability at a site with fish and wildlife.	12a, 12c, 12d, 12e	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d. The proposed action may result in loss of an area used primarily by the community as an open space (see 10.1.1.1)	12a, 12c	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e. Other impacts		<input type="checkbox"/>	<input type="checkbox"/>

12. Impact on Critical Environmental Areas

The proposed action may be located within or adjacent to a critical environmental area (CEA). (See Part 1, E.3.4)

No Yes

If 'Yes', answer questions a-e in Part 3B, Section 13

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may result in a reduction in the quality of the resource or element(s) which was the basis for designation of the CEA.	13a	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b. The proposed action may result in a reduction in the quality of the resource or element(s) which was the basis for designation of the CEA.	13b	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c. Other impacts		<input type="checkbox"/>	<input type="checkbox"/>

15. Impact on Transportation

The proposed action may result in a change to existing transportation conditions. NO YES
 (See Part I, D.2.g.)

For Part I, answer questions a - d of 15a) go to Section 16.

	Relevant Part I Question(s)	No. or small impact may occur	Moderate to large impact may occur
a. The proposed action may result in a change to existing traffic patterns.	D5j	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b. The proposed action may result in the loss of local parking or other related uses.	D5j	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c. The proposed action will eliminate existing transit access.	D2j	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. The proposed action will impede or limit pedestrian or bicycle access to transit.	D2i	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. The proposed action will affect the normal pattern of movement of people or goods.	D2i	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f. Other impacts: _____		<input type="checkbox"/>	<input type="checkbox"/>

16. Impact on Energy

The proposed action may cause an increase in the use of any form of energy. NO YES
 (See Part I, D.2.g.)

For Part I, answer questions a - d of 16a) go to Section 16.

	Relevant Part I Question(s)	No. or small impact may occur	Moderate to large impact may occur
a. The proposed action will require a use of energy that exceeds a regulatory standard.	D4f	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b. The proposed action will require a use of energy that exceeds a regulatory standard, or a use of energy that exceeds more than 50 kilowatt-hours per family residential unit or a similar other residential use.	D4f, D4g, D4h	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. The proposed action will require a use of energy that exceeds a regulatory standard.	D4k	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d. The proposed action will require a use of energy that exceeds a regulatory standard of a building that is not a residential building.	D4k	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e. Other impacts: _____		<input type="checkbox"/>	<input type="checkbox"/>

17. Impact on Noise, Odor, and Light

The proposed action may result in an increase in noise, odor, or other lighting. NO YES
 (See Part I, D.2.h, i, and j.)

For Part I, answer questions a - c of 17a) go to Section 16.

	Relevant Part I Question(s)	No. or small impact may occur	Moderate to large impact may occur
a. The proposed action may produce sound above noise levels established by local regulations.	D6a	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b. The proposed action may result in lighting that is not needed for any particular activity, which, if used, may be distracting or annoying to the public.	D6b, E13	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. The proposed action may result in lighting that is not needed for any particular activity.	D6b	<input checked="" type="checkbox"/>	<input type="checkbox"/>

4. The proposed action may result in significant environmental odour nuisance.	DO	<input type="checkbox"/>	<input checked="" type="checkbox"/>
5. The proposed action may result in fish killing or other harm to aquatic life due to the discharge of effluents.	DO, DO2	<input type="checkbox"/>	<input checked="" type="checkbox"/>
6. Other impacts:		<input type="checkbox"/>	<input type="checkbox"/>

10. Impact on Human Health

The proposed action may have impact on human health. For exposure to new or existing sources of contaminants (See Part 10. The question 1, 2, 3, and 4):

NO YES

	Relevant Part 1 Question(s)	None or small impact may occur	Moderate to large impact may occur
1. The proposed action results within 1000 feet of a school, hospital, nursing home, or residential community.	E11	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2. The site of the proposed action is in a residential area.	E12, E16	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3. There is a residential area nearby and the proposed action may result in a change in the quality of the air.	E12, E16	<input type="checkbox"/>	<input checked="" type="checkbox"/>
4. The result of the action is objectionable or undervalued building for the purpose of the project (e.g., increased dust or odour).	E12, E16	<input checked="" type="checkbox"/>	<input type="checkbox"/>
5. The proposed action may affect the natural, cultural, historical, or scientific resources of the area that are of significant importance to the community.	F12, F14	<input checked="" type="checkbox"/>	<input type="checkbox"/>
6. The proposed action may require control measures in place to ensure that there is no generation, treatment and/or disposal of hazardous wastes with the potential of human health.	D3	<input type="checkbox"/>	<input checked="" type="checkbox"/>
7. The proposed action may require construction or modification of solid waste management facility.	D6, D11	<input checked="" type="checkbox"/>	<input type="checkbox"/>
8. The proposed action may result in the handling of solid or hazardous waste.	D11, D17	<input type="checkbox"/>	<input checked="" type="checkbox"/>
9. The proposed action may result in an increase in the rate of disposal, or processing, of solid waste.	D16, D20	<input type="checkbox"/>	<input checked="" type="checkbox"/>
10. The proposed action may result in a violation of other state laws within 100 feet of a waterway by the discharge of effluents or materials.	E13, E14, E16	<input checked="" type="checkbox"/>	<input type="checkbox"/>
11. The proposed action may result in the generation of hazardous waste that is not filled, stored, or managed as required.	E15, E17	<input checked="" type="checkbox"/>	<input type="checkbox"/>
12. The proposed action may result in the release of contaminants from the site to adjacent areas.	D18, D19, D21	<input checked="" type="checkbox"/>	<input type="checkbox"/>
13. Other impacts:		<input type="checkbox"/>	<input type="checkbox"/>

17. Consistency with Community Plans

The proposed action is in compliance with adopted land use plans (See Part I, C, 201.2, D, 2.1, 2.2)
 If "Yes," attach a copy of the plan(s) to which the project is in compliance.

NO YES

	Relevant Part I Question(s)	Yes or small impact may occur	Moderate to large impact may occur
a. The proposed action and use are consistent with the different maps of land use controls (i.e., general, municipal and neighborhood)	C1, C2, D1 & E1, E 1-4	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b. The proposed action will cause the substantial degradation of an agricultural village in which the project is located or proposed to be located.	C1	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. The proposed action is inconsistent with local, state or federal zoning regulations.	C3, C2, C3	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. The proposed action is inconsistent with any county plans or other regional and state plans.	C2, C3	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. The proposed action may cause changes in the density or character of the land supported by existing infrastructure (i.e., water, sewer, electric, gas, etc.).	C3, D1, D2, D3, D4	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f. The proposed action is located in an area characterized by low density development that will require new or expanded public infrastructure.	D2, D3, D4	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g. The proposed action may induce secondary development impacts (e.g., residential or commercial development) not included in the proposed action.	D5	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h. Other:		<input type="checkbox"/>	<input type="checkbox"/>

18. Consistency with Community Character

The proposed project is in compliance with the existing community character (See Part I, C, 201.2, D, 2.1, 2.2)
 If "Yes," attach a copy of the plan(s) to which the project is in compliance.

NO YES

	Relevant Part I Question(s)	Yes or small impact may occur	Moderate to large impact may occur
a. The proposed action may reflect or eliminate existing features, structures, or uses of historic importance to the community.	E3, E1, E2	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b. The proposed action may create a barrier for public and community services (e.g., schools, police, fire).	C1	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. The proposed action may degrade a historic or historic-looking area (i.e., village, farm, or other agricultural history).	C1, C2, D1, D2, E 1-4	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. The proposed action may conflict with the use or enjoyment of publicly recognized or designated cultural resources.	C2, E3	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. The proposed action is inconsistent with the preservation and historical character of the area.	C2, C3	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f. Proposed action is inconsistent with the maintenance of existing natural landscape.	C2, C3, E1, E2, E3, E4	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g. Other:		<input type="checkbox"/>	<input type="checkbox"/>

Final Environmental Assessment Form
Part 5 - Evaluation of the Magnitude and Importance of Project Impacts
and
Determination of Significance

Part 5 assesses the results of the assessment of the environmental impacts of the proposed project against the criteria set out in Part 4. It also assesses the project against the criteria set out in the identified assessment criteria. It is used to determine the project's contribution to the overall environmental impact.

Based on the analysis carried out, the lead agency must determine whether an environmental impact statement is either given the project or whether the project is considered to be of a nature and scale that would not require an environmental impact statement. By concluding the determination of the project's contribution to the overall environmental impact, the lead agency has completed the determination of significance.

Reasons Supporting This Determination:
To include in the report:

- Identify the impact assessed in Part 2, responses and describe the magnitude. Magnitude includes terms such as minor, moderate or major.
- Assess the importance of the impact. Importance includes the geographic scope, duration, probability of the impact occurring, number of people affected by the impact and any additional environmental consequences if the impact were to occur.
- The assessment should take into consideration any design elements or project changes.
- Repeat this process for each item where there is a concern. If a concern has been identified as potentially important, where it is clear there is a need to explain why a particular element of the proposed project is not likely to be a significant adverse environmental impact.
- Provide the reasons for the impact not being considered a significant adverse environmental impact.
- For each item that is not considered a significant adverse environmental impact, the lead agency must also provide reasons why the impact is not considered a significant adverse environmental impact with EIR.
- Attach additional sheets as needed.

Signature

[Handwritten Signature]

Determination of Significance - Type I and Unlisted Actions

SEQR Status: Type I Unlisted

Identify potential EIR concerns for the project: None Part 2 Part 3

This is in case of the information recorded on this form is incorrect, you are not liable for any financial information

2.1. According to both the magnitude and importance of the identified potential impact the discharge into the City of Los Angeles is: minor significant

2.2. This impact will result in a significant adverse impacts on the environment and the state, a significant number (more than 600) of individuals. According to the applicable discharge limits:

2.3. Although this project will cause a significant adverse impact on the environment, that impact will be avoided or substantially mitigated because of the following conditions which will be required by the lead agency:

There will be no net loss of significant water resources for the project or communities, and the project will produce negative environmental impacts. A qualified executive discharge permit from the City of Los Angeles (CPLD) is required.

2.4. This impact may be avoided or significantly reduced by the discharge of the discharge into the City of Los Angeles. A qualified executive discharge permit from the City of Los Angeles (CPLD) is required. According to the applicable discharge limits:

Name of Action: Los Angeles Harbor Basin Rehabilitation Project - Harbor Hall Center

Name of Lead Agency: City of Los Angeles

Name of Responsible Party: City of Los Angeles - Fire Dept

Phone: 310-201-6060 (optional)

Signature of responsible officer: [Signature]

Date: 5-7-18

Signature of responsible officer: [Signature]

Date: 5-7-18

For Further Information:

Contact: 310-201-6060 (City of Los Angeles, Department of Water & Power Engineering)

Address: 10000 Santa Monica Blvd, Los Angeles, CA 90025

Contact Number: 310-201-6060

Email: fire@lacity.org

For Type 1 Actions and Conditions Regarding Discharges, a copy of this Notice will be:

Delivered to the Officer in Charge of the area in which the action will be principally located (e.g., Los Angeles Village 23)

Given to the responsible party;

Approved by City;

Approved by the responsible party (if applicable).

PRINT FULL FORM

FULL ENVIRONMENTAL ASSESSMENT FORM

PART 3 – EVALUATION OF THE MAGNITUDE & IMPORTANCE OF PROJECT IMPACTS

REASONS SUPPORTING THIS DETERMINATION

IMPACT ON LAND

- The proposed action may involve the excavation and removal of more than 1,000 tons of natural material.
- The proposed action may involve construction that continues for more than one year or in multiple phases.
- The proposed action may result in increased erosion, whether from physical disturbance or vegetation removal (including from treatment by herbicides).

Magnitude: The applicant indicates that construction of the project will occur over 44± months. It is anticipated that during a portion of the construction phase, land within the construction limits will be disturbed and unvegetated, which, if unmitigated, could result in erosion and sedimentation impacts. The NYSDEC regulates stormwater runoff from sites that which disturb >1 acre (SPDES General Permit for Stormwater Discharges from Construction Activity); concurrent exposure of 5+ acres would require project-specific NYSDEC approval.

Importance of Impact: With a potential construction area of 25-acres, large impacts could occur, which require further evaluation (including the identification of issue-specific mitigation).

IMPACTS ON SURFACE WATER

- The proposed action may create turbidity in a waterbody, either from upland erosion, runoff or by disturbing bottom sediments.
- The proposed action may cause soil erosion, or otherwise create a source of stormwater discharge that may lead to siltation or other degradation of receiving water bodies.
- The proposed action may affect the water quality of any water bodies within or downstream of the site of the proposed action.

Magnitude: As noted above (IMPACT ON LAND), construction of the project, including the exposure of bare soil, increases the potential for erosion and sediment-laden runoff from the site. It is anticipated that the potential for adverse impacts to occur would be limited to the construction phase, as exposed areas would be stabilized prior to the start-up of hospital operations. New York State stormwater regulations require no discharges in visible contrast to receiving waters.

Importance of Impact: With a potential construction area of 25-acres, large impacts could occur. In addition, information regarding the quality of subsurface soils and groundwater is necessary to understand the impact from past and existing land uses. Further evaluation (including the identification of issue-specific mitigation) is necessary to understand the magnitude and importance of impacts.

IMPACT ON GROUNDWATER

- The proposed action may require the bulk storage of petroleum or chemical products over ground water or an aquifer.

Magnitude: In support of project operations, the applicant proposes the registration, installation and maintenance of a 50,000-gallon underground petroleum bulk storage (PBS) tank. It is understood that New York State regulates the design, installation, use and maintenance of PBS tanks and that compliance with these regulations provides for protection of human health and the environment. Based on the applicant's compliance with state and federal regulations, significant adverse impacts are not anticipated.

Importance of Impact: While significant adverse impacts are not anticipated, the applicant should summarize how their proposal (design, installation, operations, and maintenance) complies with state and federal requirements.

IMPACTS ON AIR

- The proposed action may include a state regulated air emission source.
- The action may also emit one or more greenhouse gases at or above the following levels:
 - » More than 1000 tons/year of carbon dioxide (CO₂)
- The proposed action may require a state air registration, or may produce an emissions rate of total contaminants that may exceed 5 lbs. per hour, or may include a heat source capable of producing more than 10 million BTU's per hour.

Magnitude: The applicant indicates that operations will result in air emissions from boilers, emergency generators and microturbines, as well as other minor sources; a State Facility Air Permit or Registration will be required. The applicant will coordinate with the New York State Department of Environmental Conservation (NYSDEC) to obtain the appropriate air permit, which will include controls to meet requisite air quality standards. Acquisition and adherence to the NYSDEC-issued permit requirements would mitigate significant adverse impacts.

Importance of Impact: While significant adverse impacts are not anticipated, the applicant should summarize how their proposal (design, installation, operations, and maintenance) complies with state and federal requirements (including CO₂ emissions).

IMPACT ON HISTORIC & ARCHAEOLOGICAL RESOURCES

- The proposed action may occur wholly or partially within, or substantially contiguous to, any buildings, archaeological site or district, which is listed on or has been nominated by the NYS Board of Historic Preservation for inclusion on the State or National Register of Historic Places.
- The proposed action may occur wholly or partially within, or substantially contiguous to, an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory.
- The proposed action may result in the destruction or alteration of all or part of the site or property.
- The proposed action may result in the alteration of the property's setting or integrity.
- The proposed action may result in the introduction of visual elements, which are out of character with the site or property, or may alter its setting.

Magnitude: The project's area of potential effect (APE) includes four properties currently identified by SHPO as being eligible for listing on the National Register of Historic Places. In addition, the APE overlaps the existing Upper Genesee Street Historic District (3 properties). The APE includes additional structures that are over 50-years old, which may be determined by SHPO to be eligible for listing. The significance of potential project impacts on these properties and structures, as well as on the integrity of the historic district, requires further evaluation including consultation with the State Historic Preservation Office.

The APE also overlaps with an area designated by SHPO as being sensitive for potential archaeological sites. It is understood that a large portion of the APE has been disturbed by prior land uses, which may have impacted the temporal context of any archaeological resources. A Phase IA Cultural Resource Investigation, as well as consultation with SHPO, is required to further evaluate the magnitude of potential archaeological impacts.

Importance of Impact: Due to the number of 50+ year old buildings within the APE, as well as the applicant's proposal to remove many of these buildings, the potential for impacts on historic resources is widespread and permanent. Further assessment of the impacts, potential project modifications and mitigation is warranted.

IMPACT ON TRANSPORTATION

- Projected traffic increase may exceed capacity of existing road network.
- The proposed action may result in the construction of paved parking area for 500 or more vehicles.
- The proposed action may alter the present pattern of movement of people or goods.

Magnitude: The project includes the creation of additional parking spaces (surface and parking garage) in comparison to the number of existing spaces within the APE. In addition, the project proposes several street closures to consolidate parcels required for the proposed development. It is anticipated that traffic trips accessing and egressing the built project will increase over current trips to the area. Increases in traffic and the alteration of traffic patterns could result in significant adverse impacts if left unmitigated. Additional impacts could occur during construction due to construction-related traffic and equipment accessing and egressing the site, as well as temporary impacts due to detours and lane closures.

Importance of Impact: Additional information is needed to evaluate the magnitude and importance of the impact. The applicant will be required to consult with the City and New York State Department of Transportation (NYSDOT) to prepare a Traffic Impact Study, which evaluates the type and magnitude of impacts on the existing network (roads, traffic flow/distribution, levels of service), and required project modifications or mitigation (including construction phase maintenance and protection of traffic).

IMPACT ON ENERGY

- The proposed action will require a new, or an upgrade to an existing, substation.
- The proposed action may utilize more than 2,500 MWhrs per year of electricity.
- The proposed action may involve heating and/or cooling of more than 100,000 square (sf) feet of building area when completed.

Magnitude: The project will utilize approximately 30,000 to 35,000 MWhrs of electricity per year and require heating and/or cooling of approximately 670,000 sf of building area (main hospital). To understand the magnitude of the impact, the applicant needs to consult with the regional purveyor of electrical power to assess project consumption needs against existing infrastructure capacity. Impacts on the existing network should be identified including the need for any system improvements (on- and off-site).

Importance of Impact: To more fully understand the importance of the impact, the applicant will need to provide additional information relative to system reliability and capacity to meet project objectives (including uninterruptable/backup supplies for hospital needs). The applicant should assess impacts on the existing system including the need for, and assessment of impacts related to, on- and off-site impacts from proposed system improvements. Impacts on system capacities should be identified.

IMPACT ON NOISE, ODOR, & LIGHT

- The proposed action may produce sound above noise levels established by local regulation.
- The proposed action may result in light shining onto adjoining properties.
- The proposed action may result in lighting creating sky-glow brighter than existing area conditions.

Magnitude: Construction of the project will result in potential, sporadic noise impacts throughout the construction phase. Additional information from the applicant regarding the type, magnitude and duration of the impact is necessary to fully evaluate the magnitude and timing of the impacts. In addition, operational activities including noise generated from hospital activities, traffic (including ambulances and emergency helicopters) should be further assessed.

The project will also require safety and directional related lighting, which could result, if unmitigated, in light spillover (to adjacent properties) or sky-glow. The applicant needs to provide additional information regarding the type of lighting and lighting mitigation to more fully understand the magnitude of the impact.

Importance of Impact: Due to the extended length of the construction schedule, as well as potential new operations-related noise sources (in comparison to existing conditions), the applicant needs to provide additional information and analysis to identify the magnitude and importance of potential noise and lighting impacts (vs. existing conditions) including an identification of mitigation and/or project modifications to eliminate potential significant adverse impacts (*i.e.*, noise greater than established zoning thresholds, light spillover).

IMPACT ON HUMAN HEALTH

- The proposed action is located within 1500 feet of a school, hospital, licensed day care center, group home, nursing home or retirement community.
- There is a completed emergency spill remediation, or a completed environmental site remediation on, or adjacent to, the site of the proposed action.
- The proposed action has adequate control measures in place to ensure that future generation, treatment and/or disposal of hazardous wastes will be protective of the environment and human health.
- The proposed action may result in the unearthing of solid or hazardous waste.
- The proposed action may result in an increase in the rate of disposal, or processing, of solid waste.

Magnitude: Based on geographic information system data, the proposed project is near three licensed day care centers. While it is not anticipated that the medical function and operations of the proposed project would adversely impact these uses, the construction of the project could result in the unearthing of impacted soils and groundwater that would require management in accordance with local, state and federal regulations. In addition, the hospital will generate solid and regulated medical waste (RMW), which requires handling, transportation and disposal off-site. While it is understood that RMW will be managed at the existing St. Luke's facility, additional information is required from the applicant as to quantities and best management practices, which will be implemented to eliminate potential adverse impacts.

Importance of Impact: The applicant needs to provide additional information regarding its procedures to collect, store, manage, transport and dispose of waste materials generated during facility operations. Additional information should also be provided relative to the management and disposal of construction and demolition debris generated during construction, including wastes requiring special handling (*i.e.*, asbestos, lead paint, impacted soils and groundwater, *etc.*).

CONSISTENCY WITH COMMUNITY PLANS

- The proposed action's land use components may be different from, or in sharp contrast to, current surrounding land use pattern(s).
- The proposed action may induce secondary development impacts (*e.g.*, residential or commercial development not included in the proposed action).

Magnitude: The project is allowed by special permit under the existing zoning designation (Central Business District). The applicant has indicated that development of the project may result in beneficial, secondary economic development impacts from future supply chain-related development in the vicinity of the project. Additional information is required from the applicant to appropriately assess the magnitude of these impacts.

In addition, the applicant has indicated that the project includes the acquisition of 25+/- acres of property in an area of the City that is designated as a Federal "Historically Underutilized Business" (HUB) Zone, a distressed area and a NYSDEC-designated "potential environmental justice area." The applicant states that, while most of the property is likely to be acquired through voluntary negotiation, it is likely that some property may need to be acquired via eminent domain. Many of the existing property owners and business will be forced to relocate to other parts of the City or County. The magnitude of the acquisition of 25+/- acres will be large, but most impacts are expected to be beneficial because it will better position the hospital to serve the largest and most diverse population in Oneida County, as well as creating the potential for secondary economic development

opportunities. Additional information is required from the applicant to appropriately assess the magnitude of these impacts.

Importance of Impact: The project's consistency with, and impact on, existing land uses has been publicly identified as an issue requiring additional evaluation.

CONSISTENCY WITH COMMUNITY CHARACTER

- The proposed action may replace or eliminate existing facilities, structures, or areas of historic importance to the community.
- The proposed action may displace affordable or low-income housing in an area where there is a shortage of such housing.
- The proposed action is inconsistent with the predominant architectural style and character.

Magnitude: See response to "IMPACT ON HISTORIC & ARCHAEOLOGICAL RESOURCES."

Importance of Impact: See response to "IMPACT ON HISTORIC & ARCHAEOLOGICAL RESOURCES."

Scoping

**MOHAWK VALLEY HEALTH SYSTEM (“MVHS”)
INTEGRATED HEALTH CAMPUS (“IHC”)
STATE ENVIRONMENTAL QUALITY REVIEW ACT (“SEQRA”)
DRAFT SCOPING DOCUMENT
FOR
DRAFT ENVIRONMENTAL IMPACT STATEMENT**

1.1 INTRODUCTION

Pursuant to New York State Environmental Conservation Law Article 8 (State Environmental Quality Review Act, “SEQRA”), Part 617 of Chapter 6 of the New York Code of Rules and Regulations, and the adoption of a Notice of Determination of Significance (“Positive Declaration”) by the City of Utica Planning Board, acting as SEQRA Lead Agency in a coordinated review process, the City of Utica Planning Board intends to prepare a Draft Environmental Impact Statement (“DEIS”) for the Integrated Health Campus Project (“IHC Project”) proposed by the Mohawk Valley Health System (“MVHS” or “Project Sponsor”). In accordance with SEQRA, the DEIS is required to address specific adverse environmental impacts, which can be reasonably anticipated.

Pursuant to SEQRA implementing regulations (6 NYCRR § 617.9(a)(1)), the Project Sponsor or the Lead Agency, at the Project Sponsor's option, will prepare the DEIS. As the Project Sponsor, MVHS has prepared this Draft Scoping Document. The primary goals of scoping are to focus the DEIS on potentially significant adverse impacts and to eliminate consideration of those impacts that are irrelevant or nonsignificant. As a draft scoping document, the following information is contained herein (6 NYCRR § 617.8) for public and agency review:

- A brief description of the proposed action (Section 1.3)
- The potentially significant adverse impacts identified in the “Positive Declaration” and as a result of consultation with the other involved agencies and the public, including an identification of those aspects of the environmental setting that may be impacted (Section 1.4)
- The extent and quality of information needed for the preparer to adequately address each impact, including an identification of relevant existing information, and required new information, including the required methodology(ies) for obtaining new information (Section 1.4)
- An initial identification of mitigation measures to avoid or minimize adverse environmental impacts (Section 1.4)
- The reasonable alternatives to be considered (Section 1.9)
- An identification of the information/data that should be included in an appendix rather than the body of the DEIS (Section 1.10)

As Lead Agency, the City Planning Board will provide a copy of the draft Scoping Document to all involved agencies, post it on the Project's website, and make it available to any individual or interested agency that has expressed an interest in writing to the Lead Agency. Involved agencies should provide written comments reflecting their concerns, jurisdictions and informational needs sufficient to ensure that the EIS will be adequate to support their SEQRA Findings¹. Failure of an involved agency to participate in the scoping process will not delay completion of the final written scope. Written comments will be accepted by the Lead Agency at the address noted below from May 18, 2018 to June 20, 2018. Written comments should be forward to:

¹ SEQRA Findings (Findings Statement) means a written statement prepared by each involved agency, in accordance with SEQRA implementing regulations (6 NYCRR § 617.11), after a final EIS has been filed, that considers the relevant environmental impacts presented in an EIS, weighs and balances them with social, economic and other essential considerations, provides a rationale for the agency's decision and certifies that the SEQRA requirements have been met.

City of Utica Planning Board
Attention: Mr. Brian Thomas, Commissioner
City of Utica, Department of Urban & Economic Development
1 Kennedy Plaza
Utica, NY 13502
Phone Number: (315) 792-0181
Email: bthomas@cityofutica.com

The scoping process will also include an opportunity for public participation. The City Planning Board has scheduled a public scoping meeting for June 7, 2018, which will be held in Conference Rooms A and B at the New York State Office Building, 207 Genesee Street, Utica, New York 13501. A presentation will begin at 5:30pm and a Public Hearing will begin at 6:00pm. Oral comments received at the public scoping meeting will be recorded.

A Final Scoping Document will be prepared and issued by the City Planning Board, as SEQRA Lead Agency, which incorporates substantive comments received during the public and agency comment period. The Final Scoping Document will also identify those prominent issues that were raised during scoping and determined by the Lead Agency to be not relevant or not environmentally significant or that have been adequately addressed in prior environmental review (Section 1.11).

All relevant issues should be raised before the issuance of a final written scope. Any agency or person raising issues after that time must provide to the Lead Agency and Project Sponsor a written statement that identifies:

- The nature of the information
- The importance and relevance of the information to a potential significant impact
- The reason(s) why the information was not identified during scoping and why it should be included at this stage of the review

The Project Sponsor may incorporate information submitted after the issuance of a final written scope into the DEIS at its discretion. Any substantive information not incorporated into the DEIS must be considered as public comment on the DEIS.

Information on the project and scoping process are available on the project's SEQRA website (<http://www.cityofutica.com/departments/urban-and-economic-development/planning/mvhs-seqra/index>). The project website is also accessible from the City of Utica's home page (<http://www.cityofutica.com/>).

1.2 PROJECT PURPOSE

Faxton St. Luke's Healthcare ("FSLH") and St. Elizabeth Medical Center ("SEMC") affiliated in 2014 to become MVHS². MVHS's mission is to provide excellence in healthcare for its communities. Substantial effort has been focused on consolidating existing resources, eliminating redundancies, expanding the depth and breadth of services, improving access and elevating the quality of healthcare services in the region. MVHS has been successful in its efforts thus far, but has been constrained by the age and physical limitations of the existing facilities.

² Mohawk Valley Health System is the Sole Corporate Member of Faxton-St. Luke's Healthcare, St. Elizabeth Medical Center, St. Luke's Home Residential Health Care Facility, Senior Network Health, LLC, Visiting Nurse Association of Utica and Oneida County, Inc., and Mohawk Valley Home Care, LLC. Together, the system is governed by one Board of Directors. As referenced in its certificate of need application for construction of the new hospital, MVHS plans to apply for a certificate of need from the Department of Health pursuant to Article 28 of the Public Health Law pursuant to which it also would be the sole operator of the new integrated hospital campus.

As summarized below, FSLH and SEMC are currently comprised of three locations (see Figure 1).

FSLH Campus Locations	SEMC Campus Location
St. Luke's Campus 1656 Champlain Avenue Utica, NY	SEMC Campus 2209 Genesee Street Utica, NY
Faxton Campus 1676 Sunset Avenue (1675 Bennett Street) Utica, NY	

To support goals to deliver higher quality, more effective care with better community outcomes and at a lower cost, the proposed MVHS IHC, will combine services from both St. Luke's and SEMC. The new MVHS IHC and hospital will replace the St. Luke's and SEMC campuses, reduce the number of beds in the community, and consolidate patient services to one campus; Faxton Campus services will not move to the new IHC.

The decision to consolidate these two campuses to a single facility was motivated by several key factors:

- The desire and need to build a facility with the newest technology, services and advancements in patient safety and quality so that our community can receive the most up-to-date healthcare services that rivals those found in large cities
- The growing demand for healthcare due to the rapidly increasing and aging population in this region
- The increasing need to improve accessibility and availability by attracting specialists and providing services that otherwise would not be available to our community
- The opportunity to gain greater operational efficiencies through the elimination of duplicative and redundant functions will help to reduce the rate of increase in healthcare spending and to achieve improved financial stability

Funding for the project has been provided, in part, by New York State via the Oneida County Health Care Facility Transformation Program, which provided capital funding (\$300 million) "in support of projects located in the largest population center in Oneida County that consolidate multiple licensed health care facilities into an integrated system of care." (<https://www.nysenate.gov/legislation/laws/PBH/2825-B>)

1.3 PROJECT DESCRIPTION

As depicted on Figure 2 (Site Location Map), the MVHS IHC will generally be bounded by Oriskany Boulevard (NYS Route 69) to the north, Broadway to the east, Columbia Street and NYS Route 8 to the west, and City Hall and Kennedy Apartments to the south. The MVHS IHC will encompass approximately 25-acres and will include the following elements:

- Hospital building
- Central utility plant
- Parking facilities (including one municipal parking garage and multiple surface lots)
- Potential future medical office building (by private developer)
- Campus grounds
- Helistop

To accommodate the proposed MVHS IHC, the proposed project will involve the acquisition of properties and modifications to existing public/private utility infrastructure.

Descriptions of the project elements are provided below, as well as a description of the intended future use of the two existing St. Luke's and SEMC campuses. These descriptions represent the project as currently envisioned.

HOSPITAL BUILDING

The proposed ±670,000 square foot (sf) hospital building will be constructed on parcels located west of Broadway and will extend through Cornelia Street onto parcels located east of State Street. The hospital building consists of a 2-story podium and a 7-story bed tower.

The main entrance to the hospital will be located south of Lafayette Street, proximal to Cornelia Street. In addition to the main entrance, Emergency Department ("ED") walk-in and ED ambulance entrances will be located on the western portion of the hospital. Vehicular and pedestrian entries will be marked by canopy systems that provide adequate coverage for public drop off, ED walk-in and loading activities. Ambulance traffic will be provided with a large drive-thru canopy adjoined to the podium.

A service entrance will be located on the eastern portion of the hospital building, which will be accessible via Columbia Street.

Most services currently provided at the St. Luke's and SEMC campuses will be transitioned to the MVHS IHC including ±373 inpatient beds.

CENTRAL UTILITY PLANT

A three-story Central Utility Plant ("CUP") will service the hospital. The CUP will adjoin the eastern portion of the podium of the hospital building. The CUP will house three centrifugal chillers, a heat recovery chiller and four steam and eight hot water heating condensing boilers, each which will be fueled by both natural gas and No. 2 Fuel oil. A 50,000-gallon underground storage tank ("UST") used to store the No. 2 fuel oil will be installed south of the CUP in the service yard. A 30,000-gallon aboveground storage tank ("AST") used to store emergency water for fire protection will also be located in the service yard.

PARKING FACILITIES

Parking facilities will consist of a three-story, municipally-owned parking garage and multiple parking lots. The parking garage will provide approximately 1550 parking spaces and the parking lots will allow for an additional ±1100 parking spaces. These parking facilities will be available for use by patients, visitors, staff, and volunteers, as well as the community for non-hospital related events.

POTENTIAL FUTURE MEDICAL OFFICE BUILDING

A future medical office building is proposed. It is anticipated that the medical office building would be owned and operated by a private developer. As illustrated on Figure 2, the proposed location of the medical office building is south of Columbia Street and east of Cornelia Street.

CAMPUS GROUNDS

The campus will be designed as an urban park with enhanced lighting, trees, pedestrian walkways and seating areas. A pedestrian walkway will replace a portion of Lafayette Street. This walkway will extend from the main entrance to the west, terminating just adjacent to the North-South Arterial Highway. An additional segment of the walkway will provide access to the ED entrance. Outdoor areas will include gardens and other design considerations to create a healing environment.

HELISTOP

A helistop³ will be situated to the west of the hospital building, adjacent to the ED ambulance entrance and north of Columbia Street. Approximately 40± annual emergency flights to the hospital are anticipated.

PROPERTY ACQUISITION

The project includes the acquisition of the 25± acres of property in an area of Utica that is designated as a Federal “Historically Underutilized Business” (“HUB”) Zone⁴, a distressed area and a New York State Department of Environmental Conservation (“NYSDEC”) designated “Potential Environmental Justice Area.” While it is anticipated that most of the property will be acquired through voluntary negotiation, it is likely that some property may need to be acquired via eminent domain. Many of the existing property owners and businesses will be required to relocate to other parts of Utica or Oneida County. The magnitude of the acquisition of 25+/- acres will be large, but most impacts are expected to be beneficial because it will better position the hospital to serve the largest and most diverse population in Oneida County, as well as creating the potential for secondary economic development opportunities.

STREET CLOSURES

As currently proposed, the project would require the following public street closures or changes in designation:

- Lafayette Street from the North-South Arterial Highway to Broadway will be abandoned by the City
- Cornelia Street from Columbia Street to Oriskany Street will be abandoned by the City
- Carton Avenue, Sayre Alley, and Pine Street will be abandoned by the City
- The former Lafayette Street from Broadway to Cornelia Street will become the main entrance to the IHC
- The former Cornelia Street from Lafayette Street to Oriskany Street will become the entrance to the new public parking garage and an alternate hospital entrance/exit

UTILITY INFRASTRUCTURE

Based on a preliminary assessment of existing utilities and project needs, modifications to the existing infrastructure in the project area are anticipated. A summary of anticipated modifications is provided below.

Sanitary Sewers

It is anticipated that the existing sanitary sewer line within the right-of-way (“ROW”) of Cornelia Street between Columbia and Lafayette Streets, and in the ROW of Lafayette Street between Cornelia and State Streets, will be abandoned/removed. A new sewer line within the ROW of Columbia Street will be constructed from Cornelia Street to the 48” (diameter) trunk sewer along State Street. A new sewer line would be constructed to divert upstream flow from the south on Cornelia Street to the existing sewer on Broadway via a rehabilitated existing or newly constructed sewer in Columbia Street between Cornelia Street and Broadway. Other potential new sewers lines may be needed along Lafayette Street, abutting the north side of the hospital.

The location and size of sanitary laterals and connections will depend on the plumbing/mechanical design of the new hospital buildings. It is assumed each new structure will have its own service lateral(s) connecting to the City mains.

³ A helistop is a minimally developed helicopter facility for boarding and discharging passengers or cargo, without the support facilities found at a heliport.

⁴ HUBZone means a historically underutilized business zone, which is an area located within one or more: (1) Qualified census tracts; (2) Qualified non-metropolitan counties; (3) Lands within the external boundaries of an Indian reservation; (4) Qualified base closure areas; (5) Re-designated areas; or (6) Qualified disaster areas.

Wastewater associated with hospital operations is anticipated to be ±187,000 gallons per day (gpd) and will be discharged to Oneida County's Water Pollution Control Plant via City sanitary sewers and Oneida County interceptor sewers.

Storm Sewers

The overall percent impervious surfaces resulting from development of the IHC is anticipated to be less than the amount of coverage under existing conditions. In addition, the buildings and paved impervious surface areas of the MVHS IHC may be further minimized or reduced using "Green Infrastructure" design features such as pervious pavement/pavers, planting beds, and subsurface rainwater detention.

It is anticipated that the existing storm sewer lines within the ROW of Cornelia Street between Columbia and Lafayette Streets will be abandoned/removed. Removal of portions of storm sewer lines may also be required along Lafayette Street between Cornelia and State Streets. New storm sewer piping will be installed in the ROW along State Street and connect to the existing New York State Department of Transportation ("NYSDOT") storm sewer line, which connects to the north side of Oriskany Street West/Route 5S, west of the Utica Memorial Auditorium ("Aud"). Alternatively, storm sewers will be constructed from the intersection of State Street and Oriskany Street west to the existing storm sewer at Cornelia Street and Oriskany Street. New branch lines will tie-in catch basins along the west end of Columbia Street. Flow from the east side of the campus and upstream flow from Broadway will be conveyed through existing storm sewers in Cornelia Street, north of Lafayette, Lafayette Street east of Cornelia, and Broadway.

Water Mains

Water mains located in the ROW along portions of Lafayette Street may need to be removed/abandoned, as would other smaller mains within the new building footprint. Where new supply mains are required, the older mains would be replaced. Fire hydrants will be located along the public streets and private fire hydrants will be located within the IHC campus, as required for fire protection. Each building will be provided with its own backflow prevention device to comply with Mohawk Valley Water Authority requirements.

Water mains to be replaced or installed include: 1) older 6" and 16" mains on State Street will be replaced with a new 16" water main; 2) a 6"/8" main on Broadway that will be replaced with a 12" pipe connecting large mains on Columbia to Whitesboro Street; 3) 12" water main along Oriskany Street East between State Street and Broadway; and 4) 12" water main (private) along Lafayette Street to serve the IHC.

Electric and Natural Gas

Electric and gas utilities in the area of the proposed IHC are operated and maintained by National Grid. The gas mains and underground electric conductors are owned by National Grid. The underground conduits and vaults are owned by the City of Utica, and leased to National Grid for use.

Both electric and gas assets exist extensively throughout the IHC project footprint, including a 13.2 KV underground feed in Cornelia and Lafayette Streets. All assets, both electric and gas, will need to be relocated out of the IHC footprint, into public rights-of-way; locations are to be determined through on-going coordination between MVHS, National Grid and the City.

INTENDED FUTURE USE OF EXISTING HOSPITALS

Disposition and Repurposing of Existing Hospital Campuses

With the exception of certain existing ancillary facilities within which existing operations will be maintained (see below), MVHS' objective is to facilitate redevelopment of the existing St. Luke's and SEMC campuses consistent with the Town of New Hartford's and the City of Utica's long-term development plans and capable of making an economically positive contribution to each community. In support of this objective, MVHS will be conducting an evaluation of the properties and potential "as-of-right"⁵ redevelopment opportunities

⁵ Consistent with existing zoning designations and regulations.

concurrent with planning for the proposed hospital. In addition to the disposition and redevelopment of the primary facilities, existing ancillary facilities will also be reused. A description of the anticipated continued use of portions of the existing campuses is provided below.

St. Luke's

Most of the inpatient and outpatient services performed at the existing St. Luke's campus will be transitioned to the MVHS downtown IHC. However, it is anticipated that ±24 physical medical and rehabilitation beds, as well as some outpatient services will remain at this site. Unused medical supplies and certain medical equipment will be brought to the MVHS IHC. Medical equipment that is beyond its useful life will be disposed of in accordance with applicable federal and state regulations.

SEMC

The non-hospital buildings located at the SEMC Campus will be converted into an outpatient extension clinic. Services provided at the clinic will include sleep center services, cardiac and thoracic surgery-related physician offices, primary care services and a laboratory patient service center. Unused medical supplies and certain medical equipment will be brought to the MVHS IHC. Medical equipment that is beyond its useful life will be disposed of in accordance with applicable federal and state regulations.

1.4 POTENTIALLY SIGNIFICANT ADVERSE ENVIRONMENTAL IMPACTS

During the Lead Agency Coordination, Notice of Determination, and Scoping processes, potentially significant adverse environmental impacts were identified including both short-term, construction related activities, and long-term impacts associated with the operation of the proposed IHC. The table below identifies these potential impacts by topic and includes the following information for each:

- The potentially significant adverse impacts identified in the "Positive Declaration", and as a result of consultation with the other involved agencies and the public, including an identification of those aspects of the environmental setting that may be impacted
- The extent and quality of information needed to adequately address each impact, including an identification of relevant existing information, and required new information, including the required methodology(ies) for obtaining new information
- An initial identification of mitigation measures to avoid or minimize adverse environmental impacts

Environmental Topic	Potential Significant Adverse Impacts	Information Sources/Needs	Potential Mitigation Measures
<p>Impact on Land (Geology, Soils, Topography)</p>	<p>Construction</p> <ul style="list-style-type: none"> Physical alteration of >10-acres of land and construction that continues for more than one year or in multiple phases Excavation and removal of more than 1,000 tons of material including removal and disposal of unsuitable fill material and/or impacted soil, if encountered Increase in erosion, whether from physical disturbance or vegetation removal (including from treatment by herbicides) <p>Operation</p> <ul style="list-style-type: none"> No significant adverse impacts anticipated; proposed post-construction conditions will result in an increase in pervious greenspace 	<p>Existing Information Sources</p> <ul style="list-style-type: none"> Limited Phase I Environmental Site Assessment (Phase I ESA) Previous geotechnical investigations on properties proximal to the proposed project area Information from the Soil Survey of Oneida County, New York published by the United States Department of Agriculture (“USDA”) Natural Resources Conservation Services (“NRCS”) and other readily available existing resources (e.g., https://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx) will be relied on to describe surface (soil) and subsurface (bedrock) conditions Additional desktop/web-based environmental database reviews <p>Additional Information Needs</p> <ul style="list-style-type: none"> Topographical survey Subsurface geotechnical investigation (evaluate constructability issues such as depth to bedrock and groundwater, seismicity, soil permeability, erosion potential, etc., as well as potential surface and subsurface impacts associated with past land use) 	<p>Construction</p> <ul style="list-style-type: none"> Obtain coverage under NYSDEC’s General Permit for Stormwater Discharges from Construction Activity (GP-0-15-002) Preparation and implementation a of Stormwater Pollution Prevention Plan (“SWPPP”) including an Erosion and Sedimentation Control (“E&SC”) Plan prepared in accordance with local and State standards to mitigate construction phase stormwater runoff-related impacts Restricting the limits of construction to the minimum practicable area required to complete the work Management (handling and disposal) of impacted soils/subsoils in accordance with applicable local, state and federal requirements Timely and effective restoration of temporarily disturbed areas Constructability issues identified in the geotechnical investigation will be considered in the design of the IHC <p>Operation</p> <ul style="list-style-type: none"> Implementation of long-term stormwater management controls to control the rate and quality of runoff prior to leaving the site Use of landscaping to minimize erosion potential

Environmental Topic	Potential Significant Adverse Impacts	Information Sources/Needs	Potential Mitigation Measures
<p>Impact on Geologic Features (i.e., unique or unusual land forms)</p>	<p>Based on review of existing information sources, no unique or unusual land forms were identified within or proximal to the project site.</p>	<p>Existing Information Sources</p> <ul style="list-style-type: none"> ■ Information from the Web Soil Survey developed by the USDA NRCS (Available at: https://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx) ■ National Natural Landmarks Program, <i>National Registry of Natural Landmarks</i>, June 2009 (https://www.nps.gov/subjects/nnlndmarks/upload/NNLRegistry.pdf) 	<p>No significant impacts to geologic features were identified; no mitigation measures are warranted.</p>

1.5 CUMULATIVE IMPACTS

The DEIS will summarize the potential cumulative impacts of the proposed project in conjunction with other proposed and existing projects in the area. As defined in the NYSDEC's SEQRA Handbook, cumulative impacts occur when multiple actions affect the same resource(s). These are impacts on the environment that result from the "incremental or increased impact of an action(s) when the impacts of that action are added to other past, present and reasonably foreseeable future actions. Cumulative impacts can result from a single action or a number of individually minor but collectively significant actions taking place over a period of time."

(http://www.dec.ny.gov/docs/permits_ej_operations_pdf/seqrhandbook.pdf)

Cumulative impacts must be assessed when actions are proposed, or can be foreseen as likely, to take place simultaneously or sequentially in a way that the combined impacts may be significant. As with direct impacts, assessment of cumulative impacts should be limited to consideration of reasonably foreseeable impacts, not speculative ones. Based on an initial consultation with the City's Department of Urban & Economic Development, the following projects were identified as potentially occurring within or proximal to the project area and within a similar timeframe as the proposed IHC project:

- Expansion of the Utica Memorial Auditorium, including the proposed NEXUS Center ("NEXUS"). NEXUS will be an approximately 170,000 sf tournament-based recreation play facility, utilized for ice hockey, box lacrosse, soccer, and other field sports that can be performed on a 200 x 85-foot playing surface. NEXUS will include three playing surfaces, 25± locker rooms, commercial office space, college classroom space, retail space, food and beverage services, and other multi-purpose training space. NEXUS is proposed to be developed on the block immediately east of the existing Auditorium, and will include the removal of Charles Street, an existing City street
- NYSDOT Route 5S (Oriskany Street) safety improvement project. Construction on this 2-year project began in April 2018, and will include reconstruction, re-aligning, and re-configuring intersections along Oriskany Street between Broadway and Broad Street
- City of Utica Combined Sewer Overflow ("CSO") Control Project A9.2. Construction on this 6-month project will begin in May 2018, and will include construction of a large-diameter storm sewer from John Street to Broad Street, the rehabilitation and re-purposing of the existing Old Erie Canal Conduit between Seneca Street and John Street, and other incidental storm and sanitary sewer modifications within the project limits. The project will convey previously separated stormwater flows to a dedicated stormwater discharge point at Broad Street (Ballou Creek)

Cumulative impacts on the following resources will be evaluated:

- Traffic
- Utility infrastructure.

The evaluation will rely on existing, readily available information including environmental impact assessments prepared by others for those projects (if available). In addition, potential cumulative traffic impacts will be incorporated into the IHC project's traffic impact study.

1.6 UNAVOIDABLE ADVERSE ENVIRONMENTAL IMPACTS

The DEIS will summarize unavoidable adverse environmental impacts; these are impacts that cannot be avoided or fully mitigated. Both short- and long-term impacts will be identified.

1.7 IRREVERSIBLE AND IRRETRIEVABLE COMMITMENT OF RESOURCES

The DEIS will summarize the natural and human resources that will be consumed, converted, or made unavailable for future use by the proposed project.

Construction

- Commitment of previously developed land
- Commitment of resources (*e.g.*, building materials)

Operation

- Commitment of infrastructure (*e.g.*, water, sewer, police/fire protection, electricity, natural gas, transportation network, solid waste management)
- Commitment of workforce

1.8 GROWTH INDUCING ASPECTS

While growth-inducing effects (economic and social) of the IHC project may be beneficial to the region, induced growth may also be the prime source or cause of secondary environmental impacts. The growth inducement section of the DEIS will describe any further development, which the proposed action may support or encourage, such as:

- Attracting significant increases in local population by creating or relocating employment
- Providing support facilities or services
- Increasing the development potential of the surrounding area

The growth inducement section of the DEIS will rely on growth projections/predictions, which are based on available information. The purpose of the discussion of growth inducement in the DEIS is to enable Involved Agencies to reach findings concerning both positive and negative effects of induced growth in the area of the proposed project.

Growth inducing impacts will also address the future use/re-use of the existing facilities. MVHS is conducting an evaluation of the potential adaptive reuse of its existing facilities, which will form the basis of evaluation in the DEIS.

1.9 REASONABLE ALTERNATIVES

To support the goal of delivering higher quality, more effective care with better community outcomes and at a lower cost, MVHS made the decision to consolidate the St. Luke's and SEMC campuses to a single facility. This decision was spurred by several key objectives:

- The desire and need to build a facility with the newest technology, services and advancements in patient safety and quality so that our community can receive the most up-to-date healthcare services that rivals those found in large cities
- The growing demand for healthcare due to the rapidly increasing and aging population in this region
- The increasing need to improve accessibility and availability by attracting specialists and providing services that otherwise would not be available to our community

In addition, funding for the project has been provided, in part, by New York State via the Oneida County Health Care Facility Transformation Program, which provided capital funding (\$300 million) "in support of projects located in the largest population center in Oneida County that consolidate multiple licensed health care facilities into an integrated system of care." (<https://www.nysenate.gov/legislation/laws/PBH/2825-B>)

Considering these objectives and the capabilities of MVHS, a description and evaluation of reasonable project alternatives will be included in the DEIS. In addition to the required “no action” alternative, the DEIS will discuss:

- Alternative sites⁶
 - » Downtown Utica Site (proposed Project Site)
 - » Former NYS Psychiatric Center (“Old Main”) – 1213 Court Street, Utica, NY
 - » St. Luke’s Hospital Campus – 1656 Champlin Avenue, New Hartford, NY
 - » New Hartford Shopping Center⁷ – 120 Genesee Street, New Hartford, NY
- Alternative scale/magnitude
- Alternative design
- Alternative timing

Under the “no action” alternative, MVHS would not relocate and consolidate the St. Luke’s and SEMC campuses to the proposed downtown MVHS IHC location.

1.10 ELEMENTS OF THE DEIS

**Draft Table of Contents for Draft Environmental Impact Statement
Mohawk Valley Health System (“MVHS”)
Integrated Health Campus (“IHC”)
Utica, New York
[Notice of Completion Date]**

Cover Sheet (including items listed in 6 NYCRR 617.9(b)(3))

Table of Contents

Executive Summary

Chapter 1: Project Overview

1.1. Project Description

- 1.1.1 Project Purpose (Public Need and Benefit)
- 1.1.2 Background and History
- 1.1.3 Project Location
- 1.1.4 Conceptual Design
 - 1.1.4.1 Facilities
 - 1.1.4.2 Access/Egress
 - 1.1.4.3 Infrastructure
 - 1.1.4.4 Storm Water Management
- 1.1.5 Construction Activities

⁶ The evaluation of alternatives will rely, in part, on “Draft Hospital Site Selection Process Summary Memo” provided by Mohawk Valley EDGE for MVHS (prepared by Elan Planning and O’Brien & Gere, June 2015).

⁷ Correspondence from New Hartford Shopping Center Trust to City of Utica Planning Board (received February 20, 2018).

1.1.6 Operation and Maintenance Requirements

1.1.7 Project Schedule (including phasing)

1.2. Regulatory Review and Approvals

1.2.1 State Environmental Quality Review Act ("SEQRA")

1.2.2 Permits and Approvals

1.2.3 New York State Executive Orders and Policies

Chapter 2: Alternatives Considered

2.1. Purpose

2.2. No Action Alternative

2.3. Alternative Sites

2.4. Alternative Scale/Magnitude

2.5. Alternative Design

2.6. Alternative Timing

Chapter 3: Environmental Setting, Impacts, and Mitigation

3.#. – *Applicable Environmental Topic (The following environmental topics will be included in the Draft EIS: Land, Surface Water, Groundwater, Air, Aesthetic Resources (including Light), Historic & Archaeological Resources, Transportation, Energy, Noise & Odor, Human Health, Community Character and Plans and Solid Waste Management). For each topic, the following narrative will be provided:*

3.#.1. Existing Conditions

3.#.2. Potential Impacts

3.#.3. Mitigation Measures

Chapter 4: Effects on the Use and Conservation of Energy

Chapter 5: Cumulative Impacts

Chapter 6: Unavoidable Adverse Environmental Impacts

Chapter 7: Irreversible and Irretrievable Commitment of Resources

Chapter 8: Growth Inducing Aspects

- Subsurface Evaluations (Report & Data)
- Adaptive Reuse Report (Existing MVHS Facilities)

1.11 IRRELEVANT OR NON-SIGNIFICANT ISSUES OR IMPACTS

In accordance with SEQRA implementing regulations (6 NYCRR 617.8(f)(7)), the following issues were determined not to be relevant or environmentally significant to the SEQRA process for this project (see EAF Part 2 – Identification of Potential Project Impacts):

- Impacts to Geological Features (*e.g.*, cliffs, dunes, minerals, fossils, caves)
- Impacts on Flooding
- Impacts on Plants and Animals
- Impacts on Agricultural Resources
- Impacts on Open Space and Recreation
- Impact on Critical Environmental Areas (<http://www.dec.ny.gov/permits/6184.html>)

EXISTING MVHS FACILITIES

MOHAWK VALLEY HEALTH SYSTEM
INTEGRATED HEALTH CAMPUS
UTICA, NEW YORK

O'BRIEN & GERE ENGINEERS, INC.

FIGURE NO. 2

PLEASE TAKE NOTICE, the Planning Board for the City of Utica will hold a special meeting at 5:30 p.m. on June 7, 2018 in Conference Rooms A and B at the New York State Office Building, 207 Genesee Street, Utica, New York 13501, for the purpose of holding a public scoping hearing pursuant to the New York State Environmental Quality Review Act with respect to the Integrated Health Campus Project proposed by Mohawk Valley Health System and for the purpose of discussing any other matters properly before the Planning Board. **As per NYS regulation, photo ID is required to enter the building.**

Public scoping is being undertaken because the City of Utica Planning Board, as lead agency, has determined that the Integrated Health Campus Project proposed by Mohawk Valley Health System may have a significant adverse impact on the environment and a Draft Environmental Impact Statement must be prepared. The draft scope is available from the City of Utica Planning Board, with offices at the City of Utica Department of Urban & Economic Development, 1 Kennedy Plaza, Utica, NY, 13502 and on line at: <http://cityofutica.com/departments/urban-and-economic-development/planning/mvhs-seqra/index> Written comments with respect to the draft scope will be accepted until June 20, 2018 and must be addressed to Brian Thomas, City of Utica, Department of Urban & Economic Development, 1 Kennedy Plaza, Utica, NY 13502, Telephone: 315-798-0181, E-mail: bthomas@cityofutica.com.

The action involves construction and operation of an Integrated Health Campus, including a state of the art hospital, parking facilities/lots, utility upgrades and a medical office building on approximately 25 acres of land within the City of Utica bounded by Oriskany Boulevard (NYS Route 69) to the north, Broadway to the east, Columbia Street and NYS Route 8 to the west, and City Hall and Kennedy Apartments to the south. The Integrated Health Campus is proposed to be located in the Central Business Zoning District and requires site plan approval from the City of Utica Planning Board. Site plan approval is a discretionary action by the City of Utica Planning Board.

The proposed Integrated Health Campus will replace two existing hospitals (St. Elizabeth Medical Center and Faxton St. Luke's Hospital) also owned and operated by Mohawk Valley Health System. As part of the action, Mohawk Valley Health System plans to facilitate redevelopment of the existing hospital campuses consistent with the Town of New Hartford's and the City of Utica's long-term development plans.

While it is anticipated that most of the property for the proposed Integrated Health Campus will be acquired through voluntary negotiation, it is likely that some property may need to be acquired via eminent domain. As a result of the action, many of the existing property owners and businesses will be required to relocate to other parts of Utica or Oneida County.

It is expected that the likely effects of the Project could include moderate to large impacts on land; surface water; groundwater; air; historic or archaeological resources; transportation; energy; noise, odor, and light; human health; consistency with community plans; and consistency with community character.

**MOHAWK VALLEY HEALTH SYSTEM (“MVHS”)
INTEGRATED HEALTH CAMPUS (“IHC”)
STATE ENVIRONMENTAL QUALITY REVIEW ACT (“SEQRA”)
FINAL SCOPING DOCUMENT
FOR
DRAFT ENVIRONMENTAL IMPACT STATEMENT**

1.1 INTRODUCTION

Pursuant to New York State Environmental Conservation Law Article 8 (State Environmental Quality Review Act, “SEQRA”), Part 617 of Chapter 6 of the New York Code of Rules and Regulations, and the adoption of a Notice of Determination of Significance (“Positive Declaration”) by the City of Utica Planning Board, acting as SEQRA Lead Agency in a coordinated review process, the City of Utica Planning Board intends to prepare a Draft Environmental Impact Statement (“DEIS”) for the Integrated Health Campus Project (“IHC Project”) proposed by the Mohawk Valley Health System (“MVHS” or “Project Sponsor”). In accordance with SEQRA, the DEIS is required to address specific adverse environmental impacts, which can be reasonably anticipated.

Pursuant to SEQRA implementing regulations (6 NYCRR § 617.9(a)(1)), the Project Sponsor or the Lead Agency, at the Project Sponsor's option, will prepare the DEIS. As the Project Sponsor, MVHS prepared a Draft Scoping Document. The primary goals of scoping are to focus the DEIS on potentially significant adverse impacts and to eliminate consideration of those impacts that are irrelevant or nonsignificant. In accordance with SEQRA implementing regulations (6 NYCRR § 617.8), the Draft Scoping Document contained the following information:

- A brief description of the proposed action (Section 1.3)
- The potentially significant adverse impacts identified in the “Positive Declaration” and as a result of consultation with the other involved agencies and the public, including an identification of those aspects of the environmental setting that may be impacted (Section 1.4)
- The extent and quality of information needed for the preparer to adequately address each impact, including an identification of relevant existing information, and required new information, including the required methodology(ies) for obtaining new information (Section 1.4)
- An initial identification of mitigation measures to avoid or minimize adverse environmental impacts (Section 1.4)
- The reasonable alternatives to be considered (Section 1.9)
- An identification of the information/data that should be included in an appendix rather than the body of the DEIS (Section 1.10)

As Lead Agency, the City Planning Board made available a copy of the Draft Scoping Document via filing and public notice, in addition to posting it on the Project's website. The Draft Scoping Document was also made available to all involved agencies and to any individual or interested agency that has expressed an interest in writing to the Lead Agency. Involved agencies were requested to provide written comments reflecting their concerns, jurisdictions and informational needs sufficient to ensure that the EIS will be adequate to support their SEQRA Findings¹.

¹ SEQRA Findings (Findings Statement) means a written statement prepared by each involved agency, in accordance with SEQRA implementing regulations (6 NYCRR § 617.11), after a final EIS has been filed, that considers the relevant environmental impacts presented in an EIS, weighs and balances them with social, economic and other essential considerations, provides a rationale for the agency's decision and certifies that the SEQRA requirements have been met.

The scoping process also included an opportunity for public participation. **Written comments were accepted by the Lead Agency at the address noted below from May 18, 2018 to June 20, 2018.**

City of Utica Planning Board
 Attention: Mr. Brian Thomas, Commissioner
 City of Utica, Department of Urban & Economic Development
 1 Kennedy Plaza
 Utica, NY 13502
 Phone Number: (315) 792-0181
 Email: bthomas@cityofutica.com

In addition, the City Planning Board scheduled a public scoping meeting, which was held on June 7, 2018 at the New York State Office Building (Conference Rooms A and B), 207 Genesee Street, Utica, New York 13501. Oral comments received at the public scoping meeting were recorded.

This document represents the Final Scoping Document. The Final Scoping Document was issued by the City Planning Board, as SEQRA Lead Agency, and incorporates substantive comments received during the public and agency comment period. The Final Scoping Document also identifies those prominent issues that were raised during scoping and determined by the Lead Agency to be not relevant or not environmentally significant or that have been adequately addressed in prior environmental review (Section 1.11).

All relevant issues should have been raised before the issuance of a final written scope. Any agency or person raising issues after that time must provide to the Lead Agency and Project Sponsor a written statement that identifies:

- The nature of the information
- The importance and relevance of the information to a potential significant impact
- The reason(s) why the information was not identified during scoping and why it should be included at this stage of the review

The Project Sponsor may incorporate information submitted after the issuance of a final written scope into the DEIS at its discretion. Any substantive information not incorporated into the DEIS must be considered as public comment on the DEIS.

Information on the project and scoping process, including Draft and Final Scoping Documents, received written comments, the public scoping hearing transcript, and a summary of comments on the Draft Scoping Document, are available on the project's SEQRA website (<http://www.cityofutica.com/departments/urban-and-economic-development/planning/mvhs-seqra/index>). The project website is also accessible from the City of Utica's home page (<http://www.cityofutica.com/>).

1.2 PROJECT PURPOSE

Faxton St. Luke's Healthcare ("FSLH") and St. Elizabeth Medical Center ("SEMC") affiliated in 2014 to become MVHS². MVHS's mission is to provide excellence in healthcare for its communities. Substantial effort has been focused on consolidating existing resources, eliminating redundancies, expanding the depth and breadth of services, improving access and elevating the quality of healthcare services in the region. MVHS has been

² Mohawk Valley Health System is the Sole Corporate Member of Faxton-St. Luke's Healthcare, St. Elizabeth Medical Center, St. Luke's Home Residential Health Care Facility, Senior Network Health, LLC, Visiting Nurse Association of Utica and Oneida County, Inc., and Mohawk Valley Home Care, LLC. Together, the system is governed by one Board of Directors. As referenced in its certificate of need application for construction of the new hospital, MVHS plans to apply for a certificate of need from the Department of Health pursuant to Article 28 of the Public Health Law pursuant to which it also would be the sole operator of the new integrated hospital campus.

successful in its efforts thus far, but has been constrained by the age and physical limitations of the existing facilities.

As summarized below, FSLH and SEMC are currently comprised of three locations (see Figure 1).

FSLH Campus Locations	SEMC Campus Location
St. Luke's Campus 1656 Champlain Avenue Utica, NY	SEMC Campus 2209 Genesee Street Utica, NY
Faxton Campus 1676 Sunset Avenue (1675 Bennett Street) Utica, NY	

To support goals to deliver higher quality, more effective care with better community outcomes and at a lower cost, the proposed MVHS IHC, will combine services from both St. Luke's and SEMC. The new MVHS IHC and hospital will replace the St. Luke's and SEMC campuses, reduce the number of beds in the community, and consolidate patient services to one campus; Faxton Campus services will not move to the new IHC.

The decision to consolidate these two campuses to a single facility was motivated by several key factors:

- The desire and need to build a facility with the newest technology, services and advancements in patient safety and quality so that our community can receive the most up-to-date healthcare services that rivals those found in large cities
- The growing demand for healthcare due to the rapidly increasing and aging population in this region³
- The increasing need to improve accessibility and availability by attracting specialists and providing services that otherwise would not be available to our community
- The opportunity to gain greater operational efficiencies through the elimination of duplicative and redundant functions will help to reduce the rate of increase in healthcare spending and to achieve improved financial stability

The project also includes a proposed collaborative affiliation between MVHS and the Masonic Medical Research Laboratory. Research space is proposed within the new hospital that will allow Masonic laboratory researchers working behind the lab bench and MVHS clinicians working at patients' bedsides to collaborate and create new and innovative research and clinical benefits for the Mohawk Valley and beyond.

Funding for the project has been provided, in part, by New York State via the Oneida County Health Care Facility Transformation Program, which provided capital funding (\$300 million) "in support of projects located in the largest population center in Oneida County that consolidate multiple licensed health care facilities into an integrated system of care." (<https://www.nysenate.gov/legislation/laws/PBH/2825-B>)

1.3 PROJECT DESCRIPTION

The "Project Description" section of the DEIS will contain the following information:

- The purpose or objective of the action, including any public need for, or public benefits from the action, including social and economic considerations
- The location and physical dimensions of the action
- The background and history of the action
- Timing and schedule for implementing the action, including construction and operations phases, to the extent the information is available, or can reasonably be estimated

³ Demographic data will be presented in the DEIS.

- Relationship of the action to land use plans, zoning restrictions, and other adopted plans and programs at the local, regional or state level
- Identification of authorizations, permits and approvals required.

As depicted on Figure 2 (Site Location Map), the MVHS IHC will generally be bounded by Oriskany Boulevard (NYS Route 69) to the north, Broadway to the east, Columbia Street and NYS Route 8 to the west, and City Hall and Kennedy Apartments to the south. The proposed location is proximal to the City's urban core, as well as the City's proposed "U" District, existing Brewery District, Bagg's Square and Utica Harbor Point. The MVHS IHC will encompass approximately 25-acres and will include the following elements:

- Hospital building
- Central utility plant
- Parking facilities (including one municipal parking garage and multiple surface lots)
- Potential future medical office building (by private developer)
- Campus grounds
- Hospital Heliport

To accommodate the proposed MVHS IHC, the proposed project will involve the acquisition of properties and modifications to existing public/private utility infrastructure.

Descriptions of the project elements are provided below, as well as a description of the intended future use of the two existing St. Luke's and SEMC campuses. These descriptions represent the project as currently envisioned.

HOSPITAL BUILDING

The proposed ±670,000 square foot (sf) hospital building will be constructed on parcels located west of Broadway and will extend through Cornelia Street onto parcels located east of State Street. The hospital building consists of a 2-story podium and a 7-story bed tower.

The main entrance to the hospital will be located south of Lafayette Street, proximal to Cornelia Street. In addition to the main entrance, Emergency Department ("ED") walk-in and ED ambulance entrances will be located on the western portion of the hospital. Vehicular and pedestrian entries will be marked by canopy systems that provide adequate coverage for public drop off, ED walk-in and loading activities. Ambulance traffic will be provided with a large drive-thru canopy adjoined to the podium.

A service entrance will be located on the eastern portion of the hospital building, which will be accessible via Columbia Street.

Most services⁴ currently provided at the St. Luke's and SEMC campuses will be transitioned to the MVHS IHC including ±373 inpatient beds.⁵

CENTRAL UTILITY PLANT

A three-story Central Utility Plant ("CUP") will service the hospital. The CUP will adjoin the eastern portion of the podium of the hospital building. The CUP will house three centrifugal chillers, a heat recovery chiller and four steam and eight hot water heating condensing boilers, each which will be fueled by both natural gas and No. 2 Fuel oil. A 50,000-gallon underground storage tank ("UST") used to store the No. 2 fuel oil will be installed south of the CUP in the service yard. A 30,000-gallon aboveground storage tank ("AST") used to store emergency water for fire protection will also be located in the service yard.

⁴ Proposed services will be identified in the "Project Description" section of the DEIS.

⁵ Justification of the number of proposed beds will be provided in the "Project Description" section of the DEIS.

PARKING FACILITIES

Parking facilities will consist of a three-story, municipally-owned parking garage and multiple parking lots. The parking garage will provide approximately 1550 parking spaces and the parking lots will allow for an additional ± 1100 parking spaces. These parking facilities will be available for use by patients, visitors, staff, and volunteers, as well as the community for non-hospital related events.

POTENTIAL FUTURE MEDICAL OFFICE BUILDING

A future medical office building is proposed. It is anticipated that the medical office building would be owned and operated by a private developer. As illustrated on Figure 2, the proposed location of the medical office building is south of Columbia Street and east of Cornelia Street.

CAMPUS GROUNDS

The campus will be designed as an urban park with enhanced lighting, trees, pedestrian walkways and seating areas. A pedestrian walkway will replace a portion of Lafayette Street. This walkway will extend from the main entrance to the west, terminating just adjacent to the North-South Arterial Highway. An additional segment of the walkway will provide access to the ED entrance. Outdoor areas will include gardens and other design considerations to create a healing environment. Connectivity and greenspace considerations will be identified in the DEIS.

HOSPITAL HELIPORT

A Hospital Heliport⁶ will be situated to the west of the hospital building, adjacent to the ED ambulance entrance and north of Columbia Street. Approximately 40 \pm annual emergency flights to the hospital are anticipated. The impacts associated with a surface vs. a roof-top/elevated landing will be assessed in the DEIS.

PROPERTY ACQUISITION

The project includes the acquisition of the 25 \pm acres of property in an area of Utica that is designated as a Federal “Historically Underutilized Business” (“HUB”) Zone⁷, a distressed area and a New York State Department of Environmental Conservation (“NYSDEC”) designated “Potential Environmental Justice Area.” While it is anticipated that most of the property will be acquired through voluntary negotiation, it is likely that some property may need to be acquired via eminent domain. Many of the existing property owners and businesses will be required to relocate to other parts of Utica or Oneida County. The magnitude of the acquisition of 25+/- acres will be large, but most impacts are expected to be beneficial because it will better position the hospital to serve the largest and most diverse population in Oneida County, as well as creating the potential for secondary economic development opportunities.

STREET CLOSURES

As currently proposed, the project would require the following public street closures or changes in designation:

- Lafayette Street from the North-South Arterial Highway to Broadway will be abandoned by the City
- Cornelia Street from Columbia Street to Oriskany Street will be abandoned by the City
- Carton Avenue, Sayre Alley, and Pine Street will be abandoned by the City
- The former Lafayette Street from Broadway to Cornelia Street will become the main entrance to the IHC

⁶ The hospital heliport will be operated as a helistop, which is a minimally developed helicopter facility for boarding and discharging passengers or cargo, without the support facilities found at a traditional heliport.

⁷ HUBZone means a historically underutilized business zone, which is an area located within one or more: (1) Qualified census tracts; (2) Qualified non-metropolitan counties; (3) Lands within the external boundaries of an Indian reservation; (4) Qualified base closure areas; (5) Re-designated areas; or (6) Qualified disaster areas.

- The former Cornelia Street from Lafayette Street to Oriskany Street will become the entrance to the new public parking garage and an alternate hospital entrance/exit

UTILITY INFRASTRUCTURE

Based on a preliminary assessment of existing utilities and project needs, modifications to the existing infrastructure in the project area are anticipated. A summary of anticipated modifications is provided below.

Sanitary Sewers

It is anticipated that the existing sanitary sewer line within the right-of-way ("ROW") of Cornelia Street between Columbia and Lafayette Streets, and in the ROW of Lafayette Street between Cornelia and State Streets, will be abandoned/removed. A new sewer line within the ROW of Columbia Street will be constructed from Cornelia Street to the 48" (diameter) trunk sewer along State Street. A new sewer line would be constructed to divert upstream flow from the south on Cornelia Street to the existing sewer on Broadway via a rehabilitated existing or newly constructed sewer in Columbia Street between Cornelia Street and Broadway. Other potential new sewer lines may be needed along Lafayette Street, abutting the north side of the hospital.

The location and size of sanitary laterals and connections will depend on the plumbing/mechanical design of the new hospital buildings. It is assumed each new structure will have its own service lateral(s) connecting to the City mains.

Wastewater associated with hospital operations is anticipated to be ±187,000 gallons per day (gpd) and will be discharged to Oneida County's Water Pollution Control Plant via City sanitary sewers and Oneida County interceptor sewers.

Storm Sewers

The overall percent impervious surfaces resulting from development of the IHC is anticipated to be less than the amount of coverage under existing conditions. In addition, the buildings and paved impervious surface areas of the MVHS IHC may be further minimized or reduced using "Green Infrastructure" design features such as pervious pavement/pavers, planting beds, and subsurface rainwater detention.

It is anticipated that the existing storm sewer lines within the ROW of Cornelia Street between Columbia and Lafayette Streets will be abandoned/removed. Removal of portions of storm sewer lines may also be required along Lafayette Street between Cornelia and State Streets. New storm sewer piping will be installed in the ROW along State Street and connect to the existing New York State Department of Transportation ("NYSDOT") storm sewer line, which connects to the north side of Oriskany Street West/Route 5S, west of the Utica Memorial Auditorium ("Aud"). Alternatively, storm sewers will be constructed from the intersection of State Street and Oriskany Street west to the existing storm sewer at Cornelia Street and Oriskany Street. New branch lines will tie-in catch basins along the west end of Columbia Street. Flow from the east side of the campus and upstream flow from Broadway will be conveyed through existing storm sewers in Cornelia Street, north of Lafayette, Lafayette Street east of Cornelia, and Broadway.

Water Mains

Water mains located in the ROW along portions of Lafayette Street may need to be removed/abandoned, as would other smaller mains within the new building footprint. Where new supply mains are required, the older mains would be replaced. Fire hydrants will be located along the public streets and private fire hydrants will be located within the IHC campus, as required for fire protection. Each building will be provided with its own backflow prevention device to comply with Mohawk Valley Water Authority requirements.

Water mains to be replaced or installed include: 1) older 6" and 16" mains on State Street will be replaced with a new 16" water main; 2) a 6"/8" main on Broadway that will be replaced with a 12" pipe connecting large mains on Columbia to Whitesboro Street; 3) 12" water main along Oriskany Street East between State Street and Broadway; and 4) 12" water main (private) along Lafayette Street to serve the IHC.

Electric and Natural Gas

Electric and gas utilities in the area of the proposed IHC are operated and maintained by National Grid. The gas mains and underground electric conductors are owned by National Grid. The underground conduits and vaults are owned by the City of Utica, and leased to National Grid for use.

Both electric and gas assets exist extensively throughout the IHC project footprint, including a 13.2 KV underground feed in Cornelia and Lafayette Streets. All assets, both electric and gas, will need to be relocated out of the IHC footprint, into public rights-of-way; locations are to be determined through on-going coordination between MVHS, National Grid and the City.

INTENDED FUTURE USE OF EXISTING HOSPITALS

Disposition and Repurposing of Existing Hospital Campuses

With the exception of certain existing ancillary facilities within which existing operations will be maintained (see below), MVHS' objective is to facilitate redevelopment of the existing St. Luke's and SEMC campuses consistent with the Town of New Hartford's and the City of Utica's long-term development plans and capable of making an economically positive contribution to each community. In support of this objective, MVHS will be conducting an evaluation of the properties and potential "as-of-right"⁸ redevelopment opportunities concurrent with planning for the proposed hospital. In addition to the disposition and redevelopment of the primary facilities, existing ancillary facilities will also be reused. A description of the anticipated continued use of portions of the existing campuses is provided below.

St. Luke's

Most of the inpatient and outpatient services performed at the existing St. Luke's campus will be transitioned to the MVHS downtown IHC. However, it is anticipated that ±24 physical medical and rehabilitation beds, as well as some outpatient services will remain at this site. Unused medical supplies and certain medical equipment will be brought to the MVHS IHC. Medical equipment that is beyond its useful life will be disposed of in accordance with applicable federal and state regulations.

SEMC

The non-hospital buildings located at the SEMC Campus will be converted into an outpatient extension clinic. Services provided at the clinic will include sleep center services, cardiac and thoracic surgery-related physician offices, primary care services and a laboratory patient service center. Unused medical supplies and certain medical equipment will be brought to the MVHS IHC. Medical equipment that is beyond its useful life will be disposed of in accordance with applicable federal and state regulations.

1.4 POTENTIALLY SIGNIFICANT ADVERSE ENVIRONMENTAL IMPACTS

During the Lead Agency Coordination, Notice of Determination, and Scoping processes, potentially significant adverse environmental impacts were identified including both short-term, construction related activities, and long-term impacts associated with the operation of the proposed IHC. The table below identifies these potential impacts by topic and includes the following information for each:

- The potentially significant adverse impacts identified in the "Positive Declaration", and as a result of consultation with the other involved agencies and the public, including an identification of those aspects of the environmental setting that may be impacted
- The extent and quality of information needed to adequately address each impact, including an identification of relevant existing information, and required new information, including the required methodology(ies) for obtaining new information

⁸ Consistent with existing zoning designations and regulations.

- An initial identification of mitigation measures to avoid or minimize adverse environmental impacts

Environmental Topic	Potential Significant Adverse Impacts	Information Sources/Needs	Potential Mitigation Measures
<p>Impact on Land (Geology, Soils, Topography)</p>	<p>Construction</p> <ul style="list-style-type: none"> Physical alteration of >10-acres of land and construction that continues for more than one year or in multiple phases Excavation and removal of more than 1,000 tons of material including removal and disposal of unsuitable fill material and/or impacted soil, if encountered Increase in erosion, whether from physical disturbance or vegetation removal (including from treatment by herbicides) <p>Operation</p> <ul style="list-style-type: none"> No significant adverse impacts anticipated; proposed post-construction conditions will result in an increase in pervious greenspace 	<p>Existing Information Sources</p> <ul style="list-style-type: none"> Limited Phase I Environmental Site Assessment (Phase I ESA) Previous geotechnical investigations on properties proximal to the proposed project area Information from the Soil Survey of Oneida County, New York published by the United States Department of Agriculture (“USDA”) Natural Resources Conservation Services (“NRCS”) and other readily available existing resources (e.g., https://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx) will be relied on to describe surface (soil) and subsurface (bedrock) conditions Additional desktop/web-based environmental database reviews <p>Additional Information Needs</p> <ul style="list-style-type: none"> Topographical survey Subsurface geotechnical investigation (evaluate constructability issues such as depth to bedrock and groundwater, seismicity, soil permeability, erosion potential, etc., as well as potential surface and subsurface impacts associated with past land use) 	<p>Construction</p> <ul style="list-style-type: none"> Obtain coverage under NYSDEC’s General Permit for Stormwater Discharges from Construction Activity (GP-0-15-002) Preparation and implementation a of Stormwater Pollution Prevention Plan (“SWPPP”) including an Erosion and Sedimentation Control (“E&SC”) Plan prepared in accordance with local and State standards to mitigate construction phase stormwater runoff-related impacts Restricting the limits of construction to the minimum practicable area required to complete the work Management (handling and disposal) of impacted soils/subsoils in accordance with applicable local, state and federal requirements Timely and effective restoration of temporarily disturbed areas Constructability issues identified in the geotechnical investigation will be considered in the design of the IHC <p>Operation</p> <ul style="list-style-type: none"> Implementation of long-term stormwater management controls to control the rate and quality of runoff prior to leaving the site Use of landscaping to minimize erosion potential

Environmental Topic	Potential Significant Adverse Impacts	Information Sources/Needs	Potential Mitigation Measures

1.5 CUMULATIVE IMPACTS

The DEIS will summarize the potential cumulative impacts of the proposed project in conjunction with other proposed and existing projects in the area. As defined in the NYSDEC's SEQRA Handbook, cumulative impacts occur when multiple actions affect the same resource(s). These are impacts on the environment that result from the "incremental or increased impact of an action(s) when the impacts of that action are added to other past, present and reasonably foreseeable future actions. Cumulative impacts can result from a single action or a number of individually minor but collectively significant actions taking place over a period of time."

(http://www.dec.ny.gov/docs/permits_ej_operations_pdf/seqrhandbook.pdf)

Cumulative impacts must be assessed when actions are proposed, or can be foreseen as likely, to take place simultaneously or sequentially in a way that the combined impacts may be significant. As with direct impacts, assessment of cumulative impacts should be limited to consideration of reasonably foreseeable impacts, not speculative ones. Based on an initial consultation with the City's Department of Urban & Economic Development, the following projects were identified as potentially occurring within or proximal to the project area and within a similar timeframe as the proposed IHC project:

- Expansion of the Utica Memorial Auditorium, including the proposed NEXUS Center ("NEXUS"). NEXUS will be an approximately 170,000 sf tournament-based recreation play facility, utilized for ice hockey, box lacrosse, soccer, and other field sports that can be performed on a 200 x 85-foot playing surface. NEXUS will include three playing surfaces, 25± locker rooms, commercial office space, college classroom space, retail space, food and beverage services, and other multi-purpose training space. NEXUS is proposed to be developed on the block immediately east of the existing Auditorium, and will include the removal of Charles Street, an existing City street
- NYSDOT Route 5S (Oriskany Street) safety improvement project. Construction on this 2-year project began in April 2018, and will include reconstruction, re-aligning, and re-configuring intersections along Oriskany Street between Broadway and Broad Street
- City of Utica Combined Sewer Overflow ("CSO") Control Project A9.2. Construction on this 6-month project will begin in May 2018, and will include construction of a large-diameter storm sewer from John Street to Broad Street, the rehabilitation and re-purposing of the existing Old Erie Canal Conduit between Seneca Street and John Street, and other incidental storm and sanitary sewer modifications within the project limits. The project will convey previously separated stormwater flows to a dedicated stormwater discharge point at Broad Street (Ballou Creek)

Cumulative impacts on the following resources will be evaluated:

- Traffic
- Utility infrastructure.

The evaluation will rely on existing, readily available information including environmental impact assessments prepared by others for those projects (if available). In addition, potential cumulative traffic impacts will be incorporated into the IHC project's traffic impact study.

1.6 UNAVOIDABLE ADVERSE ENVIRONMENTAL IMPACTS

The DEIS will summarize unavoidable adverse environmental impacts; these are impacts that cannot be avoided or fully mitigated. Both short- and long-term impacts will be identified.

1.7 IRREVERSIBLE AND IRRETRIEVABLE COMMITMENT OF RESOURCES

The DEIS will summarize the natural and human resources that will be consumed, converted, or made unavailable for future use by the proposed project.

Construction

- Commitment of previously developed land
- Commitment of resources (*e.g.*, building materials)

Operation

- Commitment of infrastructure (*e.g.*, water, sewer, police/fire protection, electricity, natural gas, transportation network, solid waste management)
- Commitment of workforce

1.8 GROWTH INDUCING ASPECTS

While growth-inducing effects (economic and social) of the IHC project may be beneficial to the region, induced growth may also be the prime source or cause of secondary environmental impacts. The growth inducement section of the DEIS will describe any further development, which the proposed action may support or encourage, such as:

- Attracting significant increases in local population by creating or relocating employment
- Providing support facilities or services
- Increasing the development potential of the surrounding area

The growth inducement section of the DEIS will rely on growth projections/predictions, which are based on available information. The purpose of the discussion of growth inducement in the DEIS is to enable Involved Agencies to reach findings concerning both positive and negative effects of induced growth in the area of the proposed project.

Growth inducing impacts will also address the future use/re-use of the existing facilities. MVHS is conducting an evaluation of the potential adaptive reuse of its existing facilities, which will form the basis of evaluation in the DEIS.

1.9 REASONABLE ALTERNATIVES

To support the goal of delivering higher quality, more effective care with better community outcomes and at a lower cost, MVHS made the decision to consolidate the St. Luke's and SEMC campuses to a single facility. This decision was spurred by several key objectives:

- The desire and need to build a facility with the newest technology, services and advancements in patient safety and quality so that our community can receive the most up-to-date healthcare services that rivals those found in large cities
- The growing demand for healthcare due to the rapidly increasing and aging population in this region
- The increasing need to improve accessibility and availability by attracting specialists and providing services that otherwise would not be available to our community

In addition, funding for the project has been provided, in part, by New York State via the Oneida County Health Care Facility Transformation Program, which provided capital funding (\$300 million) "in support of projects located in the largest population center in Oneida County that consolidate multiple licensed health care facilities into an integrated system of care." (<https://www.nysenate.gov/legislation/laws/PBH/2825-B>)

Considering these objectives and the capabilities of MVHS, a description and evaluation of reasonable project alternatives will be included in the DEIS. In addition to the required “no action” alternative, the DEIS will discuss:

- Alternative sites¹¹
 - » Downtown Utica Site (proposed Project Site)
 - » Former NYS Psychiatric Center (“Old Main”) – 1213 Court Street, Utica, NY
 - » St. Luke’s Hospital Campus – 1656 Champlin Avenue, New Hartford, NY
 - » New Hartford Shopping Center¹² – 120 Genesee Street, New Hartford, NY
 - » Rehabilitation/renovation of the existing St. Luke’s and SEMC facilities
- Alternative scale/magnitude
- Alternative design
- Alternative timing

Under the “no action” alternative, MVHS would not relocate and consolidate the St. Luke’s and SEMC campuses to the proposed downtown MVHS IHC location.

1.10 ELEMENTS OF THE DEIS

**Draft Table of Contents for Draft Environmental Impact Statement
Mohawk Valley Health System (“MVHS”)
Integrated Health Campus (“IHC”)
Utica, New York
[Notice of Completion Date]**

Cover Sheet (including items listed in 6 NYCRR 617.9(b)(3))

Table of Contents

Executive Summary

Chapter 1: Project Overview

1.1. Project Description

- 1.1.1 Project Purpose (Public Need and Benefit)
- 1.1.2 Background and History
- 1.1.3 Project Location
- 1.1.4 Conceptual Design
 - 1.1.4.1 Facilities
 - 1.1.4.2 Access/Egress
 - 1.1.4.3 Infrastructure
 - 1.1.4.4 Storm Water Management

¹¹ The evaluation of alternatives will rely, in part, on “Draft Hospital Site Selection Process Summary Memo” provided by Mohawk Valley EDGE for MVHS (prepared by Elan Planning and O’Brien & Gere, June 2015).

¹² Correspondence from New Hartford Shopping Center Trust to City of Utica Planning Board (received February 20, 2018).

- 1.1.5 Construction Activities
- 1.1.6 Operation and Maintenance Requirements
- 1.1.7 Project Schedule (including phasing)

1.2. Regulatory Review and Approvals

- 1.2.1 State Environmental Quality Review Act (“SEQRA”)
- 1.2.2 Permits and Approvals
- 1.2.3 New York State Executive Orders and Policies

Chapter 2: Alternatives Considered

- 2.1. Purpose
- 2.2. No Action Alternative
- 2.3. Alternative Sites
- 2.4. Alternative Scale/Magnitude
- 2.5. Alternative Design
- 2.6. Alternative Timing

Chapter 3: Environmental Setting, Impacts, and Mitigation

3.#. – *Applicable Environmental Topic (The following environmental topics will be included in the Draft EIS: Land, Surface Water, Groundwater, Air, Aesthetic Resources (including Light), Historic & Archaeological Resources, Transportation, Energy, Noise & Odor, Human Health, Community Character and Plans and Solid Waste Management). For each topic, the following narrative will be provided:*

- 3.#.1. Existing Conditions
- 3.#.2. Potential Impacts
- 3.#.3. Mitigation Measures

Chapter 4: Effects on the Use and Conservation of Energy

Chapter 5: Cumulative Impacts

Chapter 6: Unavoidable Adverse Environmental Impacts

Chapter 7: Irreversible and Irrecoverable Commitment of Resources

Chapter 8: Growth Inducing Aspects

1.11 IRRELEVANT OR NON-SIGNIFICANT ISSUES OR IMPACTS

In accordance with SEQRA implementing regulations (6 NYCRR 617.8(f)(7)), the following issues were determined not to be relevant or environmentally significant to the SEQRA process for this project (see EAF Part 2 – Identification of Potential Project Impacts):

- Impacts to Geological Features (*e.g.*, cliffs, dunes, minerals, fossils, caves)
- Impacts on Plants and Animals
- Impacts on Agricultural Resources
- Impacts on Open Space and Recreation
- Impact on Critical Environmental Areas (<http://www.dec.ny.gov/permits/6184.html>)

1 P R O C E E D I N G S

2
3 MR. MATRULLI: Good evening everybody.
4 We're ready to proceed. Can I have a motion to
5 open the Hearing?

6 MR. CARUSO: I move that we open.

7 MR. COLON: Second.

8 MR. MATRULLI: The meeting is open. At
9 this time, I would like to present
10 Kathleen Bennett from the Bond, Schoeneck & King
11 firm, who's going to talk about the project and
12 our scoping documents. Kathleen?

13 MS. BENNETT: Hi. Good evening everybody.
14 I am an attorney with Bond, Schoeneck & King, and
15 we represent Mohawk Valley Health System in
16 connection with the construction of an Integrated
17 Health Campus in downtown Utica.

18 On May 7th, the City Planning Board issued a
19 positive declaration pursuant to the New York
20 State Environmental Quality Review Act, which I'm
21 going to refer to as SEQRA -- and for purposes of
22 the stenographer, that's S-E-Q-R-A -- and
23 identified several potential significant impacts
24 that require further study in a draft

1 environmental impact statement, which I may refer
2 to from time to time as an EIS.

3 In accordance with SEQRA, the draft EIS must
4 address specific adverse environmental impacts,
5 which can be reasonably anticipated. In
6 connection with this process, the Planning Board
7 has opted to engage in what's called the scoping
8 process in order to solicit public input on the
9 contents of the DEIS, focus the draft EIS on
10 potentially significant adverse impacts, and
11 eliminate consideration of those impacts that are
12 irrelevant or non-significant.

13 With that in mind, we thought it would be
14 useful to provide a brief overview of the project
15 and the draft scoping document that has been
16 available on the City's website.

17 So at this time, I'm going to ask Mike Solak,
18 the regional vice-president of Hammes Companies,
19 the project manager, to provide a brief overview
20 of the project.

21 MR. SOLAK: Good evening. My name is
22 Mike Solak. I work for the Hammes Company, which
23 is a healthcare development firm. We've been
24 contracted by Mohawk Valley to help manage the

1 project going forward.

2 A brief description of the project is what is
3 contemplated as a 673,000 square foot acute care
4 hospital, multi-story, containing services such as
5 operating rooms, emergency department, labor and
6 delivery, behavioral health, inpatient beds. The
7 bed count is approximately 373 beds. And it is
8 contemplated to be having cardiac services, which
9 some of the beds will be of a CCU/ICU
10 configuration. And there will be some multiple
11 buildings associated with the campus eventually,
12 including a parking garage, but currently this
13 project is contemplating the hospital structure.
14 Thank you.

15 MR. MATRULLI: If anyone hasn't signed up
16 on the sign-up sheet that wishes to speak, you
17 need to do that now. Does anybody fall in that
18 category?

19 (Attendees indicated in the Negative.)

20 MS. BENNETT: So just briefly on the
21 scoping process and the scoping document.

22 So SEQRA establishes a process to
23 systematically consider environmental factors
24 early in the planning stages of actions that

1 require funding or approvals from local, regional
2 or state agencies. Prior to issuing any
3 discretionary decision, agencies must balance
4 environmental impacts with social and economic
5 factors.

6 The Environmental Impact Statement that's
7 required for this project will explore ways to
8 avoid or minimize some or all of the potential
9 adverse environmental impacts in order to balance
10 those impacts with social and economic factors.
11 In order to do that, the draft EIS will identify
12 the significant environmental conditions and
13 resources that may be affected by the project,
14 assess relevant environmental impacts of the
15 project on those environmental conditions and
16 resources, and eliminate or de-emphasize
17 irrelevant or insignificant impacts or issues.

18 The scoping process will better frame the
19 contents of the draft Environmental Impact
20 Statement by focusing the EIS on the most relevant
21 issues and potential impacts, including means to
22 avoid or minimize those impacts and ensure that
23 the draft EIS will be a concise, accurate and
24 complete document adequate for public review.

1 Scoping also allows an opportunity for public
2 input and results in a review with broader
3 perspective.

4 So to give you a 30,000 foot overview of the
5 Draft Scoping Document, that document includes
6 potentially significant adverse environmental
7 impacts, including both short-term
8 construction-related activities and long-term
9 impacts associated with the operation of the
10 proposed project. The potential impacts in that
11 document are identified by topic and includes the
12 extent and quality of information needed to
13 adequately address each impact, such as existing
14 information, required new information, and
15 methodologies for obtaining that new information,
16 as well as an initial identification of mitigation
17 measures to avoid or minimize potential adverse
18 environmental impacts.

19 So for example, the scoping document has
20 identified the following potential impacts:

21 Potential impact to land and surface water
22 during construction activities and includes
23 potential mitigation to include preparation of a
24 storm water pollution prevention plan and

1 management of any impacted soils or subsoils in
2 accordance with state and federal requirements.

3 It identifies potential impacts to
4 groundwater during construction and operation in
5 connection with historic spills from above or
6 underground tanks and in connection with the bulk
7 storage of fuel oil, and potential mitigation to
8 include preparation of a storm water pollution
9 prevention plan, a construction health and safety
10 plan, removal of any historic contamination in
11 accordance with state and federal requirements,
12 and compliance with state and federal regulations
13 for installation of any new tanks.

14 A potential impact to air from dust during
15 construction and from emissions during combustion
16 and process sources during operation to be
17 mitigated by best management practices during
18 construction and obtaining a state air facility
19 registration from DEC for the operation of the
20 hospital.

21 Potential impacts from lighting to be
22 mitigated by adherence to building code
23 requirements and use of lighting fixtures that
24 reduce glare and spillover.

1 Potential impacts to historic and
2 archeological resources to be mitigated by
3 entering into and adhering to the terms of a
4 programmatic agreement with the State Historic
5 Preservation Office.

6 Potential impacts on transportation, which
7 will require preparation of a traffic impact study
8 and consultation with the New York State
9 Department of Transportation and the City of Utica
10 to develop appropriate mitigation with respect to
11 road and/or signal improvements.

12 Potential impacts on utilities as a result of
13 improvements and modifications needed to the
14 existing utility infrastructure.

15 Potential impacts on energy during operation
16 to be mitigated by implementation of energy-saving
17 measures.

18 Potential impacts on noise during
19 construction and operation to be mitigated by
20 compliance with city code requirements.

21 Potential impacts on human health to include
22 disturbance of hazardous building materials and
23 contaminated soils and groundwater during
24 demolition and excavation to be mitigated by

1 implementation of a construction safety plan and
2 complying with state requirements for demolition
3 and disposal.

4 The use of hazardous materials and generation
5 of regulated medical waste to be mitigated by
6 handling, storing and disposing in accordance with
7 state and federal requirements.

8 The proximity of the hospital to daycare
9 centers and the proximity of the hospital to the
10 CSX rail line to be mitigated by coordinating with
11 emergency response commissions and implementation
12 of emergency response plans.

13 Potential impacts on community character from
14 land acquisition, secondary economic development,
15 development different from surrounding land use
16 patterns/architecture/character to be mitigated by
17 compliance with building code and the programmatic
18 agreement with the State Historical Preservation
19 Office.

20 Potential impacts on solid waste management
21 to be mitigated by compliance with local and state
22 disposal plans and regulations.

23 And the potential impact on environmental
24 justice to be addressed by implementation of the

1 public participation plan.

2 So the draft EIS will also consider the
3 potential for cumulative impacts in conjunction
4 with other proposed and existing projects,
5 especially with regard to traffic and utility
6 infrastructure, growth-inducing aspects of the
7 project by relocating existing businesses and by
8 increasing development potential of the
9 surrounding area, and reasonable alternatives,
10 including in addition to the downtown Utica site,
11 the former New York State Psychiatric Center, the
12 St. Luke's Hospital Campus, and the New Hartford
13 Shopping Center.

14 So just by way of understanding what comes
15 next with regard to the process, all of the
16 comments received tonight or in writing up to
17 June 20th will be reviewed by the Planning Board
18 and the Applicant. The Planning Board, as the
19 lead agency, is ultimately responsible for
20 determining which issues and concerns are actually
21 relevant, substantive potential impacts which
22 should be included in the final written scoping
23 document. The final scope that will be adopted by
24 the Planning Board will become the standard by

1 which the applicant, the lead agency and any other
2 involved or interested entities should use in
3 determining the adequacy of a submitted
4 Environmental Impact Statement.

5 Once the EIS is determined to be complete,
6 there will be another round of public comment on
7 that document, followed by preparation of a final
8 Environmental Impact Statement, and the adoption
9 of a findings statement by the lead agency and
10 then by all involved agencies prior to any
11 approvals that those agencies have to issue with
12 respect to the project.

13 So we thank you for your time and we look
14 forward to your comments.

15 MR. MATRULLI: Can I have a motion to open
16 the Public Hearing?

17 MR. CARUSO: So moved.

18 MR. COLON: Second.

19 MR. MATRULLI: The Hearing is open. Thank
20 you for coming.

21 The purpose of this Hearing is to identify
22 potentially significant adverse impacts related to
23 the proposed actions that are to be addressed in
24 the draft environmental impact statement,

1 including the content and level of detail of the
2 analysis, the range of alternatives, the
3 mitigation measures needed, and the identification
4 of non-relevant issues. Scoping provides us with
5 guidance on matters that must be considered in the
6 environmental impact statement and provides an
7 opportunity for early participation by involved
8 agencies and the public in review of the proposal.

9 A draft scoping document was prepared by the
10 applicant and was made available to involved and
11 interested agencies, as well as to the public via
12 the City's project website.

13 As SEQRA leading agency, the Planning Board
14 scheduled a public scoping meeting to solicit
15 public input relevant to the matters to be
16 addressed in the environmental impact statement,
17 which will be prepared over the next couple of
18 months.

19 As lead agency, the Planning Board is
20 interested in receiving your input on the
21 following: An identification of those aspects of
22 the environmental setting that may be impacted by
23 the proposed project; the extent and quality of
24 information needed to adequately address each

1 impact; mitigation measures to avoid and minimize
2 adverse environmental impact; the range of
3 reasonable alternatives to be considered.

4 A final scoping document will be prepared
5 that will account for the relevant substantive
6 comments we receive tonight, and through the
7 public meeting period, which ends on June 20th.
8 The final scoping document will provide a road map
9 that will guide the preparation of the
10 environmental impact statement.

11 I would like to state the following meeting
12 ground rules. This is your time to provide input.
13 We will not be responding to questions or comments
14 tonight. Feedback will be used to guide the
15 content of the environmental impact statement.
16 Respect the stated purpose of the meeting.
17 Respect each other. Listen actively to others. Be
18 patient when listening to others speak and do not
19 interrupt them. Limit side conversations. Please
20 silence cellphones. If you choose to make a
21 comment, we will allow each individual three
22 minutes to speak, per our normal Planning Board
23 protocol. Chris Lawrence will be our timekeeper
24 and will notify the speaker when the three minutes

1 is complete. Be respectful of the time allotted
2 for verbal comments. Additional thoughts can be
3 shared via the comment cards provided.

4 Speakers will be called in order per the
5 sign-up sheet. Once your name is called, please
6 make your way to the microphone to provide your
7 comments. Note that you may only sign up once for
8 your own opportunity to speak. Speaking time may
9 not be transferred to anyone else.

10 We have a stenographer present to capture
11 verbal comments. Please clearly state your name
12 and address before you begin your comments. The
13 stenographer may ask you to repeat or spell your
14 name or street address.

15 If you have additional comments you would
16 like to submit and you do not feel comfortable
17 speaking in front of the group, you may submit a
18 written comment via the comment cards available.
19 Mail comments to City of Utica Planning Board, One
20 Kennedy Plaza, Utica, New York 13502. E-mail
21 comments to bthomas@cityofutica.com. For more
22 information, visit the cityofutica.com or
23 [cityofutica.com/department/urban-economic-
24 development/planning/mvhc-seqra/index](http://cityofutica.com/department/urban-economic-development/planning/mvhc-seqra/index). Got that?

1 All comments are due by close of business on
2 June 20th.

3 Okay. We shall begin. And I hope I don't
4 destroy too many names as I go through here.
5 Mark Laramie of Judd Road, Oriskany.

6 MR. LARAMIE: Good evening. My name is
7 Mark Laramie. My address is 5999 Judd Road,
8 Oriskany, New York. I'm here to support the
9 Mohawk Valley Health System Integrated Health
10 Campus project.

11 I work for the Oneida County Department of
12 Public Works, and for the past twenty-five years,
13 I have been directly involved with many municipal
14 and public development projects in the historic
15 Bagg Square district within the City of Utica,
16 New York. I have witnessed firsthand the positive
17 impact public improvement investment projects have
18 had on the economic development, historic
19 preservation, and revitalization of the district.

20 As a result of public investment, future
21 prospects for the historic Bagg Square district
22 are better now than any time in the memorable
23 past. The Mohawk Valley Health System Integrated
24 Health Campus Project will have a similar, but

1 exponentially larger halo effect on economic
2 development, historic preservation, and
3 revitalization, and these benefits will persist
4 for many generations to come. It is my opinion
5 that these benefits must be carefully weighed when
6 considering any adverse impacts that this project
7 may present in the community. Thank you very
8 much.

9 MR. MATRULLI: Thank you. Next is
10 Millie Candor [phonetic] -- Millie, I'm sorry, but
11 I can't read your writing.

12 MS. CANDOR: No.

13 MR. MATRULLI: No? Dave Mathis.

14 MR. MATHIS: Thank you. My name is
15 David Mathis, M-A-T-H-I-S. I live at 833 Symonds
16 Place, that's S-Y-M-O-N-D-S Place, Utica.

17 I'm here also to voice support for the new
18 hospital in downtown Utica. I have been a
19 resident of the City of Utica for seventy years.
20 I have worked downtown in Utica for forty-four
21 years. From 1974 to 1980, I worked in
22 360 Columbia street. That's the old Burger
23 Department Store building. And for the six years
24 I worked there, it was a horrible building then

1 and it's a horrible building now. I can tell you
2 that without a doubt, as I travel through the city
3 -- I worked downtown for forty-four years, and my
4 way home is to go down Lafayette Street, Bleecker
5 Street. And as I travel through that area, it's
6 very clear to me that we need to have something
7 done there. And to have the environmental scope
8 done and to look at that location for development,
9 it's clear we need to have it. You know.

10 I go back far enough to remember when many of
11 us at the time wanted to see development in the
12 City of Utica, and one of the projects that we
13 supported was to maybe put SUNY-Poly, which is now
14 in Marcy. We wanted it downtown Utica, because we
15 believed it would bring economic development, jobs
16 and a lot of growth. We didn't do that. Utica
17 lost out. Now I'm hearing the same thing again,
18 that if we build the hospital somewhere else,
19 Utica will lose out.

20 I'm about supporting strongly that we need to
21 have development within the City of Utica. This
22 project will do it. I think if you drive down
23 there or if you walk down there where this project
24 is proposed, take a look at it. And when somebody

1 tells me that these buildings need to be
2 preserved, I just don't see it. And I think it's
3 about time that those of us who are strongly
4 supportive of development within the City of
5 Utica, that we take a stand. My stand is build
6 the hospital. Thank you.

7 MR. MATRULLI: Karen Jones.

8 MS. JONES: Good afternoon. Karen Jones.
9 I'm the director of the Department of Social
10 Services, 800 Park Ave, Utica. I want to thank
11 you for the opportunity to speak here today.

12 The Department of Social Services is one of
13 the largest county departments. We have eleven
14 divisions that encompass more than twenty-five
15 distinct program areas. The services provided are
16 diverse in what we're able to provide, running the
17 gambit from benefit-related programs, temporary
18 assistance, SNAP, Medicaid, to services-related
19 programs such as child welfare, adult and child
20 protection, employment and daycare, foster care
21 and adoptions. While these services are quite
22 diverse, they share a common theme of primarily
23 working with people who struggle with issues
24 related to poverty.

1 Poverty brings with it a myriad of other
2 problems, indirectly related to the issue of not
3 having enough resources to meet one's basic needs,
4 issues like the lack of access to secure and
5 adequate housing, transportation, child care, safe
6 and environmentally-friendly neighborhoods,
7 medical care, and quality education and job
8 skills, all of which are critical to a person's
9 ability to escape impoverishment.

10 The mission of the Oneida County Department
11 of Social Services is to provide for financial and
12 social services to eligible residents of Oneida
13 County and to ensure these services are provided
14 in a manner that reflects respect for each
15 individual and enhances family and individual
16 functioning and well-being, reducing dependency
17 and maintaining children and adults in a safe
18 community as a first priority.

19 When I reflect on this statement, it's
20 evident to me that to be successful in meeting our
21 objections -- our objectives, it is essential that
22 there be recognition that a person's well-being
23 and independence must be viewed in the context of
24 the community as a whole and the opportunities

1 that exist within the environment in which our
2 individuals live, work and play. I think it is
3 often these types of connections that are missed
4 between the community and social services, because
5 DSS is often perceived by the general public as
6 the answer to the problem of poverty versus one
7 that is a component of a many-sided solution to
8 the complex issue.

9 The availability of quality healthcare, and
10 the revitalization of the area of an urban center
11 and creation of job opportunities are all
12 tremendously available to people seeking
13 assistance from our department. Poverty has been
14 clearly linked to many adverse health conditions,
15 social problems, and therefore, impoverishment
16 impacts our entire community, regardless of one's
17 own social and economic standing. A lack of
18 fiscal or social resources creates situations
19 where a person is unable to mitigate the normal
20 problems each of us encounters everyday. Having
21 adequate resources provides a buffer to manage
22 difficult situations, whether it be addiction,
23 relationship problems, poor health, high stress,
24 or a vast array of human challenges that are in

1 existence in every society and every social class.
2 One strategy to remedy this is to ensure
3 recipients have access to high-quality and readily
4 available healthcare. Another strategy is to
5 create opportunities --

6 MR. LAWRENCE: Ma'am, your time is up.

7 MS. JONES: Okay. Thank you. I apologize.
8 Thank you.

9 MR. MATRULLI: Thank you.

10 MS. BENNETT: You can remind speakers that
11 they can submit written, too.

12 MR. MATRULLI: You can submit that in
13 writing. Anybody can submit anything they've
14 printed up, the whole package. We'd be more than
15 happy to receive it. Frank --

16 MR. LAWRENCE: I want this to go as smooth
17 as possible. I don't want to cut anybody off, but
18 it might help that I just raise my hand at ten
19 seconds just to give you a warning.

20 MR. MATRULLI: Frank Przybycien.

21 MR. PRZYBYCIEN: My name is
22 Frank Przybycien, 10 Irving Place, Utica,
23 New York.

24 COURT REPORTER: Can you spell your last

1 name, sir?

2 MR. MATRULLI: Spell that.

3 MR. PRZYBYCIEN: P-R-Z-Y-B-Y-C-I-E-N. I'm
4 representing myself. I'm a professional engineer,
5 and I'm also representing, tonight, the Genesis
6 Group.

7 The Genesis Group feels very strongly for the
8 approval of this project and endorsing it at a
9 downtown location. We think that the location is
10 the best in the entire region. It's got road
11 development - north, south, east, west - and it's
12 the cornerstone of that. It also is less than
13 five minutes away from the thruway exit.

14 The first thought that we have is that the
15 project, although we're looking at it as a project
16 for today, once the medical center is open, it is
17 going to be in use between sixty and eighty years.
18 And we've got to think of it as, what is medicine
19 going to be like in eighty years? What is
20 transportation going to be like in eighty years?
21 This building will still be in use. So we're
22 looking at it from the long range, not just the
23 first year it's open.

24 The first thing we do think of is it has an

1 amazing conductivity to other great projects that
2 are underway in downtown Utica, the "U" District,
3 historic Bagg Square, hotels, and also Varrick
4 Street and multi-purpose housing and so many other
5 proposals that are yet to be named. We think that
6 this location -- and I don't think of it as a
7 hospital. I think it should be thought of as a
8 medical center campus, that there will be
9 additional buildings and additional towers and
10 additional services that we don't even dream of
11 today will be underway in this location.

12 The support services for this location are
13 just outstanding. We also think that we should
14 use renewable energy where it is possible,
15 particularly geothermal, if not in Phase 1 of this
16 project, but in further phases. We'd like to
17 think that this medical center will have R&D
18 resources, and that Utica will become known as a
19 research center and additional jobs in the medical
20 industry.

21 The final thought is this project gives
22 unique opportunities for other uses of the three
23 hospitals that are presently being used.

24 MR. MATRULLI: Thank you.

1 UNIDENTIFIED SPEAKER: Different people are
2 being asked different questions, like their name
3 and so forth. Can you start the timer after
4 people specify their name and they're asked to
5 spell it, so on and so forth, so the clerical work
6 is not counted in their time? Is that possible?

7 MR. LAWRENCE: Yes.

8 MR. MATRULLI: Michael Galime.

9 MR. GALIME: My name's Michael Galime,
10 spelled G-A-L-I-M-E. Rather than come before the
11 Planning Board this evening and discuss whether
12 there's support or a lack of support for this
13 project, I'd like to address the process.

14 Over two years ago, this project began with a
15 proposal. It was very public. It was discussed.
16 A location was selected publicly. This process
17 should have begun with MVHS and the business
18 owners, the property owners. That's how that
19 process should have begun.

20 And then the second step, which was Phase 2
21 of this project, should have been the filing of
22 this project and the Planning Board. As we know,
23 after almost three years, February 2nd of this
24 year is when this project actually officially

1 started.

2 I feel that the Utica Planning Board should
3 have been afforded the ability to weigh in on the
4 impacts of a potential hospital downtown prior to
5 two years of public debate, promotion and demotion
6 of this project.

7 Essentially what I'm asking today is that
8 this assessment be pragmatic and priority-based,
9 and I'd just like to list some of those priorities
10 from the perspective of Utica.

11 The tax base, how it's affected. The City of
12 Utica has essentially provided its services to the
13 residents of this City, and the tax base and the
14 ability for it to garner revenue is very
15 important.

16 The private property and business owners, not
17 only in the primary subject of how to deal with
18 the fact that there are business owners that may
19 be displaced if this hospital is built, but also
20 the secondary effects if people are relocated.
21 There has been proposals through the LDCs that
22 they'll be given pilots and other tax breaks. So
23 there's not only primary issues here, there's also
24 secondary and tertiary.

1 The city facilities and property. There are
2 much costs involved in not only gifting properties
3 to this project, but also the relocation of
4 facilities, such as the police department and
5 other facilities in the near future, and they are
6 related to this project and should be considered
7 as part of this cost.

8 Our form-based code. We do have a form-based
9 code. If this proposal does move forward, I would
10 strongly urge that the Planning Board be allowed
11 to consider that form-based code and that those
12 impacts be weighed on the actual design of the
13 hospital.

14 The St. Luke's campus and the St. Elizabeth's
15 campus, not only will this affect other parts of
16 the City of Utica, but this will also affect other
17 parts of the City of New Hartford -- or Town of
18 New Hartford. Those may have positive and
19 negative effects.

20 Overall, what are we building and why? The
21 legislation states very specific things, and it's
22 for the delivery of good healthcare --

23 MR. LAWRENCE: Time's up.

24 MR. GALIME: -- whether this building will

1 provide this or not.

2 MR. MATRULLI: Michael, can you also
3 provide us with your address?

4 MR. GALIME: Yes, 2617 Crestway, 13501.
5 It's Utica. Thank you.

6 MR. MATRULLI: Michael Romano.

7 MR. ROMANO: Michael Romano, 120 Airline
8 Street, Oriskany.

9 I'd like to thank you for the opportunity to
10 speak about the proposed downtown hospital
11 project. On behalf of the needs of our region's
12 older residents and those with special needs, I'm
13 Michael Romano, director of the Oneida County
14 Office for the Aging and Continuing Care.

15 And I would like to commend the leaders of
16 the Mohawk Valley Health Systems, who have had the
17 vision and foresight to create and design the
18 intent to consolidate existing resources, while
19 eliminating duplication, with the goal of
20 expanding the breadth and scope of medical
21 services.

22 I believe the system designed to incorporate
23 the latest technology to improve access and
24 availability, along with a plan to attract

1 specialists, is of the utmost importance to better
2 serve our communities and increasing older
3 population, those known to be at greatest risk for
4 acquiring multiple chronic conditions and acute
5 illness requiring and deserving the most skilled
6 medical care available. Since we know our area
7 already has a high percentage of older persons, as
8 cited by our county demographics, which includes
9 close to 52,000 persons over the age of 60
10 county-wide, of which include 48,000 living in the
11 cities of Utica and Rome. Demographic projections
12 indicate this population will increase
13 significantly by 2050. And if you consider this
14 idea from a regional perspective, the older
15 population, age 60 and older, are projected to
16 increase by nearly 30,000 by 2040. And again,
17 this is a population that is projected to be the
18 higher utilizers of both acute and primary care
19 and -- of our five-county region.

20 And while planning to accommodate for elders
21 and the need for emergency department care, acute
22 care, and discharges into rehabilitation and
23 community care, I urge the planners to not only
24 consider the demographic projections, but to also

1 consider the national hospitalization rates of
2 older persons. National data indicates that while
3 hospitalization rates of those 85 and older are
4 significantly higher than those age 65 to 85,
5 they're generally up to five times higher than
6 those under the age of 65. Also statewide
7 demographics also project that age 85 and older
8 will increase by twenty-five percent from
9 two-thousand to twenty-five [sic].

10 So because of this trend, I also ask that you
11 approach this with increased focus on the needs of
12 our older consumers. So thank you very much.

13 MR. MATRULLI: Thank you. Karen
14 Corrigan-Ryder.

15 MS. CORRIGAN-RYDER: Good evening. My name
16 is Karen Corrigan-Ryder. I'm here on behalf of
17 Claris, LLC, which owns the property at
18 333 Lafayette Street, the Burger Department Store,
19 which by the way is alive and moving, and Wilcor
20 International, which has an annual product show
21 and displays at 333 Lafayette Street. Does that
22 take care of the address and the name? Okay.

23 Our property and a substantial portion of our
24 business is in the footprint, and where our

1 employees and ourselves will be displaced with
2 this move. The draft scope by MVHS is a starting
3 point, but it's a mere skeleton of what a proper
4 scope for a project of this scale and magnitude
5 should be.

6 We understand that the SEQRA process involves
7 some give and take. From this first draft scope,
8 it's clear that MVHS expects to take, and expects
9 the community to give. This is their first offer,
10 and we urge the Board to come back with a more
11 reasonable and realistic scope for an EIS that
12 will more fully achieve SEQRA's objective of
13 elevating environmental considerations to equal
14 footing with social and economic considerations.

15 Since this is a blueprint for the entire
16 environmental review, it's imperative that we get
17 this right at the outset and we embark on this
18 process together, that both the community and MVHS
19 receives proper, even time to discuss the process.
20 It will be the Board's determination whether the
21 final scope is adequate, so please give this
22 document and your efforts your most careful
23 consideration. We will submit this in writing.

24 How an applicant will finance a particular

1 project is not typically relevant to a project's
2 purpose and need; therefore, we ask that the state
3 grant not to be referenced or discussed under the
4 section on purpose and need, as those two
5 parameters need to be independently and clearly
6 established in this record. Spending money for
7 the sake of spending money is not a legitimate
8 purpose.

9 SEQRA's broad definition of "environmental"
10 includes existing patterns of population,
11 concentration, distribution or growth and existing
12 community or neighborhood character. This project
13 would affect multiple communities and
14 neighborhoods in Oneida County, not just downtown.
15 We don't believe the draft scope properly
16 addresses these existing patterns and character,
17 or the significant impacts the project will have
18 on our existing patterns of growth and development
19 in our neighborhoods.

20 We urge the Board to take the necessary hard
21 look and analyze how the project will affect the
22 neighborhood and community where the project is
23 proposed, including people and business such as
24 ours, which would be displaced, as well as those

1 around the existing facilities, including the
2 Associated Medical Service businesses who have
3 made significant investments around the current
4 existing facilities. Please make sure that
5 they're subject to analysis and a robust
6 discussion whether DEIS -- and please make sure,
7 very sure, that adequate mitigation is imposed for
8 all these impacts.

9 I believe that somebody will be finishing my
10 comment when they come up, and I thank you very
11 much.

12 MR. MATRULLI: Thank you. Patrice Bogan.

13 MS. BOGAN: Hi. My name is Patrice Bogan,
14 and I'm a City of Utica resident at 320 Hartford
15 Place --

16 COURT REPORTER: Can you spell your last
17 name, please?

18 MS. BOGAN: B-O-G-A-N. And I'm the deputy
19 director of the Oneida County Health Department.

20 With this new hospital location comes the
21 opportunity for new and strengthened relationships
22 with the urban community. The required public
23 health and hospital community health assessment
24 identifies the City of Utica with higher than

1 average numbers of obesity, chronic disease,
2 childhood lead poisoning and addiction, to name a
3 few. Therefore, the downtown location is desired,
4 due to the opportunity for this new hospital to
5 enhance health promotion strategies within the
6 City of Utica communities, where it will live and
7 where it will serve, and that, in turn, will
8 benefit Oneida County as a whole.

9 Many factors that contribute to health are
10 outside of the healthcare system. The social
11 determinates of health are healthy aging.
12 Progress in addressing racial and ethnic
13 disparities, and socioeconomic status all
14 influence health. The New York State prevention
15 agenda recognizes the critical role of healthcare
16 providers and health improvement, with emphasis on
17 actions that the community, at an environmental
18 level to achieve prevention agenda objectives,
19 with a goal of improved health status of
20 New Yorkers.

21 Within the healthcare setting, strategies
22 that increase access to care and foster more
23 meaningful engagement with those getting care will
24 support the goal of improved health and reduction

1 of disparities through increased emphasis on
2 prevention. This development will provide growth
3 and improvement of a healthcare system for a
4 rapidly aging population. The downtown location
5 will provide an easily accessible site for people
6 in need. The combined services from existing
7 locations to this central point will also increase
8 operational efficiencies, decreasing the rate of
9 healthcare spending. Thank you.

10 MR. MATRULLI: Thank you. Dan Gilmore.

11 MR. GILMORE: My name is Daniel Gilmore,
12 G-I-L-M-O-R-E. I'm with the Oneida County Health
13 Department. I'm the environmental health
14 director, 185 Genesee Street, Utica, New York.

15 I'm here to support the new MVHS hospital. I
16 have several reasons for this.

17 First, there are some residential and mixed
18 use buildings that are old and dilapidated and
19 unsafe to live in in the hospital footprint area.
20 They will be removed, and this will be a benefit
21 for people that are living in poor conditions.

22 Second, with the removal of the older
23 buildings and to develop the new construction, it
24 will provide opportunities for water system

1 infrastructure upgrades and improvements.

2 And third, when finished, the project will
3 allow for pathways for walking, green space, and
4 other recreational uses for people that work and
5 live in this section of downtown Utica.

6 Thank you for your time.

7 MR. MATRULLI: Thank you. Steven Keblish.

8 MR. KEBLISH: Steve Keblish, 106 Genesee
9 Street, K-E-B-L-I-S-H. Good evening.

10 So I want to mostly address the impact on
11 land use tonight, bringing it down to two
12 categories.

13 Land use by the City of Utica. The City of
14 Utica currently possesses and employs several
15 parcels and streets within the impacted site.
16 These publicly-held lands serve interest in the
17 public good, including supporting public safety
18 operations, private and public transportation,
19 commerce, parking, and preserving the historical
20 character of Utica. The scoping document should
21 call for review of these uses, including plans to
22 mitigate the impacts to the City of Utica's police
23 maintenance facility operations, plans to replace
24 the police maintenance facility, the impact on

1 closing streets to transportation and parking,
2 especially on local events, including the
3 Boilmaker, Adirondack Bank Center events, and
4 other events which rely on these streets, the
5 historical significance of Lafayette Street, the
6 historical significance of the street grid,
7 especially as it relates to historical events,
8 such as National Beer Day and the potential beer
9 museum to be located in Utica, and the values of
10 the properties held by the City of Utica, and the
11 ability of the City to recoup the value of those
12 properties, especially as measured against the
13 purpose of acquiring those properties, i.e., the
14 collecting and generating of property taxes.

15 And the second category here is the land used
16 by private property owners. The proposed site
17 includes many private property owners who utilize
18 the land for private commerce, non-profit
19 activities, worship, storage, display, services
20 and community organizing. These lands generate
21 benefits to the community and public in the form
22 of property taxes, sales taxes, public space
23 amenities, fellowship, donations, and access to
24 food and other goods. The scoping document should

1 call for a review of those uses, including how the
2 project will impact property tax collection,
3 including the total impact to the county, the
4 city, the school and library before and after the
5 project, including the impacts on property taxes
6 at alternate sites, sales taxes collected within
7 the site, the degree to which charitable giving
8 will be available in or near the impacted site
9 before and after the site -- after the project,
10 the degree to which food service -- food services
11 and other low cost goods will be available before
12 and after in that area, the degree to which space
13 will be available for community organizing,
14 worship and other social activities within that
15 space, and the degree to which the project will
16 displace businesses, people and other community
17 activities. Thank you.

18 MR. MATRULLI: Thank you. Dennis Davis.

19 MR. DAVIS: Good evening. My name is
20 Dennis Davis. I currently have worked
21 thirty-eight years in the heavy construction
22 business. I'm currently the commissioner of
23 public works for the County of Oneida. My
24 comments will be brief and in a general nature of

1 the construction business, and intended to be in
2 support of this project.

3 Large scale infrastructure projects of this
4 nature definitely can have significant
5 environmental impacts. Improvements, especially
6 storm water discharge, can be realized during
7 these types of large projects and provide
8 long-term benefits. I believe that the scoping
9 document will address all of these issues, and I
10 will provide further written documents. Thank
11 you.

12 MR. MATRULLI: Thank you. Ralph Humphreys.

13 MR. HUMPHREYS: Yes. My name is Ralph
14 Humphreys, H-U-M-P-H-R-E-Y-S, Tibbitts Road, New
15 Hartford. Thank you for the opportunity to be
16 here.

17 I have more questions than anything else, but
18 listening, I was wondering. Is this about urban
19 renewal or is it about our healthcare? That is
20 one of my questions.

21 I ran a business for many years, and I was
22 always taught to not put all your eggs in one
23 basket and depend upon -- and I think what we've
24 got with three hospitals under one management is

1 working very good. And with the things that are
2 happening in the world, we're much better to have
3 them divided than all in one place. And we're
4 losing a lot of beds by doing -- doing it this
5 way. You know.

6 And the main thing about a hospital is the
7 structure of it, that it stays up, a location the
8 people can get to, the equipment in the hospital
9 and the management, and management is a very
10 important thing. You know. They say we've got
11 problems with St. Elizabeth's now. I have not
12 heard of any engineering reports, anything that
13 tells about what is wrong with it, what is the
14 cost to repair it, to put it back in shape. Those
15 things should be decided first before we go into
16 just get rid of it and build a new one.

17 We will end up -- yes, our project is going
18 to be very expensive, and I believe the best way
19 to stop -- find out where everybody stands is a
20 public referendum and let the voters decide. Do
21 that and then we can advance on after that.

22 Thank you very much. Thank you.

23 MR. MATRULLI: Thank you. Fred Lampman.

24 MR. LAMPMAN: Hi. My name is Fred Lampman,

1 120 Base Road, Oriskany. I am the deputy director
2 for Oneida County's Department of Emergency
3 Services.

4 Currently our department is undertaking a
5 multimillion dollar public safety radio
6 communications upgrade project, and one of the
7 challenges that we face when dealing with a
8 project of this type is the type of construction
9 that the proposed hospital would be for getting
10 in-building coverage for our first responders when
11 they're in such a facility. And it is our hope
12 that Mohawk Valley Health Systems will work in
13 consultation with our department to implement an
14 in-building communication solution to provide
15 adequate radio communication to our first
16 responders as they move forward with their plan so
17 that our responders can stay in contact with each
18 other and with the 9-1-1 dispatch center. Thank
19 you very much.

20 MR. MATRULLI: Thank you. Jim Brock.

21 MR. BROCK: Good evening. I'm Jim Brock.
22 That's B-R-O-C-K, 1900 Genesee Street.

23 It's been said that a city can never be
24 revitalized by subtraction. Bulldozing an entire

1 historic neighborhood is not the solution. It is,
2 in fact, the problem.

3 Your job, as the lead agency on SEQRA, is to
4 compare alternative sites, which begs the
5 question: Where are the studies that MVHS
6 promised would be provided to you of the other
7 sites that they chose not to go to?

8 It is incumbent upon you, as the lead agency,
9 to not only have it for your review, but to also
10 provide it to us, the citizens of this community.

11 Also, with all due respect to a lot of the
12 folks that spoke today, we're not here to discuss
13 how happy or nice it would be to have the hospital
14 downtown. Your job is to look at the
15 environmental issues. And as you know, SEQRA lays
16 them out. It is not simply air or water. It's
17 minerals, it's flora, it's fauna, it's noise, it's
18 resources of agriculture, it's architectural,
19 historic, aesthetic significance. It's existing
20 population concentration, distribution of growth,
21 existing community or neighborhood character, and
22 ultimately human health. When you look at those,
23 the alternate site that was unanimously approved
24 by the MVH Board of St. Luke's, if it was deemed

1 to not be feasible to come downtown, it's clearly
2 the site it should go to. It is your job to
3 determine whether the alternate site should, in
4 fact, have been the correct site.

5 We know that by coming downtown, you will
6 disrupt our tax base, both city, school, county,
7 sales. You will disrupt businesses that have been
8 in business for generations. You will literally
9 be giving a green light to rip people's properties
10 away from them, under one of most evil things that
11 exist in our country called eminent domain. We
12 may agree that on occasion, eminent domain, taking
13 a private property for a public use, might have a
14 reason to go forward, but in very limited
15 situations. It should never used to be take
16 private property and give it to a private entity.
17 Thank you.

18 MR. MATRULLI: Thank you. Shawn Corrigan.

19 MR. CORRIGAN: Shawn Corrigan. That's
20 Shawn, S-H-A-W-N, Corrigan, C-O-R-R-I-G-A-N,
21 living at 1 Derbyshire Place, Utica, New York.

22 And this is in regards to the location at
23 333 Lafayette Street, owned by Claris, LLC, which
24 is named after my grandmother, who started the

1 business in the early thirties, and Wilcor
2 International is housed in that location with its
3 international showroom.

4 I want to mention a few others -- SEQRA --
5 important things to consider. SEQRA requires that
6 all draft environmental impact statements identify
7 and discuss all reasonably related short-term and
8 long-term impacts, community impacts and other
9 associated environmental impacts. Other
10 associated environmental impacts from the project
11 include the secondary impacts that would result
12 from the displacement of property owner and
13 business within the footprint of the project. We
14 understand economic impacts are not directly
15 within the purview of SEQRA, but to the extent
16 this project would substantially interfere and
17 alter our existing patterns and population
18 concentration distribution growth and
19 significantly affect several existing
20 neighborhoods and communities, the secondary
21 impacts to displace these property owners and
22 businesses must be thoroughly analyzed and
23 mitigated.

24 The draft scope will determine the only

1 alternatives that will be analyzed and discussed
2 in the DEIS. And if an alternative is not in the
3 scope, it is not fair game. So it is extremely
4 important that the range of reasonable
5 alternatives in the scope be as broad and
6 comprehensive as the project is large in scale and
7 scope. At the very least, the final scope should
8 include an alternative that would involve
9 upgrading, renovating or retrofitting MVHS'
10 existing facilities to achieve its objective of
11 improving the delivery of patient care. Such an
12 alternative is viable and could likely achieve
13 significant advancements and efficiencies in
14 patient care at a substantially less cost than the
15 construction of a new facility.

16 We implore the Board to make sure the range
17 of alternatives specified in the scope is
18 appropriately broad and reasonable and that it
19 omits unnecessary throw-away alternatives, such as
20 the New Hartford Shopping Center. Please do your
21 own independent and thorough review of the draft
22 scope. Rely on your own professional and
23 independent consultants instead of solely on those
24 working for MVHS. And please err on the side of

1 inclusion instead of exclusion when it comes to
2 finalizing the scope, because if something is not
3 in the scope, it won't be in the DEIS. And any of
4 our later comments or any matters not addressed in
5 the DEIS will be completely ignored. That is why
6 the scoping document is so important, so please
7 get it right.

8 MR. MATRULLI: Thank you. John Swann.

9 MR. SWANN: I'm John Swann, S-W-A-N-N, and
10 I'm a Utica resident speaking on behalf of the
11 Community Foundation of Herkimer and Oneida
12 Counties, 2608 Genesee Street, Utica.

13 I've been a Utica resident for more than
14 thirty years, and I speak to you on behalf of the
15 Community Foundation tonight as its executive
16 vice-president.

17 As an organization committed to significant
18 and continuing investment that enhances area
19 resident's quality of life, the Foundation
20 supports Mohawk Valley Health System's Integrated
21 Health Campus project. The Foundation has
22 invested in many of the area's not-for-profits for
23 decades, including the vast majority, if not all
24 of its institutional healthcare providers in both

1 counties.

2 Meeting the healthcare needs of regional
3 residents is one of our continuing strategic
4 priorities. The MVHS downtown project provides a
5 unique opportunity to build a community asset for
6 our collective future, one that will not only meet
7 healthcare needs, but will also support and
8 enhance urban connectivity and place-making
9 through integrated design. Purposeful investment
10 in our community's urban core through this
11 unprecedented public/private project is not an
12 option. It is a necessity.

13 It's important to the Community Foundation as
14 a steward of community resources that the draft
15 scoping document thoroughly address potential
16 environmental impacts of this project. We have
17 reviewed the document and found it to be thorough
18 and wide-ranging in fulfilling that purpose. We
19 agree with facts stated in its descriptive
20 comments, and especially the stated project
21 purpose.

22 On behalf of our President and CEO Alicia
23 Dicks and our Board of Trustees, I would like to
24 thank you, members of the City Planning Board, for

1 your dedication and commitment to this process.
2 The Community Foundation looks forward to
3 continued progress, both for the environmental
4 review process now underway, and for MVHS
5 downtown. Thank you.

6 MR. MATRULLI: Thank you. I'm not sure of
7 this name. Is there a K. Revere?

8 MR. REVERE: Kevin.

9 MR. MATRULLI: I'm sorry.

10 MR. REVERE: It's okay. Kevin Revere,
11 K-E-V-I-N, R-E-V-E-R-E. I'm the director of
12 emergency services for Oneida County. We are the
13 emergency managers for the county. We run the
14 9-1-1 center. I'm the fire coordinator for the
15 county, and we also oversee the Stop DWI program.

16 I've got over thirty years in public safety
17 experience. I have a bachelors degree from the
18 University of Central Missouri. Go Mules. And
19 one of the first papers I had to do in college in
20 the early eighties was about boiling liquid
21 expanding vapor explosions, which has been touted
22 as one of the reasons not to build in that area.
23 And I request you, as the Planning Board, to take
24 that concern into consideration. My examination

1 of it is that it's not real. There is no need to
2 move it because of the railroad tracks.

3 Hazardous materials are transported on
4 vehicles, trucks, all over the country every
5 single day. The explosions that you see and hear
6 about that make national news, and they should,
7 are unbelievably rare. And the chemicals that are
8 transported on the tracks are also offloaded into
9 vehicles that go along our highways all the time,
10 but I do think that you should look into that and
11 engage our department, engage the hospital, which
12 is required by law to have emergency evacuation
13 plans, emergency management plans. Our office
14 works with all those agencies regularly, but it is
15 a topic that has been brought up, and we'd be more
16 than happy to engage with the Planning Board in
17 this process, because it is an environmental
18 concern.

19 In my years of experience in public safety, I
20 also ran the Child Advocacy Center for about
21 twelve, thirteen years. We investigated child
22 sexual abuse in Oneida County. And just like the
23 mentally ill, people need some -- some help. A
24 lot of sexual abuse victims or rape victims are

1 brought to hospitals because there's no place else
2 for them to go. There is no hospital in Oneida
3 County that has today's functionality for victims,
4 especially child victims of child sexual abuse,
5 and mental health facilities. I personally
6 interviewed children in waiting rooms because
7 there was no place else to do it. It's not
8 conducive to get a disclosure at that time.

9 I encourage you to even take a look at, as a
10 Planning Board, that perhaps this project needs to
11 be a little bit bigger and more floor space to
12 accommodate the mentally ill and the children and
13 rape victims who need to have a segregated space.
14 They need a different approach. That has been
15 done in medicine for a very long time, not here
16 but across the country.

17 Lastly, as I mentioned, we run the 9-1-1
18 center. We dispatch first responders for over
19 100,000 calls. St. Elizabeth's on Genesee Street
20 with all the intersections, all the traffic, is a
21 huge problem. St. Luke's, they run into traffic
22 problems all the time. This location is much more
23 conducive to that. So thank you.

24 MR. MATRULLI: Thank you. I think next is

1 Stefan Rubitski.

2 MR. RUBITSKI: Good evening. Stefan,
3 S-T-E-F-A-N, Rubitski, R-U-B-I-T-S-K-I. Hopefully
4 you have that. 22 Main Street, Yorkville,
5 New York.

6 This is a critical time for this Utica/Oneida
7 County area, and we need to come to an agreement
8 for -- about what we want to do here. And I'm
9 neither for or against this, but we need to -- we
10 need to look at alternatives, and that area that
11 they want the hospital in is an eyesore. It --
12 it's in disrepair and something needs to be done
13 in that area, development, some type of
14 development. If it's not the hospital, what could
15 go there? We need to think outside the box here,
16 and we need to -- we need to come to an agreement
17 and get along as a community. Thank you.

18 MR. MATRULLI: Thank you. Edwin
19 Waszkiewicz.

20 MR. WASZKIEWICZ: My name Edwin "Butch"
21 Waszkiewicz. That's W-A-S-Z-K-I-E-W-I-C-Z. I
22 live at 1612 Harrison Ave in Utica. Actually my
23 parents and my sisters moved in on September 1,
24 1950. I was born on September 4, 1950, and I've

1 lived there my entire life. So my neighbors
2 aren't just lucky.

3 But I am here because I am "yes, hospital
4 downtown" for all the right reasons. You're
5 letting in a 67-year-old who, for the last seven
6 years, has actually been an overnight patient
7 about eleven times. It started out -- I went in
8 for the nose job. They woke me up and I had an
9 allergic reaction to the anesthesia.

10 So I asked the doctor, "You know, Doc, what's
11 my blood pressure?"

12 He said, "It's about 297 over 197, when it's
13 suppose to be 120 over 80."

14 And I kind of fainted off into the other
15 world, but I came back. And after about
16 forty-eight hours, I had reached the point where
17 he could either send me home or keep me for
18 another day.

19 But I said, "You know, Doc, I watched the
20 room across me. They've got the masks on." They
21 moved the guy who was in the other bed because
22 they had to put the mask on him, and I was in
23 worse shape so they moved him.

24 And then I walked down the hall, and the next

1 room down has those. So forty-eight hours after
2 that incident, I had about a one hundred percent
3 chance of catching what they had, and I said,
4 "Doctor, send me home." And I was fortunate, I
5 did not have to go back.

6 But that is one of the important things to
7 think about, because most of the rooms there are
8 going to be single. And one of the biggest
9 problems -- you can look at the lists and they all
10 have the problem where if person "A" has it,
11 person "B" catches it. And that is a huge, huge
12 issue. I was very lucky.

13 I had a cousin who died. His operation was
14 successful, but he caught the infection. And
15 we've all had friends that have had that problem,
16 so this will be better from that viewpoint.

17 And the central location - north south, east
18 and west - the roads are already there. We're all
19 set. For the reasons of good health for a
20 67-year-old, who in the last six years spent about
21 ten or eleven times in there, I'm in favor of it.
22 In fact, one of my friends was Judge Ralph
23 Eannace, and I hadn't seen him in a couple years.
24 And I mentioned how many times I've been there.

1 He said, you know, if you went to Marriott or
2 Hilton, you would've gotten points. Do they offer
3 points? I jokingly asked somebody and they just
4 laughed.

5 But for all the right reasons. At one of the
6 Utica common council meetings, I did mention
7 there's three parts to what these people have to
8 be paid. The first part is the fair market value
9 of their property, and building costs and
10 marketing costs thereof. Thank you.

11 MR. MATRULLI: Thank you. Michael Lehman.

12 MR. LEHMAN: Good evening. I'm Michael
13 Lehman. It's A-E-L, last name Lehman,
14 L-E-H-M-A-N, 153 Ridge Road in Utica, New York.
15 My family moved to Utica sixty-one years ago from
16 the Albany area, so we've been paying Oneida and
17 Utica taxes for that amount of time.

18 I grew up here, moved away to college and
19 career, and moved back to Utica about five years
20 ago. I'm trained as an architect and urban
21 planner, and I think the best part of my education
22 was that I've been taught to try to respect the
23 other person's point of view and opinion, even if
24 I didn't agree with them or didn't agree with them

1 very strongly. So I've tried to do that in all
2 the meetings I've attended that MVHS had, and as I
3 think one other person pointed out, try to
4 breakdown the issues. And the issues basically
5 are best quality healthcare possible.

6 And if for some reason we've got lumped into
7 this, which has nothing to do with healthcare,
8 economic revitalization. The facts as I have seen
9 them from the health system and the other
10 discussions during their community input sessions
11 were that all of the stated Mohawk Valley Health
12 System's healthcare goals can be achieved at their
13 second location, the St. Elizabeth's -- the
14 St. Luke's campus, actually again, by their own
15 admission, and that is their second preferred
16 location should the downtown site prove
17 financially unfeasible, which I believe it has
18 already because they can't afford to build the
19 parking garage that they need. So I wish
20 somewhere along the line that would be defined, as
21 well.

22 The economical revitalization, again, it's
23 barely conjecture on all the parts of all those
24 folks who -- wishful thinking. All the

1 comparisons and the other examples that are made
2 are not in downtown. One of the facts we are sure
3 of is that the downtown hospital has actually
4 stifled development downtown. Empire Bath &
5 Beyond moved out and they're in Marcy now. Many
6 businesses down there were planning to expand
7 their businesses, and it's on hold pretty much
8 until they see what's going on with the hospital
9 project.

10 I think it's very important, again, not to be
11 sucked in by shiny renderences [sic], etcetera,
12 that basically are, again, eye wash. It's been
13 said that this is a state-of-the-art building, yet
14 in my conversations with MBBJ, the architects for
15 the building, they -- at the direction of Mohawk
16 Valley Health Systems, they will not be going
17 after a LEED accreditation for the building, which
18 is basically an energy-saving thing, that again,
19 is typically done in state-of-the-art hospitals.

20 I have some experience in planning hospitals,
21 and during my thirty-plus year career, I did
22 facilities planning work for Albany Medical
23 College and the Albany Medical Center Hospital, so
24 I'm somewhat familiar with the issues involving --

1 that are very complicated in terms of designing
2 hospitals, etcetera.

3 So again, I would ask you to consider all the
4 things, and that truly progressive design,
5 etcetera, would involve the use of newer urbanism
6 reorganization and getting LEED accreditation on
7 the building. So otherwise, it's just change for
8 change's sake and not really progress, despite
9 what all the other folks may tell you. Thank you.

10 MR. MATRULLI: Thank you. Joe Cerini.

11 MR. CERINI: Hello. My name is Joe Cerini,
12 C-E-R-I-N-I. I own the location at 418 Lafayette
13 Street. Presently the business is Citation
14 Services. The building is in the age range of 160
15 years old. The building has been there since the
16 1850s, 60s. At one point it was a hotel. It's
17 older than Hotel Utica. It was also a restaurant.
18 After that, International Heater purchased the
19 building. International Heater is why we have a
20 Boilermaker race. That was their main sales
21 floor. At that point, they built the rear
22 building as an international shipping location to
23 the -- from their building to the Erie Canal.
24 They conglomerated the businesses, Carton Furnace,

1 Wheeler and three other companies under the
2 International Heater name and sold from that
3 location.

4 The area has been gradually improving over
5 the last fifteen years. Seventeen years ago, you
6 wouldn't want to be down there. My friends told
7 me I was crazy, but it has been improving
8 gradually, and it's already a walkable
9 neighborhood from downtown Utica through to
10 Varrick Street. You can see people walking
11 constantly, people riding their bikes. It's not
12 like it was ten years ago. People shouldn't be
13 afraid to be down there.

14 What has happened with this hospital project
15 three years ago? There should have been public
16 input that was included before the politicians
17 basically got ahold of this.

18 Now, the entire decision for the downtown was
19 made before any consideration of environmental
20 impact called for by legislation that was proposed
21 and why the hospital is being given three-hundred
22 million dollars.

23 I'd like to enter into record the 710 pages
24 of e-mails in today's record, incorporation by

1 reference, that clearly show that the public input
2 was not sought. The downtown site was a
3 predetermined decision by Anthony Brindisi,
4 Anthony Picente, Larry Gilroy and Steve DiMeo that
5 pushed Mohawk Valley Health --

6 MR. LAWRENCE: Time's up, sir.

7 MR. CERINI: I'll enter the rest. Thank
8 you.

9 MR. MATRULLI: Thank you. Robert Heins.

10 MR. HEINS: Robert Heins, 15 Clinton Place,
11 Utica, New York 13501.

12 I've had a great experience. I've probably
13 told the story too many times. In 1963, I was a
14 professor at Syracuse and got us on a bus to come
15 to Utica.

16 And we said, "Why are we coming to Utica?"
17 And we were going to the Munson-Williams.
18 Michele Deschampes [phonetic] was giving a
19 lecture. It was the fiftieth anniversary of the
20 arbor exhibit. And the lecture was so boring, and
21 I was so arrogant, I left halfway through because
22 I wanted to see Utica. And I walked down Genesee
23 Street, and I had a chance to get the hamburger --
24 cheeseburger at Woolworth's. I saw the busy

1 corner and I saw what was happening then, and it
2 was a multi-use mix.

3 Now I'm an architect. I've done 3,300
4 projects around the world. There's --
5 architecture is set designs. So you can make a
6 building look like anything, but what you can't do
7 are some of the things accomplished by the
8 Auditorium Authority or Harbor Point Authority.

9 And one of the great opportunities at that
10 particular location is to look at the possibility
11 of that whole area as a donut. So that in the
12 center of it, you put your hospital or box store
13 or whatever - you know - would be going there. At
14 this point, if it's a twenty-story building, it's
15 a twenty-story building, but around the perimeter,
16 you create a neighborhood. And how do you create
17 a neighborhood? You work within the existing
18 fabric that's there. You do condition reports of
19 all the buildings that are there, per the State
20 Historic Preservation Office guidelines. You find
21 out what's going to be qualified for adaptive
22 reuse.

23 I worked on the State committee that helped
24 to draft SEQRA. I also was chairman of a hospital

1 for a major expansion. And so one of the first
2 things that we did at the alternative sites we
3 looked at -- and we decided to stay at the site
4 that we were at. We looked at those sites and did
5 Phase 1, and started a lot of Phase 2 development
6 with the New York State DEC, looking at the
7 property. We did traffic studies before we hired
8 an architect, before we did anything. We did the
9 geo-tech of the sites. We did the histrionic
10 study about what was done at the property. So
11 when the SEQRA discussions were being evolved, as
12 New York State DEC was evolving after 1970, we
13 would get together and say, one of the purposes of
14 SEQRA is to study all alternatives. And we would
15 say that, "Study all alternatives. Study all
16 alternatives."

17 And the other thing is to ask questions.
18 You're volunteering to serve on a Planning Board,
19 and it's truly unique. The Planning Board is the
20 lead agency for this particular project, the
21 things that are in there.

22 I would just say one other thing. You cannot
23 build 673,000 square foot based on prevailing
24 scale for \$500 a square foot. Please get the

1 budget correct as you're going into this, in all
2 impacts, from infrastructure right on down.

3 MR. MATRULLI: Thank you. I think this is
4 Lucretia Hunt.

5 MS. HUNT: Thank you. Lucretia Hunt,
6 L-U-C-R-E-T-I-A. The last name is simple, Hunt,
7 H-U-N-T. I live at 903 Bleecker Street in East
8 Utica.

9 I am for the hospital. My daughter got sick
10 and she lived in D.C. and we went to Georgetown.
11 I never saw anything right in the middle of the
12 city. You went around the business area, come
13 down, and there you see the hospital, surrounded
14 by everything, modern equipment and everything.
15 We need some of this here. We need a modern
16 hospital.

17 I know we have the three hospitals, and
18 they're doing the best that they can, but we need
19 to think outside of the box. We're always
20 negative when it comes to Utica - negative,
21 negative, negative. Don't you think it's about
22 time we think of something positive?

23 We have an opportunity to do something now to
24 move the city forward with everything else that's

1 going on. We've had a lot of statistics tonight
2 and answered information that I wasn't even
3 familiar with, but I am for the hospital, and I am
4 for the future, and I do think we need a new
5 hospital in the city. Thank you.

6 MR. MATRULLI: Thank you. Richard Tone.
7 Is there a Richard here? This person lives on
8 Perry Street in Buffalo.

9 MR. TONE: That's me. I don't wish to
10 speak.

11 MR. MATRULLI: That's fine. Michael Mandia
12 -- or Michele Mandia. Excuse me.

13 MS. MANDIA: Hi. My name is Michele
14 Mandia. I live at 1436 Albany Street in Utica.
15 I'm here because I was under the impression that
16 this was a forum, because the hospital and the
17 people involved in it did not present it to the
18 public enough, according to the newspaper. The
19 merger consolidation group came and said, "You
20 didn't get involvement from the public." So I
21 thought that's why we were here, but I feel a
22 little hoodwinked because there's every department
23 head from the county and the city here. So I feel
24 a little hoodwinked by this meeting today.

1 But as I sit here, my head was spinning,
2 because I want to thank everybody here for paying
3 your taxes to New York State, because without you
4 paying your taxes, I don't see Mr. Cuomo writing
5 us a check for three-hundred million dollars out
6 of his pocket. So I think where we got the
7 three-hundred million is from everybody in this
8 room and this state. So I'm glad we got the money
9 but -- in regards to that, I only foresee the
10 parking garage that's going to cost us money. My
11 city taxes will be going up. My county taxes will
12 be going up. My school taxes probably won't go
13 up, because I'm on the School Board and we work
14 diligently to keep them at a zero percent tax
15 increase.

16 As a negotiator for my union that works for
17 the hospital, our average person -- well some of
18 the people make \$9.40 an hour who've worked there
19 for fifteen years. So if you took that and told
20 them their city was going to go up, their county
21 and their parking garage fee, because nobody's
22 come out to tell us this. Is my parking garage
23 going to be free? As an employee, do I get to
24 park for free? Nobody's come out to tell us that.

1 So what I figured out is the average employee
2 making \$40,000 a year would probably have to work
3 close to twenty years to make what the CEO makes
4 in one year.

5 So I'd like you to take it back that --
6 everybody here, the new hospital is great to have,
7 but I don't think anybody here has really found
8 the impact on the taxpayer. I know it's great to
9 have a new hospital, but you haven't told us what
10 you're going to do, and how much my taxes were
11 going to be increased? You know. Am I going to
12 pay to park? Am I going to find a place to park
13 once everybody else starts using the parking
14 garage for other events?

15 So I think it's up to you to have more forums
16 that aren't stocked with department heads from the
17 county and the city.

18 MR. MATRULLI: Donna Beckett.

19 MS. BECKETT: Hello. My name is Donna
20 Beckett, B-E-C-K-E-T-T, and my address is Norton
21 Ave in Clinton, New York. I was not planning on
22 speaking tonight, but I did list my name knowing
23 that I could withdraw. And I am grateful, because
24 my job is going to be much easier right now

1 because of those other people who've spoken before
2 me.

3 When we first started speaking and some of
4 the first people speaking, I was sitting there
5 writing a few notes, because I was listening to
6 what they were saying. And as you've heard, I got
7 varying opinions. It was an opinion that it might
8 be economic growth. It was an opinion that the
9 condition of that neighborhood is not good. The
10 opinion -- I worked in Oneida County Social
11 Services for twenty years, so we had some of you
12 here talking about that. I also worked in a
13 hospital in a support service for fifteen years.
14 I've been doing this for three years everyday. I
15 did it with -- I came to it with an open mind. I
16 thought, I wonder why they're doing it. And then
17 I found out more. Okay.

18 So anyway, not so much about me. Also
19 Genesis spoke, mentioned about the future, what a
20 hospital would be like in seventy, eighty years,
21 what healthcare would be like, what transportation
22 would be like. I'm very aware of that. I worked
23 in a hospital in 1980, 1985. I saw the changes.
24 I -- working at a hospital at a young age, you

1 know how it is. You pay attention to it, even
2 after you left that. And I know how rapidly
3 things are changing.

4 So anyway -- and again, it is about
5 healthcare. I am so grateful that I have as much
6 information as I have. I, too, am a person who is
7 not emotionally driven. I'm looking at both
8 sides. I want facts. I want information. I
9 don't want -- hopefully that it's an economic
10 engine. Hopefully it will be wonderful.

11 So I think I'm going -- I just want to remind
12 -- the simplicity of this is, please remember this
13 audience clapped when those people who spoke and
14 did not think it's a good idea. No one clapped,
15 except for Lucretia, when who are in favor of it.

16 So -- and my final thing, although he hasn't
17 interrupted yet. Let's have it both ways. Let's
18 have expanded healthcare regional medical campus
19 at St. Luke's. It's a perfect sixty-four acres.
20 Use the money for healthcare and not to buy out
21 people.

22 The final thing is that I, too, walk those
23 streets, because I worked in Oneida County, and I
24 saw it getting better. Not only a year and a half

1 ago, I went and did a survey, not time to push an
2 agenda. I met all of them. So thank you.

3 MR. MATRULLI: Thank you. John Kent.

4 MR. KENT: Good evening. My name is John
5 Kent, K-E-N-T. I'm commissioner of planning for
6 the County of Oneida, and our address is 321 Main
7 Street, Utica. I have some very brief prepared
8 remarks, and I have a copy that I can read with
9 you.

10 But just in light of something that was said
11 a few minutes ago, I am a county department head,
12 but I'm the head of a department that was required
13 under SEQRA to take certain actions when it comes
14 to new projects. So we are an interested agency
15 under SEQRA, and we need to be here to have input
16 into the process. So just to clarify that one
17 point.

18 These comments I hope will be pretty brief.
19 I would like begin my comments by complimenting
20 the City of Utica Planning Board, acting as SEQRA
21 lead agency, for its decision to elect to follow
22 the formal scope and process in determining the
23 topics and analysis of the potential environmental
24 impacts of the Mohawk Valley Health System

1 proposed Integrated Health Campus, to be addressed
2 in the draft Environmental Impact Statement.

3 While SEQRA does not require scoping, electing to
4 follow the formal scoping process will provide the
5 most comprehensive and transparent discussion of
6 the proposed MVHS IHC project.

7 As described in the New York State Department
8 of Environmental Conservation's publication, The
9 SEQRA Cookbook, the scoping process has six
10 objectives: Focus the draft EIS on potentially
11 significant adverse environmental impacts,
12 eliminate non-significant or non-relevant issues,
13 identify the extent and quality of information
14 needed, identify the range of reasonable
15 alternatives to be discussed, provide an initial
16 identification of the mitigation measures, and
17 provide the public with an opportunity to
18 participate in the identification of the impacts.
19 That's why we're here tonight.

20 A careful review of the draft scoping
21 document reveals that it is diligent and meeting
22 the six objectives noted above. The document
23 clearly identifies potential significant adverse
24 impacts, both those associated with the HIC [sic]

1 construction and the operation of the completed
2 facility. It identifies existing information
3 sources, as well as additional information
4 required to make a final determination. Finally,
5 it identifies potential mitigation measures, both
6 for the construction and the operational phases of
7 the IHC. The draft scoping document provides a
8 solid framework upon which to build a draft
9 environmental impact statement that fully
10 addresses all relevant issues and concerns. We
11 fully support the lead agency moving forward in an
12 expeditious manner with the preparation of a draft
13 EIS.

14 Thank you for the opportunity to comment on
15 this important step in the process of this
16 important project of major significance to the
17 City of Utica, all of Oneida County, and the
18 entire region. Thank you.

19 MR. MATRULLI: Thank you. Ronald Vincent.

20 MR. VINCENT: My name is Ron Vincent. I
21 live at 477 Roseclair Avenue, Utica, New York.
22 The last name is the same as the first,
23 V-I-N-C-E-N-T.

24 Tonight we heard from a lot of people. There

1 was a lot of people here from the county. There
2 was a lot of tax-exempt charity organizations.
3 I'm here to speak as a taxpaying citizen, which
4 there are many of in the City of Utica, Oneida
5 County.

6 For three years, I think that's the time I
7 heard earlier, three years we've been hearing from
8 every politician from state, county, city, talking
9 about this hospital. And we've even heard from
10 the hospital people, and everybody said the same
11 thing, that politicians say it has to go in this
12 location in downtown Utica. We the taxpayers have
13 listened to this for three years. And as I stand
14 before you tonight, I'm sorry to say, I cannot in
15 three minutes say as much as they have had time to
16 say in three years. What you people should do is
17 give the taxpayers, give the citizens one-on-one
18 small group meetings, three more years to air our
19 side of this, because we do have some good ideas,
20 places where they could build a hospital where it
21 wouldn't even cost them for the property or the
22 building sitting on it, a place that I came up
23 with to try and tell somebody where they could get
24 a parking lot one-and-a-half mile long for only

1 one-and-a-half million dollars. Think of the
2 money that's being spent to buy these buildings,
3 the taxes that are coming off the tax rolls, and
4 the money that's going to be invested before the
5 first bulldozer comes onto the site, when they
6 could save so much money.

7 Outside tonight, there was a group of union
8 people saying they want these jobs because of the
9 union. If they built that house -- or hospital at
10 St. Luke's, you could have union builders up
11 there. If it's going to cost so much money to
12 build this hospital in downtown Utica, union
13 people, let me bring this to your attention. If
14 they're going to spend, say, ten percent of their
15 money before they even start building this
16 building, they might be tempted to hire non-union
17 people.

18 I yield the rest of my time. Thank you.

19 MR. MATRULLI: Thank you. Donna Bills.

20 MS. BILLS: Good evening. My name is Donna
21 Bills, B-I-L-L-S. I live at 1430 Old Burrstone
22 Road, Utica, New York.

23 I didn't think I was going to be speaking. I
24 thought, as another woman had said, that I was

1 going to be listening and getting information.

2 I also agree with her that I feel hoodwinked.
3 From what the paper had said, it made it seem like
4 it was going to be a question-and-answer forum and
5 that we were going to be given more information on
6 alternate sides besides downtown Utica, and
7 apparently not so. I also agree with one of the
8 other speakers that had mentioned that they are
9 muddying the waters in regards to are we talking
10 about land use or are we talking about healthcare.

11 There are many people that had spoken in
12 regards to the healthcare, and they had many good
13 credentials, and they told about all the good work
14 that they do and all the good work that needs to
15 be done, and I thank you for your service and keep
16 up the good work, but that has nothing to do with
17 destroying downtown Utica. We can still have all
18 of that, and all those people out there yelling
19 and carrying on from the union, they can have
20 their jobs, as well. It's not a situation where
21 there has to be a winner and a loser. We should
22 be in this to all be winners. I've lived here my
23 whole life, and I pay taxes, and I'm part of that
24 aging group. I just turned 60. And I really

1 don't want to spend the rest of my life paying for
2 a parking garage that doesn't even need to be
3 there if the hospital was in a different location.

4 Land use. There is just so much land that
5 you have and you're not going to get any more.
6 And if you take a portion of the city that is just
7 trying to revitalize itself and slap a hospital in
8 the middle of it, you're going to be destroying
9 something that you can't get back. I was so
10 excited when we started to have things come back
11 and little businesses popping up all over the
12 place, and Utica actually being something that
13 people would say, Oh, have you been to Utica
14 Bread? Have you been here? Have you been there?
15 All these little places that are coming up and the
16 way that we were starting to connect the dots. We
17 have a historic area on Genesee Street. We have
18 Munson-Williams. We have the Stanley, and those
19 are very impressive things for a city our size.
20 We are really impressive, and people don't seem to
21 take that into account. We have the auditorium.

22 They want me to wrap it up. Healthcare is
23 one thing, and location is another thing. And
24 they have not given any of the alternate places

1 this place could be when you have New Hartford
2 saying, "Take my shopping center, please" and
3 they're not interested. Thank you for your time.

4 MR. MATRULLI: Thank you very much. Phil
5 Scalia.

6 MR. SCALIA: My name is Phil Scalia and I'm
7 from Fort Plain, 21 Prospect Street, Fort Plain.
8 The last name is spelled S-C-A-L-I-A.

9 I'm a professional photographer from Fort
10 Plain. One of my favorite places to come for
11 pictures is Utica. One of my favorite
12 neighborhoods to go is the one that's under threat
13 by this expansion project. The light in those few
14 blocks is fantastic. I have three or four photos
15 from there that are my favorites. Two of them are
16 currently in a group show at Saratoga Arts. I
17 invite everybody to go. It's up until June 16th.

18 One thing I know, you don't fix a problem by
19 bulldozing irreplaceable architecture. They just
20 don't build them like that anymore, to use the old
21 saying, not to mention that it's unconscionable to
22 do so by eminent domain.

23 I hope the Planning Board will consult with
24 the City of Batavia to ask them how it went when

1 they tore out the heart and soul of their city in
2 the seventies in the name of urban renewal, an
3 unmitigated disaster by all accounts. Conversely
4 the City of Baltimore had a visionary mayor in the
5 seventies who created a homesteading program by
6 which old buildings were sold for \$100 to folks
7 that wanted to renovate. It was a tremendous
8 success.

9 In my opinion, Utica would be committing
10 suicide by taking out these beautiful structures.
11 They may be vacant now, but that is not a reason
12 to tear them down. The economy moves in cycles.
13 Save these businesses and homes. I urge the
14 Planning Board to consider alternatives. I am one
15 tourist you will lose. Thank you.

16 MR. MATRULLI: Thank you. James Zecca.

17 MR. ZECCA: Good evening. My name is
18 Jim Zecca, Z-E-C-C-A. I am a resident of Utica,
19 2662 Hedgewood Road, South Utica.

20 I'm here tonight to talk about the red zone,
21 as has been mentioned earlier by the emergency
22 management folks. The red zone is a real concern
23 that needs to be looked at in the SEQRA process,
24 and I'm going to read a statement. I'll be

1 sending information, further information, to the
2 Board for review.

3 But long freight trains coming through Utica
4 carry hazardous, flammable and combustible
5 materials far more dangerous than most people
6 realize, and by knowing these facts, we have yet
7 another major reason not to locate our only new
8 hospital in this zone of danger called the red
9 zone. Up to thirty of these types of trains,
10 which are carrying very explosive fracking oil
11 from the Dakota's that people don't know about,
12 but this is happening everyday. Up to thirty of
13 these types of trains now run through Utica every
14 week, many having a hundred cars stretching a mile
15 down the tracks. That is a 4,000 percent, 4,000
16 percent increase in this type of travel through
17 this area in the past six years with this fracking
18 oil. A high-risk red zone has been declared along
19 both sides of the railroad tracks to prepare
20 emergency response for spills, fire, toxic fumes
21 and even explosions from a track failure or a
22 train derailment, or just plain accident. And
23 don't say it doesn't happen, because it happened
24 just recently a few years back. We had a runaway

1 train from West Utica that slammed into the train
2 station, and thank God nobody was killed in that
3 accident.

4 The U.S. Department of Transportation puts
5 out an emergency response guide annually. This is
6 an official document by the U.S. government.
7 Please review this document in your SEQRA review.
8 Thank you very much.

9 MR. MATRULLI: Thank you. Is there anyone
10 that wanted to speak that I didn't call?

11 UNIDENTIFIED SPEAKER: I do. I don't need
12 that, because I have a loud mouth. My name is
13 Krista [phonetic].

14 I'm going for his store and the trees. Trees
15 help everything, and you guys want to take down
16 trees. Trees are from God and everything.

17 And the noise. I live right there, okay? I
18 live right there on Genesee Street, right next
19 door. And if they build it -- if you guys build
20 it, I'm moving because of the noise. I'm not
21 going to put up with that noise all night long.

22 And I'm doing this for their store, because
23 he's my friend. His girlfriend is a brain injury
24 person and all that stuff. So go Wilcor.

1 MR. MATRULLI: Thank you. Would you mind
2 giving us your name and address?

3 MS. MORTON: My name is Katie Morton. I
4 live at 23 Parkway Drive, Whitesboro.

5 So I just want to share that my husband and I
6 moved back from Charlotte, North Carolina to be in
7 Utica and open a business. We wanted to move back
8 here. We wanted to raise a family here. The more
9 I hear about the downtown hospital proposal and
10 the blatant disrespect and disregard for business
11 owners, I'm beginning to wonder, like, why we ever
12 did this without the respect. The more I hear --
13 give me one second.

14 One of the earlier speakers boasted about
15 being a Utica citizen for seventy years, said he
16 drives home that route and sees nothing there.
17 Well, I drive home that route everyday, too, and
18 neighbors like Columbia and Lafayette are exactly
19 why we moved back to Utica. Those neighborhoods
20 hold beauty and history and is unmatched whenever
21 I travel to other cities. To say there's nothing
22 there, you hear that all the time, but then why
23 did thirty-five to forty properties and businesses
24 have to have an offer letter to leave? There's

1 obviously something there.

2 Hear me when I say, I desperately want to
3 have an updated medical center. I'm about to have
4 my second baby here in two months and will be
5 delivering at Crouse again because of my very
6 common but high-risk pregnancy issues. We can't
7 be secure and be accommodated here and be taken
8 care of at the current MVHS hospital. That said,
9 I'm hopeful about the new hospital proposal, not
10 at downtown but in general. However, I rarely
11 hear about the actual healthcare, so it's hard to
12 say.

13 But let's highlight the environmental issues
14 that I've had. The very blocks this hospital is
15 supposed to be built in in the Columbia/Lafayette
16 neighborhoods was once known as the furnace
17 capital of America, just like Joe Cerini
18 highlighted. So this is back in 1850. Those very
19 blocks where the hospital wants to go now was --
20 let's see. Those mills and foundries aren't there
21 anymore -- sorry, out of breath from being
22 pregnant -- so now they're demolished and built
23 over. So we want to go through and bring that all
24 back up, expose it. I'm highly concerned of what

1 the contamination impact it will have on the
2 health of those in the area once those blocks are
3 exposed.

4 So that said, downtown Utica is far from
5 replaceable. There's acres of properties to build
6 a hospital in regard to our health,
7 transportation, and urban growth, and if we have
8 any hope of getting our future generations of
9 families to want to live here. Thank you.

10 MR. MATRULLI: Thank you. Anyone else?

11 MR. BROCK: Good evening, ladies and
12 gentlemen of the jury. My name is Jonathan Brock,
13 2 Tennison Circle, New Hartford, New York.

14 Now, we have been a part of this conversation
15 from the very start, and actually this
16 conversation started long before any of the public
17 knew what was about to happen to our downtown. I
18 just turned 30 years old in September, and I
19 watched my entire high school graduating class
20 move away from this area because of poor
21 decisions, like placing a hospital within our
22 downtown, or bulldozing a building because nobody
23 saw the vitality in it. I recently graduated from
24 Mohawk Valley Community College, and I will tell

1 you, there is no more an interest from the younger
2 generation to stay here and maintain a living or
3 have a future the way the generations before us
4 have.

5 Now with that being said, with regard to the
6 SEQRA process, I do agree, many feel hoodwinked
7 tonight with regard to those in the room taking
8 their time to speak, or rather our time. This
9 decision is monumental, and yes it is
10 transformant, but for what, why, and how much can
11 we, a community like this, afford this decision
12 long-term? Can healthcare in this community
13 afford this long-term? Some people talk about a
14 hospital that may be state-of-the-art on the
15 outside, but we know, according to what it is the
16 healthcare system has put out, it is not
17 state-of-the art on the inside.

18 Now, as a student of architecture and one who
19 has had the luxury of traveling and seeing many
20 neighborhoods and many communities revitalize
21 themselves, bring themselves back and maintain
22 their integrity, the little bit that sometimes
23 there's left. I do not agree that we should be
24 bulldozing what little history we have or ripping

1 up what old streets or remnants of the boiler mess
2 that we have in downtown Utica.

3 Now, this conversation should be about and
4 only should be about healthcare. The idea that
5 this is about -- somehow about transforming our
6 downtown and economic development is sickening.

7 And not for anything, but somebody said it
8 earlier. We should all get along, but you know
9 what, I haven't seen a group dragged through the
10 mud, their businesses, their families, their
11 relationship and their own life by their own
12 so-called friends as the way the people who've
13 advocated against the downtown location, not
14 against the hospital, but against the downtown
15 location the way I have in this argument, and this
16 dissertation, and even within this room.

17 Now with that being said, I hope that you
18 guys completely and fully consider every location
19 and disclose everything that you find to the
20 public. Young and old, we deserve to know. Thank
21 you.

22 MR. MATRULLI: Thank you.

23 MR. BROCK: I just want to add. I have an
24 idea for revitalizing that neighborhood. There's

1 so many that see light in it. There's a \$30,000
2 grant that's usually given out to a start-up
3 business. I encourage more of that. I actually
4 am a huge advocate of it. As a young person, we
5 need more of that.

6 MR. MATRULLI: Thank you. I believe that's
7 the last speaker. I want to thank everybody for
8 coming, and I really want to thank everybody for
9 their very comprehensive information that was
10 given. I really do. I think it was quite helpful
11 for us. Thank you very much.

12 I make a motion to close the meeting.

13 MR. COLON: I second that.

14 MR. MATRULLI: So moved.

15 (Whereupon, the Public Hearing concluded at
16 7:33 p.m.)

Patricia Knobloch, AIA
71 Ballantyne Brae
Utica, NY 13501

June 4, 2018

City of Utica Planning Board
Attention: Mr. Brian Thurman, Commissioner
City of Utica, Department of Urban & Economic Development
1 Kennedy Plaza
Utica, NY 13502

Re: Comments on Draft Scoping Document 5-10-10; Mohawk Valley Hospital System SKJRA;
sent by email (jknobloch)

Dear Mr. Thurman:

The following are my comments on the above-mentioned document:

1) On Page 3 it says that the decision to consolidate the two existing campuses to a single facility was motivated in part by the 'growing demand for healthcare due to the rapidly increasing and aging population in the region'. If there is a growing demand for healthcare, please address why the proposed new hospital will have fewer beds than the two existing campuses.

2) On the same page, it also says that this decision was based on 'the increasing need to improve accessibility and availability by attracting specialists and providing services that otherwise would not be available to our community'. Please clarify what additional specialties and services will be available at the proposed new hospital, or what specialties and services the proposed hospital hopes to attract.

3) Page 6, Storm Sewers: Please provide calculations and/or other analyses supporting the statement that the overall percent impervious surfaces resulting from development of the IHC is anticipated to be less than the amount of coverage under existing conditions, even without green infrastructure design features. Was a Sanborn Map Company application used in the analysis? If not, please include what applications or methodologies were used.

This seems especially critical because the document further states that flooding is not an issue (Page 11). Although not located in flood zone, excessive runoff can cause flooding conditions.

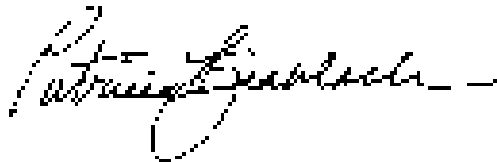

4) Will the project be in compliance with New York State's Smart Growth Multi-Infrastructure Policy Act? If so, please indicate how the current and future designs incorporate Smart Growth principles in anticipation of State Agency Smart Growth review. If the project will not be in compliance, why not?

5) Page 15. Impact on Transportation: The city's existing street patterns will be greatly affected by the proposed new hospital. Will the future traffic impact study address how Broadway, for example, will be changed to become a main access road for the hospital? Will the study include all new traffic signals and signs?

6) Page 15. Alternative Sites: Please comment on how this list of four alternative sites was established. Did it come from the earlier site selection study where twelve sites were considered? Please include that earlier study as an appendix to the final document.

Thank you for your consideration.

Very truly yours,

Patricia Kumbloch, AIA

City of Utica Planning Board
1 Kennedy Plaza
Utica, NY 13502
Attention: Mr. Brian Thomas, Commissioner
City of Utica, Department of Urban & Economic Development

Ref: Draft Scoping Document, MVHS Proposed Downtown Hospital

Dear City of Utica Planning Board:

This letter is in response to the Utica Planning Board's request for public comment on the above-referenced Draft Scoping document. As detailed below, the Draft Scope contains incorrect and misleading statements, omits relevant information, and dismisses or fails to mention the need to develop certain topics in the Environmental Impact Statement (EIS). Without correction and further definition in the Final Scope, the EIS will provide involved agencies with an inaccurate, misleading, and incomplete picture of the proposed project upon which to base their SEQR findings "that consistent with social, economic and other essential considerations, to the maximum extent practicable, adverse environmental effects revealed in the environmental impact statement process will be minimized or avoided." (Environmental Conservation Law 8-0109 (8)). To ease reference, the discussion below applies the labels found in the Draft Scope.

Section 1.2 Project Purpose

(A) The Applicant failed to identify the purpose(s) to be served by locating its project in Downtown Utica as opposed to the other sites it considered. The public has been told numerous times that Mohawk Valley EDGE used the Applicant's criteria to produce the site selection study upon which the Applicant's choice of the Downtown location was based. That study is still secret, so the public still does not know the Applicant's criteria. Applicant's spokesperson, Mr. Scholefield, has advised that the site selection study would be made public as part of the SEQR process (eg., video at the 20:00 mark found at <http://www.uticaod.com/news/20180509/compassion-coalition-mvhs-deal-unclear>). That time has now arrived and **the siting study should be included in the EIS as an appendix.**

Montecalvo to Planning Board 6/7/2018 Page 2

(B) Page 3 of the Draft Scope incorrectly states that "[t]he new MVHS IHC and hospital will replace the St. Luke's and SEMC campuses" and "consolidate patient services to one campus." As acknowledged elsewhere in the Draft Scope, MVHS will retain certain patient services at both St. Luke's and SEMC campuses. Not disclosed is MVHS' retention of the 202-bed skilled nursing facility (formerly called the St. Luke's Home) on the St. Luke's Campus. Although some functions from two buildings will be combined into a new building at MVHS IHC, significant patient services will be retained at the old sites, making the characterization of the project quoted above incorrect and misleading. There is no replacement of the SEMC and St. Luke's Campuses. Rather, the MVHS IHC Downtown campus is being added to the Applicant's responsibilities, potentially threatening its financial stability.

(C) The Applicant claims existence of a "growing demand for healthcare due to the rapidly increasing and aging population in this region." Applicant needs to substantiate this claim with actual numbers of people (not percentages). US Census statistics indicate that regional population continues a decades-long decline and the number of people in Utica over 65 years old has also declined.

(D) Applicant needs to substantiate how a new facility will attract specialists to our region when the prerequisite for specialists is a sufficient population base to make doctor specialization economically feasible. Our population is declining.

(E) Although Applicant references Public Health Law 2825-b which indicates that the purpose of the State Grant is to "consolidate multiple licensed health care facilities into an integrated system of care" the Applicant omitted any explanation of how its project meets the grant's objective. The explanation is needed because Applicant's proposal to move the hospital structure away from the retained services at the old sites (particularly the removal of the hospital from the St. Luke's Campus that will continue to hold a nursing home and rehab facility) seems to directly oppose the intent of the legislation. In addition, the removal of the hospital from the St. Luke's Campus to Downtown will place at least 2 miles between the new facility and the existing de facto "medical district" composed of the numerous medical providers that have recently located near St. Luke's along Burrstone and French Roads in New Hartford and in the Utica Business Park, including an outpatient surgical center. Because they are recent, these providers are unlikely to follow the hospital Downtown. Increasing the distance between the hospital and these providers seems contrary to good patient care.

Montecalvo to Planning Board 6/7/2018 Page 3

Section 1.3 Project Description

A. Although the project description mentions the acreage of private property that Applicant will need to acquire, it fails to disclose that this will involve displacement and/or loss of approximately 40 businesses/not-for-profits and the Utica Police Garage, permanent loss of taxable properties, and the permanent loss of properties that have in-place the public infrastructure and zoning needed to support small business development. Arguably these are the best properties for small businesses in the region due to their location in Utica's Central Business District. Utica will lose current tax revenue, important social services, jobs, and opportunities to grow jobs and its tax-base in the future. Neither the Draft Scoping Document nor any of the Application documents make any attempt to estimate the sales tax currently generated within the project area that will be at risk, to estimate the cost to duplicate the police garage off-site, to estimate the cost to duplicate off-site the public infrastructure now available for entrepreneurial growth, to estimate the non-hospital jobs currently within the project area that will be lost, or estimate the cost to duplicate lost businesses and not-for-profits elsewhere. Based upon the history of actual projects in Utica and Rome, most of the small businesses and their jobs will be lost. Although the Applicant will be liable for only a small fraction of these losses, they are real and represent a regional social and economic cost of the proposed project that will fall upon individuals, business owners, and taxpayers. State and local governments have spent literally hundreds of millions of dollars to create a relative handfull of jobs locally. Will we have to spend such huge amounts again just to make up for the jobs that this project will consume? The Applicant needs to clearly state what it is asking Utica and the region to risk in exchange for Applicant locating its proposed state-of-the-art health care facility in Downtown Utica.

B. The Draft Scope erroneously claims that +/- 373 inpatient beds will be transitioned to MVHS IHC in Downtown Utica. That statement is contradicted by the NYS Department of Health's Needs Analysis, which states that 24 of those beds will remain at the St. Luke's Campus for Physical Medicine and Rehab. That means that the MVHS IHC will only transition 349 beds to Downtown Utica. The Final Scope needs to contain an accurate description.

C. The Draft Scope indicates that the proposed project will involve construction of approximately 2650 parking spaces, or greater than 7.5 spaces per hospital bed. This far exceeds the design requirements used elsewhere (e.g., Houston, TX 2.2 per bed; Palm Beach County, FL

Montecalvo to Planning Board 6/7/2018 Page 4

1 space per 2 beds; St. Paul, MN 0.5 spaces per bed). Every space impacts the environment. Unneeded spaces create unnecessary impacts. The EIS needs to substantiate the number of parking spaces planned.

D. Applicant's description of disposition and re-purposing of existing hospital campuses is unacceptably vague given the region's history of blight caused by the abandonment of hospital buildings at the Central New York Psychiatric Center. The EIS must contain assurances that Applicant's abandonment of facilities will not create new blight in South Utica and New Hartford. As mitigation, consideration should be given to requiring MVHS to post a performance bond to fund continued maintenance and/or demolition of the abandoned hospital buildings if they are not repurposed within an appropriate specified time period.

E. Given that Applicant proposes to abandon its hospital tower at St. Luke's and/or change its use, it must be determined whether Utica's decades-old agreement to provide fire protection for the building will still apply or whether that responsibility and cost will fall upon the Town of New Hartford.

Section 1.4 Potentially Significant Adverse Environmental Impacts

The Draft Scope needs expand to include the following information under the following "Environmental Topics":

A. Impact on Surface Water: Utica currently has a number of combined sewers and combined sewer overflows which pass untreated sewage and/or tainted runoff directly into the Mohawk River, bypassing the Water Pollution Control Plant, during periods of wet weather. (1) The new hospital building will produce a volume of raw sewage concentrated at one location. (2) The acres of new parking will produce a volume of tainted runoff. Both will empty in an area of Utica where sewer infrastructure is old and likely to combine stormwater and wastewater. The EIS needs to identify the routes wastewater and runoff from the proposed project will take to their ultimate point of disposal in the Mohawk River, whether the sewers same will pass through are separate, combined, or both; whether they are adequate to handle the flows calculated; and whether or not any wastewater or tainted runoff will bypass the Water Pollution Control Plant and enter the River untreated. Flows from the proposed "U-District" adjacent to the hospital site should also be considered as a cumulative impact. Relocating the proposed project to the St. Luke's Campus should be considered to avoid these and new all surface water impacts (see "E" under Section 1.9 Reasonable Alternatives below).

B. Impact on Groundwater: Relocating the proposed project to the St. Luke's Campus should be considered to avoid all new groundwater impacts (see "E" under Section 1.9 Reasonable Alternatives below).

C. Impact on Flooding: Flooding is dismissed as an issue by the Applicant based upon the project area not being within a floodway or 100/500 year floodplain as shown on federal maps. However, the lack of a floodway designation does not eliminate flooding as a substantive and significant issue. On July 1, 2017, significant flooding (causing abandonment of cars, risk to human life, and property damage) occurred on a newly reopened section of the North-South Arterial and adjacent Lincoln Avenue in an area labeled "area of minimal flood hazard" on the federal map. Per media reports State DOT officials claimed that their drains worked properly but indicated there was insufficient capacity in the stormsewers or receiving stream to prevent the flooding from occurring. This flooding occurred approximately one half-mile from and at a higher elevation than the project site. The project description in the Draft Scope indicates that some storm sewers will be removed, some existing will be used, and others will be constructed with a connection to the State DOT stormsewer line. The proposed project will create acres of new, unbroken pavement (i.e., less able to retain/slow runoff than a patchwork of old/broken pavement, sidewalks, roofs, yards, etc.). Applicant's mere claim that the proposed project will increase pervious surfaces does not resolve the question. Given the proximity of the project area to a known area of urban flooding, the potential that some of the same overwhelmed systems may be depended upon to carry away storm water from the project site, the likely increase in amount and speed of runoff from new pavement (which would increase water depth wherever flow is impeded), and the potential of risk to human life and property, the EIS must contain calculations of the amount of runoff from the project site using appropriate design criteria, and identification and assessment of the capacities of the systems/streams that will be used to convey runoff away from the project site without creating new problems downstream. Runoff from the proposed "U-District" adjacent to the hospital site should also be considered as a cumulative impact. Relocating the proposed project to the St. Luke's Campus should be considered to avoid all potential flooding impacts (see "E" under Section 1.9 Reasonable Alternatives below).

D. Impact on Air: The proposed project will close portions of several streets including Cornelia (which connects Oriskany Boulevard with Court St.) and Lafayette (which connects Bleecker St. from East Utica with portions of West Utica), forcing drivers on these streets to detour over non-direct routes, lengthening their trips, increasing

Montecalvo to Planning Board 6/7/2018 Page 6

traffic, and resulting in corresponding increases in air-pollution. The hospital itself will be a new traffic and air pollution generator. Cumulative impacts from anticipated projects nearby also need to be addressed. These impacts on air should be assessed in the EIS. Relocating the proposed project to the St. Luke's Campus should be considered to avoid the operational impacts to air, and minimize the numbers of persons exposed to construction impacts to air (see "E" under Section 1.9 Reasonable Alternatives below).

E. Impact on Aesthetic Resources including Lighting: Relocating the proposed project to the St. Luke's Campus will minimize both construction and operational impacts (see "E" under Section 1.9 Reasonable Alternatives below).

F. Impact on Historic and Archeological Resources: Relocating the proposed project to the St. Luke's Campus will completely avoid impacts to Historic and Archeological Resources (see "E" under Section 1.9 Reasonable Alternatives below).

G. Impact to Transportation: The proposed hospital will generate new traffic for Downtown that may exceed street capacity, particularly when considered cumulatively with other projects anticipated nearby. Traffic will be exacerbated by the project's proposed street closures described at D. above. Relocating the proposed project to the St. Luke's Campus will avoid all the operational transportation impacts and minimize most construction impacts (see "E" under Section 1.9 Reasonable Alternatives below).

H. and I. Impacts on Utilities and Impacts on Energy: Applicant fails to disclose, and the EIS needs to address, the impact of the proposed project on the Applicant's Co-Generation Facility recently constructed on the St. Luke's Campus but shared with Utica College, whether it will remain economically viable, or whether the power capacity will be wasted when the hospital tower is shut down. Cumulative impacts to Utilities and Energy from anticipated projects nearby also needs to be considered. Relocating the proposed project to the St. Luke's Campus will minimize the need to reconfigure utilities (water, sewer, electric) and the impacts from doing so (see "E" under Section 1.9 Reasonable Alternatives below).

J. Impact on Noise and Odor: Relocating the proposed project to the St. Luke's Campus can be expected to minimize construction impacts, and avoid operational impacts since the need to demolish old buildings and remove old public infrastructure and contaminated soil and debris would be minimized(see "E" under Section 1.9 Reasonable Alternatives below).

Montecalvo to Planning Board 6/7/2018 Page 7

K. Impact on Human Health: Although the Applicant makes reference to the CSX Railroad Tracks about 900 feet north of the project site, the existence of an Oneida County Comprehensive Emergency Management Plan, and expected coordination with various Emergency Response entities, Applicant fails to mention that Bakken crude oil is regularly transported over railroad tracks within a half-mile of the project site, that accidents have occurred in the past on these tracks, and that when accidents involving such cargo occur, evacuation within a half mile of the accident site is often necessary. Although the probability of such an accident may be considered by some to be remote, the consequences can be disastrous, as demonstrated by the 7/6/2013 Lac-Mégantic, Quebec accident. These unstated facts substantiate that an issue exists. The potential consequences make the issue significant. Given the potential risk to human life, the EIS must contain an assessment of whether or not an evacuation of what will become Greater Utica's only hospital will be feasible in the event a Lac-Mégantic-style accident were to occur. If evacuation is determined to be feasible, an evacuation plan should be included as an Appendix to the EIS. Relocating the proposed project to the St. Luke's Campus, which is out of the danger zone, would avoid this particular potential impact to human health. It will also avoid introducing the new impacts already mentioned in the Draft Scope into the Downtown Utica neighborhood (see "E" under Section 1.9 Reasonable Alternatives below).

L. Consistency with Community Character and Plans: Applicant fails to disclose that the site of the proposed project lies within the Gateway Historic Canal District (an area bounded by Genesee, State and Columbia Streets and the CSX Tracks) which has its own specific master plan, that said plan recommended amendment of the zoning regulations for the district to encourage mixed-uses by establishing building-form requirements, that the Utica Planning Board unanimously recommended approval of the zoning amendment, that the Oneida County Planning Department recommended approval of the amendment, and that on 3/16/2005 the Utica Common Council unanimously approved the amendment. This neighborhood-specific plan and building-form requirements are consistent with the more general Utica Master Plan approved by the Council in 2011 which envisions mixed uses and "walkability" Downtown. Because they have been approved by the Common Council, it is understood that these plans and requirements are binding on the Planning Board and all who propose building within this district, and cannot be overridden with a mere site plan approval. Based upon Applicant's plans revealed to the public thus far, the proposed project materially conflicts with these officially approved/adopted plans and goals. Furthermore, since the existing street grid was established by city ordinances over the years, Applicant's proposal to close portions of streets for the proposed

Montecalvo to Planning Board 6/7/2018 Page 8

project also presents a "material conflict" with the community's plans and goals as officially adopted. Per 6 NYCRR 617.4(vi), these material conflicts are *per se* a substantive and significant adverse environmental impact that either must be mitigated by redesign of the proposed project to conform to the aforesaid requirements, or avoided by relocating the proposed project to either the St. Luke's Campus or the Psych Center Campus (see "E" under Section 1.9 Reasonable Alternatives below).

M. Impacts on Solid Waste Management: Relocating the project to the St. Luke's Campus will minimize impacts related to demolition.

N. Environmental Justice: The proposed project not only threatens the continued existence of non-hospital jobs in this environmental justice neighborhood, but also threatens several charitable services located there. Relocation of the proposed project to either the St. Luke's Campus or the Psych Center Campus would totally avoid these impacts.

Section 1.5 Cumulative Impacts

The EIS needs to develop the information on cumulative impacts identified at Section 1.4 A, C, D, G, H and I above, all of which could be avoided by relocating the proposed project to either the St. Luke's Campus or the Psych Center Campus (see "E" under Section 1.9 Reasonable Alternatives below).

Section 1.6 Unavoidable Adverse Environmental Impacts

Determination of unavoidable impacts must be made with reference to both the St. Luke's Campus and Psych Center Campus as reasonable alternative sites to allow a comparison regarding which site better minimizes or avoids adverse environmental impacts. Involved agencies will not have a sound basis for their SEQR findings without this information. For the reasons explained at "E" under Section 1.9 Reasonable Alternatives below, it is believed that the St. Luke's Campus best minimizes or avoids adverse environmental impacts.

Section 1.7 Irreversible and Irretrievable Commitment of Resources

The EIS summary should include the existing streets and other public infrastructure that will be removed; the buildings to be demolished including the police garage; the businesses and associated jobs, income and personal wealth that will be lost; the loss of taxes (property and sales) to local jurisdictions; and the lost potential for Utica to grow jobs and tax base through conversion of developable acreage into parking lots and hospital related structures. This topic

Montecalvo to Planning Board 6/7/2018 Page 9

should also include a similar summary for the St. Luke's Campus and the Psych Center Campus alternatives to permit a comparison to be made.

Section 1.8 Growth Inducing Aspects

This section of the EIS should include (A) consideration of "negative growth" with associated impacts (the spread of blight and waste of community resources), (B) discussion of whether the intent of the State's Smart Growth Policy (Environmental Conservation Law Article 6) will be implemented, and (C) substantive evidence and reasoned elaboration to back up conclusions rather than speculation and forward looking statements. Currently available information suggests that the proposed project, when completed, will exacerbate the region's *negative* population trends through the *destruction* of jobs. Hospital jobs will be reduced due to the reduction in hospital beds from 571 to 373 (see the NYS Department of Health's Needs Analysis). Most non-hospital jobs (as yet uncounted) associated with the approximately 40 entities currently within the downtown hospital footprint will disappear based upon the 90%+ closure rate experienced by Rome, NY businesses previously in the footprint of its Ft. Stanwix urban renewal project. The proposed project's occupation of 25 Central Business District Acres, primarily for parking, not only will remove this acreage from private development but also drive up the cost of remaining CBD property by restricting supply. That will discourage new startups and the creation of new jobs. Meanwhile the City of Utica will be burdened with providing municipal services to new facilities that do not generate taxes, raising taxes for everyone else and making Utica less attractive for investment. The excessive parking facilities will foster more dependency on the automobile. Simply put, the proposed project will replace an urban neighborhood that contributes to its upkeep with suburban sprawl that will not. The EIS needs to not only address these concerns, but also acknowledge that they could be minimized by placing the new facility on the St. Luke's Campus.

Section 1.9 Reasonable Alternatives

A. This section of the Draft Scope repeats the inaccurate, misleading statements and omissions addressed in "Section 1.2 Project Purpose" above. My comments there are incorporated here by reference. Please correct these elements in the Final Scope.

B. In its Certificate of Need Application, Applicant has interpreted the State's Grant as requiring a site within Oneida County's "largest population center" by appending the words "which is Utica" that do not appear in the law. Applicant now, inconsistently, lists the St.

Montecalvo to Planning Board 6/7/2018 Page 10

Luke's Campus (in New Hartford) and the New Hartford Shopping Center as "reasonable alternatives" to be considered. Since it would be "unreasonable" for agencies to consider alternate sites that do not qualify for the Grant, the listing of New Hartford sites as "reasonable alternatives" should be construed as both a waiver of future arguments that the legislation requires the proposed project to be within Utica, and as an admission that the identified sites in New Hartford are located "within the largest population center" of Oneida County.

C. The New Hartford Shopping Center must be rejected as a "reasonable alternative" to be considered in the EIS because:

1. It was not one of the several sites considered in Applicant's secret siting study and presumably does not meet the Applicant's criteria.

2. Applicant neither owns nor has a purchase option on the site (see 6 NYCRR 617.9(b)(5)(v) ('g')).

3. The proposed use is inconsistent with the Village of New Hartford's zoning ordinance.

4. Conversion to tax-exempt status would likely create unacceptable and destabilizing financial consequences to the Village.

5. Forcing the existing businesses to move will likely result in permanent closures, unacceptable job losses, potential blight elsewhere in the Village, and sprawl.

D. The Utica Psychiatric Center is appropriately considered as a reasonable alternate site because it is located within the County's "largest population center," was included in Applicant's secret siting study, and, thus, presumably meets the Applicant's base criteria. This site needs to be weighed against the proposed Downtown and St. Luke's sites as to environmental impacts (both those identified above and, perhaps, others) and a determination made as to which site minimizes adverse impacts to the maximum extent. In discussing this site, the EIS needs to elaborate on or note the following:

1. Applicant lacks ownership or a purchase option to the site (see 6 NYCRR 617.9(b)(5)(v) ('g')).

2. The proposed use of the site would be consistent with zoning, applicable local plans, the street grid, and prior site history (involving hundreds of patients and staff on site at any particular time). There would be no adverse change to community character. Bringing back a healthcare related use to the site could reverse the neighborhood decline that followed abandonment of Psych Center buildings.

Montecalvo to Planning Board 6/7/2018 Page 11

3. Operational impacts to the environment could be expected to be similar to those of the past but without an actual study and comparison of what needs to be constructed to what is now there, their significance is unclear.

4. Construction impacts to the environment and sensitive receptors off site could be buffered by both the larger site (several times the size of the Downtown site), and by less intense land uses in the surrounding neighborhood than what is Downtown. Fewer buildings to raze on this site also suggest fewer impacts than at the proposed Downtown site.

5. This site presents fewer opportunities to minimize impacts through the reuse of ancillary facilities than is possible on the St. Luke's Campus.

6. The larger campus suggests that the need for a parking garage could be replaced with surface parking.

7. Since the land is already tax-exempt institutional and existing uses would not have to be dislocated, all the adverse economic, social, business, jobs, smart growth, sprawl, environmental justice and tax consequences associated with the Downtown site would be avoided.

E. The St. Luke's Hospital Campus is appropriately considered as a reasonable alternate site because it is located not only within, but at the virtual center of the County's "largest population center" making its location convenient to the entire region that will be served by the new facility. As Applicant's acknowledged "back-up" to the Downtown site (Applicant was not required to choose a back-up), the Applicant cannot now credibly deny that the St. Luke's Campus will meet ALL its needs. This site needs to be weighed against the proposed Downtown and Psych Center sites as to environmental impacts and a determination made as to which site minimizes adverse impacts to the maximum extent. In discussing this site, the EIS needs to elaborate on or note the following:

1. The St. Luke's Campus is the ONLY site under consideration for the proposed project that the Applicant actually owns or controls (see 6 NYCRR 617.9(b)(5)(v) ('g')).

2. Per the following Table (taken from the NYS Department of Health's Needs Analysis) if the new facility were to be constructed on the St. Luke's Campus, it would result in a negligible increase of **THREE BEDS**.

Montecalvo to Planning Board 6/7/2018 Page 12

Beds: Existing and Proposed	St. Elizabeth	St. Luke's	Change	New Facility
Coronary Care		0	0	0
Intensive Care	20	22	0	12
Maternity		26	0	20
Medical / Surgical	140	208	-147	240
Neonatal Continuing Care		4	-4	
Neonatal Intermediate Care		0	0	0
Pediatric	0	14	14	0
Physical Medicine and Rehab		121	0	121
Psychiatric	24	20	-0	44
Total	201	370	-174	373

UNIVERSITY OF ST. LUKE'S HOSPITAL

Source: HHS 2017

This suggests that the variety and intensity of operational environmental impacts of locating the new facility on the St. Luke's Campus should be virtually identical to those associated with the facility that is there now, **i.e., NO new or increased impacts to the environment should be expected at the St. Luke's site.** This includes impacts to surface water, groundwater, flooding, air, aesthetic resources, transportation, utilities, energy, noise, odor, human health, and solid waste management.

3. Locating the new hospital facility on the St. Luke's Campus (which is more than double the size of the proposed Downtown MVHS IHC) will minimize the environmental impacts associated with construction because (a) the need to bulldoze an entire neighborhood that is likely to contain asbestos and other contaminants from prior uses is eliminated; (b) the **proposed project can and should be scaled back to be essentially a replacement of the existing hospital tower**, eliminating the need to duplicate existing ancillary, non-healthcare related facilities that can be re-used, such as the recently constructed medical office building, new cafeteria, new co-generation plant, helipad, and parking lots; (c) the excessive parking proposed for Downtown can be eliminated; (d) the larger site and less intense land uses in the surrounding neighborhood with much space between nearby buildings and the site will buffer impacts to off-site receptors.

4. New areas of environmental concern would be sensitive receptors on site, and a small federal wetland on site. The sensitive receptors can be dealt with as they were in the past given that the existing hospital tower has undergone several major additions over the years of its existence without interruption in service. The emergent wetland is of minimal environmental significance, has been previously encroached upon by the Applicant for a roadway and parking lot without regulatory problem, could be easily replaced or moved to a more convenient location, or be avoided altogether given the large size of the site.

Montecalvo to Planning Board 6/7/2018 Page 13

5. The St. Luke's site is far enough away from the Bakken Crude transport route to eliminate all possibility of having to evacuate the facility in the event of a rail accident.

6. The proposed project at the St. Luke's Campus would be fully consistent with Town of New Hartford zoning, plans, and involve no change to community character.

7. Since the St. Luke's Campus is already tax-exempt, institutional, and existing uses would not have to be dislocated, the adverse economic, social, business, jobs, smart growth, sprawl, environmental justice and tax consequences associated with moving services to the Downtown site would be avoided.

8. Placing the new hospital tower on the St. Luke's Campus (a) eliminates the need for the Applicant to establish and maintain an additional medical campus, (b) advances the Grant's purpose to "consolidate multiple licensed health care facilities into an integrated system of care," (c) will maintain the proximity of hospital treatment to the providers in the region's de facto medical district consistent with good patient care.

Section 1.10 Elements of the DEIS

A. The Draft Table of Contents for the Draft EIS will have to be revised to reflect the concerns detailed above.

B. Appendices must include the complete Site Selection Study and an Evacuation Plan.

Section 1.11 Irrelevant or Non-Significant Issues or Impacts

Impacts on Flooding must be eliminated from this list for the reasons detailed above under Section 1.4 C.

Thank you for your attention to these matters.

Very truly yours,

Frank Montecalvo

RE: SEGRA Draft Scoping Document
 Mohawk Valley Health System (MVHS)
 Integrated Health Campus (IHC)

City of Utica Planning Board:

I would like to begin my comments by complimenting the City of Utica Planning Board, acting as SEGRA Lead Agency, for its decision to elect to follow the formal scoping process in determining the topics and analysis of the potential environmental impacts of the Mohawk Valley Health System (MVHS) proposed Integrated Health Campus (IHC) to be addressed in a Draft Environmental Impact Study (DEIS). While SEGRA does not require scoping, electing to follow the formal scoping process will provide the most comprehensive and transparent discussion of the proposed MVHS IHC project.

As described in the New York State Department of Environmental Conservation's publication [The SEQR Cookbook](#), the scoping process has six objectives:

- *focus the draft EIS on the potentially significant adverse environmental impacts;*
- *eliminate non-significant and non-relevant issues;*
- *identify the extent and quality of information needed;*
- *identify the range of reasonable alternatives to be discussed;*
- *provide an initial identification of mitigation measures; and*
- *provide the public with an opportunity to participate in the identification of impacts.*

A careful review of the Draft Scoping Document reveals that it is diligent in meeting the six objectives noted above. The document thoroughly identifies potential significant adverse impacts, both those associated with the IHC construction and the operation of the completed facility. It identifies existing information sources as well as additional

information required to reach a final determination. Finally, it identifies potential mitigation measures, again both for the construction and operational phases of the IHC.

The Draft Scoping Document provides a solid framework upon which to build a Draft Environmental Impact Statement that fully addresses all relevant issues and concerns. We fully support the Lead Agency moving forward in an expeditious manner with the preparation of the Draft EIS.

Thank you for the opportunity to comment on this important step in the process of this important project of major significance to the City of Utica, all of Oneida County and the entire region.

Sincerely,

John R. Kent, Jr.
Commissioner

Re: Mohawk Valley Health System (MVHS) Integrated Health Campus

Dear Mr. Thomas,

Thank you for the opportunity to comment on the proposed hospital complex that will replace both St. Luke's and St. Elizabeth's hospitals in Utica, NY. Based on the material provided, a designated landing facility for helicopters will be included with the 670,000 sf complex located at the northeast corner of State and Columbia Street's. There are several aspects of this proposal that should be carefully evaluated as the City begins to plan this development.

The proposed helistop is located approximately 9.5 miles southeast of Griffiss International Airport (KRME) and just south of the final approach course to Runway 33. The proposed location would likely not pose any conflicts with arrivals, departures or traffic pattern operations given this distance from Griffiss. However, a formal review and analysis for any new helicopter facility should be submitted to the FAA using FAA Form 7480 (the form to establish landing facilities) so internal FAA lines of business can properly evaluate the proposal for potential impacts to the National Airspace System. Additionally, proposed structures (hospital, associated buildings, power poles, flag poles, antennas, trees etc.) should be submitted for review in conjunction with the established landing area to determine if there are any potential impacts on the proposed helistop via FAA Form 7460. There are no fees to conduct these reviews, and, the process can be initiated by submitting information online at: <https://oeaaa.faa.gov/oeaaa/external/portal.jsp>. It should be noted that the proposal should be submitted well in advance of planned construction, especially for newly established landing facilities. Although review times typically range from 45-60 days before a determination letter is issued on the proposed development, these times can be longer should impacts be identified and mitigation measures need to be determined. If you would like more information on this process, please contact me directly and I will provide additional

guidance.

Page three of the project description identifies that a helistop (i.e. minimally developed helicopter facility for boarding and discharging passengers or cargo, without the support facilities found at a heliport) will be situated to the west of the hospital building, adjacent to the ED ambulance entrance and north of Columbia Street. Although it is not clear what minimally developed means, the FAA has published guidance on how heliports, specifically hospital heliports, should be planned and designed. FAA Advisory Circular (AC) 150-5390/2C (attached) outlines the parameters that need to be considered when siting the facility and what infrastructure is needed. The AC does not use the term “helistop”, as the design standards and recommendations of this AC apply to all heliports. Therefore, it is recommended that the reference to helistop be changed to Hospital Heliport for consistency with published guidance and standards.

Several aspects of this proposal warrant further review and include the following:

- The material provided in the MVHS application did not identify approach and departure surfaces to the proposed helipad to determine if the location is feasible based on planned and existing infrastructure. At a minimum, the approach and departure surfaces shall maintain an 8:1 slope without any obstructions as outlined in the attached guidance. Based on the proposed location, there may be additional noise and environmental impacts by using a surface landing area versus a rooftop or elevated setup given the existing Kennedy Tower residential apartment complex will immediately adjoin the MVHS complex. A noise analysis should be undertaken to verify what configuration will result in the least amount of noise to this residential area. Additionally, an assessment should be made with respect to air quality standards from exhaust that would be generated by helicopters to this residential property;
- It is unclear if the proposed helicopter area has been sited to account for prevailing winds as no data was submitted with the proposal. It should be noted that incorrectly siting the heliport with the hospital's planned ventilation system intakes can result in significant issues with building air quality if prevailing winds blow helicopter exhaust into them or to surrounding properties;
- The application material did not specify whether the area will be lighted for night operations, contain a rotating beacon on top of the MVHS facility, whether lighted windsocks or refueling infrastructure will be provided, etc. Please clarify if these types of improvements are anticipated;
- The MVHS application did not specify whether or not the facility will be designated as a trauma center, or will plan on providing trauma services at a future date. If trauma services will be provided, it will likely result in a greater frequency of helicopter operations to and from MVHS and therefore warrant improved infrastructure to serve the facility. Should a trauma center designation apply to MVHS, careful consideration should be given to the placing the heliport on the roof versus on the ground to minimize potential impacts.
- Details were not provided as to whether or not the proposed heliport will need instrument

approach procedures developed to allow helicopters to operate when weather is less than 2 miles and 800 feet ceilings, which are minimum weather requirements for Part 135 Air Ambulance operations (see attached VFR minimums). If MVHS plans to provide trauma services, it is recommended that instrument procedures be developed so as to minimize disruption of air transportation to and from the hospital during poor weather conditions.

Requests for procedure development can be submitted at:

https://www.faa.gov/air_traffic/flight_info/aeronav/procedures/ifp_form/ and should be submitted at least 18-24 months prior to expected operations.

- Given that a proposed heliport will be constructed at the MVHS site, the City of Utica should implement zoning regulations to limit buildings/objects around the site. Please review attached AC 150/5190-4, which illustrates how a Model Zoning Ordinance can be implemented to limit height of objects around airports (Substitute the heliport surfaces for the airport surfaces in the model ordinance). Should you have any questions regarding the development of zoning ordinances for airports/heliports, please contact me for further guidance.

Thank you for the opportunity to provide input on this proposal.

Sincerely,

Dave Carlin

Advisory Circular

Subject: A HAZARD OF OBSTRUCTION TO LIMIT HEIGHT OF OBJECTS AROUND AIRPORTS	Date: 12/14/57 Initiated by: info-100	AC No.: 113-1190-404 Change:
--	--	---

1. PURPOSE.

a. This advisory circular provides a guide, among other things, to be used as a guide to control the height of objects around airports.

b. This advisory circular has been editorially revised for reprint/stock purposes only. There were no changes made in the content of the advisory circular except to update the format and renumber the document to AC 113-1190-404.

3. REFERENCE. AC 113-1190-404, A Hazard of Obstruction to Limit Height of Objects Around Airports, dated August 21, 1957.

2. HAZARD.

a. Aviation safety requires a minimum clear space (or buffer) between operating aircraft and other objects. When these other objects are structures (such as buildings), the buffer may be achieved by limiting aircraft operations, by limiting the location and height of these objects, or, by a combination of these factors. This advisory circular concerns itself with controlling aircraft operations to control the height of objects, based on the obstruction clearance described in Subpart C of Federal Aviation Regulations (FAR) Part 71, Objects Affecting Navigation, enroute flight. It should be recognized, however, that not all obstructions (objects whose height exceeds or their color surpasses see a hazard to air navigation).

b. The Federal Aviation Administration (FAA) conducts continuous studies on obstructions which exceed their effect on such factors as: aircraft operational capabilities; electronic and procedural requirements; and, airport usage patterns. If an operational study shows that an obstruction, when evaluated against these factors, has no substantial adverse effect upon the safe and efficient use of navigable airspace, then the obstruction is considered not to be a hazard to air navigation. Advisory Circular 113-1190-404, Height Obstruction Air Access to National Transportation, second edition, contains additional discussion on hazards to air navigation.

c. Airport zoning ordinances developed the height limitations do not in themselves ensure compliance with the surrounding FAA requirements. Land use zoning, incorporating height limitations criteria, is an appropriate means for achieving this objective. Advisory Circular 113-1190-404, Airport Zoning and Compatibility Planning, second edition, presents general zoning advice for compliance and also stresses the desirability of uniformity.

4. BACKGROUND.

1. The purpose of setting a limit on height of objects in the vicinity of airports is to prevent their interference with the safe and efficient operation of the airport.

2. Section 311 of the Aircraft and Airspace Management Act of 1986, states, in part, the following: "... Section 1(a) PURPOSE: As a condition precedent to approval of an airport development project contained in a certificate issued by the Department of Transportation under this title, the Secretary shall receive assurances in writing, satisfactory to the Secretary that: ... (4) the hazard associated with the airport will be adequately cleared and controlled by removing, lowering, de-constructing, reworking, or lighting or marking existing airport obstacles and by preventing the establishment or erection of future obstructions; (5) appropriate action, including the adoption of zoning laws has been or will be taken, to the extent reasonable, to restrict the use of land adjacent to or in the immediate vicinity of the airport to activities and purposes compatible with normal airport operations, including landing and airport operations," Consistency with this advisory circular will ensure the responsible local government in complying with the Section 311 assurances with respect to the height of objects. However, this advisory circular does not address other land use compatibility criteria, such as noise compatibility, which may be required under Section 311.

3. This advisory circular is based on the classification criteria described in Figure 6 of FAA Part 31. Examples of existing obstructions and a variety of airports and the 3 largest non-towered airports have been included in appendices 2 and 3.

5. APPLICABLE REGULATORY REQUIREMENTS.

4. Those responsible for existing or airport zoning ordinances to limit height of objects are aware, of course, that it may conflict with the prescribed setbacks or other portions of a zoning zoning ordinance. Only zoning by applicable to the airport located in the ordinance should be used.

5. The model ordinance included in this advisory circular defines and provides for the establishment of various zones and prescribes height limitations for each zone to prevent the creation or establishment of objects that may interfere with the operation of the airport. These zones will vary depending on the type, size, and layout of the airport. The model ordinance, therefore, leaves the specific zone measurements to be dictated by the local jurisdiction in addressing the ordinance as appropriate for the particular airport.

6. The appendices also include examples of how the model ordinance may be used by various types of airports. Since much of the technical terminology and definitions are derived from Federal Aviation Regulations, associated programs, and manuals, the advisory circular, were should be used to ensure that language used in the ordinance drafted is consistent with terms used in the model ordinance.

d. Any height variations imposed by a zoning ordinance must be reasonable, assuming that the height variations prescribed should not be so low as to require to be considered a taking of property without compensation under local law. Therefore, the zoning ordinance should not purport to impose height limitations in any zone so close to the ground that the application of rational discretion would result in unreasonable or undue restrictive height limitations. This is provided for by provision 12, excepted height limitations, as section 24, Airport Zone Height Limitations, in the Model Zoning Ordinance.

e. The decision as to the excepted height limits should be made on the basis of local conditions and circumstances, including the uses being made of property in the vicinity of the airport. In making such a decision, the relevant jurisdiction should use the same procedures generally recognized as applicable in preparing comprehensive zoning ordinances, including necessary coordination with recognized state, regional, and local planning entities, where applicable.

f. Where in the various zones where the height limitation is below the maximum height limit specified in the ordinance should be required to ensure the required percent air. In the approach area, the minimum requirement begins at the end of the primary surface defined in EIR Part 77, Section 77.27, and extends outward with the width of the approach surface defined in that section, to a point where the approach surface slope reaches a height of 10 feet above the ground elevation of the runway or taxiway, whichever distance is the shorter. If easements are acquired, they shall include the right of passage over the property by aircraft to suit the need to prevent creation of future sheet drains.

g. Approval of airport zoning ordinances should consult with Federal Aviation Administration (FAA) airport personnel to determine any district policies that conflict with airport zoning regulations.

h. The standards contained in EIR Part 77, Airport 2, make it possible to determine the true location and its adjacent to an airport, the height at which any structure or object of aerial growth would exceed an obstructions. Section 77.12 of EIR Part 77, Airport 2 sets forth the requirements for filing notice of proposed obstructions with the FAA.

i. If the object exceeds a height or surface defined in Subpart 2 of EIR Part 77, it would be an obstruction and would be the subject of an aeronautical study by the FAA to determine its effect on navigable airspace. If the object is found not to have a substantial adverse effect upon the safe and efficient utilization of such airspace, it would be determined to be a hazard to air navigation. The FAA cannot prevent its creation without local assistance. The construction of this proposed mode zoning ordinance will permit the local jurisdiction to control the creation of hazards to air navigation and thus protect the community's investment in the airport.

1) The FAA environmental study will be made available to the local zoning authorities and will set forth the scope or location of any proposed project that would result in an obstruction under Section 2 of FAR Part 77. This information may then be considered by the Board of Adjustment when processing applications for variances.

6. AIRPORT ZONING ORDINANCE MAP.

a. Attached to the airport zoning ordinance and each a part thereof is the airport zoning map. The airport zoning map is similar to all types of airports and heliports, and must be compiled from the information in Section 2 of FAR Part 77 as indicated in the Ordinance. A typical example of this zoning map was included in size for printing in this publication (see Appendix 4).

b. The airport zoning map is of the land affected by the airport zoning ordinance and shows the layout of the runway, the airport boundaries, the airport elevation, and the user topography. The map should also set forth the various zones with the applicable height limitations for each as described in the body of the ordinance. The zoning map may vary somewhat depending on local conditions, as typical in different areas of the country, such as location, ownership and usage, block and lot, or water and land. This map should also depict other land-use planning geographic objects such as streams, rivers, railroads, roads, and streets. By using a map with this amount of detail, in conjunction with the text of an ordinance, a property owner should, without undue difficulty, be able to determine not only the location of his property, but also the height limitations imposed thereon by the ordinance.

c. Suitable topographic maps may be available from local government sources, State or topographic maps (quadrangle maps) and available from the U. S. Geological Survey. These should be ordered from the Distribution Branch, U. S. Geological Survey, 700 N. First Street, Federal Center, Denver, Colorado 80225.

d. Local State agencies also make topographic maps available. In the absence of accurate topographic data, local geodetic control data may be available from bench marks, railroads, highways, or other airport surveys. Control data or zoning data should be shown to the extent reasonably available or negative reply to maps or the ordinance.

e. FORCE OF APPLICABILITY. The rules contained in this order for the drawing of a zoning ordinance or have applied to those who have been specifically exempted, and to their and their special conditions. Provided for this order for judicial review of decisions of the Board of Adjustment. Such review and appeal procedures are available to comply to applicant's conditions and requirements.

12/14/87

AC 150/3100-04

8. GENERAL INSTRUCTIONS FOR DRAFTING THE VISUAL EVIDENCE DOCUMENTS.

a. The visual evidence evidence may be used as a guide for developing direct-seeing evidences to cover the hazards of objects that may interfere with the execution of a civil airport as depicted. The blank spaces should be filled in with appropriate data as noted.

b. It is not necessary that all material set forth in the visual evidence be used for all airport seeing evidences. For example, if the airport to be shown is a utility airport with no prohibition or suspension instrument runway existing or planned, those restrictions and paragraphs referring to prohibition or suspension instrument runway or longer than utility runways may be omitted, (see appendix 2). However, if the airport changes to a larger than utility airport or receives instrument approach procedures, the evidence shall be amended to provide for the changes.

c. Section III should only include the direct zones applicable to the airport being shown. An approach zone is applied to each end of each runway based upon the type of approach available or planned for that runway end. The most precise type of approach, existing or planned, for either end of the runway determines the advisory surface width. Helicopters do not have horizontal or vertical zones. Other zones to accommodate the items covered in FAR Part 17.21(a) (2) and (3) may be shown.

d. Samples of aerial runway-type evidences are included in the appendixes for guidance.

Thomas S. Hinde

THOMAS S. HINDE
Director, Office of Airport Standards

IN WITNESS WHEREOF, I have hereunto set my hand and the seal of the Court at _____ this _____ day of _____, 19__.

AND I HEREBY CERTIFY that the within and foregoing are true and correct copies of the original as the same appear in the files of the Court, and that the same are true and correct copies of the original as the same appear in the files of the Court, and that the same are true and correct copies of the original as the same appear in the files of the Court.

This document is a true and correct copy of the original as the same appear in the files of the Court, and that the same are true and correct copies of the original as the same appear in the files of the Court, and that the same are true and correct copies of the original as the same appear in the files of the Court.

IN WITNESS WHEREOF, I have hereunto set my hand and the seal of the Court at _____ this _____ day of _____, 19__.

AND I HEREBY CERTIFY that the within and foregoing are true and correct copies of the original as the same appear in the files of the Court, and that the same are true and correct copies of the original as the same appear in the files of the Court.

AND I HEREBY CERTIFY that the within and foregoing are true and correct copies of the original as the same appear in the files of the Court, and that the same are true and correct copies of the original as the same appear in the files of the Court.

1/ This instrument shall be filed in the files of the Court and legal proceedings of your state, and any pertinent proceedings.

2/ Insert the name of the applicant for a copy of the instrument.

3/ This instrument shall be made to conform to the usual format of filing your state laws.

4/ All other areas not already used by the courts of your state in the filing of your state laws, such as "proceedings" or "proceedings" may contain additional laws.

It is further declared that the preservation of the protection of existing structures, of hazards to air navigation, the administration thereof, establishment and maintenance of hazards to air navigation, the marking and lighting of obstructions and public purposes, for the safety of a political subdivision, by means and extent public funds and resources, have an authorization to build.

IT IS THE POLICY OF THE COUNTY OF ... AS FOLLOWS:

SECTION I: SHORT TITLE

It is the intent of this ordinance to amend ... of ...

SECTION II: DEFINITIONS

As used in this ordinance, unless the context of a word requires:

- 1. APPROACH - ...
- 2. APPROACH ELEVATION - The highest point of an approach's profile ...
- 3. APPROACH SURFACE - A surface together with its extension to the subject roadway centerline extending across the space from the end of the existing surface ...
- 4. APPROVED, UNDESIGNATED, UNDESIGNED, AND UNBUILT APPROACH - ...
- 5. BOARD OF EXAMINERS - A Board consisting of ...
- 6. CRITICAL SURFACE - A surface extending across and beyond the boundary of the horizontal surface ...
- 7. ...
- 8. ...
- 9. ...

00. 150001200-01
 Appendix 1

11/14/87

12. The rate of the inclination of the roadway floor or the roadway construction.
13. **ROADWAY** - a line and area on an airport prepared for and by which take-off or landing is being accomplished.
14. **TRANSITION SURFACE** - an inclined, sloping surface, prepared or installed by man, including but not limited to, taxiway, runway, taxiway, apron, ramp, and other facilities, and associated construction areas.
15. **TRANSITIONAL SURFACE** - those surfaces which, measured at 90 degree angles to the runway centerline and the runway construction extended at a slope of seven (7) feet horizontally for each foot vertically from the edges of the primary and approach surfaces to where they intersect the horizontal and vertical surfaces. Transitional surfaces for those portions of the precision approach surfaces, which project through and beyond the limits of the vertical surface, extend a distance of 1,000 feet measured horizontally from the edge of the approach surface also at 90 degree angles to the exterior runway centerline.
16. **GRASS** - any species of natural grass.
17. **GRASSY BUFFER** - a runway limit or construction line and related area used for protection against aircraft over 10,000 pounds gross weight and 150 ft.
18. **VISUAL BUFFER** - a runway extended width for the protection of aircraft using visual approach procedures.

SECTION 100. AIRPORT ZONES

In order to carry out the provisions of this Subchapter, there are hereby created and established certain zones which include all of the land lying beneath the surface of the ground, horizontal and vertical surfaces, and other surfaces as they apply to: 1. Such zones are areas or portions of land and buildings of any kind, owned by and under the control of the State, which is attached to the Subchapter and made a part thereof. An area located in more than one (1) of the following zones is considered to be only in the zone with the most restrictive height limitation. The various zones are hereby established and defined as follows:

1. **Primary Runway and Approach Zone** - the outer edge of any approach zone established with the width of the primary surface and is 150 feet wide. The approach zone extends outward uniformly to a width of 1,200 feet at a horizontal distance of 1,000 feet from the primary surface. The centerline is the continuation of the center line of the runway.

1/ Insert dimension as set forth in FAR Part 77. Where more than one dimension is applicable, insert dimension identified to the appropriate runway involved.

3. Utility Access Encroachment Transition Approach Zone - The inner edge of this approach zone coincides with the width of the primary surface and is 500 feet wide. The approach zone expands outward uniformly to a width of 1,000 feet at a horizontal distance of 1,000 feet from the primary surface. Its centerline is the continuation of the centerline of the runway.
4. Utility Access Encroachment Approach Zone - The inner edge of this approach zone coincides with the width of the primary surface and is 1,000 feet wide. The approach zone expands outward uniformly to a width of 1,500 feet at a horizontal distance of 1,000 feet from the primary surface. Its centerline is the continuation of the centerline of the runway.
5. Runway Edge Transition Encroachment Approach Zone - The inner edge of this approach zone coincides with the width of the primary surface and is 1,000 feet wide. The approach zone expands outward uniformly to a width of 1,500 feet at a horizontal distance of 10,000 feet from the primary surface. Its centerline is the continuation of the centerline of the runway.
6. Runway Edge Utility with Visibility Minimums Encroachment Approach Zone - The inner edge of this approach zone coincides with the width of the primary surface and is 1,000 feet wide. The approach zone expands outward uniformly to a width of 1,500 feet at a horizontal distance of 10,000 feet from the primary surface. Its centerline is the continuation of the centerline of the runway.
7. Proposed Instrument Runway Approach Zone - The inner edge of this approach zone coincides with the width of the primary surface and is 1,000 feet wide. The approach zone expands outward uniformly to a width of 15,000 feet at a horizontal distance of 50,000 feet from the primary surface. Its centerline is the continuation of the centerline of the runway.
8. Helicopter Approach Zone - The inner edge of this approach zone coincides with the width of the primary surface and is 30 feet wide. The approach zone expands outward uniformly to a width of 500 feet at a horizontal distance of 1,000 feet from the primary surface.
9. Transitional Zones - The transitional zones are the areas between the transitional surfaces.

10 The size of the primary surface must be based on present and future helicopter requirements.

As 2025 2025
 a) 2025 2025

2025 2025

- a) Primary Surface - The primary surface shall be established by extending from the center of the primary roadway and the following approach roads a horizontal distance of 20.0 feet from the center of each roadway centerline and the centerline of each roadway centerline.
- b) Secondary Surface - The secondary surface shall be established by extending from the center of the primary roadway and the centerline of the primary roadway a distance of 10.0 feet from the centerline of the roadway and the centerline of the roadway.
- c) Shoulder Edge - The shoulder edge shall be established by extending from the centerline of the roadway a distance of 10.0 feet from the centerline of the roadway and the centerline of the roadway a distance of 10.0 feet.

SECTION 10. MINIMUM ROAD WIDTH REQUIREMENTS

Except as otherwise provided in this Ordinance, the minimum road width shall be established, defined, or determined and the minimum road width shall be given in any zone established by this Ordinance. The minimum road width shall be determined by the minimum road width of the roadway and the minimum road width of the roadway shall be hereby established in each of the zones in question as follows:

1. Primary Surface - The primary surface shall be established by extending from the center of the primary roadway and the centerline of the roadway a distance of 20.0 feet from the centerline of the roadway and the centerline of the roadway.
2. Secondary Surface - The secondary surface shall be established by extending from the center of the primary roadway and the centerline of the primary roadway a distance of 10.0 feet from the centerline of the roadway and the centerline of the roadway.
3. Shoulder Edge - The shoulder edge shall be established by extending from the centerline of the roadway a distance of 10.0 feet from the centerline of the roadway and the centerline of the roadway a distance of 10.0 feet along the extended roadway centerline.
4. Other - The other shall be established by extending from the centerline of the roadway a distance of 10.0 feet from the centerline of the roadway and the centerline of the roadway a distance of 10.0 feet from the centerline of the roadway and the centerline of the roadway a distance of 10.0 feet along the extended roadway centerline.

-
- 2) The minimum road width shall be established by extending from the centerline of the roadway a distance of 10.0 feet from the centerline of the roadway and the centerline of the roadway a distance of 10.0 feet from the centerline of the roadway and the centerline of the roadway a distance of 10.0 feet along the extended roadway centerline.

12/14/87

11. 1975/87
 12. 1975/87

6. Grassed Sloped Approach Surface with a Slope of 1/2" per 1' or less to 3/4" per 1' (1/2" slope) beginning at the primary surface and extending to the side of and at the same elevation as the primary surface and extending to a horizontal distance of 10,000 feet along the extended runway centerline.
7. Prepared Instrument Runway Approach Zone Slopes of 1/4" per 1' or less upward for each foot upward beginning at the end of and at the same elevation as the primary surface and extending to a horizontal distance of 10,000 feet on each side extended runway centerline; Maximum slopes upward forty (40) feet horizontally for each foot vertically to an alternate horizontal distance of 10,000 feet along the extended runway centerline.
8. Helicopter Approach Zone Slopes of 1/4" per 1' or less upward for each foot upward beginning at the end of and at the same elevation as the primary surface and extending to a distance of 1,000 feet along the helicopter approach zone centerline.
9. Grassed Area Slope - Slopes upward 1/4" per 1' foot upward for each foot upward beginning at the side of and at the same elevation as the primary surface and the extended surface, and extending to a horizontal distance of 10,000 feet above each runway level. In addition to the foregoing, there are special side slopes which slope upward 1/4" per 1' foot upward for each foot upward beginning at the side of and at the same elevation as the approach surface, and extending to where they intersect the elevated surface. Where the profile of instrument runway approach zone projects beyond the existing grade, there are established height limits sloping down 1/4" per 1' foot upward for each foot upward beginning at the side of and at the same elevation as the approach surface, and extending a horizontal distance of 1,000 feet measured at 30 degree angles to the extended runway centerline.
10. Helicopter Instrument Zone Slopes of 1/4" per 1' or less upward for each foot upward beginning at the side of and at the same elevation as the primary surface and extending to a horizontal distance of 1,000 feet measured horizontally from and at all angles angles to the primary surface centerline and helicopter approach zone centerline.
11. Grassed Area Slope - Slopes upward 1/4" per 1' foot upward for each foot upward beginning at the side of and at the same elevation as the approach surface, and extending to a horizontal distance of 1,000 feet measured at 30 degree angles to the extended runway centerline.
12. Grassed Area Slope - Slopes upward 1/4" per 1' foot upward for each foot upward beginning at the side of and at the same elevation as the approach surface, and extending to a horizontal distance of 1,000 feet measured at 30 degree angles to the extended runway centerline.

4. Obstacle height on landing - Height of this Ordinance shall be determined by projecting low obstructions or encumbrances of any structure, or growth of any tree to a height of feet above the surface of the sea

SECTION 21. AIRPORTS-1985

Notwithstanding any other provisions of this Ordinance, no use may be made of land or water or in any structure owned by this Ordinance or with a right to use or control such land or structure with any lighted signals or radio beacons, antennas or other devices, and aircraft, which either in use or in design, obstruct, diminish or prevent visibility in the vicinity of the airport, create any strike hazard, or otherwise in any use interfere or interfere with the landing, taking off or maneuvering of aircraft intending to use the airport

SECTION 22. AIRPORTS-1985

1. Lighting on airports - The light signals prescribed by this Ordinance shall not be required to require the removal, lowering, or use in any use or alteration of any structure or height exceeding the regulations and the height of any such structure, or any other use, which would interfere with the use, operation or landing and take off of aircraft intended to use the airport, or the landing, taking off or maneuvering of aircraft in the vicinity of such airports. The installation of such light signals at any such airport shall be subject to such regulations and to such other laws as may be applicable.
2. Marking of airports - Notwithstanding any existing provision of this Ordinance, the owner of any building or other structure on land in order required to build the installation, operation, and maintenance thereof of any marker and light or other aid to navigation, intended or to be dedicated to the operation of aircraft in the vicinity of the airport, the presence of such airport characteristics, such markers and lights shall be installed, operated, and maintained at the expense of the

19/ The supervisor or other person to whom the same may be referred, or their successors, shall be responsible for the same, and the person or persons to whom the same may be referred shall be liable for the same as if they were the supervisor or other person to whom the same may be referred.

20/ Insert the title of the appropriate official who had been charged with the responsibility for determining the necessity for marking and lighting.

21/ Insert the name of the appropriate person or persons.

ARTICLE 12. ZONING

- 1. Lotting Lines - Except as specifically provided in 2, 4, 5, and 6 hereunder, no building or structure shall be erected on the site of land, no structure shall be altered or otherwise established, and no sign shall be placed on any lot or building situated within a zoning district until the lot, building and structure have complied with all the provisions of this ordinance, including the provisions for setbacks and setbacks, with certain exceptions. The provisions for setbacks and setbacks shall apply to all buildings and structures, including those which are located on the lot or building which are permitted to be located on the lot or building. The provisions of this ordinance shall be applied unless a variance has been approved in accordance with Section VII, 6.
 - 2. In any zone lying within the limits of the horizontal zone and vertical zone, no building shall be required to be less than a certain less than a certain feet in height above the ground, except when because of terrain, lot conditions, or topographic features, such less or structure could extend above the height limits prescribed for such zones.
 - 3. In any zone lying within the limits of the horizontal zone, but at a horizontal distance of not less than 1,000 feet from each end of the zoning lot line, no building shall be required to be less or structure shall be less or structure shall extend above the height limits prescribed for such zones.
 - 4. In any zone lying within the limits of the horizontal zone and vertical zone, no building shall be required to be less than a certain feet in height above the ground, except when such less or structure, because of terrain, lot conditions, or topographic features, could extend above the height limits prescribed for such zoning zones.
- Nothing contained in any of the foregoing exceptions shall be construed as permitting or intending to permit any building, or extension of any structure, or growth of any tree or shrub of any of the height limits prescribed by this ordinance except as set forth in Section 12.1.
- 5. Building Lines - No building shall be erected that would allow the establishment or extension of a structure or permit a nonconforming sign, structure, or use of land or structure to be used for navigation or other use on the lot or on any other lot of the same or any adjacent lot, unless such use is in accordance with the provisions of this ordinance. Except as indicated, all applications for such permits shall be denied.

SECTION VIII. EMPLOYMENT

It shall be the duty of the _____ to employ such persons as may be required for the _____ and to pay such persons such wages and salaries as may be determined by the _____ for such purposes. The _____ shall have the right to employ such persons as may be required for the _____ and to pay such persons such wages and salaries as may be determined by the _____ for such purposes.

SECTION IX. BOARD OF ADJUSTMENT

- There shall be a Board of Adjustment composed of _____ members and having the following powers: (1) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (2) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (3) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (4) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (5) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (6) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (7) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (8) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (9) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (10) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (11) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (12) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (13) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (14) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (15) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (16) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (17) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (18) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (19) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (20) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (21) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (22) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (23) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (24) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (25) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (26) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (27) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (28) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (29) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (30) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (31) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (32) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (33) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (34) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (35) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (36) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (37) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (38) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (39) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (40) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (41) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (42) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (43) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (44) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (45) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (46) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (47) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (48) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (49) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (50) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (51) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (52) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (53) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (54) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (55) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (56) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (57) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (58) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (59) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (60) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (61) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (62) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (63) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (64) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (65) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (66) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (67) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (68) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (69) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (70) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (71) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (72) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (73) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (74) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (75) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (76) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (77) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (78) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (79) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (80) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (81) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (82) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (83) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (84) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (85) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (86) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (87) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (88) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (89) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (90) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (91) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (92) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (93) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (94) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (95) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (96) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (97) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (98) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (99) to hear and determine appeals from any order, map, plan, or other instrument of the _____; (100) to hear and determine appeals from any order, map, plan, or other instrument of the _____.
- The Board of Adjustment shall consist of _____ members appointed by the _____ and each shall serve for a term of _____ years commencing _____ and each shall be appointed and qualified. If two members first appointed, the first shall be appointed for a term of _____ years, _____ for a term of _____ years, and _____ for a term of _____ years. Members shall be removable by the appointing authority for cause, upon written charges, after a public hearing.
- The Board of Adjustment shall adopt rules for its governance and in conformity with the provisions of this Ordinance. Meetings of the Board of Adjustment shall be held at the call of the Chairperson and at such other times as the Board of Adjustment may determine. The Chairperson or, in the absence of the Chairperson, the Acting Chairperson may administer oaths and compel the attendance of witnesses. The minutes of the Board of Adjustment shall be kept by the Board of Adjustment and shall contain a full and true record of its proceedings showing the names of members present and questions or charges made and the answers and findings of fact, and shall keep records of its expenses and such other official matters, and if an appeal shall have been filed, the minutes shall also contain the appeal and the course thereof.
- The Board of Adjustment shall have the right to receive of the _____ any and all maps, plans, or other instruments of the _____ and to examine and make copies thereof and to cause to be made, if necessary, a certified copy thereof, except as when such maps, plans, or other instruments of the _____ are on file in the possession of this Ordinance.

Let there be the title of the appropriate Act, and the Secretary of Public Works, etc.

3. The rate of change value of a property of the members of the Board of Adjustment shall be determined by the Board of Adjustment, and shall be subject to the approval of the Board of Adjustment. The Board of Adjustment shall have the authority to suspend or terminate the application of any provision of this Ordinance, or to effect any change to this Ordinance.

SECTION 10: APPEALS

1. Any person aggrieved, or any taxpayer affected, by any decision of the Board of Adjustment may appeal to the Board of Adjustment within the time specified in this Ordinance.

2. All appeals concerning any decision of the Board of Adjustment shall be presented to the Board of Adjustment by filing with the Board of Adjustment a written appeal of the decision. The Board of Adjustment shall have the authority to suspend or terminate the application of any provision of this Ordinance, or to effect any change to this Ordinance.

3. An appeal shall stay all proceedings or enforcement of the action appealed from unless the Board of Adjustment, by a majority vote of the Board of Adjustment, shall find that the facts stated in the certificate of appeal would justify the suspension of proceedings. Proceedings shall not be stayed except by the order of the Board of Adjustment or notice to the Board of Adjustment.

4. The Board of Adjustment shall have the authority to suspend or terminate the application of any provision of this Ordinance, or to effect any change to this Ordinance.

5. The Board of Adjustment shall, in conformity with the provisions of this Ordinance, suspend or terminate, in whole or in part, or modify the application of any provision of this Ordinance, or to effect any change to this Ordinance.

SECTION 11: APPEALS

Any person aggrieved, or any taxpayer affected, by any decision of the Board of Adjustment may appeal to the Board of Adjustment within the time specified in Section 10 of Chapter 10 of the Ordinance of 1919.

10. In case of jurisdiction. Jurisdiction shall be given to a municipality or county from this Ordinance here or an alternative authority to all copies of this Ordinance a copy of or copy from the statute shall.

SECTION 477: PENALTIES

Every violation of this Ordinance, or of any rule, stipulation, or any other penalized instrument shall be a misdemeanor and any person who shall be punishable by a fine of not more than _____ dollars or imprisonment for not more than _____ days or both; and each day of continuing violation shall constitute a separate offense.

SECTION 478: CONFLICTING REGULATIONS

Nothing herein exists to conflict between any of the regulations or ordinances promulgated in this Ordinance and any other regulations, applications, or laws now being, about to be, or to be so in respect to the subject of the subject of herein, and to the extent of any such other law, law, rule, regulation, ordinance or requirement, shall govern and prevail.

SECTION 479: SEVERABILITY

If any of the provisions of this Ordinance or the application thereof to any person or circumstances are held invalid, such invalidity shall not affect other provisions or applications of the Ordinance which can be given effect without the invalid provision or application, and to this end, the provisions of this Ordinance are declared to be severable.

SECTION 50: EFFECTIVE DATE

WHEREAS, the immediate operation of the provisions of this Ordinance is necessary for the preservation of the public health, public safety, and general welfare; an EMERGENCY is hereby declared to exist, and this Ordinance shall be in full force and effect from and after the passage by the _____ and publication and posting as required by law.
Adopted by the _____ this _____ day of _____, 2020.

**ARTICLE 10. ZONING ORDINANCE FOR LIGHT-TYPE
AIRPORT AIRCRAFT INSTRUMENT PROTECTION**

SECTION 10.000. PURPOSE AND SCOPE OF SUBJECT REGULATIONS

AN ORDINANCE REGULATING THE PROTECTION OF THE HEIGHT OF STRUCTURES AND OBJECTS BY HEIGHT MEASUREMENT AND SENSITIVE REGULATING THE USE OF PROPERTY, IN THE VICINITY OF THE AIRVILLE AIRPORT BY DEFINING THE APPROPRIATE ZONES AND ESTABLISHING THE PARAMETERS THEREOF, PROVIDING FOR CHANGES IN THE RESTRICTIONS AND REGULATIONS OF SUCH ZONES; ALL SUCH CLASSES TERMS USED HEREIN; INCLUDING IN THE AIRVILLE AIRPORT ZONING MAP WHICH IS INCORPORATED IN PART AS PART OF THIS ORDINANCE; PROVIDED FOR LA 0007100-83 ESTABLISHED IN A POINT OF CONFLICT, AND THEREBY ENFORCED.

This Ordinance is adopted pursuant to the authority conferred by Chapter 111 of the Laws of the State of XXXX. It is hereby found that an observation from the potential for endangering the lives and property of citizens of Airville Airport, and property or interests of others in the vicinity of the Airport, and that such observation may include the use of aircraft available for the landing, takeoff, or maneuvering of aircraft, that landing or takeoff or maneuvering of aircraft at Airville Airport, and the public convenience thereof, would be, in violation:

- (1) that the construction or establishment of an obstruction may be prevented or delayed a public nuisance and may injure the region served by Airville Airport;
- (2) that it is necessary in the interest of the public safety, public health, and general welfare that the location or establishment of such a structure that may be a hazard to air navigation be prevented; and
- (3) that the prevention of these obstructions should be a duty imposed on the extent legally possible, by the exercise of the police power without compensation.

It is further declared that the prevention of the erection or establishment of hazards to air navigation, the safety, health, and general welfare or navigation of airports to air navigation, the health and safety of the community and public convenience for the use of airports and navigation, may require and expend public funds for the benefit and use of the community.

IT IS HEREBY ENFORCED BY THE COMMISSIONERS OF PUBLIC SAFETY AND HEALTH OF THE STATE OF XXXX.

SECTION 10: DEFINITIONS

This Ordinance shall be read and may be cited as follows: **County of Santa Clara**, being **Ordinance**.

SECTION 11: DEFINITIONS

As used in this Ordinance, the following definitions shall apply:

1. **APPROACH** - Means any of the following:
 - a. **APPROACH, TRANSITION, HORIZONTAL, AND VERTICAL CURBS** - These terms are defined in Section 11 of this Ordinance.
 - b. **FRONT OF ADJACENT** - A line consisting of members appointed by the Board of County Commissioners of the City and County of Santa Clara, California, to the laws of the State of Texas.
 - c. **ROADWAY SURFACE** - A surface extending to the side and across from the roadway of one highway to another at a grade of 20 to 25 feet horizontal distance or 1,000 feet.
 - d. **SAFETY FOR THE PUBLIC** - An installation authorized to assist in providing a service that is in the life and efficient utilization of the highway system.
 - e. **HEIGHT** - For the purpose of determining the height limits in all cases, the height in this Ordinance and shown on the zoning map, the latter shall be mean sea level, a positive or negative elevation is specified.
 - f. **HORIZONTAL SURFACE** - A line which is less than the established support elevation, the elevation of which is also coincides with the perimeter of the structure.
 - g. **PROPOSED STRUCTURE** - The proposed structure, object of review, zoning, or use of land, which is inconsistent with the provisions of this Ordinance or an ordinance thereof.
2. **MEAN SEA LEVEL** - The standard, positive or negative height, as shown on the zoning map, that is used in determining height limits in Section 11 of this Ordinance.

- 12. **PERSON** - An individual, firm, partnership, corporation, company, association, joint stock association, or governmental entity, includes a trustee, a successor, an assignee, or a similar representative of any of them.
- 13. **PRIMEY SURFACE** - A surface longitudinally centered on a runway, when the runway has a specially prepared hard surface, the primary surface extends 200 feet beyond each end of that runway. When the runway has no specially prepared hard surface, or planned hard surface, the primary surface ends at each end of that runway. The width of the primary surface is not forth in Section III of this Ordinance. The elevation of any point on the primary surface is the same as the elevation of the nearest point on the runway centerline.
- 14. **RUNWAY** - A defined area on an airport prepared for landing and take-off of aircraft along its length.
- 15. **OBSTACLE** - An object, including a vehicle object, constructed or installed by man, including but not limited to towers, towers, cranes, cranes, obstructions, earth construction, and overhead wires or cables.
- 16. **UNDESIRABLE USES** - Those uses which are not allowed at all angles any use to the runway centerline and the runway centerline extension at a slope of seven (7) feet horizontal to one foot vertical, extending from the edges of the primary and secondary surfaces to seven (7) feet above the horizontal and centered over same.
- 17. **USE** - Any object of material nature.
- 18. **UTILITY RUNWAY** - A runway that is constructed for and intended to be used by propeller driven aircraft of 12,500 pounds maximum gross weight and less.
- 19. **Visual IDENT** - A runway intended solely for the operation of aircraft using visual approach procedures.

SECTION 12.03.02.01.01 State

In order to carry out the provisions of this ordinance, bases and runways created and established hereby shall be marked with lights and beacons, including the approach surfaces, edge lights and lights, centerline lights, and lights for taxiways, as they apply to the 4,000 ft runway. Such signs are shown on the 4,000 ft Airport Final Engineering Plans consisting of two sheets, prepared by the Department of Public Works and dated August 2, 1978, sheet

is attached to each infrastructure and utility within the project. The zones defined in this chapter are 1) the primary surface zone, 2) the extended runway zone, 3) the transitional zone, and 4) the safety zone. The safety zone is defined as follows:

1. Primary Surface Zone - The outer edge of this approach zone coincides with the width of the primary surface and is 250 feet wide. The approach zone expands outward uniformly to a width of 1,000 feet at a horizontal distance of 5,000 feet from the primary surface. The centerline is the continuation of the centerline of the runway.
2. Transitional Zone - The transitional zones are the zones between the traditional runways.
3. Extended Zone - The extended zone is established as an area extending 100 feet beyond the outer edge of each end of the primary surface to 1,000 feet from the runway axis. The extended zone is defined by extending the length of the runway. The horizontal zone is 500 feet wide, the vertical and horizontal axis.
4. Safety Zone - The safety zone is established as the area that encompasses the periphery of the extended zone and extends outward therefrom a horizontal distance of 1,000 feet.

SECTION 10: AIRPORT ZONE HEIGHT LIMITS

Except as where so provided in this chapter, no structure shall be erected, altered, or maintained, and no trees shall be allowed to grow, on any lands owned by this city, or on any lands under its jurisdiction, to a height in excess of the applicable height limit hereby established for each zone. Such applicable height limitations are hereby established for each of the zones as set forth as follows:

1. Primary Surface Zone - Slopes twenty (20) feet outward. The 200-foot slopes beginning at the ends of each of the same elevation as the primary surface and extending to a horizontal distance of 1,000 feet along the extended runway centerline.
2. Transitional zones - Slopes seven (7) feet outward for each foot upward beginning at the sides of each of the same elevation as the primary surface and the upper surface, and extending to a height of 10 feet above the project elevation such as to each zone as set forth. In addition to the temporary zones and additional height limits sloping seven (7) feet outward for each foot upward from the edge of the runway, the same shall be provided on the adjacent runways and extending to seven (7) feet above the runway surface.
3. Extended Zone - Established at 150 feet above the airport elevation or 100 feet above 150 feet above mean sea level.

4. Critical Zone - a zone of trees covered for each foot upward from the surface of the runway of the horizontal zone and at 100 feet above the surface maximum and extending to a height of 500 feet above the surface of the runway.
5. Tree Height Limitations - Noting in this Ordinance shall be construed as prohibiting the construction or maintenance of any structure, or growth of any tree to a height up to 50 feet above the surface of the land.

SECTION VI - TREE RESTRICTIONS

Substantiating any other provisions of this Ordinance, no use may be made of land or water within any zone established by this Ordinance in such a manner as to create electrical interference with navigational signals or radio communication between the airport and aircraft, make it difficult for pilots to distinguish between airport lights and stars, result in glare to the eyes of pilots using the airport, impair visibility in the vicinity of the airport, create wind above airports, or otherwise in any way interfere or hinder any other lawfully, lawfully, or lawfully in a lawful, lawful, or lawful manner.

SECTION VII - MAINTENANCE OF TREES

1. Maintenance of All Structures - The regulations prescribed in this Ordinance shall not be construed to require the removal, location, or other manner of construction of any structure or tree not conforming to the regulations or of the effective date of this Ordinance, or other maintenance with the maintenance of a grandfathered use. Notwithstanding herein shall require the owner, in the construction alteration, or removal of any structure, the construction or alteration of such use began prior to the effective date of this Ordinance, and an affidavit procedure.
2. Maintain and Lighting - Notwithstanding the provisions herein of this Section, the owner of any existing grandfathered structure or tree in zones required to permit the installation, operation, and maintenance thereof, of such markers and lights as shall be deemed necessary by the Director, Department of Public Works, be located to the vicinity of aircraft in the vicinity of the airport. The presence of such markers and lights. Such markers and lights shall be installed, maintained, and maintained at the expense of the Director, Department of Public Works.

SECTION VIII - UTILITIES

Utility lines - as specifically provided in a, b, and c hereunder, no electrical energy shall be used in the use of land, to permit the same to be used as otherwise established, and no tree shall be cut and shall be removed unless a permit therefor shall have been applied for.

and granted, such permit shall be a permit to use the property for such the purpose for which the permit is issued, with the following conditions: any use permitted is to be determined based on the resulting use, structure, or tree being removed to the regulations herein prescribed. If such determination is in the affirmative, the permit shall be granted. No permit for a use inconsistent with the provision of this Ordinance shall be granted unless a variance has been approved in accordance with Section VII, 2.

- a. To the area lying within the limits of the horizontal zone and vertical zone, no permit shall be required for any tree or structure less than twenty-five feet of vertical height above the ground, except sign, banner or banner, land marker, or topographic marker, such tree or structure shall exceed above the height limit prescribed for such zones.
- b. To areas lying within the limits of the horizontal zone, but at a horizontal distance of not less than 4,000 feet from each end of the runway, no permit shall be required for any tree or structure less than twenty-five feet of vertical height above the ground, except sign, banner or banner, land marker, or topographic marker, such tree or structure shall exceed above the height limit prescribed for such zones and areas.
- c. In the areas of the horizontal zone and vertical zone, no permit shall be required for any tree or structure less than twenty-five feet of vertical height above the ground, except sign, banner or banner, land marker, or topographic marker, such tree or structure shall exceed above the height limit prescribed for such zones and areas.

Nothing contained in any of the foregoing conditions shall be construed as preventing or intending to prevent any construction, or alteration of any structure, no permit of any kind is needed if any of the height limits established by this Ordinance except as set forth in Section 17(c).

8. Existing Uses - No permit shall be required for any structure, building, or other structure or use existing on any lot at the time of the adoption of this Ordinance, or any structure or use existing on any lot at the time of the adoption of this Ordinance, or any structure or use existing on any lot at the time of the adoption of this Ordinance, except as indicated, a permit shall be required for any structure or use.
9. Manufacturing Uses - No permit shall be required for any structure, building, or other structure or use existing on any lot at the time of the adoption of this Ordinance, or any structure or use existing on any lot at the time of the adoption of this Ordinance, or any structure or use existing on any lot at the time of the adoption of this Ordinance, except as indicated, a permit shall be required for any structure or use.

10. Variance - Any person applying to obtain or amend the subject of any structure, to permit the growth of any trees on the property, and in accordance with the regulations prescribed in this Ordinance, may apply to the Board of Adjustment for a variance from said regulations. The application for variance shall be accompanied by a site plan as set forth by the Federal Aviation Administration as to the effect of the proposed on the operations of air navigation facilities and the safe, efficient use of navigable airspace. Such variances shall be allowed where it is duly found that a literal application or enforcement of the regulations will result in unnecessary hardship and relief granted will not be contrary to the public interest, will not create a hazard to air navigation, will be substantial justice, and will be in accordance with the spirit of this Ordinance. Additionally, no application for variance to the requirements of this Ordinance may be considered by the Board of Adjustment unless a copy of the application has been furnished to the Airport Manager for review as to the aeronautical effects of the variance. If the Airport Manager does not respond to the application within 18 days after receipt, the Board of Adjustment may act on its own to grant or deny said application.
11. Restrictions on Zoning and Licensing - Any person who owns, controls, manages, or operates any building, structure, or premises, or any part thereof, which is subject to zoning, licensing, or other regulations may not, and is prohibited from doing so, permit the Indian County Department of Public Works, or its staff, employees, or agents, to conduct any zoning, licensing, or other regulatory enforcement activities on the property owned and controlled.

SECTION 14: ENFORCEMENT

14.01. The jurisdiction of the Director, Department of Public Works, to enforce zoning and licensing laws shall be subject to the jurisdiction of the Director, Department of Public Works, to enforce zoning and licensing laws. Applications received by the Director, Department of Public Works, shall be promptly considered and granted or denied. Application for action by the Board of Adjustment shall be reviewed transmitted by the Director, Department of Public Works.

SECTION 15: BOARD OF ADJUSTMENT

1. There is hereby created a Board of Adjustment to have and exercise the following powers: (1) to hear and decide appeals from any order, requirement, condition, or restriction made by the Director, Department of Public Works, in the enforcement of this Ordinance; (2) to hear and decide special use applications in the terms of this Ordinance; and (3) to hear and decide appeals from any regulation that may be required to pass on (1) to meet any zoning or licensing variance.

2. The Board of Adjustment shall maintain a formal analysis approved by the Board of Adjustment to determine how much the property for a term of three years and a maximum number of years and any conditions. If the property is not a parcel that is subdivided or a term of one year, the Board of Adjustment shall not be a term of three years. Subdivisions shall be approved by the Board of Adjustment by the Board of Adjustment.
3. The Board of Adjustment shall adopt rules for its governance and in conformity with the provisions of this Ordinance. Meetings of the Board of Adjustment shall be held at the call of the Chairperson and at such other times as the Board of Adjustment may determine. The Chairperson, or, in the absence of the Chairperson, the Acting Chairperson, may, in his or her discretion, suspend the attendance of members. All hearings of the Board of Adjustment shall be public. The Board of Adjustment shall keep minutes of its proceedings, showing the vote of each member upon each question or in absent or failing to vote, or casting such vote, and shall keep records of its communications and correspondence, copies of which shall, upon request, be filed in the office of the Chairperson and be due under oath.
4. The Board of Adjustment shall have authority to receive and consider any appeal or to give any such appeal priority, if such and the Board of Adjustment from such facts in reviewing, affirming, or modifying any order, decision, or determination, or authorization which shall conform to the provisions of this Ordinance.
5. The Chairperson, or, in the absence of the Chairperson, the Acting Chairperson, shall be sufficient to reverse any order, determination, decision, or authorization of the Board of Adjustment, or to refuse to issue or to suspend or to suspend any other action which is required to pass under this Ordinance, or to a new condition to this Ordinance.

ARTICLE 10. APPEALS

1. Any person aggrieved, or any taxpayer affected, by the decision of the Board of Adjustment of Public Works, made in the administration of the Ordinance, may appeal to the Board of Adjustment.
2. An appeal shall be filed with the Board of Adjustment, by filing with the Director, Department of Public Works, a notice of appeal, specifying the grounds thereof. The Director, Department of Public Works, shall forward the appeal to the Board of Adjustment at the same time as the notice is received upon which the notice appealed therefrom shall be filed.
3. An appeal shall stay all proceedings in the enforcement of the Ordinance appealed from, unless the Director, Department of Public Works, certifies to the Board of Adjustment, upon the filing of appeal, that such stay is not in the public interest and that the Board of Adjustment shall stay

2) If, in the opinion of the Director, Department of Public Works, the proposed parcel to be used for purposes of such uses, planned uses shall not be allowed except by order of the Board of Adjustment, or subject to the Director, Department of Public Works, and to the zoning system.

4) The Board of Adjustment shall, to the maximum extent practicable, give public notice and information and perform its functions and duties for such other reasonable terms upon the business day prior to the appearance, proposed by sign, or by otherwise.

5) The Board of Adjustment may, in accordance with the provisions of this ordinance, require or allow, in whole or in part, or modify the use and requirements, conditions, or restrictions attached thereto and may make such other requirements, conditions, or restrictions as may be appropriate under the circumstances.

SECTION XI: APPEALS

Any person aggrieved by any decision of the Board of Adjustment may appeal to the Circuit Court of the State of Georgia, 11th Judicial Circuit, 11th of the State Court of the State of Georgia.

SECTION XII: PENALTIES

Any violation of this Ordinance or of any regulations issued by the Board of Adjustment shall constitute a misdemeanor and be punishable by a fine of not more than 100 dollars or imprisonment for not more than 180 days or both, and each day a violation continues shall constitute a separate offense.

SECTION XIII: SEVERABILITY

Where parts of this Ordinance or any of the regulations or limitations provided by this Ordinance are held unconstitutional or otherwise inapplicable to the State of Georgia, whether the invalidity is determined by the courts or otherwise, the remainder of this Ordinance shall remain in full force and effect.

SECTION XIV: REPEAL

If any of the provisions of this Ordinance or the application thereof to any person or circumstance are held invalid, such invalidity shall not affect other provisions or applications of the Ordinance which can be given effect without the invalid provision or provisions, and to that extent the provisions of this Ordinance are declared to be severable.

SECTION 07 EFFECTIVE DATE
